The gods assembled in Teotihuacan, the ancient city of the sun, and took counsel, asking each other who should take charge of lighting the world. The first who offered himself was Nanauatzin, the ancient moon, who was considered by the gods as the second child of this deity would take charge of lighting the world. As one rejected, the gods requested Nanauatzin, who was the first child of the god, to undertake it, and he consented. The gods kindled a great fire in the totecalli, the 'divine store,' and Tezcatlipoca tried first to throw himself into the fire, but he was afraid and drew back. Then Nanauatzin shut his eyes and threw himself at once into the fire, and after him Tezcatlipoca did the same. This took place at midnight. Then the gods consoled in that direction the sun was to rise. It was in the east, where the sun rose at day-break, followed by the moon. The chronizers relate that originally the moon possessed the same splendour as the sun, but the gods struck her in the face with a rabbit, so that her splendor darkened, and now the figure of the rabbit is seen on the face of the moon. After having risen, the moon and the sun stood still for fourteen days, and then upon the gods resolved to sacrifice themselves in order to give life to the sun. After the gods had killed themselves, the sun commenced to move, and ever since has made his regular courses, alternation with the moon.

3. Origin of men.—When heaven and earth were created, the gods took counsel and asked where to get beings to dwell on the earth. Then Xolotl, the dog who jumps down from the sky—the god who carries the setting sun to the under-world—went to the kingdom of the dead to fetch a bone of the dead. When he had given his message to Mictecantec, the king of the dead, the latter sent the four brothers and sisters, Aztechincoatl, the black jade sceptre in the stone-ceremony, blowing the conch. The dog called upon the worms to make a hole in the bone, and put it into the shell, and the conch. The king of the dead gave the bone to him, but ordered his vassals to follow him and to dig a pit in his way. There the god stumbled and fell, and the bone was broken in pieces, the hand, fell to the ground, and was broken in pieces. The god was much grieved, but he arose, picked up the fragments, and brought them to Tlancanachtlan, a region situated far in the west.
There the goddess Chicomochtli or Quinatzin ground down the fragments on the grinding-stone, and put the pulverized material into the chalchihuites, the bowl hollowed out of a precious stone, and set with gems. On this pulverized material Quetzalcoatl, the feathered serpent, drew by piercing his penis with a knife. In this way men were generated, and food was found for them in the same region of the west. It was the maize, whose place the black ant and the red ant showed to the god.

4. Heaven, earth and under world, and the abode of the gods. The Mexican deities of opinion that from the earth (tlaltecuhtli) upwards there were thirteen regions or heavenly spheres (ihuauintli), and from the earth downwards there were nine regions or under worlds (mielpan). The second, third, and fourth of the heavenly spheres were the setting of the sun when the moon and the clouds, the stars and the sun moved, while the uppermost or thirteenth region was the abode of Omecaotin, Oneincatl, or Tonamecuatl, Tezcatlancatl, the gods of generation. The second of the under-world regions was the Chichinauhaplin, the 'nine streams, the water that encircled the realm of the dead and was in a way identified with the ocean of the western region. The third under-world region was the tepetl condemnacion, the gateway by which the souls were led to the underworld. The fourth or undermost region was the abode of Mietlancatl and Mietlancatl, the lords of the dead. To this under-world region there went, however, only the men and the women who had died in their homes from contagious disease or who were taken by the war. If the dead had any special merits, or were priests, or were the sons of the nobility, they were buried with great ceremony, and their souls were believed to be taken by Thloco, the rain-god. Their corpses were not burned, but buried in the ground. The bodies—having been put on their foreheads. They went to Thlocoan, the home of the rain-god, situated on a great mountain in the east, a paradise of vegetation, in order to serve him there. Men killed in war or sacrificed on the sacrificial stone and women who had died in childbirth belonged to a third order, and went to heaven, to the house of the sun. The warriors went to the east, to receive the rising sun and to accompany him up to the zenith. The women had their dwelling in the west, in the region of the setting sun. In the morning they climbed up to the zenith, where, at noon, they received the sun from the hands of the warriors, and accompanied him on his downward course. At night the sun returned to the dwellers in the under-world region, for at night the sun illumines the under-world, and the dead awaken and live.

5. Principal deities. A detailed study of Mexican mythology and the character of the Mexican gods leads to the conclusion that the forefathers of the Mexicans worshipped the moon, the moon, the morning star, the earth-god, the maize-god, and the other deities of vegetation, the gods who pour down the beneficial rain, and host of naucnuco and spirits who were believed to dwell in particular places, as mountains, caves, water-holes, etc. In the course of time those cosmic potencies assumed very different shapes in the mythopoetic imagination of the people, coalescing in part with a defined ancestor, or being merged in certain regional festivals, thus giving rise to certain well-defined divine personages, who in the different tribes, towns, and villages were acknowledged as the 'lords of godlihood, the 'heart (or living principle) of the town.'

Thus Uitzilopochtli, the war-god, the particular protector of the citizens of Mexico (Tenochtitlan), must originally have been the rising sun, or the morning star. His mother, the conquest-goddess, feathered-bull coming down from the sky. Her other children, the Centzon Uitzman, the 'four hundred Southern' (the stars), and their elder sister Coyolxauhqui (the moon), seeing their mother pregnant, wished to kill her, but just at this moment Uitzilopochtli was born. Armed with shield and spear, he came forth and killed or devoured his own mother and appropriated her strength, or maghnicient prey. The child of the morning star, Uitzilopochtli, was probably a mythic conception of the morning star. Tlaloc was the rain- and thunder-god and the god of the mountains. He had his residence on the top of a mountain in the east, where he owned four chambers and four bars, from which he brought down the water and poured it down on the earth. Stone images of this deity are to be found all over the country. Tetzctliopochi was the god of the Teoztecac and of the tribes dwelling on the slopes of the volcano. He was the sorcerer who roams about in the night, the god who sees and punishes sin, and the patron of the toltecoatl, the club-house of the young warriors; and certainly derived from the conception of the new, waxing moon. Xintecuatli, the lord of the turnip and potato gods, the 'god with the yellow face,' was the tutelary deity of the citizens of Tlateloc and their brethren on the western mountain slope, the Tepanecs of Tepacal and Coyotanec. Tonatiuh, the sun, and Meteti, or Tetzcteacatl, the moon, had in ancient times a great worship in the north of the valley of Mexico, and two great pyramids dedicated to them are still to be seen in that place. The moon alone was the principal deity of the inhabitants of Xilitzucan and of the province of Maztecatl, the water and rain gods, or the deities that ensured the growth of the crops. Quetzalcoatl, the feathered snake, the creator of human life, the wind-god, was another conception of the waning and resuscitating moon. He was the great god of the merchants of Choluia and all the Mexican commercial colonists, down to the provinces of Guatemala and San Salvador. Xipe Totec, 'our lord, the flayed,' the god of the sowing time, the god of vegetation, was generally worshipped in the whole country; but it seems that the Nahatl tribes on the borders of the State of Oaxaca, the inhabitants of Tehuanac, Coaxtan, and Teotitlan del Camino were particularly addicted to his cult. He is also called god of the goldsmiths, because the goldsmiths, located in the town-square, entered to the dwellers in the under-world region, for at night the sun illumines the under-world, and the dead awaken and live.

Female deities were Coatltecu, the mother of Uitzilopochtli, worshipped in Mexico City; Ciaeaeacatl, the female warrior, the goddess of Cuitlahuan; Itzpapalotl and Quinatzin, the earth-goddess and the fire-goddess of the towns of Quauhtitlan and Xochimilc; Tetelo innan, the 'mother of the gods,' or Toci, 'our grandmother,' also called Tecuhtzoltecatl, the 'valley of darkness.' Tlalocquixtli, 'mire-eater' (i.e., sinner); she was generally worshipped as a harvest-goddess; Xochiquetzal, the goddess of flowers and of love, her worshippers throughout the country, and a maghnicient prey, came from the town of Xochimilc, south of Cuauhtlan. All these goddesses, without any doubt, were originally moon-goddesses, but developed into goddesses of
fertility and generation, into earth-goddesses and patronesses of women's art. Chichimilthinile, the 'goddess whose garments are precious stones,' was the impersonation of running water, brooks, and lakes; Uxoltziatl that of the salt water, and another that of the rain. As the priest-architect, the male-god, was represented either as a female or as a male deity, and was particularly related to the gods of generation, the authors of life.

6. Religious practices. — The Mexicans were penetrated by a feeling of absolute dependence on their gods. They regarded them as the givers of all things and as those who inflicted punishments upon them, and they were convinced that most of these punishments were brought down upon them by their own sins. In order to obtain the favour of their gods or to appease their wrath, they used them to address them with prayers, to present offerings to them, to humble themselves in their presence, and to torture themselves in their honour. In the work compiled by Bernardino de Sahagun, which is originally written in Aztec, he has preserved many prayers directed to several gods, delivered by a high priest, and in a wonderful refined and poetical language, while another chapter of the same work contains twenty ancient and very curious songs, which they used to sing in honour of their gods at the different annu-

uary festival. (Text, Gurne, tr., and comments in E. Sefer, Gesammelte Abhandlungen zur ameri- kan. Sprach- und Altertumskunde, Berlin, 1902-08, ii, 939-1107.)

The offerings which the Mexicans were accus- tomed to bring to their goddesses consisted of food and garments, flowers and green twigs (necoyotl) to adorn their altars, caps, rubber, and different kinds of aromatic herbs to burn, and piles of wood to heap up and kindle on the top of their temple-

houses, in the presence of their gods by eating earth (tlotlaliztli), i.e., by touching the earth with the finger and putting it to the mouth. When they requested something from their gods, and before every festival dedicated to them, they fasted, eating only once in the day, avoided red pepper sauce and every kind of spices, abstained from sexual intercourse, and did not wash their heads. When the request which they had to make was a very earnest one, they tore themselves by piercing their tongues or the margin of their ears, sometimes drawing stakls or threads through the hole made in the tongue, and offering the blood issuing from their wounds, collecting it on agave leaves. If they had committed a sin such as intercourse with the wife of another man, and wished to atone for it, they went to the priests of the goddess Tlalticue and made confession, and the priests, after having heard the confession, imposed some penance — e.g., to go naked in the night to some shrine of the 'women-goddesses' (cicelotetel), to deposit garments made of the common bark-paper. By performing this penance they were believed not only to have got rid of the sin committed, but also of the punishment for it enjoined by the law. A Mexican religious practice that excited the curiosity and even the amazement of the Christian priests was the so-called "eating of the god" (tequiquiliztli). At a certain festival a number of devotees assembled, and, after having made an image of the god from the paste obtained by grinding certain seeds, the high priest sacrificed the image and cut it into pieces. The assembled persons ate the pieces, and those who had partaken were obliged to pay for a year all expenses for the cult of the god in question.

Finally, the Mexicans felt compelled to bring living beings as an offering to their gods. They sacrificed to the fire-god by casting into the fire all kinds of animals that could be found in the fields, and they also offered human prisoners in the same way. The warriors who had captured them brought them, their limbs tied together, and hanging on a pole, like captured salt-makers or masons. The female god of war and of the chase. The Mexicans killed quails by decapitating them, as an offering to the sun and other deities such as Urzilopoeh traffi, for the quail was the spotted bird, the image of the starry sky.

They fastened prisoners with extended arms and legs to a wooden frame, and shot them with arrows. This was a sacrifice for the earth-goddess, and was intended to fertilize the earth. There is no doubt that it was originally meant as an imitation of the sexual act. They decapitated a woman as an image of the 'mother of the gods' — the moon-goddess, the harvest-god — and flayed her, for the old moon, the waning moon, is cut into pieces, and her splendour is lost. Yet she would revive, and therefore the flayed skin of the victim was draped by a man who, in the following ceremo-

nies of the feast, represented the goddess.

The Mexicans practised to a terrible extent the offering of human hearts, torn out of the bodies of living men. They used for that purpose a sacrificial stone of a rounded pyramidal shape. The victim was thrown backwards on the top of it, his extended arms and legs were held by four men, and the sacrificer, armed with a big stone knife, made a broad cut across the breast, under the ribs, and, putting in his hand, tore out the heart. The heart itself was presented to the sun, and with the blood they moistened the mouth of the idols, while the heads of the sacrificed were put in rows on poles. The body was delivered to the man who had captured the prisoner and had presented it as a sacrifice. He cooked the flesh with maize, and made a feast of himself and of his relatives and friends. With the thigh-bone of the dead man he made a bundle that was hung up on a high pole in the middle of the house-courtyard. This was the symbol of the owner of the house, and probably, at the same time, a fetish for luck and protection.

7. Annual festivities. — The Mexicans divided the year into eighteen sections of twenty days each and five remaining days. On each of these twentiths they had a feast with many elaborate ceremonies, dedicated successively to various special deities, all these feasts being so intimately connected with the exigencies of the different sections of the year with regard to the culture of the soil, sowing, and harvesting, and with the changing aspects that in the different years those important affairs presented to the anxious eye of the labourer. They commenced with the ceremonies early in the year — in the time of our February. At that time, in the houses and on sacred spots — mountains, caves, water-holes, and localities considered as the abodes of the rain-gods — they set up poles to which papers painted with the emblems of the muisina of these localities were attached; and they carried children, who were bought from their parents, to the same localities and sacrificed them to the rain-gods, in order that these divinities might grant rain in sufficient quantity for the crops of the new year.

In the second twentith they celebrated a great feast to Xipe Totec, the god of vegetation, a form of the ancient moon-god. This was just before sowing, and it seemed to those ancient philosophers to be necessary to fertilize the earth, that she might receive the germ and bring forth the crops. For this important business a sacrifice of value and a vigorous man was required.

They took a prisoner of war, the most gallant whose hands at hand, and with him performed a ceremony of a testing. He was fastened by a rope to the central hole of a
In the third and fourth twentieths, called Topoztli, 'awakening,' the temples and shrines were adorned with green stalks, and the ears destined for sowing were brought to the temple of the maize goddess to be consecrated. The fifth feast, called Toxcatl, fell at the time when the sun, shifting to the north, came to the zenith. This was regarded as the real feast of the new year, and the priests designated a prisoner of war, who in the disguise of this god had represented him all the year round, was sacrificed, and immediately replaced by another prisoner, who, invested with the paraphernalia of the god, had to die in his stead in the sixth twentieth, the time when the rainy season set in, was celebrated by a general and severe fasting of all the priests of all the temples, including the little boys in the priestly schools. The Mexicans ate at this feast a certain meal prepared from maize in grain and beans, called etzahuitl, with which it bears the name Eztalqualiztli, the 'eating of the meal of maize and beans.' In the seventh and eighth twentieths the sprouting of the young maize-ears was celebrated by a ceremonial dance of the kings and rulers of the town, and a general feeding of the people, the feast being called Tecuilhuitl, the 'feast of the kings.' The ninth and tenth twentieths were called Mixcochimaco and Xochiquetzal, i.e., the god of the Xochitl, the flower and ornament, which the Xochitl comes down (for the Xochi, i.e., Xochicueh, the 'feast of the dead.' At these festivals living prisoners were thrown into the fire as a sacrifice to the god of fire, and the image of Xochitl or Otontecuhtli, the god of the Otoni, the 'soul of the dead warrior,' having the shape of a bird, a butterfly, or of a mummy packet, was placed on the top of a high pole, and brought down by the novice youth, vying with each other in climbing to the top.

The eleventh twentieth, called Ochapinaztli, 'sweeping the roads,' was the harvest feast, and at the same time a great exequia ceremony, by which evil was taken out of the town.

A woman representing Teteo innan, the 'mother of the gods,' having been decapitated at midnight and thrown, a priest on the skin and represented the goddess in the following ceremonies. From a portion of the skin of the thigh, a mask was made for the son of the 'mother of the gods,' to be worn in the role of the black and white God of Thunder, and, on the way to the meeting of the gods, Teteo innan was accompanied by warriors, armed and protected by priests (of the province of the Huexcoa). Ceremonial dances followed, where Teteo innan was replaced by the maize-ear, and the faces of the feast, racing with each other, took the music out of the town, and buried it somewhere in the territory of their enemies. The goddess herself, i.e., the priest, wearing the skin of the victim, was likewise driven out of the town, and the skin was hung up, beyond the boundaries of the town, on a frame-work dedicated to the god, Cocihuatl, being the god of the earth and fertility. This was the original form of the ceremony, and as the pictographs, and as it was performed in certain ancient towns up to the time of the conquest.

In Mexico City, however, when the skin of the prisoner was exhausted and the god was no longer able to defend himself, he was sacrificed in the regular way, by cutting the breast and tearing out the heart; and many prisoners were sacrificed in the same way after him. The bodies of the sacrificed were skinned, and the skins donned by certain men who represented the god in the following ceremonies, to show that the god had passed on to a new form. From this custom this second annual feast was called Tlacaxipehualiztli, 'sacrificing men.' This feast concluded with a great ceremonial dance, where priests disguised as maize-ears, maize-stalks, and other vegetables, or as beings connected with the maize, obtained the abundance of food which the new year was expected to bring.

In the twenties, called Teocalli, the Mexicans celebrated the return of their gods, i.e., of the fire-gods, who were taken out of the country and returned during the rainy season. The feast may also be called the 'birthday of Uitzilopochtli.' It concluded with another fire-ceremony, in which living prisoners were thrown into the flames. The thirteenth feast, called Tepedihuitl, was another harvest feast, when the pulque-gods—the gods of fecundity—were honoured by sacrifices, and offerings were brought to the rain-gods, i.e., to the gods of the mountains. The fourteenth feast, called Quechollii, was dedicated to Mixcoztli, the god of hunting and war, and was celebrated by a great ceremonial hunting. Arrows and other weapons were made.

The fifteenth feast, called Panquetzaliztli, 'raising the banners,' was the great feast of the god Uitzilopochtli, when the myth of the birth of this god and the victory which he obtained over his brethren, the Centzon Uitzman (the stars), were dramatically represented by a combat between the warriors and the priests. The outer banner represented the fire-smoker, the weapon with which Uitzilopochtli had killed his sister Coyolxauqui, came down from the upper platform of the temple to burn the offerings heaped up on the great cylindrical stone at the foot of the case leading up to the platform. The sixteenth feast, Atenoztli, was dedicated to the rain-gods. The seventeenth, Titiolli, was a commemoration feast of the dead, at which the iztacolli, 'women-goddesses,' i.e., the deified spirits of the women who died in childbirth, and their patroness Iztacatatl, the old goddess, the goddess of fire, played an important part. The eighteenth and last feast was called Izcalli, 'increasing,' and was dedicated to Xiuhtecuhtli, the god of fire, who was honoured by offerings of all kinds of animals thrown into the flames. The god was represented in this feast by two different figures—at one time as a god of vegetation, dressed in green Quetzalcatl-feathers and wearing a mask of turquoise, and green stones, and at another time as the god of the burning fire, dressed in feathers of the red macaw and wearing a mask of red and black stones. The five last days of the year, called nemontemi, were deemed unlucky. No feasts were celebrated on them, nor any business of importance taken in hand.

Other ceremonies were performed to the deities who were believed to rule certain days, according to the name of the day in question, these names being composed of one of the numbers one to thirteen and of one of the twenty day-signs. As these names, in the different years, were not assigned to a fixed date—the initial days of the years bearing different names—the feasts of the rulers of the days were designated 'movable feasts.'

8. Priests.—For the performance of all these ceremonies, filling out, in the true sense of the word, nearly the whole year, and for the regular service of the different gods, many priests were employed, called tlamacazqui, 'servants.' They were divided into different classes, such as the tlamacazte, 'incense-burners,' the tecpatl, 'guardians of the idols,' the quepmaco, 'fire-god priests,' and the xocochtli, 'tallow priests,' who were, at the same time, the musicians and the singers. At the head of all these priests there were in Mexico City two high priests, called Quetzalcocatl Toteo tlamacazqui and Quetzalcocatl Tlaco tlamacazqui, and at Mixcoztli two great gods, Uitzilopochtli and the rain-god
9. General characteristics.—In spite of their adherence to bloody sacrificial rites, the Mexicans were sober, honest people, of tender susceptibility, governed by the laws of a highly developed civilization, respecting the rights of property, detesting lying and falsehood, cheerful with their friends, brave in war, and unflinchingly obedient to their native kings. Their governors and princes exercised arbitrary power, but were restrained by unwritten laws, handed down from their forefathers, and by public opinion. Their punishments were severe, but never cruel. Vices such as drunkenness and untruthfulness arose with the misery and slavery of the Spanish times. In material culture, too, the Mexicans were nearly equal to their conquerors. Spanish government did not add very much to their cultural standard, and to-day the Mexicans are, if not the most refined, certainly the most honest, component of the population of the Mexican territory.

EDUARD SÉLÉR.

MEXICANS (Modern).—An intimate knowledge of the religious life of the ancient peoples of Mexico is necessary in order to understand the religious life of the present native population of the country. On first acquaintance with the people an impression is given that the Roman Catholic religion is everywhere present, yet many of the pre-Columbian religious ideas remain. Too much cannot be said of the energies and the fervour of the Roman Catholic priesthood in their attempts to Christianize the natives. The originality of their methods and their enthusiasm for the work resulted in a marked success. They learned the native languages, and collected much data upon the customs and religion of the people, and to these early accounts we owe practically all our knowledge of the pre-Columbian life.

The ability of the people to read in pictures, and this was turned to account in their teaching of the Roman Catholic Catechism. Figures were drawn on large pieces of cloth representing most ingeniously, in a series of pictures, the various teachings of the Church. These pictures were also made in books, some of which, according to N. Leon (Am. Anth., new ser., ii. [1900] 726), are still used among the Mazahua of Michoacan. A more ambitious attempt was made by the priests to teach the native peoples the words of the Latin Prayer and other Articles of the Church. A native monosyllable word was selected, the sound of which was similar to a syllable of the Latin word, and this sound was represented by a picture. The first syllable, pa, of pa'eter, was shown by a picture of a flag, which in Nahauatl was pantli, and the second syllable, ter, was represented by a drawing of a stone, tell in Nahuatl. In this way, picture by picture, the native word was known, and each word recalled a similar word or syllable in the Latin.

J. de Torquemada tells us (Monarquia Indiana, Madrid, 1729, xv.) that the Christian priests illustrated the vicissitudes and the instability of life by pictures representing a great expanse of water on which were vessels manned by sailors. On one ship Indian men and women were praying, with garlands of roses in their hands, and they went to heaven accompanied by angels, while on another vessel the Indians were shown fighting with one another, ogling women, becoming intoxicated, and receiving glasses of wine from devils. According to J. de Acosta's report (9. Mural Hist. of the Indies, ed. C. R. Markham, London, 1850, bk. vi. ch. viii.), in illustrating the doctrine of the Trinity, God was pictured with three carved heads, and St. Peter and St. Paul were drawn as two carved heads with keys and sword. As Sapper remarks: 'It is easy to suppose that this sort of picture must have been absolutely incomprehensible to an Indian, but the Catholic Church, and Sapper has no doubt that the effect of these pictures was extremely favourable to the spread of Christianity' (Globus, lxxx. 129).

The Spanish padres were not content with these mnemonic and symbolic methods of teaching the Christian religion, but soon learned the languages of the country, translated the Catechism into the various dialects, and preached in the native tongues. Priests taught the Indians how to record their languages phonetically by the use of the Spanish characters, and from the early days of the Conquest there was a constantly increasing amount of printed and MS material in the languages of the different peoples of Spanish America. The earliest pantheon was an earnest attempt to incorporate it, as much as possible, into their own religion, and, accordingly, we find many of the ancient myths turned into a new setting, with the saints now figuring as the gods of the new faith. We cannot attempt to explain everything in terms of his own mental fabric, we may suppose that many of the strange metamorphoses which came about were the natural result of implanting ideas upon an older foundation, but a result not recognized or authorized by the Church. In many cases the gods of the ancient religion were incorporated into the new, as when the three most important gods were sometimes turned into the Trinity, while the lesser gods became the saints of the Church. This did not always work, as some gods already had a counterpart in the Mexican religion; among the Mayas he was Kisín, the earthquake.

The present population of Mexico may be divided, for the purposes of this article, into four classes as regards their religion: (1) those of Spanish descent who are true Roman Catholics; (2) those of mixed descent who are nominally Roman Catholics, but still retain some of the ancient pre-Columbian religious ideas; (3) those of mixed blood who are fundamentally pagans from the Christian point of view, with religions rites coloured by Roman Catholic teaching; and (4) those who show no trace of the Roman Catholic teaching, and still continue to practice the ancient religion. It is, of course, impossible to draw a hard and fast line between any two of these classes; the middle divisions are differentiated only by the degree in which the Christian or the native religion prevails.

CLASS 1.—In the large cities and towns there is a numerous population of Spanish-speaking people who have little or no Indian blood, and these carry out the rites and ceremonies of the Roman Catholic Church as practised in Spain. The festivals of the Church are celebrated with great pomp and ceremony. An interesting survival of the teaching of the early Franciscans is seen in the Nacimiento,
MEXICANS (Modern)

the Pedraletes, and the Mystery Plays, performed at Christmas and at other times. Soon after the Conquest the sacred dramas, so popular in Spain at that time, were introduced into Mexico, and were regarded as an important means of propaganda.

Class 2.—The casual observer seldom sees any of the native element among the peoples who have been placed in this division, and he considers the population good Roman Catholics. It is only after close intimacy extended over a considerable period of time, together with a knowledge of the nature of the native practices, that one gradually finds that the underlying principles of the religion are based on the native ideas rather than upon the Christian faith. The veneer of Roman Catholicism is removed, and the native religion stands out clearly. The greater part of the population of Mexico are of mixed blood, with a strong preponderance of the Indian over the Spanish strain. This type of native is present even in the large cities and towns, where a great proportion of the people fall into Class 2, whose religion is Roman Catholic, with an undercurrent of the old ideas. The gente of Mexico City, e.g., are of this class.

Holy Week throughout Mexico is a time of great religious festivity. In the Passion Plays which have already been mentioned, there is a constant round of festivals, many of which are strongly flavoured by the native elements. The season of prayer and fasting appeals to the natives, some of whom wear the crowns of thorns and dangle themselves. From Holy Thursday until the Gloria of Saturday the bells of the churches are silent, and the water-carriers, or ratters, take their place. Each child and adult has a rattle, and the streets are full of vendors, each selling some sort of noisy toy. On the Sabado de Gloria new fire is struck from the blessed lint. The burning of Judas is a common sight in every Mexican town; figures of Judas, representing him as a man or woman, a negro, a soldier or a knife, a devil or a gentleman, are burned in every village plaza. Many of these figures contain jars filled with various objects, and, when the container is broken, the contents fall into the struggling crowd. Firecrackers often burn the hands and feet of these Judas figures. It is a time of much merriment.

In Mexico City on Viernes de Dolores, the eve of Pahu Sunday, there is a long procession of devotions from the various missions to the Viga, in which small shrines, and altars are displayed everywhere, the native love of flowers and their varied use of them as decoration being seen at this time at its best. These religious festivals play a very important part in the life of the people.

The custom of erecting wooden crosses along the roads and trails is very common in Mexico. The traveller, in passing one of these crosses for the first time, usually deposits a stone or a flower before it.

It is on the magical side of the religion that we find the greatest number of survivals at the present time. Symbolic and contagious magic abound among all strata of the population. Some of their ideas are, of course, derived from the Spanish element, but the greater number are purely native. Hypnotic suggestion is the important feature in all the ceremonials which deal with healing the sick. The air is full of evil spirits, which linger round the outskirts of the villages, and precautions must be taken to placate or oust them.

Class 3.—This class is represented in the small pueblos in the country districts, where the headman of the village performs the offices of the Church, except at infrequent intervals when the priest of the district makes his visit to celebrate Mass and to perform marriages and baptisms. The native religious ideas are also considerably influenced by the visits of a priest of the Church; often too infrequent to make much headway against the presence of the strong native religious element. This cannot be stamped out among the people, and it remains a study growith itself. Unless energetic efforts are made to counteract its influence by Christian teaching, it is among people of this class that the blending of pre-Columbian and Christian ideas may best be studied.

The native element in the form to the front especially in connexion with agriculture and the burial of the dead. Incense is burned and offerings are made to the gods of fertility at the time of sowing; other gifts are presented to the gods of rain; in some cases offerings are given to the wind-gods when the brewing of the brush of the maize-field is undertaken; and abstinence from sexual intercourse before the planting is another of the survivals. Among the Otomi an idol is buried in the maize-field, another is kept in the domestic house, and a third in the granary. The hunter may burn incense for a successful hunt, the traveller for a prosperous journey. Every house has its santo, or saint, often the crudest kind of picture or image, and the first fruits of the harvest are usually placarded before this shrine; in time of sickness and death many offerings are made and incense is burned. It is the nature of the gifts and the spirit in which they are made, rather than the act itself, that shows the pre-Christian element.

In many of the prayers the native element is seen. Sapper tells (Vida nörd. Mittel-Amerika, p. 250) of the Kekehi praying, 'Thou art my mother, thou art my father, a form common in the Popol Vuh (q.v.); for example, in one of the prayers is seen in the poetical form, the parallelisms, the antitheses, and the repetitions of single words and phrases. Seler tells of a stone idol discovered in a cave in the State of Puebla before which offerings of flowers, eggs, and wax candles were found. In another case the visiting padre saw, to his indignant, a stone idol occupying the place of honour beside the crucifix, on the altar of the village church. In a cave in Oaxaca a pottery image and grapes were discovered, the feathers having undoubtedly been used in connexion with the sanctuary of human blood, so common a part of the religious ritual of the ancient Mexicans. These definite examples will show the hold which the older ideas have upon the people, who are nominally good Roman Catholics.

Class 4.—The number of individuals who have been placed in this division is comparatively small, and, as might be expected, they are found only in the most unsettled and inaccessible portions of the country. They show practically no influence from the outside world in their customs, their languages, or their religion. Spanish is seldom understood, and the native language shows little change from those portions which were recorded by the early Spanish conquerors. It is among these people that one can obtain a clear picture of the pre-Columbian aborigines. The polytheistic ideas are still maintained, and many of the gods now worshipped may be identified with the ancient deities of the people.

—Sakaimokha of the Huichols, e.g., is recognized as the old rain god, Tlaloc. It is seldom that the ancient gods of the sun, the moon, the morning star, and other planets can be identified with them, although among the Seri of Lower California the sun and moon find a place among the gods, and among the Pueblos there is a 'father-sun' and 'mother-moon.' Among the present-day Mayas the sun and moon are servants of the gods.
Worship by means of prayer, divination, and sacrifice takes many different forms. Human sacrifice has been aboli-
shed, although there are a few sporadic cases where it has been reported within the last century. Blood sacrifice is not un-
common among people of this class, the car and other parts of the body being plunged into the sacrificial knife, and the blood allowed to drop upon the idols. Offerings of food and drink now form the main portion of the religious practices of the population, although burning of copal or other incense to the gods is also very common. Compulsory intoxication —a common feature of the ancient religion—is still carried out by means of the pulque of the Mexicans, the kikali of the Huichols, the teocino of the Tarahumara, and the bateko of the Lacandones. Divination is practised in many forms, and among many peoples there is a class of soothsayers who look into the future by means of the movements of sacrificed animals, the smoke of the incense, the crystal, the image on the surface of a basin of water, and many other ways. The prayers of the Cora, collected and translated by Preuss (Die Nayagrat.-Expedition), furnish an excellent criterion of the native point of view towards the gods and religion. Certain places are usually set aside for them, and are often held for magical purposes. Among the Tarahumara, e.g., the dance is a prayer, a petition for prosperity for the harvest, or for health and freedom from ill-fortune.

The idea of renovation, the renewal of the incense-
burners and the cleansing of the houses and of the places of worship at certain times of the year, is an ancient practice. Among the Lacandones, at the main ceremony of the year, when the firstfruits are offered, the collection of the incense-burners is renewed. The old ones are 'dead,' and new ones are made to take their place. Priests no longer form a distinct class by themselves in Mexico, but the head-man of the village or the head of the family now performs the priestly functions, and among some of the tribes the class of shamans still remains. It is claimed that one-fourth of the Huichols (g.v.) of Northern Mexico are shamans; the name of the tribe signifies 'the doctors or healers.' It is they who have the power to look into the future and who understand and interpret the will of the gods. Religious temples, so common a feature of the pre-Columbian culture, no longer play a part in the religions life, though the Lacandones make many places of worship of incense-burners and other offerings. The religious practices are usually carried on either in the domestic habitations or in a house set apart for the purpose, this house being called tapia, 'the house of all,' among the Huichols. Women are usually excluded from these religious places, except at the termination of the worship, when general feasting takes place, and the offer-
ings, previously made to the gods, are consumed by the worshippers. Perhaps the best example of a people who have had no contact with Spanish ideas are the Lacandones, who live in the State of Chiapas on a tributary of the Usumacinta River, which forms a portion of the boundary between Mexico and Guatemala. The early efforts of the Spanish to Christianize these people met with failure, and they have remained undisturbed for three hundred years. The customs, and especially the religious, of this people is of great importance in understanding much of the life of the early Maya tribes, and many of the ceremonies are counterparts of those represented in the pre-
Columbian MSS.

A careful survey of the principal religions of the native Mexicans shows an interesting change from north to south. From the religious point of view, the ideas of the tribes of Sonora and Chihuahua are directly associated with those of the natives of the southern-western portion of the United States: the religion of the Puebloan peoples and of the Navahos and Apaches shows a striking similarity to the religious ideas of the Huichols, the Cora, and the Natchez of New Mexico. The rain and the importance of rain are the prime factors in the religion of all these peoples. The symbolism of the Huichols centres in the pheno-
mena of nature and the power of the gods. The religious ideas of the present native population show a great number of survivals of the ancient religion of the formerly highly cultured peoples belonging to the Nahua, the Maya, and kindred civilizations.

MICHAELMAS.—1. The origin of the festival and the Michael churches in Italy.—The Martillo in Englyshe, translated by Richard Whytford of Sycamoonastery by William Ykyn de Wode in 1520, records the Roman and Sarum tradition of the origin of the festival:

'The xxix day of September, in the month of garson, the rememhred memory of saint Michael the Archangel where a church of hym is osen, that is but of poore budyng yet notwithstanding it is adored wyth many grete vertyes (Henry Bradshaw Society, iii, (1891) 155).

The Sarum Missal in the calendar has: ' 3 kl. Oct. Michaelis anchargeli, and in the text: 'Michaelis anchargeli' (Miss. ad numm. Sarum, Burntisland, 1891-ss, pp. 23°, M8). The calendar of the Westminster Missal of 1685 has: ' 3 kl. Oct. Sancti Michaelis anchargeli' (H. Bradshaw Soc. i. (1891) xiiii). The Missal of Robert of Jumieges, an English Service-Book written, probably at Winchester, between the years 1096 and 1027, has in the to the rainnyng structures wher they believe the gods reside, carrying with them incense-burners and other offerings. The religious practices are usually carried on either in the domestic habitations or in a house set apart for the purpose, this house being called tapia, 'the house of all,' among the Huichols.

Women are usually excluded from these religious places, except at the termination of the worship, when general feasting takes place, and the offer-
ings, previously made to the gods, are consumed by the worshippers. Perhaps the best example of a people who have had no contact with Spanish ideas are the Lacandones, who live in the State of Chiapas on a tributary of the Usumacinta River, which forms a portion of the boundary between Mexico and Guatemala. The early efforts of the Spanish to Christianize these people met with failure, and they have remained undisturbed for three hundred years. The customs, and especially the religious, of this people is of great importance in understanding much of the life of the early Maya tribes, and many of the ceremonies are counterparts of those represented in the pre-
Columbian MSS.

A careful survey of the principal religions of the native Mexicans shows an interesting change from north to south. From the religious point of view, the ideas of the tribes of Sonora and Chihuahua are directly associated with those of the natives of the southern-western portion of the United States: the religion of the Puebloan peoples and of the Navahos and Apaches shows a striking similarity to the religious ideas of the Huichols, the Cora, and the Natchez of New Mexico. The rain and the importance of rain are the prime factors in the religion of all these peoples. The symbolism of the Huichols centres in the pheno-
mena of nature and the power of the gods. The religious ideas of the present native population show a great number of survivals of the ancient religion of the formerly highly culturally peoples belonging to the Nahua, the Maya, and kindred civilizations.

LITERATURE.—D. G. Brinton, 'Das Heiligtum im christlichen Yukatan,' Globus, IX. (1897) 176-179; M. R. Cole, 'Los Pastores, a Mexican Play of the Nativity,' Memoirs of the Amer. Folk-

Martin Rule, in his 'Analytical Study of the Leorum Sacramentary' (JThSt. ix. (1905) 515 ff., x. (1908) 514 ff.), traces the traditions of this Venetian MS of the 7th cent. to three collections made during the pontificates of Leo I. (440-461), Hiiranus (461-468), and Simplicius (468-473). This carries the evidence of the rubric to the 5th cent.

The festival is, therefore, in its origin the dedication festival of a church. The evidence is not confined to the liturgical books of the Lateran rite. The early Mozarabic rite is represented in a MS of the 11th cent. at Paris (Bibl. Nat. nov. acq. lat. 2171). In a short frontispiece, Adnotationes front. evisitationum, the festival is announced thus: 'Adveniente diei festivalis erit dedicatio sancti Michaelis archangeli vel socororum eius' (MS, p. 2171, col. 2).

And in the Notitiae Leorum, a calendar in the same MS under Sept. 29, 514 (413, Oct.) dedication sancti Michaelis arcangeli (G. Morin, Liber Comices, Anecdotae Moravodanoi, i. (1903) 392, 402). A contemporary MS from the same Spanish monastery or bones in Old Castle (Brit. Mus. Add. MS 3653) has the same hymn of 'Dianam Sancti Michaelis Arcangeli, where reference is made to the 'socii.' The first hymn is: 'at glorietur in deo cum consortibus sociis'; and the second: 'Sancto Gabriel Raphaeleo socius.'

i. The Castello S. Angelo at Rome.—Quentin has lately given further evidence of the Martyrologies. The earliest example is that of the Martyrology of Bede: 'iii. li. Oct. Dedicatio ecclesiae sancti angelii Michaelis.' This is modified by the Macon MSS: 'Romae, dedicatio basilicae sancti angelii,' and the Monti MSS: 'Romae, dedicatio basilicae sancti Michaelis archangeli:' and by the Bologna MS with the insertion of the words 'milionario sexto' between 'Romae' and 'dedicatio.' The earliest evidence suggests that of the Leonian Sacramentary, and that the dedication of a church on the 5th stone mile on the Via Salaria is: 'in Monte Garagano, dedicatio basilicae sancti Michaelis archangeli.' This is the source of the entry in the Martyrology of Aど, archbishop of Vienne, c. 570; but as he adds: 'Sed non multo post, Romae, venerabiles etiam Bonoestit unius ecclesiae sancti Michaelis nonnunquam constituunt dedicatam in instantia eirii, quia ubi populus altissimi popocuman. Unde et hodie loci, in summatione sancti Michaelis unius ecclesiae sita sacerdos loci ' (Quentin, Les Martyrologies historiques, p. 56).

The entry in the Martyrology of Aど is the most ancient to be the conscription of the tomb of St. Michael. A century later Liutprand, in his Vita of Chironia, witnesses to this church on the top of the Castel S. Angelo: 'Munitione vero ipsa ... tanque altitudine est, ut ecclesia quae nuper locis, in honore sancti et ecclesiae unius principis archangeli Michaelis fabricata, dicitur sancti Angelii ecclesia usque ad eadem' (ib. p. 96).

Baronius also identified the Church of St. Michael 'inter nubes' with the Castle of S. Angelo, assigning its dedication to Boniface III. (606) or Boniface IV. (607-614), in memory of the stay of the pope on the 29th Sept., and to the festivities of the Great (C. Baronius, Martyrologium Romanum, Venice, 1602, p. 544).

ii. The church on the Via Salaria.—The dedication festival of Sept. 29 would seem to have three steps in historical process. The earliest has reference to the church on the Via Salaria, the second to the Apulian church on Monte Gargano, the third to the church on the Castel S. Angelo. The sixth milestone on the Via Salaria is north of the site of Fidenza, between Castel Gandolfo and Casale Mareglialo. The Casale Sette Iigni, which lies on the hill-side north of the little stream of the Allia, cannot be far from the old basilica of St. Michael. The evidence from the Michael shrine at Spoletto, the pre-ambulatory of Monte Gargano, and the third springs, may explain the origin of the dedication.

iii. The church on Monte Gargano.—Monte Gargano, as the third church on the Via Salaria, is the southernmost of the Michael shrines. The church is dedicated to St. Michael from the sixth till the 17th cent. Liutprand refers to it under the year 493 (Annales Eusebii, ed. Mainz, 1806-1807, sub anno xliii.; cf. his Martyr, ii. 39, 30). It was a great church of the 13th cent. Otto iii. visited the sanctuary in 998. The fact rests on the credible witness of the Vita S. Romualdi of Petrus Damianus (F. Gregorovici, Historia della citta di Roma, ital. ed., Venice, 1872-75, iii. 559). This church was dedicated to St. Michael, and to the third spring of water which was held to be a cure for fever:

'Exspectant saxo qua software: sancta ecclesia stet in altitudinis ipsa quod aubaculum: quam fieri locum, velit spectari quae sancta ecclesia.'

iv. The Michael sanctuary in Umbria.—The Antonine itinerary thus notes two stations on the way from Rome to Milan by the Via Flaminia: ' civitas spolitio ... mil. vii; mutatio Saxararia ... mil. viii.' This 'mutatio' is placed at Le Vene, near Spoletto (Itin. Ant. Aug., ed. G. Parthey and M. Pinder, Berlin, 1868, iii. 1849). Itinerarius, Leclercq rejects the theory of P. Clavier that this referred to a sanctuary of Jupiter Cittanum, and accepts that of H. Holstein that there was a Christian sanctuary on this site when the Itinerary was written (P. Wesseling, Itinerario Itinerario, Amsterdam, 1875, p. 613). H. Leclercq states definitely that the sanctuary cannot have been dedicated to the 'God of Angels' before the epoch of Theodosius, or at the latest before the beginning of the 5th cent. The inscriptions at the sanctuary belong to this date. The inscription over the central door reads: 'SCE DEUS ANGELORUM QUI FECIT RESURRECTIONEM.' Leclercq says:

'Ce cimetiere, dont la plus grande destitution n'a pas précédé l'urbanisation, et qui portait primitivement la noms du saint Apparition, a été transformé et dédié au Dieu des anges qu'a époque de Théodose' (BAGL. art. 'Anges,' p. 252).

And again, after examining the theory of H. Grisar that these buildings (i.e., the Tempio di Cittanum and the Church of S. Salvatore a Spoletto) are works of a school of the 12th cent., he concludes:

Nous pensons donc, jusqu'à nouvelle démonstration, que contrairement à l'opinion de H. Holstein, le tempio di Cittanum a été une destination primitivement sacerdotale, le fait d'un de ces sanctuaires qui bordaient en asile la route de Cittanum pour avoir fait donner le nom de Sacerori au site d'église situé entre Spoletto et Trevi (ib. p. 258).
The consecration of the healing water of the Citumanius to the God of Angels suggests a similar origin for the basilica on the Via Salaria, and may perhaps lie behind the dedication on Monte Gargano. The early Christian association of angelic agency with healing springs is recognized in Ju b. Lodereq states that there is evidence of the prevalence of the cult in Umbria in the first half of the 5th century. The Church of S. Salvatore outside the walls of Spoletto is on the site of a small church originally dedicated to St. Michael in 429. There is another in the parish of Mandorletto near Perugia, of the same epoch, called in the inscription: 'basilica sanctorum angelorum' (ib. p. 2148).

2. The Michael churches in the East. — 1. St. Michael of Khonai. — The Church of St. Michael the Archangel was a centre of the cult of Asia. When the hill-station of Khonai took the place of Colossae in the 7th cent., the Church of Colossae became known as the Church of St. Michael of Khonai. The legend tells that St. Michael, with the angels, cleansed the ancient city of Lycus by inundation from clearing the gorge outside Colossae. The miracle of Khonai in its present form is of the 9th cent., but it represents the fusion of legend and of a later dedication of Colossae. W. M. Ramsay has no doubt of the identity of the Church of St. Michael of Khonai with the Church of Colossae. The raid of the Turks in 1189 swept along the Lycus valley. Khonai on the hill-side escaped them, but the threshing-floors along the valley were destroyed, and the great church was burnt (Nicetas Choniates, Annales de Isaac Anglo, bk. ii. ch. 2 [Hist. Byz. Venice, 1729, xii, 210]). The legend also explains the origin of a spring which burst forth on the site of the church of St. Michael. Ramsay (Cities and Bishops of Phrygia, i. 214 ff.) says that St. Michael of Khonai in the later Christian legend takes the place of the Zeus of Colossae of pagan tradition. The power associated with Zeus was transferred to St. Michael. Ramsay sums up the importance of the legend in its bearing on early Christian history: 'The worship of angels was strong in Phrygia. Paul warned the Colossians against it in the first century (Col. ii. 18). The Council held at Locutio on the Lugus in 367, afterwards transmuted as idolatrous (Conc. Lat. Cap. 35), Theodoret, about 230, in his History of the Church, asserts that this disease long continued to infect Phrygia and Pisidia (Interp. Ep. Col. ii. 6). But that which was once counted idolatry, was afterwards reckoned as pietas' (Church of the Roman Empire, London, 1883, p. 477).

ii. Asia. — Michael the Archangel was honoured throughout Asia. His name is preserved in Mikhail near Prynnesmos, in Mikhailitich on the Sangarios, and in other city names (Ramsay, Phrygia, i. 31 f.). He is connected with the introduction of Christianity into Isauria, and is associated with the cities of Akroinos-Nicopolis and Gordium-Endokias. Sozomen speaks of the cures wrought at the Michaelion, a shrine built by Constantine on the north shore of the Boeotrians (Hist. eccl. iv. 17). He was the son of a wealthy citizen named Theoctistus. His father, at whose instance he was consecrated to St. Michael, was transferred to the Church of St. Michael on the island of Lemnos, and is now represented by Armanou near the island.

Procopius describes the rebuilding of this basilica by Constantine, and the building of another under the dedication of St. Michael at Proocheiths on the Boeotian shore (De bellic. i. 8). He built another on the Asiatic coast at Mokadia (ib. i. 9). Procopius also mentions the Michael churches erected by Justinian at Antioch (ib. ii. 111) and at the healing springs of Pythia in Bithynia, with a house of rest for the sick (ib. iv. 3), while at Verna in Pamphylia stood a ptochelon of St. Michael (ib. v. 9).

iii. Constantinople. — There are important references to the Michael churches of Constantinople and the neighbourhood in the Imperius Orientale of Anselmo Banduri (Hist. Byzant., xxii. and xxiv.) and in the Constantinopolitan Churches of C. D. du Cange (Hist. Byzant. xxii.). The latter gives a list of fifteen churches (Const. Christ, iv. 23) in the city and five monasteries in the suburbs (ib. iv. 15). The chief festival of St. Michael in the Eastern Church is kept on Nov. 8. iv. Alexandria. — The Annals of Eutychius of Alexandria (p. 94) have a legend connected with a Michael church in Alexandria. It tells of the site of a temple of Saturn, in which had been an image of brass named Michael. The image was broken up, and the pagan festival was transferred to St. Michael (R. Sinkler, D.C.A., p. 1179).

3. The Michael churches in the West. — In Italy and the East, headland, hill-top, and spring sanctuaries now dedicated to St. Michael were formerly sacred sites of earlier religions. The associations rest frequently on folklore; the testimony is of that of legend and tradition or place-name. The same associations are to be expected in the West. In some cases the legend may be traced; in others it may linger in folklore, and can be looked for only in local traditions. An association to St. Michael and a site associated with a headland, hill-top, or spring, on a road or track of early origin, is reasonable to look for a pre-Christian sanctuary.

i. Headland and coast churches. — On the French coast are St. Michel near the mouth of the Loire, St. Michel on the Pointe du Rau in Brittany, St. Michel en Greve to the south of Launon, the Ile St. Michel near the Cap de Frehel, and, best-known of all, Mont St. Michel. The legend associated with Mont St. Michael suggests the tradition of an ancient sanctuary of Celtic heathendom. The giant stian by Arthur on the site is said to have come from Spain, the Hades of Celtic mythology (Illus, Celtic Heathendom, p. 90 f.). He is said to have ravished Eluen, who is equated with a goddess of Welsh mythology (ib. p. 161). Thus, by the overthrow of a giant by the champion of Christianity, the Celtic sanctuary becomes the sanctuary of St. Michael.

Among the coast and headland churches in England are St. Michael's Mount, the church of Lynne Regis, and that of Bere near Seaton, all of ancient origin. There are also St. Michael near the mouth of the Camel on the Devon coast, and Michael's Mount, overlooking Falmouth Bay, and St. Michael-Caer-hayes. On the west coast there is a Michael church at Workington in Cumberland; on the east coast, Garton in the East Riding, Sidestrand and Ormesby St. Michael, in Norfolk; on the south coast, Newhaven in Sussex and East Teignmouth, Devon. With a few exceptions the majority are in Dorset, Devon, and Cornwall, where the old lore lingered longest.

ii. Hill-top churches. — These are to be found throughout the West, sometimes as hermitage chapels, sometimes as town and village churches. St. Michael is the central church of Limoges, the ancient seat of the bishopric. The bishops of Limoges are also the central church of Castelo-media on the old road between Carcassonne and Toulouse. These sites are frequently the high-places consecrated to early religious rites. The church of Penkridge in Staffordshire is dedicated to St. Michael. Penkridge is the Celtic site of the ancient city of Pemecromium, a place-name which bears evidence to the worship of the heathen god in the centre of ancient Britain (Illus, Celtic Heathendom, p. 204 f.). It is the Brythonic equivalent of the Irish Cois Cruach, 'the Chief of the Mound,' who bowed before the staff of St. Patrick.
MICHAELMAS

Peakridge was formerly the sanctuary of the Celtic Zeng. St. Michael church may often witness to some pre-historic centre of religious worship.

The story of a bull is associated with the foundation-legend of the Church of St. Michael 'in Monte Cargano.' The legend rests on a 'libellus' written in 1179 by Hermannus, a priest of Sipontum, who missed his bull from the herd:

"Quem domus condita servatorum multitudine per eleva quacia latus hanc tympanum plantato tamen tundere celtibus sollicitum sititium."

Thus transtorn cur solivagia aspernatas: stait myrtis curatus tenuis, et appetit illum sanctum et sanctam quod sancta domus plantum quia quod sancta domus plantum societatem perimetis.\(^\text{(Mobiuniim, Sanctuarium, i. 299; ed. Hereford Diocet in Chapter History, Worcestershire, 15th cent. v. i., p. 229.)}\)

The sanctity of the bull-shrine is here vindicated. The terror is averted by the dedication of the site to St. Michael.

The life of St. Francis of Assisi alludes to the forty days' fast in honour of St. Michael. It was kept 'ad heremum Alvernae.' It was on this occasion of one of these facts that the birds gathered round his cell. They are called his "coruscat," (Mobiuniim, Sanctuarium, i. 299.)

The vision of the stigmata is assigned to the same sanctuary.

"Eunium itaque antequam spiritum rederet caelo...per dormitium in sibilationem acceperat..." (Mobiuniim, Sanctuarium, i. 299.)

The third church.—The dedication of wells and springs to St. Michael may be noted in the Michael churches of Askerwell, at the head of the Askar Valley in Dorset, at Barwell in Lincolnshire, and at Horton-le-Spring in Durham. In Portugal near Leiria on the Monte de Sao Miguel a warm and a cold spring issue close together from the Ollhos de Sao Pedro.

There is a remarkable example of a Michael church in association with a spring at Landanghel near Llanvycit Major in Glamorgan. The church is in a dell, and just outside the N.W. corner of its churchyard is a spring. The spring head is ornamented with the bust of a woman, and the water used to issue from the breasts. It is now (April 1915) nearly filled up with mud.

iv. The Landanghel churches in Wales.—It has been noted by W. L. Bean (Dioic. Hist. of St. David's, London, 1888, p. 36, ap. Willis Band, The Celtic Church of Wales, p. 336) that the Michael churches in association with the Bishops of St. David's, to the number of forty-five, with one exception, are in the country districts. It has been suggested by Willis Band (p. 336) that they mark a second stage in the spread of Christianity in Wales.

The Michael churches would therefore represent the villages of the lay tribe that had become Christian, but which still belonged to the lay tribe, and so could not be called by the name of the Saint, or the tribe of the Saint, or of his family. They thus form a group which marks the spread of Christianity. The term selected was one that would celebrate the victory of the cross over the Pagans (ib. p. 336). The Michael churches of Anglesey bear out this assertion. There are four of them; and they are all in the near neighbourhood of sites of great antiquity, associated with the legend and myth of Wales. Landanghel-yn-Sylwy, on the coast north-west of Beaumaris, is within the pre-historic site of Bedd Arthur; Landanghel-yr-Beirdlıc the name comes from the ancient Cerniadan Trer Beirdl. It lies to the east of Llanerchymlyn. Landanghel-y-n-Nhowyn, south-east of Valley, is near the site of Ger-Elen. Landanghel Eoseling is parochially connected with the old site of Ynys Bere. This group requires the Michael churches of Anglesey, taken together with the evidence of the churches in Italy and the East, can hardly be accidental. It would seem to support the evidence that the Michael churches occupy the shrines and sites of Celtic heathendom.

v. The Michael church by Cole.—The churchyard of St. Michael's at Lichfield is referred to in the MS Historiae Ecclesiasticae Lichfieldensis in the Cathedral Library at Lichfield. It was erected on site even in the time of St. Augustine.

"Corporibus occidens sepeliiendi insculpunt magnitudinis corporerum quem uno Dei Michaelis alacritate, fertur inveniisse; quem fertur Augustinio, qui Anglorum Apostoli, qui habeat in illis insulae partes inviares, religione venerande ussas" (MS Historiae Ecclesiasticae Lichfieldensis in the Cathedral Library at Lichfield, 1174, p. 14).

A note 'de Cemeteriis' in the same MS speaks of certain national burial-places in the early ages of the Church:

There is a passage in Bede which probably refers to a similar burial-place in the neighbourhood of Hexham:

"Est minusa quaedam secretaria, numerar eae et callo circumdata, non longe a Hugubaldstium ecclesias... habent cemeterum sancti Michaelis archangeli, in qua vir Dei sanctificat, numerar eae pacis, atque deinde eos a peculiis quietem operam dare consecraverunt" (ib. v. 2).

The Church of St. Michael at Bordeaux is on the site of an ancient cemetery, the soil of which has the property of preserving the existing bones.

vi. The Angel Victor in Ireland.—The Genar Patercius, the hymn of St. Faicce in honour of St. Patrick, has two references to St. Michael under the name of Victor. In v. 4 it is by his command that Patrick went across the seas:

"Asket Victor pri guadal
Mill con tessd for tommas,"

The translation of the Irish gloss on v. 16 reads:

"Victrix, angel comunis Scotticae genitae...quia Michael angelus Eboracensis genitae, vita Victor Secundorum" (ib. v. 129). A.

The name Victor may be traceable to the iubalitos of the Mozarabic Missal for Michaelmas:

It is a point of affinity between the liturgical uses of Ireland and Spain.

But the name Michael is not sunk in the title Victor. J. H. Bernard, in his note on the Hymn of St. Colman Mase Murchon in honour of St. Michael, says:

"St. Michael was very popular in Ireland. In the Second Vision of Adamnan we read in section 19: 'The three hostages that were taken on behalf of the Lord for warding off every disease from the Irish—are Peter the Apostle, and Mary the Virgin, and Michael the Archangel.' There are a large number of fragmentary Irish poems in praise of St. Michael in the manuscript collection of the Irish Tracts. When these were churches dedicated to him in many localities; the place-name Temple Michael still exists in 0 of 7 counties" (ib. Liber Hymnorum, xiv. 133).

4. The Michaelmas goose.—There is an old saying: 'If you eat goose on Michaelmas-day you will never want money all the year round' (Hone, Every-Day Book, i. 439).

In Herefordshire in 1740, 'one goose B. for the lady's dinner on the feast of St. Michael the archangel' was due as
part of service or rent for land (ib.). G. Gascoigne, in his poems published in 1573, alludes to a similar custom:

"At Christmass a capon.
A Miclinashe a goose.
And somewhat else at New-yers title,
For here their lease the loose (ib.)."

Such customs are deep in the folk-lore and religious ideas of a people. Geese have sacred associations. They saved Rome ('anes norr refelore: quibus sacris Junoni') [Livy, v. 47]. The goose-pond, or 'fuente de las ocas,' is still preserved in the cloister court of the cathedral of Barcelona. The cathedral is built on the site of a Roman temple—a temple ascribed to Hercules. Some columns in an adjoining street still witness to the antiquity of the site. There were sacred geese in the Greek temples (ErE 1. 518). Geese were taken to the ancient Britons ('Ieporem et gallinam et anserem gustare fass non putant') [Cas. de Bell. Gall. v. 12]. They also had a place in the story of St. Werburga (in Wuladena's house, quod est iuxta Hamtun... infinita ancora silvatierno... multitudine) [Vener Legenda Anglica, ed. C. Horstmann, Oxford, 1901, ii. 423]. The witness of East and West, the folk-lore and legend of Britain, alike point to the sacred associations of the Michaelmas goose. As the traditional feasts of Christi, of St. Peter, and of St. Agnes, rest, together with the sites of so many of our Michael churches, on a foundation of primitive religion, and in Britain they are no less sacred to Christianity for thus keeping alive the deep-rooted pre-Christian faith, so the Michaelmas goose has become a part of the folk-lore and legend of Britain.

5. The liturgical meaning of the festival: St. Michael and All Angels. — The festival of Michaelmas is specially in honour of St. Michael, but the words of the officium ne introit to the mass in the breviary of Cluny ('hius Michaelis omnes angeli') the festival thus includes All Angels. The English Prayer-Book entitles the festival 'St. Michael and All Angels, The College Breviary of c. 1675 (H. Bradshaw Soc. xxiii. [1912] p. xxxvii) agrees in this title: 'St. Michaelis et omnium Angelorum.' The Dedication of the Great Hall of the Bishops of Dialectian in 1564 under the title S. Maria degli Angeli shows the same idea.

The Collect 'Dens, qui miro orario'—the services of Angels and men in a wonderful order—is common to all the uses. Its subject is the ministry of angels. The gospel, oecclerom, and postcommunion are also common to all. The Gospel—'Qui salvet suae præsuæ'—is the theme of the angels, the Offertory—'Stetit Angelus'—to the incense of prayer, the Postcommunion—'Beatæ Archæangéli tui Michaelis'—to the intercession of St. Michael. The Epistle common to the Roman and Sarum and most of the Western uses—significavit Dens quaeritis féri citó'—commemorates the Angel of the Apocalypse (H. Bradshaw Soc. xii. [1897] 1958).

The Epistle in the English Prayer-Book, 'There was war in heaven,' represents a different strain of liturgical tradition, and celebrates the victory of St. Michael over the dragon, 'that old serpent, called the devil and Satan, who deceiveth the whole world.' The Western Infant Missal of 1561 has this Epistle as a First Lesson, followed by the usual Epistle, 'Significavit Dens.' It is a rare instance of two prophetic lessons before the gospel, which of itself shows the influence of Gallican use. This inference is strengthened by its use as the First Lesson in the Mozarabic Missale Mistum (ed. Lesley, p. 389).

It also appears as a Matins lesson in the Milan Breviary (Breviarium Aquinatianum, Milan, 1890, Pars Estiva, ii. Prop. de Tempore, p. 460). Wicliffe Langtree traces it in the Missale of Durham, Abingdon, and Sherborne among old English uses; and in that of Rouen of 1499 and the Cistercian Missal of 1627 (H. Bradshaw Soc. xii. [1897] 1958).

The English Epistle is inspired by the thought of the triumph of Christianity over heathenism, and belongs to the same cycle of ideas as the Angel Victor in Ireland.

MICIUS. — Micius is the latinized form of the words otherwise transliterated Mî Tse, or Mo Tse, meaning 'the philosopher Mî.' His personal name was Tîh (or Tî). He was a native of the State of Sung, and is regarded by some as a younger contemporary of Confucius (E. Faber, E. H. Parker), and by others as 'very little anterior to Mencius' (J. Legge). His opinions are preserved in 71 chapters arranged in 15 books; but 18 of the chapters, in some cases along with their titles, have been lost. Faber speaks of him as an ancient Chinese socialist, and Parker calls him a 'Quixotic Diogenes,' head of 'the school of simplicity, socialism, and universal love' (China and Religion, London, 1905, p. 67). It is this doctrine of universal love by which he is best known, largely because of the criticism of it by Mencius (p. 67). All social disorders in the empire, and between persons and families, on account of selfishness, and would be impossible if men loved the persons, families, and States of others as they love what belongs to themselves. Such universal love may be difficult; but, if men can be induced to sacrifice their selfishness for the sake of pleasing their sovereign, how much less difficult should they find it to practise universal love, which, moreover, would be recompensed by love. Others would follow if only rulers would lead the way by administering their government on this principle, taking plea-are in it, stimulating men to it by rewards and praise, and awing them from opposition to it by punishment and fines. Micius advocates the ancient kings as examples, for equally with Confucius he builds on the same idea.

What gives rise to hate and all its evils is the principle of making distinctions. In spite of the brevity of life and the selfish desire to make the most of it for oneself, each man should be for the other as for himself. This is not a plea for friendship, for Micius never prefers his friend to his own; it is merely the statement of the fact that the sovereign one who practises universal love rather than one who acts on the opposite principle. To the objection that universal love is injurious to filial piety, Micius replies that the filial son is one who wishes to secure the happiness of his parents by inducing men to love and benefit them, and that to love and benefit the parents of others is precisely to secure for one's own the same treatment in return (bk. iv.). It is here that Mencius joins issue with the Mîhist Tî Tse. Taking Micius's doctrine as inculcating equal love to all, he argues from the actual facts of human nature, pointing out that man's affection for his own child is not merely the same as his affection for the child of his neighbour, and that man is related in a special way to his own parents, heaven having made man to have this one root (Micius, bk. iii. pt. i. ch. 5, pt. ii. ch. 9). Legge admits that Micius appears to lose sight of the other sentiments of the human mind in his exclusive contemplation of the power of love, but denies that Micius taught equal love to all. It is true that we do not find in Micius the phrase 'without difference of degree,' used by 1 Tse, though it may be held that 1 Tse represents the logic of his master's doctrine. 1 Tse
MIDRASH AND MIDRASHIC LITERATURE

also exposed himself to Micus's criticism by his exaggeration of his master's teaching on simplicity in funeral titubation (Miehus, bk. 1, ch. 5). Midrash did no more than discourage extravagance on utilitarian grounds, as being of no profit to men or gods, while he allowed all that was necessary for a devout interment (Miehus, bk. v, ch. 25). Among other points worthy of notice are these. In bk. iii, on the value of uniformity, Miehus holds that men originally were hopelessly at sixes and sevens, each having his own view of right, and that order is based on submissive acceptance of the will of God, whose judgment, however, must conform to heaven if heaven-sent punishments are to be avoided. Hence the pietty of the ancient kings. Miehus is firmly convinced of the existence of spiritual beings, the instruments of God's administration, and so far alluring the necessity of religious belief for social stability (bk. viii.). Of two chapters criticizing the Confrancian school one survives, though Chinese editors are inclined to deny this nature to his remarks. The whole body of Miehus deserves Legge's praise of him as 'an original thinker,' who exercised a bolder judgment on things than Miehus or any of his followers.

MICMACS.—See Algonquins (Eastern).

MIDRASH AND MIDRASHIC LITERATURE. — The term midrash (from the root davrash, 'to seek,' 'inquire') signifies 'research,' 'inquiry,' 'study.' Applied by the Chronicler to historical writings ('the spirit'), the Midrash of the Prophet Is: (2 Ch 12:3) and the Midrash of the book of Kings (2 Ch 24:7), it assumed later, with the advent of the sif'orim, or scriptures, upon the stage of Jewish history, the connotation of free exposition or exegesis of Scripture, eventually becoming a general term for pure theoretical study as opposed to a practical pursuit of knowledge. From the latter usage the Jewish academy received its name beth ha-midrash, 'house of study.' In a narrower sense, midrash is employed to mean any specific exposition of a Scriptural passage differing essentially from the p'shalim, the literal meaning (the plural form in such ease being midrashot), and the name is then transferred to a collection of such free expositions, known collectively as midrashim, Midrashic works.

The intellectual activity of the Rabbis with regard to this free exposition of the Bible was developed along two different lines, the Haflkah and the Midrash, and a few brief remarks on the basic differences between these two currents of Rabbinic thought, flowing in parallel streams, are of paramount importance. Reduced to their bare etymology, the terms signify halakhah, 'way of action,' halakhah, a rule of conduct; haggadah (also known in its Ara'mic form aggadah or agadah), 'narrative,' 'explanation.' The Halakhah confines itself to the legalistic aspect of the Scriptures; the Haggadah to their moralizing and edifying aspect. From the Rabbinic standpoint, the Bible is a microcosm in which is reflected every move and event of the great universe. One teacher comments: 'Turn it, and again turn it; for the all is therein, and the secret of the ages.'

It is prescribed (Neh. 8:8) to derive this word from the toledot mogen sk'it, 'the text explains that,' in use in the earliest Midrashic works.

The deeper aspect of the Halakhah was its teaching of the inner meaning of the Law, as against the p'shalim, and the Midrash is the explanation of the embarrassment; like a hammer which strikes the inherent sparks from the rock, it is possible to unravel all the secrets which lie beneath the surface of the cold letter of the text (Sokh. 54a). The Halakhah takes up this work of rekindling the mystic spark of knowledge in the legal field; in all other fields of human activity that task is undertaken by the Haggadah. The Halakhah relies, for its powers, mainly on the intellectual and logical faculties of the man; the Haggadah on the imaginative and emotional faculties. The Halakhah strives to preserve the letter of the law by insisting on the observance of all the details in the ritual; the Haggadah, by a well-defined analysis of the relation of man to his environment, seeks to preserve its spirit.

Midrashic study, therefore, assumes a twofold aspect. On the one hand, it is concerned with the evolution of legalism—the Halakhah; on the other, it centres about the problems of God, man, and the universe—the Haggadah. The origin of Midrashic study is shrouded in the gloom of antiquity. The Rabbis themselves often assign Midrashic interpretations of Scripture to Biblical personages, but such statements are not to be taken at face value. A noteworthy instance of this occurs in the Mishna (Shabb. 6:6): 'This is the midrash which Jehoiada, the high-priest, taught.' By such assertions the Rabbis probably meant to emphasize the continuity and binding force of the traditional law. There can be no doubt, however, that this free method of inquiry into Scripture was well established during the period of the early scribes, the men of the Great Synagogue, who took up the constructive work initiated by the Rabbis. Daniel uses Midrashic exegesis quite literally in interpreting the words of Jeremiah (23:29, 29) in his famous prophecy of the weeks (ch. 9). With the advent of the scribes Midrashic study becomes a permanent institution in the Jewish intellectual world and passes through its process of evolution during the succeeding ages. Three historical periods are generally distinguished: (a) the period of the sif'orim, or scriptures, 400 B.C.-A.D. 10; (b) the period of the Talmud, 10-500; and (c) the period of the Amoraim, later Rabbinic authorities, A.D. 500-950.

The historical side of the development of Midrashic study has been ably dealt with in the works of L. Zunz, Die gottdienstlichen Chrestomathien, 1892; Z. Frankel, Hesed ut'Hegodes in Mischna, Leipzig, 1859, and Introductio in Talmud Hierosolymitamnun, Breslan, 1870; D. Hoffmann, "Zur Einleitung in die halachischen Midrashim" (Buehne des Rabbiner-Seminars zu Berlin), 1887; and especially in the works of W. Bucher, Die Agada der Tannaiten, Strassburg, 1903, Die Agada der babylonischen Amorier, do. 1874, and Die Agada der palastinischen Amorier, do. 1892-99. Only few traces remain of the Midrashim of the early scribes (cf. Mishnah Sheiti, viii.; Malakht Sheti, v. 104). During the second period, the Tannaitic, Midrashic study must have developed to grand proportions, as is evident from the fact that the various schools of Rabbis, beginning...

2 The following passage is of interest as confirming this position. Rabbi Levi says: 'We have received this midrash from the men of the Great Synagogue. Wherever Scripture uses the expression 'and it was,' it has a deeper meaning; w. H. Gaster, "The philosophical study of the megillot," (Signs of the Jewish Fathers, ed. C. Taylor, Cambridge, 1897, p. 48). On the Elijah character of the prophetic spirit, cf. I. J. Wise's Introduction to the literature of the OT, Edinburgh, 1913, p. 529.

3 Cf. W. Bachor, Die exegetische Terminologie der juedischen Traditionsliteratur, Leipzig, 1899-1900, i. 102.

4 The etymology of this word or phrase is debatable. For the meaning 'definity' (Mishnah, 106), parallel passages on the authority of a number of different teachers are cited (cf. Exeget. xi. 2; Wayikrah, xi. 7; Ruth, iii. 7; Esther, i. 10; P'ukkath Rabba, i. 7)." Estor Rabba, i. 10; P'ukkath Rabba, i. 5. In these periods the meaning of the Babylonian Rabbis is again that of the Midrash (cf. N. Krochma, Morch Nebkhit ha-Zeman, Warsaw, 1894, p. 223).
1. Halakhic Midrashim.—The legalistic exegesis of Scripture did not proceed in an unsystematic manner, but rather as a consequence, the results of its work to the next in the form of rules of legal hermeneutics which were derived from a colation of similarly worded passages in the Pentateuch. Accordingly, the school of Hillel, at the beginning of the lifetime of the Haggadic commentaries, left seven such rules, which, in the school of Rabbi Ishmael, were later amplified into thirteen. These are either based on some logical syllogism or of purely exegetical character. Thus the steps of the school of Hillel embrace the following: (1) the inference from minor and major (at the bottom of which is a fortiori reasoning); (2) the analogy of expressions; (3) the generalization of one special provision; (4) the division of two special provisions; (5) the effect of general and particular terms; (6) the analogy made from another passage; (7) the explanation derived from the context.

From the time of Rabbenu Bahya, a complete commentary on the legal portion of the Pentateuch was issued, the following parts of which have been preserved.

(a) The Meshilta (Aramaic for ‘rule’ or ‘measure’), which is the halakhic work extant, is a running commentary to the legal portions of Exodus. It begins with the injunction concerning the Passchal lamb in 12th, and ends with the injunction concerning the kindling of fires on the Sabbath (69). A large portion of Haggadic material has also been added. In the Meshilta, as well as in all the other Halakhic Midrashim, the activity of the Rabbis in the legal field is analyzed; in the Mishna it is synthesized. The Meshilta went through the hands of later redactors, who work is still traceable. The edition princeps was Constanti- nople, 1515, and the two critical editions are Meshilta . . . von I. H. Weiss (Vienna, 1865) and Meshilta de Rabbi Ishmael . . . von M. Friedmann (1879).

(b) The existence of a commentary to Leviticus from the same school is posited by Hoffmann (‘Einleitung,’ pp. 72-76) from fragments preserved in various places in Rabbinic literature.

(c) The Midrash Rabbah from the same school is the Sifre to Numbers, forming a running commentary to 5-35 with omissions. The work is generally bound together with the Sifre to Deuteronomy, and both were, for a long time, considered of similar origin. The latter work, however, originated in the school of Rabbi Akiba. The name Sifre probably means ‘books.’ The first edition was printed in Venice, 1546, and a critical edition was issued by M. Friedmann, Sifre de Rabbi Akiba (1879).

(d) Fragments, from the same school, of a commentary to Deuteronomy were published by D. Hoffmann, in Jubeschrift zum sechzigsten Geburtstag des Dr. Israel Hildesheimer, Berlin, 1890, pp. 1-32.

Opposed to the methods pursued by the school of Rabbi Ishmael was the more rigoristic school of Rabbi Akiba. The latter, in expounding the law, followed a method known as explaination and limitation (προσκεκλημένος τον κύκλο), introduced by his teacher, Nahum of Ginzo. According to this system, it was necessary to consider the amplifying or limiting value of certain particles used in the Pentateuch (cf. 1. 371-410), and when considering the question of the passage, in order to include the additions of tradition or to exclude what it no longer sanctions. Thus the particles ‘even,’ ‘every,’ ‘also,’ ‘with’ were considered as amplifying, the particles ‘but,’ ‘only,’ ‘from’ as limiting hand over hand.

Rabbi Akiba’s disciples included the most distinguished teachers of the Law, such as Rabbi Meir, Judah ben Hai, Simeon ben Yoḥai, and Yosé ben Ḥalata. His disciple, Aquila, followed his methods of exegesis in his Greek interpretation of the Old Testament. The school of Rabbi Akiba the following Halakhic Midrashim have been preserved: (i.) the Mehilta of Rabbi Simeon ben Yoḥai on Exodus, contained in the Midrash haGadol, and published by D. Hoffmann (Mehilta de Rabbi Simeon b. Yoḥai, Frankfurt a. M., 1903); (ii.) the Sifre or Tosefta Kōhānīm, ‘the Law of the Priesthood,’ which is a most complete running Halakhic commentary to Leviticus, and was edited by Rabbi Hylah (middle of 12th cent.; cf. Hoffmann, Einleitung, pp. 222); the edition princeps was Venice, 1545, and the standard edition is Sifre, Commentar zu Leviticus . . . nebst Erläuterung des R. Abraham ben David u. I. H. Weiss, herausgegeben von M. Friedmann (Vienna, 1862); (iii.) the Sifre Zatā, the Halakhic commentary to Numbers from the school of Rabbi Akiba, existing only in fragmentary form in various collections, foremost among which is the Toldoth haze-Avot, the concern of which, expression Zatā, ‘smaller,’ to distinguish this Midrash from the Sifre to Numbers mentioned above (cf. Hoffmann, ‘Einleitung,’ pp. 59-66); and (iv.) the Sifre to Deuteronomy, which is the legal commentary to this book issued, at the time of Rabbi Akiba, usually bound with the Sifre to Numbers emanating from the school of Rabbi Ishmael (cf. above).

These Midrashic collections are but small remnants of the great number of such works which the ravages of time have destroyed. They were compiled, for the most part, during the first two centuries of our era. While their scope is primarily Halakhic, the Haggadic content in each instance forms no mean proportion, for the Rabbis felt themselves bound by no rigid rules in arranging their material. The later Mishna and Talmud are similar extensive collections which comprise the greatest efforts of the Rabbis in the realm of Halakhah and Haggadah.

To illustrate the methods of the Halakhic Midrash the following passage, in which the legal aspect of tort is discussed, will be of interest:

"Eye for eye" (Ex 21:23) means a money-compensation. This, however, is a mere assertion; perhaps we are actually to understand the passage in its literal sense. Says Rabbi Eleazar: Scripture unite in one passage (Ex 21:23) the two injunctions, 'he that killeth a beast shall make it good; and he that killeth a man shall be put to death.' For what purpose is this collation? In order to establish a like precedent for the laws of tort in the case of man and beast. Just as the damage inflicted on a beast is punishable by a fine, so the damage inflicted on a human being is punishable by a fine." Rabbi Tarshish adds: "In the case where one's beast had repeatedly inflicted death on several human beings, scripture specifically imposes a fine on the owner to escape a deserved death-penalty (Ex 21:23); in this case, where the Scriptural penalty is only the loss of an eye, there is all the more reason to believe that the intention was to allow a money compensation" (cf. Mehilta of Rabbi Ishmael, Mahpotion, 6).

The binding force of the decisions of the Rabbis with regard to their interpretations of the Mosaic law is clearly expressed in the following:

"Concerning the authority of the words of the scribes. Scripture says (De 16:17): 'According to the IDF unto the end of the day, which they shall teach thee.' It does not say which the Torah

shall teach thee, but rather which they shall teach thee. . . . Furthermore, when one reads: "Thou shalt not turn aside from the sentence which they shall shew thee, to the right hand, nor to the left," which means that thou shalt listen to their opinions in reference to what is right and in reference to what is left, if they tell thee that it is right, and concerning the right thee; and if they tell thee that it is left, and concerning the left, thou must yield to their opinion." (Shir ha-Shirim Rabba, i, 2).

2. Haggadah Midrashim. — The Haggadah is the expression of the philosophy of Jewish life, and, as a result, had a wider appeal than the more abstruse Halakhah. With a keen appreciation of the consoling powers of the Haggadah, Rabbi Isaac informs us:

"Generations before, when the penny had a freer circulation, there was a desire to listen to lectures on Mishnah and Talmud; but when the penny is scarce, there is only a desire for Scripture and Haggadah." (Midrash Rabbah, Beshalach hunh-Shelehah).

The Haggadah Midrashim are of two kinds: (1) exegetical, and (2) homiletic. The first form running commentaries to the text of the various books of the OT, and in this respect follow the method of the Halakhic Midrashim. They are, however, frequently introduced by several prayers — opening remarks generally based on some text in the Hagiographa — which is rather a characteristic of the homiletic Midrashim. The latter are collections of homilies or sermons which were delivered during the Shabbath, or other festival services, in the synagogues, and which were based on the portion of the law read during such service. The homiletic Midrashim, therefore, differ essentially, in structure as well as in the treatment of their subject matter, from all the other Midrashic works.

They are regularly introduced by proems in which a passage from the Hagiographa or Prophets is explained and introduced into the context. Several homiletic works (notably the Tanhaimi) also resort to a Halakhic portion of the day is then attached to the opening verses of the portion of the law read during the service, the text being often used merely as a basis for a lesson on morals quite fully developed. The homilies close, for the most part, with verses of encouragement, prophesying the redemption of Israel and the advent of the Messianic era. Two cycles of homiletic Midrashim are in existence: (a) those originating in the three-year-cycle of Sabbath readings, a cycle that begins in the fall of the year in Palestine — the Shabbat cycle — and (b) those based on the readings during the special Sabbath and festivals in the Jewish calendar (occurring before Purim and Passover) and on the festivals and fast-days — the Pesah cycle.

3. Exegetical Midrashim. — Of these the oldest and most important is Bveshith Rabbah, a Haggadic commentary to Genesis. It is the first in the collection known as Midrash Rabbah, or Midrash Rabhah, which comprises ten Midrashic works, one for each book of the Pentateuch, and one for each of the Five Scrolls (the books of Esther, Canticles, Ruth, Lamentations, and Ecclesiastes). The works included in this collection are of a more exegetical character than the homilies, and each position extends from the 6th to the 12th cent. — the period in which the different Haggadah Midrashim were redacted. Of the Haggadah Midrashim Rabhah is, not only the oldest, but the richest from the point of view of subject-matter. Like most of the Midrashim, it had its origin in Palestine, and was put into its final form no later than the 6th cent. Older authorities ascribe the work to Rabbi Hillel, a Palestinian teacher of the 6th cent. (with whose remarks the book opens), but he cannot be responsible for the work in its present form. The historical and legendary content of Genesis furnishes ample material for Haggadic exposition. The ten Midrashic works comprising the collection Midrash Rabbah were printed for the first time in Venice, 1545. The standard edition is that of Wilna, 1878—87. The collection was translated into German by August Wünsche in Bibliotheca Rabbinica, eine Sammlung alter Midrashim, Leipzig, 1880—85, and L. Shapiro translated a part of Bveshith Rabbah into English (Midrash Rabbah, New York, 1906).

Ekhah Rabbati, a Haggadic commentary to Lamentations, is also a very early exegetical Midrash, and is included in the Midrash Rabbah. This work (as well as Bveshith Rabbah) is introduced by many elaborate proems followed by commentary to the text of Lamentations. The book is especially rich in anecdotes and legends of the pathetic events that transpired during the destruction of Jerusalem. A critical edition has been issued by S. Buber, Ekhah Rabbati, Wilna, 1899.

Shir ha-Shirim Rabba is an exegetical Midrash to Canticles, included in the Midrash Rabbah. The entire work is an elaborate allegorical rendition of the relation between God and Israel implied in the dialogues between the Lord and Israel in the festival services. Rosh Rabbah (also included in the Midrash Rabbah) is an exegetical Midrash to Ruth. The book is introduced by a series of proems, and the conversion of Ruth furnishes many a beautiful lesson to the Habbinites. Kohelet Rabbah (also included in the above collection) is an almost complete exegetical commentary on Ecclesiastes. The author utilized much of the material found in the Talmud and in various curricula. The lesson ends, and mentions several sources by name, as a sign of the late origin of the Midrash.

Finally, Esther Rabbah is an exegetical commentary on Esther included in the Midrash Rabbah. This is one of a number of extant Haggadic Midrashim to the book of Esther, very popular because of its use during the Purim Festival. The others were published by S. Buber, Sammlung agiadischer Commentare zum Buche Esther, Wilna, 1896, and A. Buber, Abhandlungen zum Buche Esther, Cracow, 1897.

Besides the above-mentioned Midrashim to the Five Scrolls, Buber published several other extant Midrashim to the books of Canticles, Ruth, Lamentations, and Ecclesiastes, in Midrash Sota, Berlin, 1894.

There are still extant several Haggadic Midrashim dealing with the remaining books of Scripture. There can be no doubt that originally such exegetical works existed on all the books, but they have been lost. Foremost among them is Midrash Tehillim, a Haggadic commentary to the book of Psalms. It is also known as Shheker Tobb, "He that seeketh good" (Ps. 147), which are also the opening words of the book. This Midrash is especially rich in the rhetorical devices employed by the Haggadists — analogies, legends, fables, maxims, etc. A critical edition was issued by Buber (Midrash Tehillim, Berlin, 1901). Midrash to the book of Samuel has, likewise, been preserved, known as Midrash Shnunel. It is a collection of Haggadic comments on the book, gleaned from various parts of Rabbinic literature. The first edition of the work was Constantinople, 1517. A critical edition was issued by S. Buber (Midrash Snimel, Cracow, 1893). Midrash Mikthi is an incomplete Haggadic Midrash to Proverbs. The comments in this Midrash are exceptionally brief, so that the work approaches the character of a Biblical commentary. A critical edition was
issued by S. Buber (Midrashisch, Wilna, 1893). The Midrashim to the books of Isaiah and Job are mentioned by older authorities, and, of the latter, extracts are found in the collection, Yalkut Shim'on Baali, (to Is 61), and in a few other old works. Several fragments of a Midrash to the book of Jonah have been published by A. Jellinek (in Bacher, Midrash, Leipzig, 1883-87, i, 96-145); and by C. M. Horovitz (Sammelband kleiner Midraschim, Berlin, 1881).

Finally, there are in existence a number of works known as Yalkutim, 'collections,' which are in the nature of themasi to all the books of Scripture, and which give (with their proper sources) a wealth of Haggadic material for each of the books. Three of these works are very important: the Yalkut Shim'on Baali, frequently known merely as Yalkut; the Yalkut Meiri; and the Yalkut ha-Maior, ascribed to Rabbi Meir ben Abba Mari, only portions of which have appeared (Buber, Yalkut Meiri. ed., den 150 Paalmen, Berlyczew, 1899), and the Midrash Hagadah on Leviticus, of which the part to Genesis has been published by Schechter (op. cit.), and the part to Exodus by D. Hofmann (Berlin, 1913-15).

4. Homiletic Midrashim.—The purely homiletic Midrashim, according to the Schliem cycle (based on the triennial readings of the Pentateuch in the synagogues of Palestine) are: (1) the Tractatus, (2) Aggadath Bereshith, and (3) the four remaining works in the Midrash Rabbah on the four last books of the Pentateuch. This remains a complete homiletic commentary to the Pentateuch, extant in two versions of two specific families for each of the days of the Pesah cycle. A third version is known to have existed. An important critical edition was issued by Buber (Midrash Tanachuna, Wilna, 1885). Shimon, Rabbah on Exodus, Pirkei Rabbah on Leviticus, Yad Hakohen on Numbers, and Debarim Rabbah on Deuteronomy are four homiletic works of different origin belonging to the same cycle. Of the three homilies to Leviticus are, no doubt, among the most important; a characteristic feature of their conflation of popular sayings and proverbs to illustrate the lesson of the day. The other three works include many homilies that are already found in the Tanhuma collection. Aggadath Bereshith is a collection of homilies on portions of the Pentateuch, which is found in the editions of the Prophets and Psalms, and was edited by Buber (Agadath Bereshith, Cracow, 1902).

Two collections of homilies of the Pesah cycle have been preserved: (1) Pesikta of Rav Kahana, and (2) Pesikta Rabbath. The first consists of thirty-four homilies on the lessons for the special Sabbaths and the feast days. It was edited by Buber (Pesikta, von Rav Kahana, Lyck, 1868). The Pesikta Rabbath is a later work, and also contains homilies for the special days of the Pesah cycle. It was edited critically by M. Friedmann (Pesikta Rabbath, Vienna, 1880).

Style and content of the Haggadic Midrash.

In order to make their teachings most effective, the Rabbis resort to well-known rhetorical devices. Foremost among these is the use of the 'analogy.' The analogy, or extended metaphor, is a well-known figure in literary composition; in the hands of the Rabbis it reached the zenith of its didactic powers. The analogies were drawn from inanimate objects, from the events of everyday life, and, secondly, from the institutions of the Roman empire, during which period the Rabbis lived. On the subject of the political institutions of Rome as depicted in the *mashal* an interesting volume of notes and extracts was made by P. Wilner, *Die Königsgleichnisse des Midrash bezeichnet durch die römische Kaiserzeit* (Breslau, 1903). On the comparative side, Paul Fiebig has contributed an interesting volume on the differences between the Hebraic *mashal* and the classical *gnomen* (Gleichnisse und die Gleichnisse Jesu, Tubingen and Leipzig, 1904). The analogy was most helpful in explaining difficulties in the literal narrative, and often in accounting for extraneous matter in Scripture not quite adaptable to teaching purposes. A few examples will suffice to illustrate the use of the *mashal*.

A* matura* once asked Rabbi Yosef bar Hala, "Why does Scripture say: 'He gave wisdom unto them that know understanding' (Deut 32:8)? It must have been that the passage should read, 'He gave wisdom unto the unwise, and knowledge to them that have no understanding.'"

This Rabbi Yosef met with the following: "Let me give you an analogy. If two men, one poor and one wealthy, were to approach thee to borrow a sum of money, to whom wouldst thou lend the money, to the poor man or to the rich?" "Of course to the rich" was very naturally replied, "But, when thou dost do a loss, he still has assets from which I might recover, whereas from the poor man I could not get a penny." Thenceupon Rabbi Yosef replied: "Would that thy ears would hear what thy mouth doth utter! If the Holy One, Blessed be He, were to grant wisdom to simples and fools, they would have received the wisdom from the public baths, the theatres, and at other unseemly places. He therefore granted wisdom to the wise, who confine it to its proper place in the synagoge and the academy (Kolaheth Rabbi, i. 7).

In commenting upon the fact that the Pentateuch does not enumerate by name the participants in the sedition of Korah, the Rabbis use the following *mashal*:

Rabbi Ippah, the son of Simon, explained, on the authority of Rabbi Levi ben Parha. "This may be compared to the son of a deacon who once committed a theft in the public bath, and the keeper of the bath does not desire, for tactless reasons, to reveal his name; but describes him as "a handsome youth dressed in white." Similarly the Pentateuch does not mention the names of all the participants in the sedition of Korah, but merely describes them in the following terms: "princes of the congregation, called to the assembly, men of renown" (Num 16; i.e., Prithakhab Rabbi, loc. cit.).

Another form of the *mashal* was the fable or parable. Collections of parables are already associated in the Jewish world with the name of the wise king, Solomon, who is said to have spoken 'of beasts, and of fowl, and of creeping things, and of fishes' (1 K 4:23). In the Talmud two collections are mentioned on several occasions—a collection of fox-fables and a collection of date-tree parables (cf. Sukkah, 22a; Britot Bikkurim, 334b). The OT uses the parable in the speech of Jotham (Jg 9:11-15) and in that of Jehoshaphat (2 K 13:14). A casual example will illustrate its use in the Midrash. In the following, the fable of the fox and the fishes is effectively employed by Rabbi Akiba.

During one of the persecutions, when the study of the Torah was forbidden under penalty of death, Pappus discovered Rabbi Akiba hastily engaged in its study. Pappus asked him, 'Rabbi, art thou not endangering thy life in transgressing the royal mandate?' 'Whence dost thou, Rabbi Akiba, reply?' 'Let me give thee an analogy in the following story: Once the foxes, to hide the bank of a river and, beholding the fishes, exclaimed, 'Come out to me, and 1 shall hide you from all harm in the crevices of the rock, where you will never fear capture.' To which the fishes replied, 'Thou, who art the most clever of beasts, art nothing more than a similitude of what we depend on the element of water, and thou wouldst have us leave it for the dry land.' Similarly, the life of Israel is wrapped up

1 Besides the collections already mentioned, there are special Haggadic works of didactic import based upon a large corpus of material in previous works, but not arranged in the form of commentaries to the Scriptures. Such are the Pirke de Rabbi Eliezer, Warsaw, 1825; the Ethyok, em. cit. ed. M. Friedmann, Vienna, 1907; and the whole collection known as Smaller Midrashim, dealing with Haggadic on special subjects, such as the Decalogue, the death of Moses and Aaron, etc., scattered in various collections, and especially in the works of Rabbi Yeshua ben Hala ( loc. cit.); M. Friedmann (Qeret Midraschim, New York, 1915). The Midrash known as Lekhah Tovah (ed. Buber, Wilna, 1883), of Tobias ben Eliezer, is not a true Midrash, but rather a commentary on the Pentateuch.
Another means of impressing a lesson is the aphorism, maxim, or proverb. The OT already contains extensive gnomyology in proverbial form. The wisdom of the great Ben Sira later added to this. The collection of the Jerusalem Targum of the Yerushalmi, Be'Rebbi, 33; Thnonnull, xxii; and Mishnah Sotah, 1, 17. Similarly, "Enough for the servant that he be as his lord" (Mt 1032) is found in Tanhuma, Yeh Lekha, 23; Thnonnull, xxi, 5; and in the Talmud (Be'Rebbi, 558). Only a few of these gems can be quoted here.

A single coin in an empty jar makes a loud noise (Thnonnull, i, 21). "I am not the horse and I am not thy servant" (Thnonnull, ii, 21; Be'Rebbi, Rabbai, xx, 10). "Who to the door which thou hast driven in" (Thnonnull, iii, 14). Woe to the woman who implores the aid of the dead, woe to the hero who intercedes with the weakling, woe to the seeing who ask help from the blind, and woe to the generation whose leaders are women (ib. xxii, 20).

Another rhetorical device for impressing a lesson is the pun. This leads into the field of Rabbinic humour. Scripture has set the precedent for its usage in carefully executed word-plays and puns especially on the names of individuals, and shall I not have gotten? (Heb. kenneth) (Gen 44). God shall enlarge (gefo) Rabbai (gefo) (Gen 97). The prophet Isaiah (67) very eloquently says, 'He looks for judg-ment, but behold oppression is (mpenu)'; for righteousness (mpenu), but beholds a cry (mpenu).

Similarly, the Rabbs take great liberties in punning on proper names.

Wherefore was the prophet called Jeremiah? Because, during his life, Jerusalem was left in a state of ruin (destruction). Or. Thatmud, 6, 2. ‘The daughter of Naomi was Orpah because she turned her back (befo) to her mother-in-law. The name of the other was Ruth, because she was hounded (parshah) the words of her mother-in-law’ (Kath Rabbi, ii. 9).

The Rabbs decide from a pun that the language of the creation was Hebrew.

She shall be called Woman (zakah), because she was taken out of Man (beka) (Gen 2). From this it is evident that the Targum was given in the holy tongue. Rabbai Pinnias and Rabbai Rukkh claims the following on the authority of Rabbi Simon:

Just as the Torah was given in the holy tongue, so was the Tanhuma. Later, at Nain, the holy Rabbi Shlomo, that thou ever heard anyone derive a form yonicha from the word yonah (Gr. yonea, 'woman'); for he knew none derive anthropa from the word anthropa (Gr. anthropa, ‘man’), or parshah from parshah (Heb. yonicha (Gr. yonea, ‘man’), or parshah from parshah (Heb. for ‘man’). But one does say ‘parshah’ (Hec. for ‘woman’). From this (Hec. for ‘man’)” (F. Rebbi, Rabbi, xvii, 4).

The Massoretic variations of the Heb. text of the Bible open up new channels for Haggadic exegesis. The Midrash often assigns explanations for the defective writing in the text or for the marginal variations (kere and kethib). The following is an example:

"When it giveth its colour (lit. ‘eye’) in the cup’ (Pr. 239) is rendered ‘the script reads in the verse’ (Hec. kethib), not ‘in the cup’ (Hec. kere). Reference is made to the drunkard, who giveth his eye in the cup; and, on the other hand, to the merchant who fixeth his eye on his purse’ (Tanhuma Shemai, 7).

The Midrash also employs the well-known kabbalist method of exposition, g'matria, which consists in deducting hidden meanings from the numerical value of the letters in the words or, for folk lore, for primitive conceptions of natural science, etc. Only a few examples can be given here. The following pathetic tale is one of a series of anecdotes depicting the events that transpired during the destruction of the Holy City:

The story is told of Miriam, the daughter of Nadabinoz (Nebuchadnezzar), whom the sages had granted an allowance of 300 (tie) gold denarii for her daily outlay and expenditures, and who maligned them for it in the words ‘This mistreat your own daughters’! (Joi.). This Rabbi Shlomo says to her: ‘If thou know not, O thou fairest among women, go thy way forth by the footsteps of the flock, and feed thy kids beside the shepherd’s tent’ (Cai 19) (Rabbai Shemai, 27).

The superstitions of the day were shared alike by Rabbi and priest. Many are the stories told of demons infesting wells and desert places (Tanhuma, Be'Rebbi, 27; ib. Kolhah, 8), often driven out through the opulent intervention of the Rabbi who called magical formula to his aid. Very often the heathen practices of antiquity are recorded. Thus, in Lekh Rabba Shemai (poem 33), it is said, ‘The Arab slays a dog, and in the following year the river is dried for the purpose of anuring future events.’ This practice is well known to students of Kulturgeschichte.

Philosophy, primitive conceptions of science, natural hi-story—all enter to the one end of teaching a lesson in ethics or morals, which is ever the ultimate aim of the Haggadic Midrash.

LITERATURE.—This is given throughout the article.

SOLOMON T. H. HERWITZ.

MIKIRS.—1. Name and History.—The people known to the Assamene by the name Mikir are one of the numerous Tibe-Burman races of Assam. Their own name for themselves is Arung, which (like many other names in Assam and elsewhere) means ‘man’ in general. Their numbers, according to the Census of 1911, were 106,239—a large total for a homogenous Tibe-Burman group in Assam; of these 756 were classed in the returns as Hindus, 1182 as converts to Christianity, and the remainder as animists. The race occupies the central portion of the Assam range, looking north to the Brahmaputra, and the isolated mountainous block south of that river between Nowgong and Sibsagar called the Kangla Hills; a few have settled in the plains of Nowgong and Kainirup, and north of the river in the Darrang district, and follow plough cultivation, but the main strength of the tribe is found in the hilly region of the Kainirup (about 11,000), Khais and Jaintia Hills (15,000), Nowgong (45,000) and Sibsagar (25,000) districts. They are essentially a hill race, practising the form of cultivation by axe, fire, and hoe known as jhum. Their remembered history, like that of most tribes of the kind, goes back a very short distance in time. There is reason to believe, from the local names of places and streams, that they once occupied the

1 In Heb. they have numerical values.
southern portion of the hill tract north of the Kachar valley, where they are not found. It is certain that they afterward resettled in mass in the eastern portion of the Jaintia Hills, as subjects of the Jaintia Raja; and a still clearer tradition relates that, being harassed by warfare between hostile Mahas (lithic) chiefs, they resolved to move into territory governed by the Ahoms, and theremon migrated into the tracts which they now hold in the Nowgong and Sibsagar districts. This migration probably took place, as can be gathered from the Ahom annals, about A.D. 1765. As the figures just given show, large numbers continued to live in the Khâsi and Jaintia Hills and along the Kamrup border, which tract they call Nihang, the territory into which they migrated in the east being called the trien. Here they have a peaceful and unwarlike life, and are said to have given up the use of arms when they placed themselves under the protection of the Ahom kings. Their traditions tell of fights with the Hill Kachar, or Dihong, in the olden days, and to the migration into Jaintia territory, or at any rate to that into the Ahom dominions.

2. Physical characteristics. — Physically they present the ordinary features of the Tiheto-Burmese races of Assam; physically, an average height of about 5 feet 3 inches, cephalic index 77.9. The nose is broad at the base, and often (but not always) flat, with a nasal index of 83-1 and an orbital-nasal of 107.7. The hair is generally straight, and is worn. The front of the head is sometimes shorn; the hair is gathered into a knot behind, which hangs over the nape of the neck. The body is muscular, and the men are capable of prolonged exertion. They have been largely employed (like the Khâsis) as porters in frontier expeditions in Assam, and carry heavy loads, the burden being borne upon the back and secured by a plaited bamboo or cane strap passing round the shoulders. This, however, is the general method of carriage from Nepal eastwards along the whole sub-Himalayan region, and not peculiar to the Mikirs. The staple food is rice, fish, and the flesh of pigs, goats, and fowls, but meat is chiefly eaten by the Khasis and the Jaintias. The flesh of cows is not eaten, nor is milk drunk. Large quantities of rice-beer are made and consumed, being prepared by each household, and spirit is also distilled. Opium is used to a large extent, as by other races in Assam. Tobacco and betel-nut are also commonly used.

3. Marriage and inheritance. — The Mikir people are divided into three sections, called Chintong, Ronghang, and Amri. These, however, are only local names, the first representing that portion of the tribes inhabiting the Mikir hills, the second the central portion, in the hilly parts of Nowgong and N. Kachar, and the third those in the Khâsi and Jaintia and Kamrup Hills. The whole tribe, wherever settled, is divided into five large exogamous groups, and these into sub-groups. The five main groups are called Ingdi, Terang, Lekthe or Ingdi, Teron, and Tinoung. Within each of these groups intermarriage cannot take place; hence a child of one of these groups is spiritually, and usually in law, the child of the father's group. The most usual marriage, however, is between first cousins on the mother's side, and the maternal uncle occupies a privileged position at the funeral ceremonies; this may be a on-to-on adopted from the Khâsiâs, among whom the strict matriarchal system prevails. Ordinarily the son on marriage brings his wife home to his parents' house; but, if he has to make a payment to his father-in-law, he may stay a year, two years, or even for life, according to agreement, giving his work to the family in return for his bride. There are traces of a former condition of things analogous to that which is found among the Naga tribes, in which the boys of a village lived together in the terang, or bachelors' house, and the unmarried girls are said also to have had their own terang or to have lived in that of the boys, when resolved to move into territory governed by the Ahoms, and thence to move into the tracts which they now hold in the Nowgong and Sibsagar districts. This migration probably took place, as can be gathered from the Ahom annals, about A.D. 1765. As the figures just given show, large numbers continued to live in the Khâsi and Jaintia Hills and along the Kamrup border, which tract they call Nihang, the territory into which they migrated in the east being called the trien. Here they have a peaceful and unwarlike life, and are said to have given up the use of arms when they placed themselves under the protection of the Ahom kings. Their traditions tell of fights with the Hill Kachar, or Dihong, in the olden days, and to the migration into Jaintia territory, or at any rate to that into the Ahom dominions.

2. Physical characteristics. — Physically they present the ordinary features of the Tiheto-Burmese races of Assam; physically, an average height of about 5 feet 3 inches, cephalic index 77.9. The nose is broad at the base, and often (but not always) flat, with a nasal index of 83-1 and an orbital-nasal of 107.7. The hair is generally straight, and is worn. The front of the head is sometimes shorn; the hair is gathered into a knot behind, which hangs over the nape of the neck. The body is muscular, and the men are capable of prolonged exertion. They have been largely employed (like the Khâsis) as porters in frontier expeditions in Assam, and carry heavy loads, the burden being borne upon the back and secured by a plaited bamboo or cane strap passing round the shoulders. This, however, is the general method of carriage from Nepal eastwards along the whole sub-Himalayan region, and not peculiar to the Mikirs. The staple food is rice, fish, and the flesh of pigs, goats, and fowls, but meat is chiefly eaten by the Khasis and the Jaintias. The flesh of cows is not eaten, nor is milk drunk. Large quantities of rice-beer are made and consumed, being prepared by each household, and spirit is also distilled. Opium is used to a large extent, as by other races in Assam. Tobacco and betel-nut are also commonly used.
ness, who declares (after the appropriate incanta-
tions) that Arman-kēthe or Pōng wishes to join the
hostile camp and the warrior his former
victim would generally be satisfied with Hānpāh and
Mukrang.
The village or communal gods are called Rēkānglōng (= 'mountain of the community') or Umlong-pi (= 'great mountain'), and Arman-pāra, already mentioned. The Mikir villages are nomadically,
moving from place to place as the soil in the
neighbourhood becomes exhausted. Rēkānglōng is the
god of the hill on which the village stands, the dēu
bēo, with whom they have to be at peace. He is
worshipped in the field, and only men eat the
sacrifice, which is a fowl or goat per house once a
year. Arman-pāra is the name of a god who
takes a hundred shares of rice, rice-flour, betel-nut, and
the red sphatik of the plantain-tree cut up: the
name seems to be a collective, and to indicate all
the divine powers in the neighbourhood. He is
worshipped with a white goat and a white fowl.
These two gods figure particularly at the Rōng-ker,
or great festival annual, celebrated for the most part
in June at the beginning of the year's rainy-season
cultivation, or in some villages during the cold
weather. The sacrifice is eaten in common by
the men only of the village, and they keep apart from
the women of the night of the festival. The
observances correspond with the custom of genua
(village tabu), which is common among the
neighbouring Naga tribes.
The gods named above are all invoked and pro-
pitiated to guard against an avert misfortune, both
generally and specially. There are, besides,
numerous gods who take their titles from the
special diseases over which they preside or which
they are asked to avert; such gods are called after
tropical, cholera, leprosy, elephantiasis, etc. Each
worship has its appropriate ritual, often of a
complicated character. Among these deities per-
haps a trace of Hinduism may be discovered in the
name for smallpox, pi-dāmar, 'the mother's flowers';
in Assamese and Hindi the goddess of smallpox is
known as 'the mother' (Mātā, or Śītālā Māi). It
is difficult to draw the line which divides the gods,
diseases, and female spirits who are the after-hyranges
of the demons or devils, kēt, who are also said to
cause continued sickness. They too are propitiated
with sacrificial offerings in the same manner as the
gods.

An interesting name in the list of gods is Lām-
pāh, 'the head or master of words,' a power proba-
bly of modern origin. He is the deity sacrificed
to by a man who has a case in court; the sacrifice
is a young cock, which should be offered at night,
secretly, by the sacrificer alone, in a secret place.
There is no worship of trees or animals, and the
gods have no visible shape, temples, or shrines.
Idols are not in use. At the time of the sacrifice
the gods to whom it is offered are addressed in set
forms of prayer by the worshipper, but there does
not appear to be any separate class of priests
charged with the sacrificial ritual. The animal
sacrificed is beheaded, as in Hindu sacrifices, by a
stroke delivered from above with a heavy knife.

Divinities.—The most important person with
reference to the worship is the diviner (nēk, fām,
achē-pi), who decides on the deity to be invoked.
Here, again, there does not appear to be any caste
or hereditary function: any one may be an achē.
The gods are of two sorts, an inferior, generally
a man, called mgang-lehōng-ahom, 'he who ingests
gains of rice,' whose art is acquired by
instruction and practice; and the superior, called
lohet or lohōpi, invariably a woman, who works
under the inspiration or afflatus of divine powers.
The services of these persons are generally sought
in cases of sickness, the lohet being inquired of in
the more serious cases.

The hunter practitioner proceeds by arranging grains of
rice, taken at random from those left in the pot, in particular
fashion in small heaps; the grains in the heaps are then
counted, and, if the odd numbers predominate, the omen is good.
Cowries are sometimes used instead of grains of rice. Another
way, apparently borrowed from the Khānas, is to arrange in a circle
equidistant from a point marked on a board, as many little beads
as there are gods suspected in the case, and then called by the name
of a god. An egg is then sharply thrown at the point marked in the
middle of the board, when it breaks and the egg yolk is scattered,
thick which receives the largest splash of yolk, or towards which the largest and longest splash points,
indicates the god responsible for the affliction. Another mode of
procedure is to hold up in the hand a long iron or wooden stick
special form, called the mokir, which is invoked by a spell to become inspired
and to speak the truth. The holder then asks questions of the
mokir as to the probability of the sufferer's recovery and the god
responsible for his sickness, and the mokir shakes at the correct
answer and name.

The lohet is an ordinary woman (not belonging
to any particular family or group) who feels the
divine afflatus, and, when it is upon her, yawns
continually and calls out the names and will of
the gods. Her assistance is invoked when witch-
craft (miqā) is suspected.
She latches her hands, feet, and face in water in which the sacred boil (gomān samāt), the top of a
bubbling water which has been steamed, and begins to shake and yawn. A goblet of rice-beer is brought, of which she drinks some, and begins to
fall out the names of gods, or deities, or answers
now inspired, and, when questioned, indicates, by indecises and
riddling answers, the enemy who has bewitched the sufferer, or the
gods to whom sacrifices must be offered.

Charms are much used for the treatment of disease,
as they are everywhere else in India, and do not
present any special features. Both herbal and
incantations take the place of ordeals, the speaker
inviting evil on himself if he swears falsely or fails to
perform a promise.

Funeral ceremony.—The most elaborate
celebration is the funeral ceremony, of which a long
account, full of detail, is given in Stack and Lyall's
monograph on The Mikir cited at the end of this
article. Much money is spent upon it, and it is
spread over several days. It is the only occasion
on which dances are performed by the young men
of the village or music used, except (to a much
less extent) at the harvest-home. The ceremony is
considered obligatory in all cases except that of a
child who has been born dead, or who has died be-
fore being cut in two, when the body is buried without any ceremony.
Victims of smallpox or cholera are buried shortly
after death; but the funeral service is performed
for them later on, the bones being dug up and duly
cremated. When a person has been killed, or if the
body or clothes are found, they are buried at a
distance from the village, because the tiger is sup-
posed to visit the burial-place. Such persons
cannot gain admittance to Jôm-ārōng unless elabora-
ted funeral and expiatory ceremonies are performed
for them. Being killed by a tiger is generally im-
plicated to the victim's sin; his spirit is believed to
dwell in the most dreary of the places where dead
men's spirits go. Except in such cases, the dead
are disposed of by cremation, the burnt bones
being afterwards buried.
What is chiefly noticeable about the ceremony,
as described in the work referred to, is the confident
assumption of the continued existence of the dead
person's spirit, for whom food is specially prepared
to be eaten by the nēkpi, or diviner; and the
insistence upon the due performance of the rites
in order to get admission to Jôm-ārōng; and the
use of dancing, which is marked by its name
(ekomāng-khan) as adopted by the Khānas, as
the keynote of the ceremony. If the deceased is a person of
importance, a still more elaborate ceremony is
required, and monumental stones, upon the model
of those erected by the Khānis, are set up.
Ideas of fate of life.—Apart from the ritual of
the funeral, the Mikirs seem to have a strong conviction of the survival of the dead. They speak of having seen the 'shade' or 'image' (ārjóna) of a dead man; a sickly or neurotic person catches such glimpses in the house, on the road, etc. Phārīlō, 'spirit,' is both of liminous and disembodied. They say of one deceased, 'Last night in my spirit I saw him,' where phārīlō is the spirit of the sleeping man. When such glimpses are experienced, betel and food are set aside in the house, and after a time thrown away. After a death a chant is composed, setting forth the parentage and life of the dead, and ending: 'You will now meet your grandparents, father, deceased brother, etc., and will stay with them and eat with them.' As already mentioned, food is regularly provided for the spirit until the completion of the funeral; after that there are no regular offerings, but occasionally a man or woman puts aside from his or her own share of food a portion for the dead, as, e.g., when another funeral reminds them of those who have died before. There is said to be no fear of the dead coming back to trouble the living. The Mikirs' conception of Jōm's town is that everything there is different from the earth-life. An Rēs, perhaps borrowed from the Brahmins, is said to be the spirit of the dead. The Mikirs say that the spirits of the dead do not stay for ever in Jōm-ārōng, but are born again as children, and this goes on indefinitely. On the other hand, Stack records, in the words of his informant, the following:

'The same principle is given to children born afterwards, and say that the dead have come back; but they believe that the spirit is with Jōm all the same' (Mikir, p. 20).

8. Conclusion.—The unwarlike character of the Mikirs has prevented them from becoming, like their neighbours, the Nágas and Kuki, split up into different units, with hostile feelings towards each other, the community, and with language and habits gradually diverging more and more from the common standard. Their speech is very uniform wherever they are found, and a large amount of co-operation and friendly intercourse exists among them. On the other hand, the group differs very much, in habits, institutions, and particularly in language, from the other tribes by whom they are surrounded. A study of their speech and social institutions has led to the conclusion that they should be classed with those tribes which form the connecting link between the Nágas and the Kuki-Chins, and that the preponderance of their affinities lies with the latter race, especially with those dwelling in the south of the Arakan Rima range, where the Chin tends to merge into the Burman of the Irawadi valley.

LITERATURE.—All that has as yet been put on record about the Mikirs is summarized in the volume in the series of Assam Ethnographical Monographs entitled The Mikirs, from the papers of E. Stack, edited, arranged, and supplemented by C. J. Lyall, London, 1906. C. J. LYALL.

MILINDA.—Milinda is the Indian name for the Greek king of Bactria called in Greek Menander. When Alexander's empire broke up on his death, Greek soldiers on the east of India founded separate States, and the names of about thirty of them and their successors are known by their coins. Of these the most powerful and successful was Menander, who must have reigned for at least thirty years at the end of the 2nd and the beginning of the 1st cent. B.C. He died probably about 85 B.C., but we know neither the boundaries of his kingdom nor how far he was merely overlord, rather than the actual administrative sovereign over the various portions of his vast domain. He is the only one of the Greek kings of India whose name has survived in India; and he is there remembered, characteristically enough, not as a political ruler, nor as a victor, in war, but as an intelligent and sympathetic inquirer into the religious beliefs of his subjects.

This has found expression in a very remarkable book, the Milinda Pañha ('Questions of Milinda'). Just as in one of the most popular of the Dialogues of the Buddha Sakka, the king of the gods, is represented as coming to the Buddha to have his doubts resolved, so in this work the Greek king is represented as putting puzzles in religion to Nāgasena, a wise teacher among the Buddhists of his time. In it, the king submits to Nāgasena the difficulties which he has met in the course of his studies. The discussion of these difficulties leads up to and culminates in the meaning of nirvāṇa, and closes with an eloquent peroration on the subject of the Self.

Having thus brought his reader up to the bracing plateau of emancipation, the author proceeds in the next book, the Anumanā Pañha, 'Problem of Inference,' to describe what is to be found there. In an elaborate allegory of the City of Five Kinds of Life he sets out the various mental and moral treasures enjoyed by the arahant who has reached in this life the ideal state. The next book, the Dhutagun, 'Extra Vows,' is devoted to an exaltation of those who have adopted the ascetic practices so called. The last book, incomplete in our existing MSS., consists of a long list of types of the arahant, showing how he has, e.g., five qualities in common with the ocean, five with the earth, five with water, and five with fire. The details of sixty-seven such similes are given. Of the remaining thirty-eight only the list is given, the detailed explanations being lost.

There are peculiarities both of merit and of defect in this book. The author, or authors, have an unusual command of language, both in the number of words used and in the fitness of the words chosen in each case. There is great charm in the style, which rises occasionally throughout the book to real eloquence; and there is considerable grasp of the difficult and important questions involved. On the other hand, there is a great weakness in logic. The favourite method is to invent an analogy to explain some position, and then to take for granted that the analogy proves the position taken to be true; and quite often, when the right answer to a dilemma would be a simple matter of historical criticism, the answer invented savours of casuistry or is mere play, or the ambiguity of words. Then the author, though he naturally avoids the blunders so often repeated in European books against Buddhism—that nirvāṇa, e.g., is a state to be reached by a 'soul' after it has left the body, and not by a victor, in war, or by a priest, or by a 'monk'—does not stand on the ancient Path. His description of the arahant, whom he calls a yogi (a term not found in the older books), lies more stress on those qualities afterwards ascribed to the bodhisattva (q.v.) than on those belonging to the Path, or mentioned (of the

1 See the authorities quoted in Bühler, Faust, Questions of King Milinda, i. (ASB xxi.) pp. xvii-xviii.
MILINDA

arhat) in the Nāgārjuna. His Buddhology has advanced beyond that of the Nāgārjuna. The ethics of the Aryan path are barely referred to; the doctrine of emanation, the necessity of seeing things as they really are (yathābhūtātmanam yā jñanam), is not even mentioned, notwithstanding its cardinal importance in the earlier teaching. The author devotes a whole book to the dhātāigus, a term not occurring in the Nāgārjuna, and in that book manifests a spirit entirely opposed to the early teaching. All these peculiarities of style and mental attitude are uniform throughout the work. It would seem, therefore, most probable that it was the work either of one author or of one school within a limited period of the history of that school. Probably the latter will eventually be found to be the right explanation.

The work is four times quoted as an authority by the great Buddhist commentator, Buddhaghoṣa. It is the only work outside the Pali canon which he thus quotes. It is also quoted as an authority in the Abhidharmapada commentary (l. 127). All these references may be dated in the 5th cent. A.D. They are taken from the second, third, and fourth books, which at least must be considerably older than the works in which the Milinda is quoted as an authority. None of the quotations is exactly word for word the same as the corresponding passage in Trenckner's edition of the text, and the present writer has pointed out elsewhere the various interpretations possible of these interesting, though slight, discrepancies. In one passage (p. 92 of Trenckner's text) Buddhaghoṣa seems to have the better reading. Nāgārjuna is also quoted in the Abhidharmakosā-kosāṅgukīya, a Sanskrit Buddhist work which may be dated in the 6th cent. A.D. There are also several incidental references in Chinese 'translations' of Indian books. When we know the dates of the latter, and can be sure that the references really occur in them, these references may have importance.

At the beginning of the work (p. 2 of the text) there is a table of contents giving the titles of the subdivisions of the book. The editor, V. Trenckner, also gives us titles, which differ, however, from those in the table of contents given in the text. Hinayāna Buddhists translate into Sūrābhi's 'likewise seven titles, presumably from the much older Pali MSS which he used. These titles differ from both the other lists. Trenckner, who has certainly made one glaring mistake (p. 96), gives nothing for his titles; and, as he used only three of the seven MSS of the work known to exist in Europe, one would like to be informed also as to what readings are given by the first four. Even for the canonical books the discrepancies in the subsidiary titles are very frequent, and it is often probable that such titles are later than the text to which they refer. It is clear that, pending further information, Trenckner's titles to the divisions of the Milinda cannot be relied on as original.

E. Nanjio, in his most useful catalogue of Chinese Buddhist books, gives under no. 135 the title of one called Nāgā śrīkāla Maṅgala. Nāgārjuna is the Bhikkhu's book. The attempt to reproduce one sound of the words of this title suggests that the words before the translator must have been, not Sanskrit (bhikkhu), but Pali (bhikkhu) or some other Indian dialect akin to Pali. J. Takakusu has discussed the date of the work, which purports to be a translation of some Indian book with the same title. It is first mentioned in a catalogue dated A.D. 783-804, and some translations exist. But, though the compilers of all these catalogues are usually careful to give the name or names and the date of the translators or authors of the books which they mention, they do not do so in this case. They add, however, a remarkable note that the work was long lost, and we register it as belonging to the Eastern Pāli dynasty (A.D. 317-429).

So we have a book known to have existed at the end of the 8th cent., and then believed, on grounds not recorded, to have existed in the 4th cent. A.D. There is no evidence that the original was in Sanskrit. There are two recensions of this book in Chinese, the longer one about half as long again as the shorter one. The difference arises mainly from the omission in the shorter of two long passages found in the longer. In other matters the two are much the same. These omissions are probably due to a mere mistake, perhaps of the translator, of the printer, or the two recensions may be considered as really one. This bears to the Pali text the following relation.

The translation into English by the present writer consists of 580 pages. The Chinese corresponds more or less to 90 of these pages (one recension omitting about 34 of these 90). The paragraphs corresponding in Chinese and Pali are those on pp. 40-135 of the English version. But there are seven or eight omissions, and three additions of whole paragraphs, and quite a number of smaller variations or discrepancies. It is clear that there is some connexion between the Chinese and Pali books. It is possible that the Indian original (for there was only one) of the Chinese book may be the original out of which the Pali was developed, mainly by the addition of the last three books. It is equally possible that the Indian work translated into Chinese was itself derived from an older work in seven books, and that its author or authors omitted the last three books as dealing with arhat-ship, in which he (or they) took no interest. This would be precisely comparable with the general feeling in the Buddhist literature of India at the period in question—the end of the 3rd cent. B.C. The doctrine of an emancipation to be reached in life by strenuous mental exertion, was not unnatural, yielding place to devotion in the next life through bhakti, personal devotion to a deity. The psychological details of the old system of self-control rather bored people. So the Milinda may, quite possibly, have been reduced to a short and easy book, with the sting of arhat-ship taken out of it.

A solution of this Milinda problem would be of the utmost importance for the elucidation of the darkest period in the history of Indian literature. Unfortunately, each of the alternatives involves great difficulties, and none of the scholars who have written on the subject has so far been able to persuade any other to accept his conclusions. The evidence at present available is insufficient. When the Milinda has been properly examined, when all the quotations from the Milinda in the Pali commentaries are edited, when all the references elsewhere (and especially those in the numerous Hinayāna Sanskrit works still buried in MSS) have been collected, we shall be better able to estimate the value of the external evidence as to the history of the Milinda literature in India. When an adequate compari-

MILK (Primitive Religions).

That milk should have become an object of sacred importance in the mythology of early man was inevitable. As food, milk was sacred, and so beneficial in every way, has been accorded a special place among the objects of religious veneration by mankind at nearly all stages of its development. Anthropologists have not specifically dealt with the first stages in the domestication of animals, except as a part of the larger question of totemism. There are people who have practically no tame animals, and these are in the lowest stages of savage culture. An observation of O. T. Mason is clearly indicative of where these first stages must be looked for.

Women were always associated especially with the milk and the care of the milking vessels. The observation goes, 'always possessed of the souls of sacrificial animals. Milk taking an important part in their religious belief and ceremonial. It is not clear, however, whether the diverse practices obtaining among the varied races of these continents have any relationship as stages in the evolution of man's religious attitude towards milk. Consideration of the subject from this point of view can be conducted only by the widest survey of the cow and it will be well addressed to the highest form to which religious belief concerning milk has attained and proceed thence to some of the lower forms of the cult.

The use of milk in religion has reached its climax among the Toda tribes of India, in the sanctity of the dairy among these people is the chief element in their religion. The gods take part in the churning, and the dairy organization marks off two great divisions: 'The most important dairy marks off two great divisions: 'The most important dairy among the Todas is the Tarthali, but their dairymen are Tevaih.' [W. H. R. Rivers, The Todas, London, 1906, p. 680]. The milk of the buffalo is sacred. The ritual connected with the buffalo and with the dairy is 'certainly of a religious character,' and there can be little doubt that the dairy formulae 'are intercessory and that they bring the dairy operations into definite relations with the Yoda deities' (ib. p. 299). The dairy are given milk to drink when on the point of death (W. E. Marshall, A Philosopher amongst the Todas, London, 1873, p. 171), and the dead body is taken into the dairy (Rivers, op. cit.). From these facts, carefully marshalled by Rivers, it is clear that these people have developed the sanctity of milk to its highest point. There is an essential feature of organized worship.

There is nothing like this in any other part of the world. It is the highest specialized use of milk in religions observances. The sacred character of milk in other parts of the primitive world is shown by its use in various ceremonies of a religious character; but not in connexion with an organized totemistic cult, as among the Todas. Both in Africa and in India these ceremonies reach a high grade in places, but do not attain the Toda level. Perhaps the royal milk-drinking observances of the king of the Chyoro, a section of the Bantu people in Africa, affords the nearest parallel. It refers to events which preceded the use of milk, but it contains details which bring it within the general condition of the African beliefs. 'They used to get milk from a tree. This was got by squeezing, and the people who drank it were blessed. The Kaffir now drinks a kind of fermented milk, and it is noticeable that, when poured out for use by the master of the household, who is the only one permitted to touch the milk, a portion is always left behind to act as lever' (ib. p. 195). These are clearly religious practices which require further investigation, but in the meantime it is permissible to classify them as less developed in form than the Toda example.

One knows the reverence paid to the cow in India; but, in spite of the attempt of the early mythologists to identify the cow with the higher forms of Hindu religion (A. de Gubernatis, Zoological Mythology, London, 1872, i. 1-41), the fact remains that the cow is not a god. The reverence for the cow is quite human in its character, and the 4th book of the Laws of Manu contains the clearest evidence of this.

Crooke points out that respect for the cow in India is of comparatively modern date, and gives some interesting data to show the lines along which it has developed (PR ii. 226-236). This view is confirmed by the use to which the products of the cow were put. According to Vijn, a house is purified by plastering the ground with cow-dung, and land is cleansed by the same process; cows alone make sacrificial oblations possible by producing sacrificial butter, and among six excellent productions of a cow, which are always produced milk and sour milk are included (Institutes of Vijnan (SBE vii. 1900), xxiii. [1883] 56-61).

On the other hand, the evidence from the Panjabis that, when a cow or buffalo first gives milk after calving, the first portions of milk drawn from her are allowed to fall on the ground in honour of the goddess (O. C. J. Ibbetson, Punjab Ethnology, Calcutta, 1853, p. 114). It is also a protective from the evil eye, and has various uses in magic and divination. This suggests that in the Panjabi milk is on its way towards a definitely religious position.

In Europe the once sacred character of milk is indicated by the evidence of folk-lore, which record-
MILK (Primitive Religions)

The protective measures which have to be taken to secure harm from witches and other malevolent powers (GP, pt. i., The Magic Art, London, 1911, ii. 524 f.).

The best examples are found in Russia, where the people on Midsummer eve drive the cattle through the villages, as also the son of the Pomorian Elatha. It is related of him 'that he arrogated to himself the milk of all the hairless dun cows in the land,' and he 'caused a great fire of ferns to be made, and all the cows in Munster to pass through it, so that they might fulfill the necessary conditions, and their milk become the royal property' (H. d'Arbois de Jubainville, Irish Mythological Cycle, Eng. tr., Dublin, 1903, p. 95). Included in this tradition are the following ritual observances—the restriction to cows of a single colour, the passing through fire to secure protection, and the right of the king to a royal supply of milk. The restriction as to colour also appears elsewhere in Irish folklore (C. Plummer, Vita Sancta Domini Hiberniun, Oxford, 1910, vol. i. p. 153).

The ritual in custom and ritual in myth are parallels, and it would be well to inquire whether in folklore there is more than this suspicion of sanctity in the attitude of popular belief as to milk. The milkmaid is almost everywhere an important personage in the social fabric of the village, and her unselfish share its importance. The present writer differs from Lady Gomme in her explanation of the famous game of 'Milking Fails' as a mere teasing of the mothers (Dict. of Traditional Games, London, 1894-98, s. v.) in that it appears to be a cumulative estimate of the superior value of the milk-pail as an article of domestic use, and it is pertinent to note in this connexion that the Irish chieftain had 'in his dominion a cow of milk' (Lives of Ireland, Dublin, 1855-1901, iv. 311). That milk was poured on the ground is attested by J. G. Dalvell (Darker Superstitions of Scotland, Glasgow, 1855, p. 183), and W. Gregor states that at death the hero is poured out on the ground (Folklore of N.E. of Scotland, London, 1881, p. 296). This must have originally been an offering to the earth-god as in the Punjab. In Ireland it is called an oblation to the fairies (W. G. Wood-Martin, Traces of the Elder Faiths of Ireland, London, 1902, ii. 7), and the fairies are the successors of the gods. It was offered every Sunday on Brownie's stone in the island of Valiny and other islands (M. Martin, Western Islands, London, 1716, i. 67, 159).

This brings us very close to the stage when milk was a sacred object in the cult of the gods. In the Christian Church it was substituted for wine in the elements of the communion. This was afterwards prohibited by canon law (Dalvell, p. 183, quoting Gratian, Decretal., p. 111), but it may be surmised that it originated as one of the surviving rites of ancient pagan religion. St. Bridget was in some degree regarded as the special patron of milk; and in the history of Scotland (A. Carmichael, Carmina Gadelica, Edinburgh, 1909, i. 261-275), and she was at her birth bathed in milk (Lives of Saints from the Book of Lismore, ed. Whitley Stokes, Oxford, 1890, p. 184, 315). St. Bridget is in many of her attributes a pre-Christian goddess, and her association with milk in the surviving forms once more takes us back to ancient pagan religion.

That bathing in milk was also a death rite is shown both in traditional ballad lore and in traditional games. In the beautiful ballad of 'Burd Ellen,' preserved by R. Jamierson (Popular Ballads and Songs from Northern Ireland, etc., Edinburgh, 1886, p. 125), is the verse:

'Tak up, tak up my bonny young son,
Gar wash him with the milk of the cow,
Tak up, tak up my fair lady,
Gar row her in the milk.'

Lady Gomme has analyzed the different versions of the children's game of 'Green Gravel,' and has shown from the general movements of the game that it is derived from a funeral rite. This view is confirmed by the fact that the most constant formula in the game rhymes include the line,

'Wash them in milk and clothe them in milk' (l. 72).

There seems little doubt that these words are survivals of an ancient burial rite.

In the religions of antiquity there is more definite evidence. J. E. Harrison, in his discussion of primitive baptism (Prolegomena to the Study of Greek Religion, Cambridge, 1903, p. 596 f.), asks 'what was the exact ritual of the falling into milk?' Did the initiate fall into a spring of milk, or . . . is the ritual act of drinking milk from the beginning metaphorically described?' and, in spite of a useful parallel from Egyptian ritual, comes to the conclusion that 'of a rite of immersion in milk we have no evidence.' This, however, cannot be quite true if St. Bridget represents, as there is strong evidence to prove, an early Celtic goddess who has brought into her Christian attributes traditions and rites of pre-Christian origin. There is the further example of the Irish milk-slaying themselves from the poisoned arrows of their Fir-Fidga enemies by taking a bath filled with the milk of one hundred and twenty white hornless cows, where the single colour condition is again repeated. The rite of bathing in milk attributed to St. Bridget was certainly not of Christian origin any more than the offering of milk and honey in early baptismal rites was Christian (ib. p. 597 f.), and we must take it that these rites come from early Celtic religion. Milk and honey were made to the nymphs and to Pan (Theoc. Id. v. 53 f. and 58 f.), and to this day in modern Greece they are made to the Nereids (J. C. Lawson, Modern Greek Folklore, Cambridge, 1910, p. 150 f.).

To sum up the evidence—it would appear that in primitive religions there are three stages in the sacred characteristics attributed to milk: (1) where it is a definite part of the dominant religious cult; (2) where it is extensively used in religious ceremonial, but is not an exclusive or predominant element in the ceremonial; (3) where it is looked upon as a religious object, and is, consequently, subject to danger from outside forces, from which it demands various forms of protection. The survey seems to make it clear that the unique example of the Todas is a highly specialized development of the religious conception of milk, and not a normal condition, while the evidence of folklore and of the religion of antiquity leads us to conclude that the endowment of milk with sacred properties arose from its enormous social influences, which led to specialization of its use on solemn and important occasions. This would be the normal position of milk in religion, and the beheading of milk-seers is accounted for by the necessity of protecting it from malignant influences. This is survival from the normal stage, and arises only when it was no longer a protective force itself.

Lituratur.—This is given fully in the article.

1. GOMME.
MILK (Civilized Religions).—1. As food and sacrifice.—Since man is a mammal, milk is universally known; and, as early learned to use the milk of goats, cows, and camels, milk became a natural symbol of nourishment. The ancient Egyptians sometimes pictured the heavens as a woman with hanging breasts, and sometimes as a cow with full udder; thus suggesting that the heavens nourished men. The Babylonians suggested, similarly, that milk is the divinely given nourishment of man by picturing the mother-goddess with breasts so full that she must support them with her hands. Since milk is so universally an element of human diet, it is but natural that it should have been offered at times in sacrifice to deities, as meat, meal, and firstfruits were. Thus in Jud. xv. of the Avesta there is frequent mention of a sacrificial gift of boiled milk, and it was mingled with hoom (q.v.) in sacrifice. Among the Arabs flesh seethed in milk is still a common dish, yet the Hebrews were prohibited from boiling a kid in its mother's milk; W. R. Smith thinks that this was because milk for boiling is usually sour, so that such boiling would involve the offering of a fermented sacrifice, or that possibly milk was here regarded as a substitute for milk. 1

2. In a supposed Semitic myth.—In the OT 'flowing with milk and honey' is a phrase frequently used to designate the fertility of Palestine. It occurs in Ex 3:13; 13:33, Lv 20:26, Jer 11:13, 32:33, and Ezek 36:8. Curdled milk (the modern laban) and honey are also mentioned in 1 Kgs 18:12 as the food of the child that is to be named 'Immanuel.' It occurs again in the same chapter (7:26), where it is more difficult to interpret, and where its occurrence may be due to editorial redaction. The phrase 'flowing with milk and honey' occurs in the document (c. 850 B.C.) and continued to be used till the time of Ezekiel. T. K. Cheyne 2 in 1901 noted that the phrase is more poetical than the context seems to justify, and suggested that it might be a survival of a description of Israel's idealized past. Since ancient poetry is always tinged with mythology, he thought it not improbable that this phrase was of mythological origin. Usener 3 in 1892 held that the phrase was of mythological origin, and that it was borrowed by the Hebrews from Iranian mythology, where, according to him, we hear of heavenly honey and holy cows. The phrase had, he thought, descended by one line to the Hebrews and by another to the Greeks, who described the foundation of the heroism of Crete as curds and honey. Stade, 4 in commenting on Usener's article, claimed that the phrase 'flowing with milk and honey' was not used earlier than the time of Ezekiel, that in the Usener document and Jeremiah it was a later addition, and that Usener was right in claiming that in 5:18 the use of the figure was due to Greek influence. Whether 'curd and honey' could have been a mythological phrase introduced from Assyria, he thought, was a problem for Assyriologists. H. Zimmern 5 in the next year, 1903, claimed from the Assyriological side that honey and curd played a great rôle in the Babylonian cult, and that it was of mythological origin, though he offered little proof of its correctness. Finally, Grossmann 6 in 1905 endeavoured to work this view into an elaborated scheme of Hebrew mythology, which formed, he believed, the basis of the prophetical eschatology.

Before accepting this view, it should be noted that just what part milk and curdled milk, or laban, played in the life of the Hebrews. Milk, like wine, was in early Israel a symbol of prosperity and plenty. An old poet sang of Judah:

'Milk eyes shall be refreshed with wine,
And his teeth white with milk' (Gen 49:11).

Laban was a dish so relished as an article of diet that Abraham is said to have offered it to his guests (Gen 18, and Joel to the tired Sisera (Jud 5)): honey and laban were a favourite food of ancient, barley-meal, beans, and lentils were furnished as food to David and his men (2 S 17, 21). It is natural, therefore, that laban and honey, the two most delicious viands known to them, should enter into poetical descriptions of abundance, fertility, or prosperity (see Dt 32, Job 20, 26, Sir 32). The natural uses of these articles of food are sufficient to account for these poetical allusions.

The strongest arguments of the mythological school rest, however, on the highly-coloured language of Joel and later apocalyptic writers, and upon supposed Assyrian parallels. In 4:18 (EV 39) we read:

'And it shall come to pass in that day that the mountains shall drop sweet wine, and the hills shall flow with milk, and all the water-courses of Judah shall flow with water, and a spring shall come forth from the house of Yarakh and water the valley of Shittim.'

In the Sibyline Oracles, iii. 744 ff.:

'For Earth the universal mother shall give to mortals her best fruit in countless store of corn, wine and oil. Yeas, from heaven shall come a sweet draught of luxuriant honey, The trees shall yield their proper fruits, and rich beaks, And kine and lambs of sheep and kids of goats. He will cause sweet fruits to spring from hills and mountains, and white milk to burst forth'; and again, ib. v. 214 ff.:

'But the holy land of the godly alone shall bear all these things.
An ambrosial stream distilling honey and milk shall flow from rock and fountain for all the righteous.'

In view of the aridity of the desert, it would seem to need no mythology, but only a little poetical exaggeration, to lead to the designation of Palestine by the nomads as a 'land flowing with milk and honey.' The use of these viands in the life of the Hebrew nation easily accounts for the poetical use in Deut. and Job, and these in turn furnish the point of departure for the later, more hyperbolic language in Joel and the Sib. Or. Unless we can find some outside parallels, there is, then, no need for the mythological hypothesis.

Most of the Assyrian parallels hitherto cited turn out to be unreal. Thus a passage cited by Zimmern simply enumerates honey and laban along with oil, wool, gold, and silver as desirable things. Another passage deserves more attention. It is part of an incantation for driving the demon of sickness from a man's body. It runs:

'Laban from a pure stable they shall bring.
From a pure corral they shall bring.
Over the pure laban from the pure stable utter an incantation:
May the man, son of his god, become pure!
May that man become pure as laban.
Like that milk may he become pure.'

It is clear that no mythological meaning can be involved in this passage. It is the purity of the laban and the milk that is emphasized. A mythological quality is as much out of place as it would be in the Avesta, when milk is enumerated among the foods which may be given to a woman who has

MILK (Civilized Religions)

brought forth a still-born child, in order to effect her purification (see Vandallus, v. 62, vii. 67). The milk of only one of several ingredients—meal, bread, wine, water. As she had first to drink ox-

urine, the milk can hardly have been chosen for mythological reasons. Another fragmentary text which has been frequently cited on the basis of an indefinite reference by Friedrich Delitzsch runs as follows: 2

1 'Crown of . . .

2 For the shepherd of the black-headed [people] . . .

3 I pray a prayer . . .

4 A sheep of lamp’s hair may his hand [grasp] . . .

5 For the shepherd the bleached-dawned [is offered] . . .

6 Honey and laden abundantly . . .

7 The mountain bearing produce . . .

8 The stripe, the field bearing fruit . . .

9 On his left hand may the god shin . . .

10 To the king in person may they do honours . . .

This is clearly a prayer for a Babylonian ruler. The petitioner asks that great fertility and prosper-

ity may come in his time. The language resembles that of Joel and the Sibyl, but the imagery is capable of as natural an explanation as is that of the Hebrew seers.

The other passage which has been thought to show that the Babylonians and Assyrians held

mythological views of dairy produce, milk and honey, has been introduced in sacrifice and was used in certain incantations, as noted above. Homage was rendered to it, and it was regarded

as a divinely purified provision in the breasts of females, as was the seed in males; 1 a prosperous

woman was ‘rich in children and rich in milk. 2 The cow was regarded as a beneficent animal

guarded by Ahura Mazda as he guarded all other things on which the prosperity of people depends, but in no sense a heavenly animal. So far from Jews having borrowed a myth from Persians, as Usener thought, the elements of the supposed myth appear only in the later syncretistic Mithra cult, and would seem to have been borrowed from the Semites.

4. In the Vedas.—In India milk was viewed as a symbol of nourishment. The Atharvaveda regards a house full of nurture as one full of milk, 3 and the earth is a mother who can pour forth milk for her supplicants. 4 Nevertheless in the Rigveda both milk and honey were employed in the ritual, though they were both subordinate to the all-preva-

uling soma. When milk was used as an offering, it was sometimes sweet and sometimes sour, both kinds of offerings being recognized. As in Iranian ritual, the milk was, in the same way, mixed with soma, the lactant element sometimes being sour. 5 Honey was in the same way used as an offering; sometimes it was mixed with soma, 6 but sometimes with milk. Thus Rigveda, VIII. iv. 8, addresses Indra: 7

8 With honey of the bee is the milk mixed;

9 Come quick, run and drink!'

Milk was offered in kine by Varuna, even as he gave cool breezes to the forests, swiftness to horses, wisdom to the heart of man, lightning to the clouds, the sun to the sky, and soma to the mountains (Rigveda, v. xxxv. 2). This reveals a high estimate placed upon milk and honey. Though the milk lacks any mythical element, 8 as does the passage (X. lxix. 3) in which the sky (dyaus) gives milk to the All-Gods.

The Sanskrit poets often allude to the ability of the swan to separate milk from water; but this, as C. R. Lassen has shown, has no mythological significance. It is a reference rather to the fact that these birds fed on the milk-like juice of the lotus stalks, which grew beneath the water. 9 Similarly the religious teachers of India often use as an illustration of a changing existence the relationship between sweet milk, sour cream, and butter, not because they saw any mythical reality in them, but because they illus-trated change in forms of existence. 10

In India, then, it can only be said that milk and honey were so highly valued as food that they

9 For the various sacrifices into which milk entered as an element (sacrifices to the deer, new and full moon sacrifices, etc.) see A. H. Sayce, 'Ritual Literature: Yajurveda,' p. 33; and Zucker ('Glpit' ii. 32), Strassburg, 1857, pp. 55, 110, 111, 117, 133, 135, 169, 172, 196.

naturally formed a part of the most valued offerings to the gods. Perhaps the proper mixture of these offerings was supposed to have some magical significance, for one passage (Rigveda, IX. xi. 2) says that even the gods were wont to be satisfied by the offerings; but there is no trace of such a myth as some have supposed for the Semites.

5. In Egypt.—In Egypt, as already noted, the sky-goddess was pictured as either a woman or a cow with full breasts, though this was only to symbolize her nurture of her earthly children. If milk had in early Egyptian thought any mythological significance, we should expect to find it prominent among the foods promised to the deified kings to whom the pyramid texts of the Old Kingdom promised a place among the gods. True, the departed king is frequently represented as suckled by the sky-goddess or some other divinity connected with Re. The goddess is once thus addressed: 'O mother of this king Pe'ep, suckle this king Pe'ep therewith.' The goddess replies: 'O my son Pe'ep, my king, my breast is extended to thee, that thou mayest suck it, my king, and live, my king, as long as thou livest.' But, then, the food of the celestials only during their heavenly childhood. When Pepi was grown, he was promised 'bread which cannot dry up' and 'beer which cannot grow stale.' Later he is given a 'snared for the gods.' Bread and beer, the food of the gods, Pepi is invited to sit down to thy thousand of bread, thy thousand of beer, thy thousand of oxen, thy thousand of geese, thy thousand of everything wherein the god liveth.' Another source of food for the deified king is the tree of life situated in a mysterious isle at a distance, and this king Pepi sought and attained. This tree of life is probably a survival from a desert and oasis life similar to that of the Semites. Milk plays a very little part in these Egyptian myths. It is only the food of the deified kings, during that part of their celestial life which corresponds to childhood on earth.

6. In Graeco-Roman Literature.—Among the Greeks and Romans, as among the Semites and people of India, milk and honey were delicacies that were much appreciated, and their use goes back to an early time. Lilibations of milk and honey were, according to the Historia, poured out for the Olympic and such libations appear to have continued down to the Christian era. In case of pestilence milk and honey were among the offerings presented at the sacred mountains of Pelion and Ida, and before eating, milk, honey, and bread would be offered to Hestia. Milk and honey were also symbols of plenty and prosperity. Thus Findar (\(\text{432 B.C.}\) says: 'Rejoice, my friends! Lo, I send you, though at late hour, this honey mixed with white milk, fraught with the wondrous blending, a draught of song conveyed in the breathing of Aiolian flutes.'

Though these metaphorical for sweet poetry, the metaphor attests the use of milk and honey as delicacies. In course of time both milk and honey became symbols of plenty. Thus Tihmusi (\(\text{18 B.C.}\)) says: 'The oaks themselves give honey, and beyond the sheep Bring odours of milk ready to the hand of the care-free.'

Similarly Ovid:

'Now rivers of milk, now rivers of nectar run,
And yellow honey flows from the green hives.'

With these poems milk and honey have become emblems of the Golden Age, and with many others they are simply symbols of plenty.

Latin writers are, of course, dependent on Greek models for their imagery, and it is possible that Tihmusi and Ovid were influenced directly or indirectly by Semitic kins. Some curious Christian myths connected with the milk of the Virgin Mary are, however, still current in Bethlehem and its vicinity. There is at Bethlehem a cave called the 'Milch (Milk) of the Holy Family.' A legend has it that the Holy Family once took refuge there, and that, as the Virgin nursed the Child, a drop of her milk fell on the floor. Because of this it is still believed that a sojourn in the grotto not only increases the milk of women and animals, but cures them of barrenness. In reality this legend arose to Christianize a grotto that was originally a shrine of Ashtoret.

All about Bethlehem the limestone crumbles and forms little white pebbles covered with green peas. These are accounted for by the story that a drop of the Virgin's milk fell on the rock, and that these pebbles are the miraculous result. Similarly it is said that, as the Virgin nursed the Child by the wayside, a drop of her milk fell on a thistle, which on this account became flecked with white and is called 'Mary's thistle.' These myths are the outgrowth of the transfer to the Virgin of the old grotto of the mother-goddess, and are really much more exotic than the quotation in the Patriotic writers about the Golden Age.

In the early Church the newly baptized were given milk and honey to taste (or, in some Western churches, milk and wine) as a symbol of their regeneration through baptism (cf. 1 Co 3, He 5, P 29). By the twenty-fourth canon of the Third Council of Carthage (397) this milk and honey was to be consecrated at the altar on Easter Even, the most solemn day for baptism; but the use has been forbidden since the Trullan Council of 692.

MILL, JAMES AND JOHN STUART.—
The two Mills, father and son, occupy a unique position in the history of British thought. They were, after Bentham, the greatest figures in the utilitarian school and the leaders of the philosophical revolution in politics.

1. James Mill.—Next to Bentham, James Mill was the force that moulded the early expression of utilitarian doctrine. He was a Scotsman by birth, the son of humble parents (his father a country schoolmaster and his mother a weaver), born at North Water Bridge, on the North Esk, in the parish of Logie-Pert, Forfarshire, on 6th April 1773. By his intellectual ability and his indomitable power of work, he raised himself to the commanding position that he ultimately attained. His early education was received at the parish school of his native place, and afterward at Montrose Academy, where he had as schoolfellow Joseph Hume. From Montrose Academy he went to Edinburgh University (in the palmy days of Dugald Stewart), where he graduated M.A. in 1794, and forthwith proceeded to the study of Divinity, and was licensed as a preacher of the gospel in the Church of Scotland in 1798. The ministerial vocation was not long. Being appointed tutor to the only daughter of Sir John Stuart of Fettercairn (Member of Parliament for Kincardine-shire), he came under the special notice of Sir John, and went with him to London in 1810; and was not long in London before he made his presence felt. In 1809 we find him active in originating The Literary Journal and making many contributions to it. In 1819 he produced his pamphlet on the Corn Trade. The next ten years (from 1806 to the end of 1817) he worked strenuously at his History of British India, which, on its publication, produced a great impression. The immediate result was his appointment in 1819 to be Professor of Political Economy in the University of London. In 1820 he became Professor of Political Economy in the University of London. In 1820 he became head of the office in 1820. Besides a little book on the Elements of Political Economy (1824), largely reproducing Adam Smith, but embodying also the distinctive principles of Ricardo, he produced his great psychological work, the Analysis of the Phenomena of the Human Mind, which was brought out in 1829. This at once raised him to the position of philosopher in chief of the utilitarian school. But it also left behind it the elaboration and multifarious teaching of Bentham. With Bentham himself Mill was on terms of the most intimate friendship, and the master regarded him as his most stalwart disciple. So staunch a Benthamite, indeed, was Mill that it has been doubted whether he was anything more than a brilliant reproducer of Bentham's opinions. That, however, does Mill an injustice. He was no mere echo, but a voice. His psychology alone produced a new and original view of the human mind and character of the human mind. mill on Mackintosh. This is really a vigorous defence of empiricism against intuitionism, though it assumes the form of a vehement criticism of Mackintosh, and is chiefly valuable as presenting Mill's philosophical positions in a clear and condensed light, rendered all the more effective by the polemic setting.

Mill's fame as a psychologist rests on his consistent experimentalism, his thoroughgoing application of association to the phenomena of the mind, and his unceasing insistence on the power of association to explain the mind and all its processes. But this has already been brought out in the art. Association, and need not be further dwelt on. A word, however, may be said on his psychological ethics. Mill's ethics is essentially hedonistic: the human will is moved by pleasure (or the avoidance of pain) and by this alone; and with a view to the attainment of pleasure (or to the getting rid of pain) men habitually act. But there is such a thing as disinterested conduct; and by the utilitarian himself benevolence is regarded as the supreme virtue. How, then, explain this? In the first place, Mill has recourse to the distinction (of which Bentham had made so much) between motive and result: being able to keep human conduct consistent with our intention in benevolence is disinterested, our motive is interested; in other words, a benevolent action pleases the individual, gives him satisfaction, else he would not do it, but it also promotes the happiness of others. From this, Mill argues, that the happiness of a man is itself happiness, and that therefore the happiness of one person is as much a reason for acting benevolently towards another—what else is it than the individual identifying another's happiness with his own? And what more could be demanded of him? 'Can any greater degree of social love be required,' asks Mill, 'than that he should feel the joy of others' happiness as his own? There are others who should cause us pleasure; in other words, that their good should be ours?' (Frag. on Mackintosh, p. 294).

Then, again, there is the ethical principle of transformation (the phrase is not Mill's) to be considered—the principle that we see at work in the moral sense, whose nature is so changed by his traffic with money that the original desire of money for the pleasure that it can procure him becomes ultimately the desire of money for its own sake. What happens in the case of the miser happens in the case of disinterestedness and benevolence. Although individual pleasure lies at the root of a man's benevolent action, he has come, through continued intercourse with men and the experience of mutual help, to value the act of doing of its own sake and make benevolence itself its end.

What, then, of conscience, with its intuitions and its rationalisations? Conscience to Mill is not a simple and elementary faculty in human nature, but the product of association. That gives to it its power, and explains its peculiarities, and indeed constitutes its value. The ultimate test of morality is utility: right and wrong are qualities of conduct and are to be gauged by the tendency of actions to produce pleasure gain that had been left in the elaborate and multifarious teaching of Bentham. With Bentham himself Mill was on terms of the most intimate friendship, and the master regarded him as his most stalwart disciple. So staunch a Benthamite, indeed, was Mill that it has been doubted whether he was anything more than a brilliant reproducer of Bentham's opinions. That, however, does Mill an injustice. He was no mere echo, but a voice. His psychology alone produced a new and original view of the human mind and character of the human mind. mill on Mackintosh. This is really a vigorous defence of empiricism against intuitionism, though it assumes the form of a vehement criticism of Mackintosh, and is chiefly valuable as presenting Mill's philosophical positions in a clear and condensed light, rendered all the more effective by the polemic setting.

Education occupied a large share of Mill's attention. As a utilitarian, he was eager that the people should be educated—educated so as to develop and improve their intelligence, and render them fit to be worthy citizens. Hence, he took a practical interest in the educational movement of the time, and entered as a keen polemic into the controversy between the Lancasterian and the Bell systems of education; he tried to establish a school of his own, but failed on political forces. In his Chromatograph ("Study of useful things") and was one of the small band of ardent educationalists who organised the University of London. But his claim to honour as an educationalist rested on a passage in his Educational article, where education is shown to be the work of a man's life-time, where
the roots of it are laid in associationist psychology, and where the principles of Helveticus regarding the almost unlimited power of education in transforming the individual are vigorously enforced.

In the realm of jurisprudence Mill made for himself a great name in this lifetime. His Encyclopædia article on that subject is, within its limits, almost perfect. It might be elaborated at points and more fully illustrated, but it is everywhere wise and suggestive. Particularly striking are its handling of the rights of nations in the time of war, and its treatment of the possibility of an effective court of arbitration in international quarrels.

As a philosophical politician Mill achieved fame by his theory of government. It is not a theory that is invulnerable. It lays itself open to objection as to the adequacy of its analysis of human nature; it was attacked by Maccallay on the ground of its deductive method and disregard of the inductive mode of procedure; and Sir James Mackintosh attacked it on the side of its extreme advocacy of popular representation, which seemed to ignore the danger of democratic tyranny, or the irremediable danger on lines of ‘masses’ in defiance of the interests of the ‘classes.’ The foundation of the theory is that the individual man is by nature self-centred, that he aims at pleasure for self and as much of it as he can obtain, and that by his own energy and, to some extent, also by the labors and labours of others, he is already in a large measure prepared and fitted to gratify his own selfish desires. Hence the need of government, and its meaning: government just signifies keeping out of the way the selfish energies of other men, as far as they may be inconsistent with what belongs to another. But the members of a government are themselves men, with men’s selfish passions and readiness to tyrannize over others, and, consequently, need themselves to be restrained. The restraint comes and only can come from the people; and the only tolerable form of government is a representative government—a government where the people’s representatives act as a check on legislative abuse. It is only when the people are governed by men elected by themselves and representing them that the interests of governers and governed can be identified. Yet this identification of interest is liable to be broken through, if the representatives are not themselves watched. A representative man, if left entirely to his own actions, will have ‘sinister’ interests and may become as selfish and oppressive as an individual may be. The safeguard lies in frequent parliamentary elections; thus only (so it appeared to Mill) could the people retain a proper hold on their own representatives.

Into social reform Mill threw himself with much energy. Reforming zeal was the great characteristic of the utilitarians. This was but the practical side of their all-controlling principle, the general welfare, or the greatest happiness of the greatest number. Prisoners and prison discipline, mendicity, the Poor Laws, and such like engaged his pen, and if he is to be credited to the influence of his views, to no small extent, that subsequent reforms were effected.

2. John Stuart Mill.—The eldest child of James Mill was John Stuart Mill (born in London on 20th May 1806, died at the age of 80, on 3rd May 1873). His early education was conducted solely by his father, who, although constantly occupied in literary and exacting work, did not grudge to act as schoolmaster to his son. His method of teaching was altogether of an experimental kind; and, although the result of it was also exceptional, the method has not been imitated by others or regarded as generally practicable. At three years of age the boy was set to learn Greek, which was his chief study for the next five years, English and arithmetic being added as secondary subjects. This created in the youthful learner a love for Greek—not only for the language, but for the literature and the thought of Greece that lasted throughout his life. There is nothing more noticeable in his writings than his genuine appreciation of the dialectic method of Plato and his constant use of the Socratic mode of inductive defining, in order to secure clear concepts and exact verbal expression of them, with a view to truth. At the age of eight, the boy had Latin added to his Greek; and, by the time that he was fourteen years of age, he was indoctrinated into the principles of logic, psychology, and political economy. These were still subjects for a boy of that age; but they were the subjects in which he afterwards excelled.

All the time that these subjects were being set as tasks, the father was making the boy his constant companion, sharer in his daily walks, and, through his conversation and judicious cross-questioning, was gradually developing the boy’s mind and imparting to him clearness and exactness of thought, as well as in thinking. This Socratic procedure was supplemented at the earliest moment by making the boy himself a teacher. He was set to superintend the education of the younger members of the family, thereby enabling him to gain control over himself and to strengthen his intellectual faculty. No wonder that the precocity of young Mill became proverbial.

A further stage in his education was a year’s sojourn in France as a youth of seventeen at the age of Bentham, at the age of fourteen. This introduced him to the French language and to French literature and politics; and, through excursions in the Pyrenees and elsewhere, aroused in him an enthusiasm for natural science and a love for botany and zoology. These things all influenced him in later life.

On his return from France, he was further taken in hand by his father. He was now directly introduced to Bentham’s teaching, in the French translation and exposition of it in P. E. L. Dumont’s Trésor de législation (London, 1802). ‘The reading of this book,’ he says (Autobiography, p. 64), ‘was an epoch in my life; one of the turning points in my mental history. At this time I studied Roman law under John Austin, the jurist.

At the age of sixteen, the youth was beginning to feel his intellectual independence. Burning with enthusiasm for Bentham, he started a Bentham Club of young men, which he designated ‘The Utilitarian Society.’ Somewhat later he became a member of the Speculative Society, and was also a prominent figure among the youths who met, at stated times, in George Grote’s house for discussion of philosophical and economic questions. Later he took an active share in the Political Economy Club; thus was the development of young Mill’s thought and mind further aided by a variety of powerful intellectual agencies.

In 1823, at the age of seventeen, came his appointment, by the East India Company, to the post of Assistant Examiner, under his father, in the East India House, and at the Office of the East India Company. His salary was £200 a year. This continued till he reached the position of Chief of the office in 1836—two years before the abolition of the East India Company.

A turning-point in his life was his break-down in health in 1829. There is little doubt that hard work, long-continued and uninterrupted, and the over-strain of early education under his father’s tuition were largely the cause of this. But there was something more. There was the emotional
nature of the young man, which had been cramped but not destroyed by his father's one-sided training, craving for satisfaction. The end of the crisis was what he himself regards as analogous to a 'conversion.' It came in large measure through study of the poetry of Wordsworth and the philosophic of Coleridge, and was expounded both in his intellectual opinions and in his character. He was no longer the unobserving follower of Bentham that he had been; he was no longer neglectful of the emotional side of human nature. He emerged from the ordeal a new man, with wider mental outlook and deeper and intenser sympathies. The extent of the change may be seen by reference to his two remarkable essays on Bentham and Coleridge, republished in vol. i. of his *Dissertations and Discussions* (London, 1850-67).

Another important factor in his life was the influence over him of Mrs. Taylor, who became his wife in 1851. His work in connexion with literary journals was enormous. He wrote articles almost without number and on an exhaustless variety of subjects (philosophical, political, economic, social). They began with *The Westminster Review* and extended to other magazines—especially *The London Review* and *The Fortnightly Review*. They are valuable as enabling us to trace the development of his opinions, the growth of his views in philosophy, and the gradual modification of his radicalism in politics.

Herbert's great intellectual work was his *System of Logic*, *Ratiocinative and Inductive*, which appeared in 1843. This was followed, in due course, by his *Essays on some Unsettled Questions of Political Economy* (1844), and *Principles of Political Economy* (1848). In 1850 appeared his little treatise on *Liberty*, and his *Thoughts on Parliamentary Reform*. His Considerations on Representative Government belongs to the year 1850; and in 1863 (after first appearing in magazine form) came his *Utilitarianism*. In 1865 came his *Examination of Sir William Hamilton's Philosophy* (in 1866; his *Rectorial Address* at St. Andrews University, on *the true line of culture*; in 1868 his pamphlet on *England and Ireland*; and in 1870 his *Tract on Women*). In 1869 also was published his edition of his father's *Analytical of the Phenomena of the Human Mind*, with many valuable notes illustrative and critical by J. S. Mill himself, by Bain and Grote, and by Professors and others. His works are his *Autobiography* (1873) and his *Three Essays on Religion* (1874). To these have to be added the two large volumes of *Letters* (ed. Hugh S. R. Elliot) published in 1910.

A phase of Mill's life has still to be noted—his parliamentary career. In the Parliament of 1865-68 he sat as Radical member for Westminster. Three things in chief did he advocate in the House of Commons—women's suffrage, the interests of the laboring class, and Ireland in general. He took his *Political Economy* and his *Utilitarianism* to be taken in connexion with his notes in his edition of his father's *Analytic*. As a logician he stands out as the great empiricist who formulated and elaborated inductive logic, who re-stated and in part revolutionized deductive logic, who made systematic application of logical principles to the study of moral science, and who enforced, in sylleptic form, the power of experience to be the criterion or ultimate test of truth. The brilliancy of his thought and the clearness of his style (including an unmounted aptitude for felicitous illustration, ranging over a wide field of knowledge) cannot be too highly praised. The stimulus to the student derivable from a study of his *Logic* is undoubted. The epoch-making character of his great work must be acknowledged without reserve. But how far he has succeeded in bridging the gulf between inductive and syllogistic logic may be disputed—even Bain, his intimate friend and assessor in a rival *Examination* (1869), 

*In psychology Mill upheld the associationism of his father, but gave a more attractive expression of it as 'mental chemistry.' He carried forward his psychology into theory of knowledge and formulated his doctrine of psychological idealism (founders on Berkeley), which, resting on the empirical genesis of knowledge through the various senses operated by association, issues in the conception of matter or objective reality as 'the permanent possibility of sensations' and of mind as 'the permanent possibility of feeling.' In the case of mind, however, there is a peculiarity: it is conscious of its states. This we must accept, as it is given in our experience, but we must accept it as an inexplicable fact. Mill was unprincipled in his opposition to those who base truth on intuition. Not that he denied the fact of intuition, but he demanded that it should be tested by experience, so that it may not become (as it had become to a school of philosophers at the time) the bulwark of prejudice and irrationality and the hindrance to intellectual, political, and social progress.

Mill's great work on *Political Economy* (in originality of thought and in importance to his *Logic*) is a clear exposition of the various branches of the science—wealth, distribution, consumption, and exchange, and all the various topics that arise out of these. It shows him also as a keen, but fair, critic. But his chief merit lies in his widening the scope of political economy and removing from it the reproach of being 'the dismal science.' This he did (parcely under the influence of Auguste Comte) by infusing into it human feeling and associating it with the doctrine of Humanitarianism. His political principles were now conjoined with their practical applications, and a transformation took place. Not only do we have a minute and scientific handling of such things as labour, capital, rate of interest, money and posthumous; but the other points that the ordinary political economy dealt with, but also a stimulating discussion and wise treatment of such deeply interesting problems as the future of the labouring classes, the land question, socialism, etc. In explanation of the exceptional popularity of the treatise he himself says:

"It was, from the first, continually cited and referred to as an authority, because it was not a book merely of street science, but also of application, and treated Political Economy not as a thing by itself, but as a fragment of a greater whole; as a branch of Social Science, so interrelated to other branches, that its conclusions, even in its own peculiar province, were only true conditionally, subject to modifications, results, and action from causes not directly within its scope; while the character of a practical guide it has no pretension, apart from the other classes of considerations" (Autobiog., p. 226).

That is, doubtless, absolutely correct.

Mill's utilitarian ethics, as expounded in his *Utilitarianism*, is extraordinarily significant; both the matter and the style fascinate, not less than the glowing politics of character, as it were. Justice has rarely been done to it by opponents, because they have failed to see (a) that it is not a treatise of pure abstract reasoning, but one written out of the living conviction of a man who loved his fellow-men; (b) that it is practical in all its object, and not merely theoretical; and (c) that,
although it sets forth pleasure or happiness as the standard and test of human conduct, it makes supreme the conception of man as a social being and conditions all by the conception of the general welfare. His view of the human will as determined by character, and of character as formed by a man, and the presidential election of the free will problem, and his defence of the position that there can be such a thing as a science of ethics and, if of ethics, then also of economics.

Mill is a political thinker is a great subject. As a radical democrat, he loved the people and worked hard for them in parliament and out of it. But he would not submit in any degree or for a moment to the conventional desires and expectations. They had to be led and not followed. He was acutely conscious of their tendency to tyrannise and their selfish disregard of justice. He was exceptionally alive to their readiness to dominate over minorities; hence he powerfully advocated the principle of parliamentary proportional representation. Thus alone, he thought, could minorities of electors get their rights. He saw the people's jealousy and suspicion of the educated and refined classes of society; hence he stood firmly by the principle of plurality of votes, as determined by culture and social position. He was very sensitive to the tendency in the masses to act unscrupulously and in an underhand fashion; therefore he held that nothing by law and tradition could be unassailable. On the other hand, he was a strong upholder of the liberty of the individual; and he gave a powerful defence of individualism in his treatise _Liberty—a defence of the right of the individual to hold his own opinions and to give free expression to them, and his right to live in such a way as seemed fit to himself, so long as his mode of living did not interfere with the rights and liberties of others._ In the same spirit, though he was quite alive to the necessity of the government dictating and controlling within limits, and therefore, restricting the liberty of the individual to that extent, he thought that the less government interfered the better: his legislative principle, with necessary qualifications, was _laissez-faire._

Another object that lay near to Mill's heart was that of women's suffrage. His book on the subject has exhausted the handling of the theme from that point of view. But he added active support to his views by consistently advocating universal franchise in parliament, and by pushing on and personally guiding the Women Movement in London and the provinces. The problems of the universe were constantly in Mill's thoughts. He puzzled himself long and anxiously over the question of the freedom of the will, and ultimately reached the deterministic solution that has just been referred to. The nature of the external world and of the human ego also exercised his mind: and his doctrine of 'psychological idealism' was the result. But there still remained the problem of God. With the conception of the Deity as 'the Absolute,' unknown and unknowable, to whom no knowledge (such as knowledge, mercy, and love) could be applied, he had no sympathy. His criticism of H. L. Mansel's view, as set forth in his Bampton Lectures on _The Limits of Religious Thought_ (London, 1870), is savage. But the strain on the great theme is best given in his supremely interesting posthumous _Essays_. His honesty of character and his 'indifference to truth' (as Locke would express it) here come out in a very striking fashion. Discouraged from theistic thinking by his father in his early training, and not encouraged to it by his utilitarian friends and fellow-thinkers in after life, he yet had that openness of mind that would willingly receive truth to whatever extent it might reveal itself. He fain would have been optimistic in his view of the universe, but he could not; and the most that he could do was to allow a conception of God that conserved His goodness but limited His power. In face of our narrowing experience of Nature to the self-insulation of the cell and ofravin' and of theutterly hard and harsh experiences of life in general, he could not rise to the idea of a Great Power who was All-loving, Omniscient, and Omnipotent. But he was willing, or, at any rate, not unwilling, to believe in the Goodness of God or of Love who would, if He could, subdue evil and put an end to suffering and misery and was only hindered by the recalcitrant circumstances of the world. This admission, combined with his admiration of Jesus of Nazareth as the highest of ethical teachers, shows his power of detachment from early upbringing and from immediate social environment, and his readiness to respond to the light whenever it came. This was the noblest trait of his character.

Mill's nature was, in many ways, an attractive one, characterized by high and sterling qualities. He was generous in his outlook and sympathetic in his theory. He was scrupulous in his accounts, and held doubts. He was eager to be fair in his estimate of others and of their opinions, and always ready to admit that there is likely to be some truth in every doctrine and belief that has been sincerely held; there was nothing by law and tradition could be unassailable. His disinherited regard for truth was unbounded; and he took little care to cloak or hide unpalatable opinions, but expressed himself freely without regard to personal consequences. He delighted in championing persons and causes that he conceived to be unjustly treated by society or by the law of the land. His public spirit was intense; and he never feared to attack legislative or other injustices, and to uphold unpopular views, in the interest of the working classes of the nation and the world. His life was consistently devoted to one end—furtherance of the good and welfare of his fellow-men.

**MILTON.**

**MILTON—1. Life.**—John Milton was born in London at the Spread Eagle in Bread Street, in 1608. He was the eldest son of John Milton, a London scrivener, whose conversion to the faith of the Anglican Church had led to his being disinherited by his father, a yeoman of Shotover Forest and a staunch Roman Catholic. The poet's mind was deeply impressed by the example of his grandfather and the more sensitive and cultured spirit of his father, from whom he also derived his taste for music. From the first the boy was studious, and his father supplied him with the best teachers. When in 1625 (Feb. 12) he entered Christ's College, Cambridge, at the age of sixteen, he had already acquired, under his first tutor, Thomas Young (a graduate of
MILTON

St. Andrews, and at St. Paul’s School, under the care of his younger brother, a master of Latin, a competent knowledge of Greek, and even some acquaintance with Hebrew. *From the twelfth year of my age I scarce ever forsook my nightly studies for bed before midnight* (Defensio S. Chri- sti apud Angliam, 1633). In English literature he was familiar with Joshua Sylvester’s translation of Du Bartas (1605), Fairfax’s Tasso (1600), and probably Spenser, Drummond, and others. The older Gill was a reader of English literature, but probably Shake- speare and play-books were not welcomed in a religious family like that of the scrivener’s, where ‘last of all, not in time, but as perfection is last, that care was ever had of me, with my earliest capacity, not to be negligently trained in the precepts of Christian religion’ (Apology for Smectymnus, 1642). Milton was no attracted by the dialectical and theological studies of Cambridge. The lines At a Vacation Exercise and some Latin pieces show that he took his part in the prescribed work, but his favourite studies were literary and classical, ‘grave orators and historians,’ the ‘smooth elegie poets,’ from whom he passed in ‘riper years’ to ‘the shady spaces of philosophy; but chiefly to the divine volumes of Plato and his equal (i.e. con- temporary) Homer.’ Milton’s knowledge of classical poets he added now the Italians, ‘the two famous renoveners of Beatrice and Laura,’ the ‘lofty fables and romances’ of Boaard and Ariosto (Apology for Smectymnus, Intro.). On the world of medieval writers, Milton looked out through Italian windows, but he was familiar (later, at any rate) with Geoffrey of Monmouth and probably with Malory. The poems of this period, both English and Latin, bear witness to the grace of Miltonic elegiac and classical literature and the Biblical Christianity of Puritan England. The finest expression of these, not always entirely compatible, tastes is the tender (an epithet so rarely applicable to Milton’s poetry) and beautiful ode, On the Morning of Christ’s Nativity (1629); while some lines of the At a Vacation Exercise and the short odes, On Time and At a Solemn Music, show the poet of Paradise Lost — mewing his mighty youth — and meditating the divine lines—

Yet I had rather, if I were to choose, The service in some graver subject use, Such as may make thee search thy coffer round, Before thou clothe thy fancy in soft sound: Such where the deep transported mind may soar Above the wheeling poles, and at Heaven’s door Look in, and see each blissful deity,’ etc. (At a Vacation Exercise, 29 F.)

Milton left the University in 1632 without taking orders, and the next six years of his life were spent at Horton in the quiet prosecution of his studies in classical literature, history, mathematics, and music, with occasional visits to London to purchase books, to visit the theatre, to be an onlooker perhaps at Court cermonials,

Where throughs of palace high in the heavens (L’Allegro, 119.), and to enjoy the company of friends, among whom the first place was held by Charles Diodati. A young Italian girl, too, of whom we know only that her name was Laura, seems to have touched his fancy and occasioned the writing of his earliest Italian verses. The experience is perhaps referred to in the seventh of his Latin degrees. During these years he also extended his knowledge of English poetry from Chaucer and Petrarch to Shakespeare (at Cambridge he had already written his famous lines for the second folio), Jonson, and the later Elizabethans. All the poems written at this period bear witness to this native and Elizabethan influence, and among them, as L’Allegro and II Penseroso, are composed in a lighter, more secular and Epicurean vein than any English pieces (some of the Latin elegies are very much in this vein), before again to be written by Milton. But In Comus, or A Masque Presented at Ludlow Castle (1634), which he composed at the invitation of Henry Lawes, all the resources of Milton’s learning and art were employed to set forth, in his own words, ‘thechoice, the beauty, the nobleness, the infirmities, the convictions, his passionate love of purity, his sense of the dependence of all human virtue on the protecting grace of God. The theme of the second book of the Faerie Queene is rendered by a poet of a higher moral temperament and a less of the more controlled and classically educated, sense of beauty.

Milton had gone to Cambridge with a view to taking orders, and, though he left without doing so, there is no evidence that he had ceased to be, when he settled at Horton, an orthodox Anglican. He was a communicant; he had signed the Articles; nothing had yet betrayed that he was by conviction a Presbyterian in his views on Church government; while on the doctrine of predestination in its relation to the human will his position was always closer to that of the Arminians than to that of the Calvinists. What alienated Milton from the Church of England was less its dogmas than its practice, the rigour of Latin, and the discrepancy between the Church and its arbitrary policy. His intense and ideal love of liberty was awakened, and the first notes of the coming storm were heard in Lycidus (1638), the most passionate, choral, and musical poems which Milton had written. In the same year he went abroad, still intent rather on self-culture and the preparation for the task of writing a great poem than on controversy and theology. In Paris he met the Dutch seuul Hugo Grotius, whose History of Episcopacy, and in a Latin poem addressed to him prays that he may find a like patron when he undertakes to sing of

\[\text{rages,}\]
\[\text{Artorumque eliam sub terris bella novemcent,}\]
\[\text{Ant dicentur invicta soli fidei mensae,}\]
\[\text{Magnanimesque tibi carnem, et amico praebere solius,}\]
\[\text{Prangam Saxonum Brittonum sub Marte plangant,}\]
\[\text{(Sylva, 'Massae,' 59 ff.).}\]

But Milton was not destined to sing of kings or the knights of the Round Table. The meeting of the Long Parliament determined him to return home, and he made his way back to England by Venice and Geneva to plunge soon into that long course of controversy, ecclesiastical and political, which determined the choice between the doctrinal framework, and the temper and spirit of Paradise Lost, Paradise Regained, and Samson Agonistes.

The first of the controversies into which Milton plunged with ardour and vehemence was that concerning Church government, and the rival claims of a Presbyterian and Prebatical organization. In the first pamphlet, Of Reformation in England (May-June 1641), he raises the question why the English Reformation had lagged behind that on the Continent and attacks Episcopacy and English bishops and their ’policy’ from Cranmer and Ridley to the promoters of the war with Scotland, closing with an animadversion, more or less, on the Prebatical Episcopacy (June-July 1641) is an examination of the origin of Episcopacy in reply to a.
tract by Archbishop Usher. Of the other pamphlets two, *Anecdota upon the Remonstrants' Defence against Smectymnuus* (July 1641) and *An Apology against a Pamphlet called a Matched Constitution of the Anonimovers against Smectymnuus* (March–April 1642), were contributions to a controversy on Episcopacy between Hall and certain now little-known Puritan divines led by Thomas Young was one. The most fully reasoned and interesting statement of Milton's ideal Presbyterians is contained in *The Reason of Church Government urged against Prelaty* (Jan.–March 1641–42). Two uncontroversial of the *Tract* was written, rising to the surface from time to time, the one with unmistakable and eloquent distinctness, the other with less obtrusive yet sufficient clearness. The first of these concerns the great poem which he was meditating; the other shows him full of high thoughts concerning the mysteries of love and marriage. The Puritan movement had heightened men's ideals both of purity and of marriage, and Milton was as impassioned a champion of chastity as he was an enemy of asceticism. Love had touched his fancy in youth, but, when in May 1643 he married, it was clearly the act of one whose choice of the individual was too hastily determined, and whose decisions were too hasty, for he had, it is fondly anticipated, no intellectual helpmeet, but an 'unconversing inability of mind,' 'a mute and spiritless mate,' begetting 'that melancholy despair which we see in many wedded persons' (*Doctrine and Discipline of Divorce*; p. 41). Others have experienced the same misfortune in the end have managed to work along; but Milton was no average man, and he turned passionately round to discover an escape, and that one which should enjoy the approval of his own conscience and the Christian Church. *The Doctrine and Discipline of Divorce Restored* (Aug. 1643) was written and published (anonymously and without licence) before his wife had given any definite ground for the controversy, and an improved edition appeared in February 1644 with a signed introductory letter to 'the Parliament of England with the Assembly.' A second tract, *The Judgment of Martin Bucer concerning Divorce,* followed in 1645. The pamphlet's position against critics; and to the same end he issued in March 1645 *Tetrachordon,* a discussion of four passages in Scripture, and *Colasterion,* a savage onslaught upon a certain Joseph Caryl, one of the licencers. Incidentally the divorce controversy called forth the most famous of Milton's pamphlets, *Areopagitica, A Speech . . . for the Liberty of Unlearn'd Printing* (Nov. 1644).

The outcry which the divorce pamphlets evoked on Milton and his friends eventually gave birth to the most famous of Milton's pamphlets from the Presbyterian Church which its votaries were seeking to invest with all the divine right and intolerant authority of the crown. The Church Assembly, which Milton had helped him to formulate his own conception of Christianity as independent of any visible and authoritative Church. He never, therefore, identified himself with the Independents, but from this time to the close of the Commonwealth his sympathies were with that party in politics; and, when the death of the king completed the rupture between them and the Presbyterians, Milton came forward as the champion of regicide and the imposer of the Commonwealth, whether of authority or endowment, b'veen Church and State.

On 13th February 1649—a fortnight after the execution of Charles—appeared *The Tenure of Kings and Magnates,* proving that it is lawful, and hath been held so throughout all Ages, for him who have the Power, to call a Tyrant or wicked King, and after due conviction to depose and put him to death, if the ordinary Magistrate have neglected, or deny'd to do it. And that they may do this, of late, so much blame depositing was that did themselves.' The sting in the tail of this bold title is intended for the Presbyterians, who are roughly handled throughout as hypocrisies and revolters from their own principles. The *Eikonoklastes,* of the controversial chapter by chapter the Eikon Basilike in Milton's most scornful style. To Salmasius and other impugners of the King's execution Milton replied in his first and second *Defensio pro populo Anglicano* (1653–1654). The *Defensio contra Morum* (1655) was a savage onslaught on one who, he believed, had slandered himself. His last purely political pamphlet, the *Ready and Easy Way to Establish a Free Commonwealth* (1660), was published on the eve of the Restoration.

That conception of the Church's influence and authority as purely spiritual which is evident in Milton's first sketch of an ideal Presbyterianism, and had been intensified by his rupture with the Presbyterians, led him to disapprove of Cromwell's attempt to combine religious endowment with a wide though still limited toleration; and his own position was expounded in the *Defensio Secunda* (1657–58), *Of the Authority of the Protector* (1659) and his associates) and, after Cromwell's death, in *A Treatise of Civil Power in Ecclesiastical Cases* (Feb.–March 1659). When the Rump superseded Richard Cromwell and the question of titles was also raised, Milton published his *Hypostatic Union* (1659), which was in reply to his own pamphlet on the subject. The *Hypostatic Union* (1659) was a bitter onslaught on the clergy, Presbyterian or Independent, who claimed titles or fees instead of trusting to the 'benedictions and free gratitude' of their flocks. Milton's last religious works were the short pamphlet *Of True Religion, Heresy, Schism, and what best Means may be used against the Growth of Popery* (1673) and the body of divinity *De Doctrina Christiana,* on which he had laboured for many years, but which was not printed till 1685.

Throughout the rule of the Commonwealth Milton's life had been the twofold one of a private student and tutor (to children living in or coming to his house) and of a public servant to the secretary to the Council of State (1649–59). The incidents of his private life are few. In 1653 his wife died, and in 1656 he married Catharine Woodcock, whose early death in 1658 is referred to in the most touching of his sonnets. His marriage with Elizabeth Minshull in 1663 was a convenient arrangement.

During all these years Milton had written very little poetry. From 1640 to 1662 his mind had been full of his great projected work, the *Paradise Lost,* a commonplace-book preserved at Trinity College, Cambridge, shows the steady trend of his thoughts towards a drama on the subject of the Fall. Two sketches of the dramatic idea, and Edward Phillips, reports that the speech of Satan at the opening of the fourth book of *Paradise Lost* is part of the original scheme. The interest of controversy and the shock of his unhappy marriage interrupted the work and it was not resumed till 1658. In the interval the only English poems which Milton wrote were some sonnets on public events or persons and private incidents in the dignified manner of his Italian predecessors in similar poems, and in Italian form, for even the device of running the sense on from octave to sestet which has been
thought a device peculiar to himself) had been practised by Italian poets known to Milton. In like manner, verse and epic, not dramatic, form; was composed to dogmatism, corrected, and completed by 1655; and published in 1667.

It was followed in 1670 by *Paradise Regained*, an epic on *the brief model* of the book of Job, and *Samson Agonistes*. Milton's sole experiment in these "dramatic constitutions" wherein Sophocles and Euripides reign.

2. Thought and works. — Of Milton's early poems no more need be said here. Apart from their lovely shape of existence and delightful purity to the delicate purities and profound piety of the poet's childhood and youth, combining in an effect of unique and too transitory looseness literary and classed culture with the finer spirit of a Puritanism which was not yet heated and hardened by the fires of religious and political controversy. The purpose of the present article is to outline the creed of Milton as it took shape in the years of storm and stress which followed his return to England and to consider the reflection of this creed, and the temper which it at once expressed and intensified, in his longer poems.

In his earliest pamphlets Milton ranges himself on the side of the Presbyterian reformers of the Anglican Church. The Swiss authority for the right government of the Church, which is not a matter that has been left to human discretion and experience to devise. God, who shaped to his minutest detail the government and worship of the Jewish church, should be the guide and standard by himself or by his own prescribed discipline have cast his line and level upon the soul of man which is his rational temple, and, by the divine square and compass thereof, form and regenerate in us the lovely shape of virtue and grace, the sacred device to edify and accomplish that immortal stature of Christ's body which is his church, in all her glorious lineaments and proportions? (Reason of Church Government, i. 2.) But the NT recognizes only two orders, bishops or presbyters (they are the same thing) and deacons — so Paul writes to Timothy (not once naming any other order in the Church). Prelacy is an addition of man's devising and ambition (Lucifer . . . was the first prelate and prince to the reason and end of the gospel) (ib. i. 5 ff.).

But, when Milton came to state the respect in which Episcopal jurisdiction opposes the reason and end of the gospel, he parted company at once (freely and consciously to say) with the Swiss and English sympathizers, and with the actual practice of dominant Presbyterianism. For his objection to Episcopal jurisdiction is the, for Milton, fundamental principle that juridical power in the Church there ought to be none at all. His objection is to the hierarchiads "of the State Chamber. Over the outward man, person, and property, authority belongs to the State, which is not concerned with inward matters but with the outward peace and welfare of the commonwealth, and civil happiness in life" (ib. ii. 3). The authority of the Church is over the inward and spiritual man, and her sole weapons are instruction, admonition, rebuke, and, finally, excommunication, that last to be so used as always to keep open the door of reconciliation to repentance. The motive to which the Church appeals is not terror, but shame, "the reverence and due esteem" in which a man holds himself worthy of the dignity with him and for the price of his redemption which he thinks, is visibly marked upon his forehead, making him account himself a fit person to do the noblest and godliest deeds, and much better worth than to reject and delude, with such a defame-ment, and such a pollution as is, himself so highly transmuted and enabled to a new friend-hip and filial regard in epic, not dramatic, form; was composed to dogmatism, corrected, and completed by 1655; and published in 1667.

It was followed in 1670 by *Paradise Regained*, an epic on "the brief model" of the book of Job, and *Samson Agonistes*. Milton's sole experiment in these "dramatic constitutions" wherein Sophocles and Euripides reign.

The motive to which the Church appeals is not terror, but shame, "the reverence and due esteem" in which a man holds himself worthy of the dignity with him and for the price of his redemption which he thinks, is visibly marked upon his forehead, making him account himself a fit person to do the noblest and godliest deeds, and much better worth than to reject and delude, with such a defame-
Milton 645
different passages are duly compared and when all are interpreted in the light of the Christian law of charity, in the spirit of the words "the sabbath was made for man, and not man for the sabbath". The one to which Milton never condescends is experience, the difficulties and the practical means of obviating these revealed by experience; he has none of Burke's reverence for "prudence constituted as the god of this lower world."

Milton's polemical pamphlets are, accordingly, a bewildering blend of ideal reasons, high a priori principles set forth in glowing and harmonious but elaborately Latinized periods; a jumble, at times capricious and wrong-headed, of citation and cross-examination of Biblical texts; truculent polemics, condescending not infrequently to coarse personal abuse; and within a general absence of the mellower wisdom that proceeds from experience and charity. There is much to inspire and delight in these pages burning with fires that are perhaps not yet altogether extinct but in general have died down; there is little to interest the statesman. If Milton's pamphlets yet live, it is in eloquent arguments of high and abstract ideals, to ignore which altogether is to reduce political expediency to sheer opportunism.

The divorce pamphlets have nothing to say upon the political problems of children and the mutual relations of the family and the State. They combine elevated reflections on the ideal significance of marriage as a spiritual rather than a carnal union (regarded solely from the point of view of the man) with a defence of the political principle that the attempt to reconcile Christ's prohibition of divorce but for adultery with Moses' permission. God cannot have at any time permitted sin. The later command cannot have been intended, therefore, to annul the earlier, but merely to check certain prevalent abuses. Milton was not without apprehension of the fact of moral and religious progress. He went beyond the English Protestantism of his day in asserting that under the new dispensation the Mosaic moral as well as ceremonial law had been abolished. But the new law was, he maintained, a law of liberty, of greater responsibility because of greater freedom. Such a rigid law of marriage as the Churches asserted was a curtailment of liberty, which was a right not granted, a fresh emblazonment of the spirit to the letter. Looking at the question exclusively from the man's point of view, he advanced to an assertion of divorce as the private concern of the individual and to a defence of polygamy (De Doctr. Christ. i. 10).

The Areopagitica was an overflow from the divorce controversy, and is a magnificent a priori vindication of freedom of thought and speech as the fundamental condition of the successful quest of truth. The practical difficulties which have beset the attempt to find a solution, other than a compromise varying in different countries, lay outside Milton's ken. He could foresee all the evils that have attended the freedom allowed to a Chauvinist or a commercial press to deceive and to pervert.

The same lofty but a priori idealism combined with a universal toleration of all religious bodies, the Roman Catholic Church alone excluded. Of the original and inalienable rights of subjects and the duties and responsibilities of kings Milton writes with all the passion of a mind nurtured upon classical republicanism and O.T. history, and heated by the fires of civil war:

There can be but one sacrifice to God, and that is... than an unjust and wicked king. (Seeemus, Fecit, Pro. 192, in The Tenure of Kings and Magnates.)

The doctrine of the civil contract is buttressed by precedents from the turbulent annals of Israel, the early history of the Britons, the rebellions in Scotland and Holland. Of the real difficulties of the problem, as Holmes saw them, of how somewhere government in every society there is and must be an authority against which no rights can be pleaded, Milton shows no suspicion. He was at work reasserting with the greatest of dignity the government of England at the moment of the Restoration. His sympathies were aristocratic: the best should rule. Of the difficulty of securing this he knows nothing. Hooker's claim for a divine sanction attaching to usage and expediency is spurned by Milton's contempt for tradition, confidence in a priori reasoning, and conception of the Bible as the sole oracle of God, of authority in all fields of thought and experience. His Latin quotations and English elucidations attempt to reconcile the political thought of the 17th century.

Milton's demurrer to an endow up a clergy—a subject on which he found himself at variance with his hero Cromwell—and his demand of all religious differences of opinion were the natural outcome of that conception of the purely spiritual character of ecclesiastical authority with which he set out, of his growing dislike of the Presbyterian and his claim to use the privileges and intolerance of their Anglican predecessors, and of the purely individualistic character of his philosophical Christianity. From rejecting ecclesiastical discipline and authority Milton was driven onward by a ruthless logic to the denial that any regard is due, in religion or ethics, to the collective consciousness of Church or society. Yet without such collective consciousness, however imperfectly developed, is either religion or morality possible? For Milton every man is his own Church: his creed the product of his own study of the inspired text. The heretics are those who follow a Church against their conscience and their convictions based on Scripture. Congregationalism or Presbyterianism is the product of the enmity of men, meeting to worship together, Milton seems to assume there will always be; but for the service of a clergy, except to teach the young and to exhort the careless, there is no need.

* We have not all our time under a teacher to learn logic, natural philosophy, ethics or mathematics, which are more difficult—certainly it is not necessary to the attainment of Christian knowledge that men should sit all their life long at the feet of a pulpit man. (The Oldest Means to remove Hesitancy.)

Let there be a voluntary, simple, itinerant clergy living by the labour of their hands and the free-will offerings of the richer congregations.

This conception of Christian doctrine as something as definable and demonstrable as mathematics (but easier of comprehension) is crucial for a right apprehension of what Milton was in quest of throughout these years of theological and political polemic—that justification of God's ways to men which was to be the theme of his poem. For a study of that thought as finally articulated we must go to the De Doctrina Christiana, Joannes Milton Anglus Universis Christi Ecclesias Neon Omnium FulCan Christiianam Dulcanque Gentium Profligentibus. The dedicatory words of the MS in which was set down the creed of the Church of John Milton, the final result of his resolve to have done with traditions and definitions, councils and assemblies, and to formulate for himself,
Milton's higher the original and, not for I In fleshy Faith Under a religious 12 and will the the the is the gone. which ideit, the the the is anticipated, the promise religious not Milton's 3rd Pilgrim's of 

A Milton's divinity extends the redemption, which the ardor of love which throbs in Dante's *Divina Commedia* or Bunyan's *Pilgrim's Progress* or Thomas' Kemps Musica Ecclesiasteria, or many others of the great distinc
tively Christian works of feeling and imagination. A humanistic monotheism is of the innermost texture of Milton's soul.

The same high, not to say proud, soul is revealed in Milton's refusal to accept the Calvinist doctrine of predestination and the complete corruption of man. Here is the Fall—refusal to sacrifice the reality of human freedom, the intrinsic worth of human nature. Predestination, he declares, extends to election only, not to reprobation. It did not determine man's fall, but the means of his redemption, since God foreknew that of his own free will man would fall:

> *For man will hearken to his glowing lies, And easily transgress the solemn command, Sole pledge of his obedience: so will fall He and his faithless progeny. Whose fault? What is his own? Ingrate, he had of me All he could have; I made him just and right, Sufficient to have stood, though free to fall.*

*Milton, Paradise Lost, iii. 93 ff.*

The redemption purchased by Christ is in the same way freely offered to all, not to an elect, predestined number. To all, God gives grace, 'though not in equal measure': yet sufficient for attaining knowledge of the truth and final salvation:

> *For I will clear their senses dark What may suffer, and soften stony hearts To pray, repent, and bring obedience due, To prayer, repentance, and obedience due, Though but endeavoured with sincere intent, Mine ear shall not be slow, mine eye not shut* (ib. 185 ff.).

Nor — and here again Milton diverged from orthodox Protestantism—is all apprehension of and aspiration after good extinguished in man as a result of the Fall. The result, indeed, of Adam's sin is not only guilt but spiritual death, which is 'the observation to a great extent of that right reason which enabled man to discern the chief good', that despair subjection to sin and the devil which constitutes, as it were, the death of the will. Yet the divine image in man's soul is not wholly extinguished.

This is evident, not only from the wisdom and holiness of many of the heathen, manifested both in words and deeds, but also from what is said Gen. iv. 2 the deed of you shall be upon your head, v. 16, whom man's blood by man shall be shed; for in the image of God made He man. These vestiges of original excellence are visible, first, in the understanding, as in the *Divine Compendium* or in *Milton's Natura of Literature*. Take away from either of these poems the high purpose that shines through them, and half their beauty is gone. It is its symbolic, mystic character that gives sublime to
deavour after righteousness, at least to make him responsible for his sins, though its power is so small as to afford him no subject for boasting.

In accordance with the same high regard for the will, for conscience, for the test of the good life, Milton refuses to accept the orthodox distinction of faith and works and the ascription of justification to the former alone. In the text 'A man is justified by faith without the deeds of the law' (Ro. 3), he insists that stress must be laid on the words 'of the law.'

> *For Paul does not say simply that a man is justified without works, but without the works of the law alone, but "by faith which worketh by love," Gal. v. 6. Faith has its own works which may be different from the works of the law. We are justified therefore by faith, but not by a living not a dead faith; and that faith alone which acts is accounted living. James ii. 17, 20, 25."* (ib. 12, 33.)

The same spirit makes Milton assert more completely than the Westminster Confession the liberty of the Christian under the new dispensation. It is not the ceremonial law alone that is abolished, but the entire Mosaic law, including the Decalogue (ib. i. 25 f.), the place of which is taken by a higher law: 'written not in tables of stone, but in fleshy tables of the heart,' the law of love given in our Lord's words, 'Thou shalt love the Lord thy God with all that is in thee, and with all thy strength, and with all thy mind; and thy neighbour as thyself' (Lev. 19). In the Decalogue is included the Fourth Commandment (ib. i. 10, ii. 7), on which English Puritanism laid so much stress. In his poem *Paradise Lost* and joined in the general condemnation of the Book of Sports and its instigation to 'gaming, jigging, wassailing and mixed dancing' on 'that day which God's law, and even our reason, hath consecrated.'

'So the day of the Sabbath, the seventh day is not moral, but a convenient respite of worship, in fit season, whether seventh or other number.' Our rigid observance is an unnecessary cause of separation from the Reformed Churches of the Continent. The argument, (e.g., of the Westminster Confession) that the Jewish law of the Sabbath had been transferred intact to the first day of the week is invalid (*De Doctr. Christ., ii. 7*). Under the gospel no one day is appointed for divine worship in preference to another, except such as the church may set apart of its own authority for the subsistence and assembling of its members, wherein, relinquishing all worldly service, we may dedicate ourselves wholly to religious services as far as is consistent with the duties of charity and work. Such are some of the most important divergences of Milton's creed from the creed of the Protestant Churches around him. Of this creed *Paradise Lost* and *Paradise Regained* are the poetical setting forth. Like the *Divine Comedy*, the *Paradise Lost* is not primarily an epic, but a didactic exposition of a theological creed: and, as all the details of Dante's creed may be discovered in the *Summa of Thomas Aquinas*, so Milton's conception of God, of Christ, and of the angels and devils is that which he has set down more dryly in the *De Doctrina* and the purpose which Milton declares he has in view:

> *To justify the ways of God to men—* is theologically conceived. His poem is not an attempt to reconcile the heart and the imagination to truths already accepted. It is a restatement in poetico form of these doctrines in such a way as will finally justify God and indict man. 'Thereof short art inexorable, O man, whatsoever thou art that judgest' (Ro. 9).

Looked at steadily from this point of view, it cannot justly be said that *Paradise Lost* will bear comparison with the *Divina Compendium* or the *De Doctrina*. Take away from either of these poems the high purpose that shines through them, and half their beauty is gone. It is its symbolic, mystic character that gives sublime to
every detail of Dante's heaven and hell. Few today read Paradise Lost with any desire to discover Milton's creed, or, if they do, will accept with any confidence, much less with a spirit of criticism, the doctrine of heaven and earth as it is the function of poetry to beget, his justification of God's way to men, this stern and harsh rendering of Paul's 'as in Adam all died.' The time is past in which Milton's poem was read almost as if it were the Bible. It is no longer the poetic presentation of those momentous events as if they actually occurred, to judge of the justice or injustice of which was forbidden. Now we can see that the epic form and the spiritual intention of the poem are not capable of being harmonized. The poem is held together from the first line to the last by the miracle of Milton's style—a veritable 'cleft of gold' energized with all the barbaric spell of his multifarious learning—and by the miracle of his verse harmonies. But, when we look beneath this dazzling surface, we see that the unity is not so complete as we imagined, that a magnificent epic story is troubled and rendered abortive by the cramping theological purpose. All that is gained in Paradise Lost is the product of Milton's creative, mythopoetic faculty working as freely on the scanty material of Biblical record and ecclesiastical tradition as did Homer or any primitive poet when shaping and embroidering popular material. But there is nothing in the poem that is essentially Christian. The splendid scenes of the opening books—Satan and his companions debating in hell, Satan voyaging through chaos or descending through the heavenly bodies in the first freeness of his creation—in Eden, the wars in heaven—all these might be fragments from the primitive myths of some forgotten religion, and perhaps nowadays we should read them with greater and less troubled interest if we might do so without the necessity of reference to our own religious traditions and feelings, without having to ask ourselves 'Is this our God? Is this the Second Person of the Trinity?' For, as Milton approaches his proper theme, in the theological disquisition in heaven, in the story of the Temptation and what follows, we cannot but feel, despite frequent beauties, a steady subsidence of the creative power of the opening; the didactic displaces the epic poem. The magnificent promise of the opening books is not fulfilled. The noble characters there brought upon the stage achieve nothing. Even the Satan of the Temptation strikes us as not quite the Satan of the first and second books, of whose damned, passionate soul we should have expected some action larger, more significant, than this rather over-eloquently treated temptatio of a not too wise woman. The simple Bible story will not adapt itself to the classical epic treatment. The large, creative movement of the earlier episodes is lost as the poet feels himself confined by the original story and the didactic purpose.

The harmonizing of story and didactic is better achieved in Paradise Regained, Milton's epic on the 'brief model' of the book of Job; but it is so because the didactic and argumentative strain is, as in Job, dominant throughout. The poem is a finely wrought presentation of Milton's ideal Christian virtues, obedience, temperance, and the scorn of worldly gain. The poet, with the utmost perfection and chaste yet rich in texture, is none of the wonderful creative power of the great episodes and characters in the longer poem; and its austerity of tone marks its limits as a religious poem, for obedience, temperance, and unworldliness are Christian virtues only as they flow from or lead to charity, and but little of the radiancy of Christian love illumines and warms this severe and stately poem.

The passion which sleeps under Milton's most interesting lines flowed forth like a flood of lava in the work which closed his career. Samson Agonistes has the rare interest and beauty of the personal passages in Paradise Lost and is the product of Milton's poetic diction and of criticism upon Scripture. His discovery is the artificial mould of classical tragedy all the more passionate feeling with which he reviewed the course of his own life and the history of the cause with which he had identified himself; but with all heartfelt. The never-closed wound of his first marriage, the loss of his sight, the defeat of the high hopes which he had conceived for his country as a chosen people, a Kingdom of God on earth, the triumph of the hated prelates and the despised sons of Bedouin with tenderness and wine. All found no utterance in the severely measured lines and choruses of this tragedy, not a lament, as the French called it, but the last utterance of Milton's indomitable will, that unmistakable self-confidence which he called faith in God—a fitting close to the career of the loftiest soul among English poets:

'Samson hath quaffed himself
Like Samson, and heredily hath finished
A life heroic' (Samson Agonistes, 1704.)

Of Milton's supreme greatness as a poet there is no question. In sustained loftiness of soul, elaborate magnificence of language, and mystery of varied cadence of power movement, there have become the touchstone of poetic taste, for, unless a reader has an ear and taste for the technique and music of poetry, he may not find much to attract him in Milton; if he does, he will find endless delight. To the question whether he is also to be considered a great Christian poet a more modified answer must be given. A study of his articulated creed bears out the impression communicated by his poetry that Milton's was not an anima naturalis. Christ was rather the soul of an ancient Stoic, blended with that of a Jewish prophet, which had accepted with conviction the Christian doctrine of sin and redemption. The spirit of his poetry wants two of the most distinctively Christian notes—humility and love. Milton's soul was as proud as Dante's; he was less conscious of the failing (Purg. xiii. 186 f.) It is the absence in all his poetry of the note of passionate self-surrender to the love of Christ that separates him, not from Dante, but from the Paritan like Bunyan, an Anglian like Herbert, a Roman like Crashaw and Vondel, among his contemporaries. It was on another side that Christianity claimed Milton. His work begins and ends in the idea of liberty and its correlative duty, human freedom and the responsibility that it carries with it of living

'As ever in the great Taskmaster's eye.'

God is, for Milton, indeed the great Taskmaster, but he rejoices in the tasks; 'the victories of the conscience are gained by the commanding charm which all the severe and restrictive virtues have for him' (Emerson, in North Amer. Review, xvi. [1885] 65); for Milton freedom is obedience in the highest and hardest tasks. To restore this freedom is the great service of Christianity, the fruit of Christ's perfect obedience and the regenerating work of the Holy Spirit. Christianity alone is perfect liberty, a liberty that no human authority, Church or State, may limit. Milton, with all his defects, is an ethical and religious poet because of the conviction which his poetry imparts that, in the words of a recent French writer,

'God is for Milton the all in all of life. There is no more terrible evil than sin which separates us from it, and no more sublime mystery than the Redemption which reconciles us to God' (P. Chaquet, La Religion de Milton, Paris, 1885, p. 241.)

All his acts and writings were inspired by his desire that the Kingdom of God might come on
MIMAMSA

Coleridge, first termed W. T. com-
exen. Milton, in reality T. A. Arthnsoifjraha, cer-
monial 'Mitha' text-book which is the title of one of the six systems of
orthodox Vedic philosophy. The Minimamsa is the
most mystical and philosophical of the six systems of orthodoxy. It
is concerned with the system of knowledge, the Vedanta
system, the system of Vedanta, the system of Vedanta, the system of Vedanta,
the system of Vedanta, and is the system of Vedanta.

The Mimamsa system is divided into two parts: the
part of the representation of works and the part of
the representation of words. The first part of the
representation of works is the representation of
the works, and the second part of the representation
of words is the representation of words. The
representation of works is divided into two parts:
the representation of words and the representation
of works. The representation of words is divided
into three parts: the representation of words, the
representation of words, and the representation
of words.

The Mimamsa system is the most mystical and
philosophical of the six systems of orthodoxy. It
is concerned with the system of knowledge, the
Vedanta system, the system of Vedanta, the system of Vedanta,
the system of Vedanta, and is the system of Vedanta.

It has been already reached that the form in
which the Mimamsa is presented may have contri-
buted towards its being regarded as a branch of
its own. That the Mimamsa is presented in the
form of a branch of its own is generally regarded.

Mimamsa

Mimamsa is Sanskrit for "investigation", and is also
the term used in the vernacular language for
the study of the Vedas. It is the branch of
philosophy which most closely resembles logic.

The Mimamsa system is divided into two parts:
the part of the representation of works and the part
of the representation of words. The first part of the
representation of works is the representation of
the works, and the second part of the representation
of words is the representation of words. The
representation of works is divided into two parts:
the representation of words and the representation
of works. The representation of words is divided
into three parts: the representation of words, the
representation of words, and the representation
of words.

The Mimamsa system is the most mystical and
philosophical of the six systems of orthodoxy. It
is concerned with the system of knowledge, the
Vedanta system, the system of Vedanta, the system of Vedanta,
the system of Vedanta, and is the system of Vedanta.

It has been already reached that the form in
which the Mimamsa is presented may have contri-
buted towards its being regarded as a branch of
its own. That the Mimamsa is presented in the
form of a branch of its own is generally regarded.
MINÆANS.—See ARABS (ANCIENT), SAK-ANS.

MIND.—Questions of empirical psychology and of the relations between body and mind are discussed in other articles (see Body, Body AND Mind, Brain AND Mind). The present article must be limited to a discussion of the metaphysical theories of mind. Owing to the peculiar position which these problems occupy in philosophy, as well as in the study of ethical and religious systems, it is advisable, first of all, to make explicit some of the epistemological problems which especially confront the student of the nature of mind; and, in order to do this, we must consider certain traditional conceptions which beset the theory of the knowledge of mind, open our discussion with some general statements concerning the nature of problems of knowledge.

The history of epistemology has been dominated by a well-known contrast between two kinds of knowledge, namely, perceptual knowledge and conceptual knowledge. This dual contrast seems insufficient to supply us with a basis for a really accurate classification of the fundamental types of knowledge. It is proposed in the present article to base the whole discussion upon a threefold classification of knowledge. Having begun with this threefold classification and briefly illustrated it, we shall proceed to apply it to actual problems which we have to face in dealing with mind. We shall then consider in some detail what kinds of mental facts correspond to the three different kinds of knowledge thus defined. In conclusion, we shall draw some conclusions of the philosophy of mind in the light of the previous discussion.

1. Perception and conception as fundamental cognitive processes.—A careful study of the processes of knowledge, whether these occur in the individual or in the efforts of common sense to obtain knowledge, shows us three, and only three, fundamental processes which are present in every developed cognitive activity and interwoven in more or less complicated fashion. Of these two have been recognized throughout the history of science and philosophy, and their familiar contrast has dominated epistemology. The third, although familiar and often more or less explicitly mentioned, was first distinguished with sharpness, for epistemology by the American logician, Charles S. Peirce. We shall speak first of the two well-known types of cognitive process, perception and conception.

The name 'perception' is used in psychology with special reference to the perceptions of the various senses. We are here interested only in the most general characteristics of perception. William James has used, for what is here called perception, the term 'knowledge of acquaintance.' He distinguishes 'knowledge of acquaintance' from 'knowledge about.' In the simplest possible case one who listens to music has 'knowledge of acquaintance' with the music: the musician who listens in the light of his professional knowledge has not only 'knowledge of acquaintance,' but also 'knowledge about': he recognizes what changes of key take place and what rules of harmony are illustrated. A deaf man who has learned about the natural tones of the fixed notes, as far as he can tell him about it, but who has never heard music, has no 'knowledge of acquaintance,' but is limited to 'knowledge about.' 'Knowledge of acquaintance' is also sometimes called 'immediate knowledge.' In the actual cognitive process of the individual human being it never occurs quite alone, since, when we know something perceptually or by acquaintance, we also always have more or less 'mediate knowledge,' i.e., one who listens to music, but who also considers the person of the artist, the relation of the music to the programme, the name of the composer, or the place of this experience in his own life, has in his knowledge that which is more than the immediate hearing of the music.

'Knowledge about' includes, on occasion, mental processes which may vary very widely and which may be mingled with 'knowledge of acquaintance' in ways which are far too complex to analyze here. But 'knowledge about' is especially opposed to 'knowledge of acquaintance' in one class of cases which need to be emphasized through the use of a special name. We may name that class by calling the kind of knowledge involved in it by the name already used, 'conceptual knowledge.' Conceptual knowledge is knowledge of universals, of relations, or of other such 'abstract' objects. The Socratic-Platonic theory of knowledge called attention from its very beginning to universals and relations, and consequently made this type of knowledge specially prominent.

No doubt, even if one is disposed to cling to this merely dual classification of knowledge, one may well question whether it is a sufficiently explicit. The merely 'knowledge of acquaintance' is of the grade of conceptual knowledge. For there is much 'knowledge about' concerning which we should all hesitate to say that it is knowledge of universals. Socrates himself did not distinguish the knowledge of universals from the knowledge of particulars. In the classical theory of universals, met at the start with the fact that much of our knowledge of universals is confused in our minds. But if, for the moment, we reject the intermediate cognitive states in which we more or less lose our 'knowledge of acquaintance' and conceptual knowledge, or possess conceptual knowledge in imperfect degrees of development, we may readily admit that this traditional dual classification of cognitive states is sufficiently adequate to call attention to a distinction which is of the utmost importance, both for empirical science and for metaphysics.

While the distinction between perceptual and conceptual knowledge is of great importance in determining the distinction between the deductive and the inductive methods in the sciences, the classification of these two modes of cognition does not of itself suffice to determine what constitutes the difference between inductive and deductive science. When we speak of conceptual knowledge, we are in general prepared to undertake scientific processes that in the case of further development will involve deductive methods. Thus, in particular, a conceptual knowledge of universals leads in the mathematical sciences to the assertion of propositions. Some of these propositions may appear at the outset of a science as axioms (q.v.). Whether accepted as necessarily true or used merely as hypothesis, these propositions, either alone or in combination, may, after all, the mathematical sciences do, form the starting-point for a system of rational deductions. The type of knowledge involved in this deductive process will be, in the knowledge of acquaintance, on the other type. In what sense and to what degree a 'knowledge of acquaintance' enters into a process of mathematical reasoning we have not here to consider. All will admit that the sort of knowledge which dominates such a deductive process is not the knowledge in reaching results which are true about the propositions that themselves form the premises of the deduction. And so our knowledge concerning numbers, the operations of a mathematical science, and similar cases form exceptionally good instances of what characterizes conceptual knowledge in its exact and developed form.

In the inductive use of scientific methods we find a more complicated union of the perceptual
and the conceptual types of knowledge. When a hypothesis, such as Newton's formula for gravitation, or Galileo's hypothesis concerning the laws of falling bodies, is stated, the type of knowledge involved in formulating and in understanding that hypothesis is previsional. When the hypothesis is tested by comparing the predictions based upon it with experience, the test involves appealing at some point to perceptual knowledge, or 'knowledge of acquaintance.' The concept of experiment used in an inductive science might seem to be typical cases of processes involving perceptual knowledge. And experiments unquestionably do involve such knowledge. But an experiment reveals a truth, because it brings concepts and percepts into some sort of active synthesis. Upon such active synthesis depends the process of validation which is used as the basis for the definition of truth used by recent pragmatists (see ERROR AND TRUTH).

In so far as we insist upon this dual classification of fundamental processes of cognition, the questions which most come to our notice, regarding both knowledge and its objects, concern (1) the relative value of these two cognitive processes, and (2) in which of these processes, or in ideal cognitive processes (such as we may ascribe to beings of some higher order than ours), the two can ever be separated. These two questions have proved especially momentous in the discussion of knowledge and the concept of reality.

(1) Regarding the relative value of the two fundamental types of cognition, Plato, as is well known, held that conceptual knowledge is the ideal type, the right result of an expression of reason. Conception knowledge gives truth; perceptual knowledge gives illusion or appearance. The same is true, on the whole, of the Platonic doctrine. In recent discussions the pragmatists—and still more emphatically Bergson—have insisted upon the relative superiority of the perceptual type of knowledge. The familiar expression of this view is the thesis of recent pragmatism that conceptual knowledge has only a sort of 'credul value'; perceptual knowledge furnishes the 'cash of experience'; concepts are 'bank notes'; perceptions, and perceptions only, are 'cash.' The statement of Bergson goes further, and declares that, if we had unlimited perceptual knowledge, i.e., 'knowledge of acquaintance' whose limits and imperfections we had no occasion to be aware of, but our knowledge had no imperfections, then concepts could have no possible interest for us as cognitive beings. In other words, we use concepts, i.e., we seek for a knowledge of universals, only when our perceptions in some way fail us. Conceptual knowledge is in its very essence a substitute for failing perceptual knowledge. The opposition between Plato and Bergson regarding this estimate of the relative significance and truthfulness of the two kinds of cognitive processes is the characteristic of the contrast which is here in question. Of course all the philosophers admit that, in practice, our knowledge makes use of, and from moment to moment consists in, a union which involves both conceptual and perceptual processes.

(2) On the question whether the two foregoing types of knowledge, however closely linked in our normal human experience, can, at least in ideal, be separated—i.e., whether a knowledge by 'pure realization' is possible on the one hand, or a knowledge of 'pure experience' on the other hand—the historical differences of opinion are closely related to well-known metaphysical controversies. For Plato, as in another age, and in a largely different metaphysical context for Spinoza, it is at least to say that, for the conceptual philosopher, to attain a purely intellectual insight into the realm of 'ideas' or into the nature of the 'substance.' For various forms of mysticism, as well as for theories such as the one set forth in the Kritik der reinen Erkenntniss (Leipzig, 1888-90) of B. H. L. Avenarius, there may be a mental transeuntment which involves either a practical or a scientific correction and gradual suppression of erroneous intellectual illusion; and, at the limit of this process, reality becomes immediately and perceptually known, without confusion through abstractions.

The 'radical empiricism' of James's later essays makes use of a theory of knowledge which attempts, as far as possible, to report, apart from conceptual constructions, the data of pure experience.

2. Interpretation through comparison of ideas as a third fundamental cognitive process. It is an extraordinary example of a failure to reflect in a thoroughgoing way upon the process of knowledge that until recently the third type of cognitive process to which we must next refer has been neglected, although every one is constantly engaged in using and in exemplifying it.

When a man understands a spoken or written word or sentence which is denoted by a sign, or expression of an idea or meaning, which in general belongs to the mind of some fellow-man. When this sign or expression is understood by the one who hears or who reads, what is made present to the consciousness of the reader or hearer may be any combination of perceptual or conceptual knowledge that chances to be in question. But, if any one cries 'Fire!', the sort of knowledge which takes place in my mind when I hear and understand this cry essentially depends upon this fact: I regard my fellow man's cry or expression of the fact either that he himself sees a fire or that he believes that there is a fire, or that, at the very least, he intends me to understand him as asserting that there is a fire, or as taking an interest of his own in what he calls a fire. Thus, while I cannot understand my fellow's cry unless I hear it, unless I have at least some perceptual knowledge, and while I equally shall not have a 'knowledge about the nature of fire, and so a knowledge about the fact or expression of the fact either that he himself sees a fire or that he believes that there is a fire, or that, at the very least, he intends me to understand him as asserting that there is a fire, or as taking an interest of his own in what he calls a fire. It is to be noted that, however we reach the belief in the existence of minds distinct from our own, we do not regard these minds, at least in ordinary conditions, as objects of our own perceptual knowledge. For the very motives, whatever they are, which lend me to regard an expression as my own even therby lead me to regard my fellow's perceptions as never present within my own field of awareness. My knowledge of my own physical pains, of the colours that I see, or of the sounds that I hear is knowledge that may be called, in general terms, perceptual. That is, these are objects with which I am, or upon occasion could be, acquainted. But with my fellow's pains I am not acquainted. To say this is merely to say that, whatever I mean by 'my own physical pains,' the very distinction between the two is so bound up with the type of cognition that is in question that whatever I am acquainted with through my own perception is in sapp facto my own object of acquaintance, and hence that perceptual knowledge has not as its object what is
at the same time regarded as the state of another mind than my own.

But, in the kind of my fellow, in particular his ideas, his feelings, his intentions, are never objects of perceptual knowledge for me, so that I am not directly acquainted with any of these states, must we regard our knowledge of the mind, of the ideas, of the purposes, feelings of our fellow-man as a conceptual knowledge? Is our fellow-man's mind the object of a concept of our own? Is the fellow-man a universal, or a relation, or a property? Wherein do he differ from a mathematical entity or a law of nature? Unquestionably we regard him as possessing conceptual knowledge of his own, and also as engaged in processes of knowledge which may be conceptual, or which may involve any union of percept and concept. But the fact remains that neither by our own perceptions can we become acquainted with his states of mind, nor yet by our own conceptions can we become able to know the objects which constitute his mental process. In fact, we come to know that there are in the world minds not our own by interpreting the signs that these minds give us of their presence. This interpretation is a third type of knowledge which is closely interwoven with our perceptual knowledge, very much as they in turn are bound up with it, but which is not reducible to any complex or combination consisting of elements which are merely perceptual or merely conceptual.

Knowledge is the relation of both man and man, or (what is still more important) every process of inner self-comprehension carried on when a man endeavors to 'make up his own mind' or 'to understand what he is about,' involves this process of conceptual interpretation, and cannot be reduced to perception or to conception. It is to this third cognitive process that, following the terminology which Peirce proposed, we here apply the name 'interpretation.'

In order to distinguish more clearly the three types of cognition, we may say that the natural object of perception is some inner or outer datum of sense or of feeling, such as a musical tone, a color, an emotional state, or the continual flow of the natural life which Ferguson much insisted. For these are typical objects of perceptual knowledge, i.e., of 'knowledge of acquaintance.' The typical objects of conceptual knowledge are such objects as numbers, and relations such as identity and difference, and qualities or properties. The objects of interpretation are signs which express the meaning of some mind. These signs may be expressions of the meaning of the very mind which also interprets them. This is actually the case whenever in memory we review our own past, when we reflect upon our own meaning, when we form a plan, or when we ask ourselves what we mean or engage in any of the inner conversation which forms the common expression of the activity whereby an individual man attains some sort of explicit knowledge of himself.

The form of cognitive process involved in the social relations between man and man is essentially the same as that involved in the cognitive process by which a man makes clear to himself his own intent and meaning. For, despite well-known assertions to the contrary on the part of Bergson, nobody has any adequate intuitive 'knowledge of acquaintance' with himself. If such perceptual or intuitive knowledge of the self by the self were possible, we should not be obliged to acknowledge that the world of human beings is dominated by such colossal and often disastrous ignorance of every man regarding himself, his true interests, his real happiness, his moral and personal values, his intents, and his powers, as we actually find characterizing our human world. In brief, man's knowledge, both of himself and of his neighbor, is a knowledge which involves an interpretation of signs. This thesis, very ably maintained by Peirce in some of his early essays, involves consequences which are at once familiar and momentous for the theory of knowledge.

That the type of knowledge involved whenever signs are interpreted is a fundamental type of knowledge which cannot be represented either to perception or to conception can be exemplified in many manifold ways, and will appear more clearly through the illumination given us by the following early statement. It may be useful to point out here that, while all our interpretations, like all our perceptual and conceptual knowledge, are subject to the manifold illusions in detail, it still remains the case that, whenever one is led to attempt, propose, or believe an interpretation of a sign, he has actually become aware, at the moment of his interpretation, that there is present in his world some meaning, some significant idea, plan, purpose, undertaking, or intent, which, at the moment when he discovers its presence, is from his point of view not identical with whatever idea or meaning is then his own.

If somebody talking to me uses words which I had not intended to use, I may misunderstand the words, or I may not understand them at all. But, in so far as I take these words to be the expression of a meaning, this meaning is one that just then I can think of for the words do not express my ideas, in so far as these ideas are by me interpreted as my own. The cognitive process here in question divides, or at least distinguishes, that part of the objects, ideas, or meanings in question into two distinct provinces, or modes of mental activity. One of these regions is interpreted at the moment as 'my own present idea,' 'my own purpose,' 'my own meaning'; the other is interpreted as 'some meaning not just now my own, or as 'some idea or meaning that was once my own'—i.e., as 'my own past idea,' or as 'my neighbor's meaning,' or perhaps as 'a meaning that belongs to my social order,' or 'to the world,' or, if I am religiously minded, 'to God.' In each case there is a method which may prove to be a wrong one. Interpretation is fallible. So, too, is conception, when viewed as a cognitive process, and so is perception, whose character as 'acquaintance with' is no guarantee of its accuracy. But typically, objects of interpretation are signs which express the meaning of some mind. These signs may be expressions of the meaning of the very mind which also interprets them. This is actually the case whenever in memory we review our own past, when we reflect upon our own meaning, when we form a plan, or when we ask ourselves what we mean or engage in any of the inner conversation which forms the common expression of the activity whereby an individual man attains some sort of explicit knowledge of himself.

There is another way of expressing the distinction of these three kinds of knowledge which is useful for many purposes. Knowledge of the first kind, 'knowledge of acquaintance,' may for certain purposes be characterized as 'appreciation.' Conceptual knowledge, owing to the means often employed in making a concept explicit, may be for many purposes called 'description.' In each case, as will be noted, the main character of the
type of knowledge in question can be designated by a single term, namely, appreciation or description, just as in the foregoing these two types of knowledge have been designated each by a single term, acquaintance in one case and conception in the other.

In designating the instances of interpretation it is well to note that every interpretation has three aspects. For the one who interprets it is an expression of his own meaning. With reference to the object, i.e., to the sign, or to the mind whose sign this is, the interpretation is the reading or rendering of the meaning of this mind by another mind. In other words, every interpretation has so far a dual aspect: it at once brings two minds into quasi-social contact and distinguishes between them or contrasts them. In the light of this contrast and with reference to the direction in which it is read, the two minds are known each in the light of the other. As has already been seen, the two minds in question may be related as a man's own past self is related to his present or future self. And in fact, as Peirce has pointed out, every act of interpretation has also a triadic character. For the cognitive process in question has not only a social character, but what one may call a directed 'sensation': a sensing for the 'cash,' in the form of sense-data, such as may, when found, meet the requirements, or 'calls,' made by the conceptual aspect of the very idea which is in question. This concept has, in Bergson's phrase, its 'credit value.' Eventual sense-data may furnish the corresponding 'cash.' The idea is the seeking for this 'cash.'

When the wanderer in the woods decides to adopt the idea that 'yonder path leads me home,' he makes an active synthesis of his concept of home and of his present sense-data. This active synthesis, expressed in his idea, 'I am homeward bound,' is a leading, which, if he is successful, will result in furnishing to him, when his wanderings cease, the perceptions of home which constitute the goal.

Thus, in brief, knowledge by interpretation is (1) an expression (by an 'interpreter') of (2) the idea or self-consciousness, involving a definite sequence of plans of action, and dealing with long stretches of time, has this tripartite character. The present self interprets the past self to the future self; or some generally still more explicit social process takes place in which one self or quasi-self has its meanings stated by an interpreter for the sake of some third self.

Thus, in brief, knowledge by interpretation is (1) an expression (by an 'interpreter') of (2) the idea or self-consciousness, involving a definite sequence of plans of action, and dealing with long stretches of time, has this tripartite character. The present self interprets the past self to the future self; or some generally still more explicit social process takes place in which one self or quasi-self has its meanings stated by an interpreter for the sake of some third self.

3. Self-interpretation, comparison of one's own ideas, and knowledge of time.—When such interpretation goes on within the mind of an individual man, it constitutes the very process whereby, as is sometimes said, he 'finds himself,' 'comes to himself,' 'directs himself,' or 'gets his bearings,' especially when he is in the midst of his own past self, past and future. In the inner life of an individual man this third mode of cognition, therefore, appears at once in its most fundamental and simplest form as the cognitive process whose being consists in a comparison of ideas. The ideas compared here belong in one sense to the 'same self'; but they differ as the ideas of 'past self' and 'future self'; or, in various other ways, they belong to different quasi-minds.

A mode of process is, indeed, irreducible to pure perception, to pure conception, or to that active synthesis of the two which James has in mind when he uses the term 'idea,' readily becomes manifest if we consider what takes place when two 'ideas' are 'compared,' whether these two belong to men who are 'different individuals' or to the same individual, or to the past, present, or future selves of one who is, from another point of view, the same man.

An 'idea,' when the term is used in the sense which recent pragmatism has made familiar and prominent, is not a mere perception, nor a mere collection or synthesis of various perceptions, images, and other immediate data, but is a mere conception, whether simple or complex. It is, for James and his allies, a 'leading,' an 'active tendency,' a 'fulfilment of purpose,' or an effort towards such fulfilment, an 'adjustment to a situation,' a seeking for the 'cash,' in the form of sense-data, such as may, when found, meet the requirements, or 'calls,' made by the conceptual aspect of the very idea which is in question. This concept has, in Bergson's phrase, its 'credit value.' Eventual sense-data may furnish the corresponding 'cash.' The idea is the seeking for this 'cash.'
of failure (e.g., the reaching home itself, or getting to the close of some stage of the wandering); and, in making this comparison, this interpretation estimates the result, perhaps in the light of one's ideas in advance, and henceforth I need search no more!], or perhaps in the light of one's idea of one's entire self ('I have succeeded,' or 'I am a knower of the truth,' or 'So much of the world of reality is mine'). In any case two comments may be made upon every such act of comparing two ideas and interpreting one in the light of the other.

(1) Unless such processes of comparing ideas were possible, and unless, in at least some rudimentary form, it took place, we could never make even a beginning in forming a coherent view of our own past and future, of our own selves as individuals, or of selves not our own. Our ideas both of the Ego and of the Alter depend upon an explicit process of ideas—a process wherein some self, or quasi-self, or idea interprets another idea, by means of a comparison which, in general, has reference to, and is more or less explicitly addressed to, some third self or idea.

A view of the three cognitive processes to our knowledge that various minds exist and to our views about what sorts of beings minds are.—The use of the foregoing classification of the types of cognitive processes appears of special importance as a means of distinguishing some of the principal theories about the nature of mind which have played a part in the history of philosophy. Newrout how does the theory of knowledge show itself of more importance in preparing the way for an understanding of metaphysical problems than in the case of the metaphysics of mind. No attentive student of the problem of mind can easily fail at least to feel, even if he does not very explicitly define his feeling, that in dealing with the philosophy of mind both common sense and the philosophers are accustomed to combine, sometimes in a very confused way, a reference to different more or less hypothetical beings, while the ideas that are proposed with regard to the nature of these beings are of profoundly different types.

Thus it may be a question for common sense or for a given metaphysical doctrine as to whether or not there exists a so-called soul. Now it makes a great difference for the theory of mind both common sense and the philosophers are accustomed to combine, sometimes in a very confused way, a reference to different more or less hypothetical beings, while the ideas that are proposed with regard to the nature of these beings are of profoundly different types.

whence being consists in the fact that it is to be interpreted thus or so. Unless the three kinds of cognition are clearly distinguished, the one who advances or tests a given theory of the soul does so without observing whether he is speaking of the soul as a possible perception, or is treating it as if it were, in its inmost nature, an object which can be known only through some adequate conception. If one has called to his attention the fact that he is speaking in conceptual and not in conceptual terms of the mind or soul which his theory asserts to be real, he may then attempt to solve his difficulties in the way which recent pragmatism has emphasized, i.e., he may declare that his doctrine is not necessary a 'working hypothesis' about the nature of the soul, that it is, of course, in part stated in conceptual terms, but that the concepts are true only in so far as they prove to be somewhere directly verifiable in terms of immediate perception.

Yet nowhere does recent pragmatism, in the form in which William James left it, more display its inadequacy as a theory of knowledge than in the case where it is applied to an effort to define the truth of hypotheses concerning mind, or to test such truth. For, as a fact, nobody who clearly distinguishes his neighbour's individual mind from his own expects, or can consistently anticipate, that his neighbour's mental states or activities which essentially belongs to the inner life or to the distinct mind of his neighbour, can ever become, under any circumstances, a direct perception of his own. For, if my neighbour's physical pains ever become mine, I should know them by immediate acquaintance only in so far as they were mine and not my neighbour's. And the same holds true of anything else which is supposed to be a fact essentially belonging to the individual mind of my neighbour. And I can have at most only a greater or less probability, to interpret correctly the meaning, the plan, or some other inner idea of the mind of my neighbour; but I cannot hope to go beyond such correct interpretation so far as to perceive my neighbour's mental states. For, if my neighbour's states became the immediate objects of my own acquaintance, my neighbour and I would so far simply melt together, like drops in the ocean or small pools in a greater pool. The immediate acquaintance with my neighbour's mind which would be a knowledge neither of himself as he is in distinction from me nor of myself as I am in distinction from him. For this general reason 'working hypotheses' about the interior reality of myself of my neighbour's mind can never be 'converted into the cash of experience.' My neighbour's mind is never a verifiable object of immediate acquaintance, precisely as it is never an abstract and universal idea. The one sort of knowledge for which recent pragmatism has no kind of place whatever is a knowledge, storable in pragmatic terms, concerning my neighbour's mind.

James himself follows a well-known and ancient philosophical tradition by declaring that our assertion of the existence of our neighbour's mind depends upon the argument from analogy. Because of similar behaviours of our organism we regard it as an analogy for ourselves that both neighbour's organism and our own are vivified by more or less similar mental lives, so that we have similar experiences. But to regard or to believe in the mind of our neighbour as an object whose existence can be proved through an argument from analogy raises a question whose answer is simply fatal to the whole pragmatic theory of knowledge. Surely an argument from analogy is not its own verification. For pragmatism the truth of a hypothesis depends upon the fact that
It is possible, of course, to say of the foregoing argument from analogy what is also said both by common sense and by science, on the basis of a theory of truth which is in its essence conceptual and which we assert that the actual fact the mental states of my neighbour really exist and are in a certain relation which makes it true to say that they are analogous to mine. This real relation may be asserted to be a part of fact at any other fact in the universe. If this fact of the real analogy is granted, then it may be declared that my hypothesis to the effect that my neighbour's mind is a actually future. This, however, is precisely the type of truth with which William James's pragmatism undertakes to reject.

A very different appearance is assumed by the whole matter if we recognize that there is a third kind of knowledge, which is neither conceptual nor perceptual, and which is not the sort of union of conception and perception which is completely expressive in terms of the favourite metaphor of Bergson and the pragmatists, namely, the metaphor of the conversion of conceptual credits or banknotes into perceptual cash, i.e., into immediate data of experience. For interpretations are not verified merely through immediate data, nor through the analysis of conceptions. This is true whether I myself or the object of my interpretation begins with the metaphor, and is that which the neighbour of a metaphor already used, furnishes the means of indicating wherein consists the relative, but never immediate, verifiability of the truth of an interpretation.

When I interpret, whether my own purposes or intents of the ideas of another man are the objects which I seek to interpret, what I first meet in experience is neither a matter of acquaintance nor a matter of interpretation. What I meet is the fact that, in so far as I now understand or interpret what I call myself, I have also become aware, not immediately but not in the temporal process of my mental life, that ideas have come to me which are not now my own, and which need further expression and interpretation, but which are already partially expressed through signs. Under these circumstances, what happens is that, as interpreter of these signs, I offer a further expression of what to me is a sort of knowledge about. This is the form of the hypothesis that this expression makes more manifest to me both the meaning of this sign and the idea of the mind or self wherein this sign gave partial expression. It is of the essence of an expression which undertakes to interpret a sign that it occurs because the sign already expresses a meaning which is not just at the present moment of our own, and where interpretation, while the interpretation which at the moment we offer is itself incomplete, but requires further interpretation.

In literal conversation our neighbour utters words which already express ideas. These ideas so contrast with our own present ideas that, while we find the new ideas intelligible, and, therefore, view them as expressions of a mind, we do not fully know what they mean. Hence, in general, our neighbour has addressed us, we can reply ask him, more or less incidentally or persistently, whether or not this is what he means—i.e., we give him back our interpretation of his meaning, in order to see whether this interpretation elicits a new expression which is in substantial agreement with the expression which we expected from him. Our method in a conversation is, therefore, unquestionably the method of a working hypothesis. But since this working hypothesis refers to our neighbour's state of mind, it is never conceivable capable of direct verification.

Nor does what the pragmatists are accustomed to call the successful 'working' of this hypothesis consist in the discovery of any perceptible fact attributable to the neighbour. Our interpretation of our neighbour satisfies our demands, precisely in so far as our interpretations, which are never complete, and which always call for new expressions and for further interpretations, lead to a conversational situation, as a whole, essentially 'coherent,' despite its endless novelties and unexpected incidents.

Our whole knowledge of mind, in so far as we mean intelligent mind, not only depends upon, but consists in, a consistent series of interpretations, which we obtain, merely through interpreting 'credits' into the 'cash' of immediate acquaintance, but by seeking and finding endlessly new series of ideas, endlessly new experiences and interpretations. This never-ended series of ideas, in so far as we can hold them before our minds, tends to constitute a connected, reasonable, comprehensible system of actual ideas and meanings. The essence of the mental interpretation which underlies this experience of intelligent mental life and of all spiritual relations—only not depends upon, but consists in, this coherent process of interpretation.

Or, again, an interpretation is not a conceptual hypothesis which is verified in 'practical knowledge': it is a hypothesis which leads us to anticipate further interpretations, further expressions of ideas, novel bits of information, further ideas not our own, which shall simply stand in a coherent connexion with one another and with what the original interpretation, as a hypothesis, had led us to expect. When I deal with inanimate nature, I may anticipate facts of perception, and that my hypotheses about these facts 'work,' in so far as the experiment on that hypothesis turns out to be successful. But, when I deal with another mind, I do not merely expect to get deducible perceptions from that mind; I expect that mind to give me new ideas, new meanings, new plans, which by contrast are known at each new stage of social experience to be not my own, and which may be opposed to my own and in many respects repellent to me.

But it is essential to the social intercourse between minds that these endlessly novel ideas and meanings should, by their very novelty and surprises, retain genuine coherence. Thus, in dealing with other minds, I am constantly enlarging my own mind by getting new interpretations, both of myself and of my neighbour's life. The contrasts, surprises, conflicts, and puzzles which
these new ideas present to me show me that in dealing with them I am dealing with what in some respects is not my own mind. The coherence of the whole system of interpretations, ideas, plans, and purposes shows me just as positively that I am dealing with a mind, i.e., with something which through these expressions constantly interprets itself, while, as I deal with it, I turn constantly interpret it, and even in and through this very process of interpretation never recognize and must be observed that this Alter, with which I have to deal, both in reflecting on my own mind and in seeking for new light from my neighbour, is never a merely single or separable or merely detached or isolated body dual, but is always what is of the nature of a community, a 'many in one' and a 'one in many.' A mind knowable through interpretation is never merely a 'monad,' a single detached self; its unity, in so far as it possesses concept and coherent unity, tends, in the most significant cases, to become essentially such as the unity which the apostle Paul attributes to the ideal Church: many members, but one body; many gifts, but one spirit (Ro 12:5).--an essentially social unity, never to be adequately conceived or felt, but properly the object of what the Apostle viewed, in its practical and religious aspect, as the spiritual gift of charity, in its cognitive aspect as interpretation, may rather that ye may interpret (1 Cor 12).

5. Metaphysical theories of the nature of mind.—(a) Predominantly perceptual theories. The nature of mind may be defined by a given metaphysical theory mainly in terms of which we regard mind as best or most known through possible perceptions or through possible acquaintance with its nature. Such theories have been prominent throughout the whole history of human thought, and, as an isolated body dual, but is always what is of the nature of a community, a 'many in one' and a 'one in many.' A mind knowable through interpretation is never merely a 'monad,' a single detached self; its unity, in so far as it possesses concept and coherent unity, tends, in the most significant cases, to become essentially such as the unity which the apostle Paul attributes to the ideal Church: many members, but one body; many gifts, but one spirit (Ro 12:5).--an essentially social unity, never to be adequately conceived or felt, but properly the object of what the Apostle viewed, in its practical and religious aspect, as the spiritual gift of charity, in its cognitive aspect as interpretation, may rather that ye may interpret (1 Cor 12).

Motives which as a fact are not stable in purely perceptual terms have joined with this fondness for defining mind in perceptual terms to make an emphatic the assertion that this theory of mind once and for all be stated in expressly ‘pluralistic’ terms. It has, consequently, been freely asserted that we ‘immediately know’ our own self to be independent, to be distinct from all other selves, and thus to be given. Since it is also sometimes asserted that we know, or that ‘we know intuitively,’ upon occasion, the fact that we can never be directly acquainted with the conditions of our neighbour’s mind, such perceptual theories have given rise to the so-called problem of Solipsism. For, if we know mind by perception only, and if we are sure of it only when we perceive it, and if each of us can perceive only his own mind, then what proves for any one of us that there is any mind but his own? The analogy which primitive animism so freely and so vaguely used becomes, for the critical consciousness, questionable. In consequence, the problem of Solipsism has remained in modern times a sort of scandal of the philosophy of mind.

The solution of the problem of Solipsism lies in the fact, upon which Feirce so well insisted, that no one of us has any purely perceptual knowledge of his own mind. The knowledge of mind is not so immediately given as the case either of our own or of the neighbour, in terms of merely immediate acquaintance. If the truth of this proposition is once understood, the entire theory of mind, whether for metaphysics or for empirical psychology, is profoundly altered. Until this inadequacy of knowledge through acquaintance to meet the real end of human knowledge is fully grasped, it is impossible to define with success either the mind or the world, either the individual self or the monistic world.

(b) Predominantly conceptual theories.—As is the case with every highly developed doctrine, the conceptual form is very naturally assumed by any philosophical theory of mind which seeks for theoretical completeness. The conceptual theories of mind have been in history of two general types: (1) the purely conceptual, i.e., the abstractly rational’ metaphysical theories; and (2) the more inductive conceptual theories based upon the more or less highly developed ‘empirical psychology’ of the period. With the period in which these theories have flourished. We need not enumerate these theories or give their history.

Of principal importance in their history have been (1) that type of view, the monistic, representative is the Aristotelian theory of mind; (2) the monistic theory of mind, which often depends not so much upon the general metaphysical tendency to define the whole universe as One, but rather upon the effort to conceive mind and matter in, regarding them both as the same in substance and (3) the various types of monadology, which are characterized by the assertion of the existence of many real and more or less completely independent minds or selves, whose nature it is either to be themselves persons or to be beings which under certain conditions can assume the form of persons.

Of these various important theories which are expressed in the predominantly conceptual view, that of Aristotle is very deeply and interestingly related to primitive animism on the one hand, while, on the other hand, it looks towards that development of the idea of the distinct individual self upon which modern formal systems of monadology have depended.

Whatever special forms the conceptual theories of mind may assume, the well-known problem remains: How are these conceptions of the various mental substances, or principles, or monads, which are each in time in question related to the sorts of experience which the psychologists, the students of the natural history of mind, have by a process of knowledge discovered or may yet hope to discover? From the point of view of modern pragmatism, conceptual theories of mind might be entertained as ‘working hypotheses’ if they led to verification in perceptual terms.

In fact, the modern physical sciences, in conceiving the nature of matter, deal with manifold problems, but use conceptual hypotheses regarding the nature of mind which are in a larger measure, subject to pragmatic tests. Molecular and atomic, and, of late, various other types of conceptual physical entities, which were formerly supposed to be incapable of being objects of physical experience, now appear to come within the range of the experimentalist’s verifications. Therefore the processes of the experimental verification of physical hypotheses are, on the whole, a direct relation to the sort of knowledge upon which the pragmatists so much insist. The ‘conceptual credits’ of physical hypotheses are, on the whole, verifiable in terms of the ‘perceptual cash’ of laboratory experience. When this is not the case, there is a tendency towards such direct verification. Hence physical self or of the world, as what is generally called the phenomenal nature of matter, have generally proved to be topics for an inquiry within the strict realm of inductive science.

But it has been, in the past, the reproach of the conceptual theories about the nature of mind that no pragmatic test can be discovered by which one might learn what difference it would make to an observer of mental processes and, in particular, his own mental processes, whether the so-called ‘soul substances,’ or Leibnizian monads, or not, or whether the introspective observer of his own sensations or feelings is or is not himself a Leibnizian monad or Aristotelian ‘entelechy’; or, again, whether he is essentially persistent and indestructible. Thus, from the pragmatic point of view, the majority of these conceptual hypotheses regarding the nature of mind show little sign of promising to prove more verifiable than they thus far have been. In consequence, the views regarding the real nature of mind has been, for many reasons, on the whole sceptical. In fact, the whole nature of mind cannot be adequately conceived, and could not be so conceived even if our observational processes were increased indefinitely, unless another type of cognitive processes were concerned in such an enlargement. For a mind is essentially a being that manifests itself through signs. The very being of signs consists in their demanding interpretation. The relations of minds are essentially social; so that a world without at least three minds in it—one to be interpreted, one the interpreter, and the third the one for whom or to whom the first is interpreted—would be a world without any real mind in it at all. This being the case, it might well be expected that a conceptual theory of mind would fail precisely as a perceptual theory fails. Such theories would fail because they do not view the cognitive processes to not take account of that which is most of all needed in order even in the most rudimentary fashion to grasp the nature of an intelligent mind.

(c) Theories making use of the cognitive process of the interpretation.—In the development of the doctrine of interpretation thus far in the history of epistemology, there have not been lacking theories regarding the nature of mind according to which mind is an object to be
known through interpretation, while its manifestations lie not merely in the fact that it possesses or controls an organism, but in the fact that, whether through or apart from an organism, it expresses its purposes to other minds, so that it not merely has or is a will, but manifests or makes clear that will, even through itself, as a monad or a substance, but in essence a mode of self-expression which progressively makes itself known either to its fellows or to such minds as above or below its own grade.

That theory of mind which are based upon such a view have existed, even from very primitive times, is manifest wherever in the history of religion a consultation of oracles, discovery of the future or will of the gods through divination, or, in fact, any such more or less superstition appeals to other minds, and readings or interpretations of these appeals, have taken place. Primitive belief in magic arts has apparently, on the whole, a conceptual type of formulation. Therefore magic has been called the physics of primitive man. It depends upon the view that man is subject to laws which, if he could discover them, he could use for his purposes, just as we now make use of the known laws of physics for industrial purposes. The supposed realm of magic arts is thus analogous to our present realm of industrial arts. The view of pragmatism—that primitive magic is not true merely because its hypotheses correspond in a manner to certain diseases does not 'work'—is in this case fairly adequate to express the situation both epistemologically and metaphysically.

Moreover, as we have seen, animism, in its more primitive form, has a predominantly conceptual theory of mind, and whether such a theory, either of mind or of the relations between mind and the physical world, is held in some simple form by the medicine-man of an obscure tribe or is fascinatingly placed in the setting of a modern evolutionary theory by Bergson, makes comparatively little difference to the essential views of the philosophy of mind which are in question. But that view of the nature of mind which gained, apparently, its earliest type of expression when men first consulted, and hereupon more or less cautiously interpreted, the oracles of their gods has (as befits a theory of mind which is founded upon a fundamental cognitive process) persisted throughout the history of human thought. This way of viewing mind has, in fact, persisted in a fashion which enables us to distinguish its expressions with sufficient clearness from those which have had their origin either in the conceptions of primitive magic or in the perceptions which guided primitive animism.

From the point of view of the cognitive process of interpretation mind has, at all times, where it reaches a relatively full and explicit expression, equally definable in terms of two ideas—the idea of the self, and the idea of a community of selves. To an explicit recognition of what these two ideas involve a great part of the history of the philosophy of mind has been devoted. Both ideas have been subject to the misfortune of being too often viewed as reducible either to purely conceptual terms or to purely perceptual terms. If the self were a mental term, it tended to degenerate into a substance, a monad, or a mere thing of some sort. Under the influence of a too abstract epistemology (such as the Kantian) the self also appeared as the 'logical ego,' or else as the 'pure subject.'

The fortunes of the idea of the community have been analogous. In religion this idea has proved one of the most inspiring of the ideas which have gradually transformed tribal ends into the two greatest religions which humanity possesses—Buddhism and Christianity. In ancient philosophy the community, viewed as the soul 'writ large,' inspired some of the most fruitful philosophical interpretations of Plato, Aristotle, and the Stoics.

In the general history of civilization this idea is united with the practically objective love of communities as persons that represent mind on a level higher than that of the individual, is, like the Pauline charity (which is explicitly a love for the Church universal and for its spirit), the chief and the soul of the humanizing virtues—that virtue without which all the others are but 'sounding brass or a tinkling cymbal.' Yet, in the history of thought the idea of the community has greatly suffered, less frequently from the attempt to view it as the proper object of a direct mystical perception than from the tendency to reduce it to a purely conceptual form. As a conceptual object the mind of the community, the 'corporate mind,' has tended to be thought of as an entity possibly significant in a legal or in a sociological sense, but difficult, and perhaps unreal, in a metaphysical sense.

Experience shows, however, that the two ideas—the idea of the individual self and that of the community—are peculiarly adapted to interpret each other, both to itself and to the other, when such interpretation is carried on in the spirit which the relation of Israel first made central in what undertook to be a world religion, and which the apostle Paul laid at the basis both of his philosophy of human history and of his Christology.

Modern idealism, both in the more vital and less formal expressions of Hegel's doctrine and in its recent efforts at a social interpretation of the self, of the course of human evolution, and of the problems of metaphysics, has already given a partial expression to a theory of which we tend to become clearly aware in proportion as we recognize what the cognitive process of interpretation is, and how it contrasts with, and is auxiliary to, the processes of conception and perception. Only in terms of a theory of the field of knowledge can we hope fully to express what is meant by that form of idealism which views the world as the 'process of the spirit' and as containing its own interpretation and its own interpreter.

LITERATURE.—The epistemology of Charles Peirce is discussed at length by the present writer in The Process of Philosophy, London, 1913, ii. (In Index, e.g. 'Peirce,' references will be found which will serve as a guide to Peirce's theory of knowledge, and its relation to the metaphysical theories of the nature of mind).

MINIM.—Certain persons of Jewish origin mentioned in the Talmud and contemporary Rabbinical literature, usually with severe disapproval, are called Minim. Considerable difference of opinion has existed upon the question who the Minim were; but the view is now generally, though not universally, held that they were mainly Jewish-Christians. This theory has the apparent support of Gutzkow, of Welsch, of Bacher, and of Levi; the chief opponent is Moritz Friedländer. The writer of this article, from an independent study of the evidence, deduces for the Jewish-Christian interpretation, while admitting a wider 'pure subject' in a few passages. The evidence, consisting of the whole of the passages (so far as they are known to him) where mention is made of the Minim, is presented in full in the writer's work
MINIM

Christianity in Talmud and Midrash, to which the reader is referred for details which cannot be given in the short space of this article.

Parker, p. 113, quoting Nu 15:32, "And ye shall not walk after your heart," says, "This is Minim"—meaning that this is the state of mind, or principle of conduct, characteristic of the Minim. This is the earliest attempt at a definition of the term, though the word itself was in use earlier. It amounts to saying that a Minim (singular of Minim) was one who followed the dictates of his own selfish nature as against those of the lawful authority. The result of doing so is, inevitably, the rejection of beliefs and practices enjoined on those who hold the true religion. A Minim, accordingly, disregards the authority of the Rabbis, as teachers of religion and exponents of the Torah both written and unwritten, and also maintains doctrines and practices which are not those of the true religion. Tos. Sanh. xiii. 4 f. has the following censure on the Minim:

"The sinners of Israel, and the sinners of the nations of the world, descend into Gehenna, and are judged there twelve months... But the Minim, and the Apostates, and the betrayers, and the Apostrophes... Gehenna is shut in their faces, and they are judged there for generations of generations."

If the term Minim denoted all unfaithful Jews, there would be no need of four descriptive names. The distinction between the four is as follows. The Apostates (Apostrophes, Mischorchers, "delators") are political informers, "traitors." Apostates are those who wilfully and openly transgress some part of the ceremonial law, thereby proclaiming their disloyalty. Apostrophes are "Epicureans," free-thinkers, whether Jewish or Gentile. The Minim, the Minim, are those who are false at heart, but who do not necessarily proclaim their apostasy. They are the more dangerous because more secret; they are not an open enemy, but the foe within the camp; and it is in accordance with this fact that the Talmud refers to the Minim more frequently and with more hostility than to the other classes of unfaithful Jews. The Minim might be an apostate or a delator, and could hardly fail to be a free-thinker; but the real nature of his offence was moral rather than intellectual.

Why was the name Minim given to such persons? Various derivations of the word have been given, some of them mere fanciful guesses. The best explanation seems to be that proposed by Bacher (in REJ, xliii. 45, and xxviii. 205), according to which min (ミン) is at first the ordinary word for 'sort,' 'kind,' and is translated in the LXX, 6ν τεραμονι, by γέρος. Figuratively the word is used to denote a 'sort' (αξπεραξια), and more particularly the sort of διάδησιν (γέρος) in Jos. Ant. xiii. 6, where η διάδησις αξπεραξια is used. Gradually the term lost the meaning of 'sort' and took on that of 'sect,' the Jew who separated himself from the community and adopted false doctrines. If this explanation is correct, it throws light on the fact that in the Rabbinical texts the reading sometimes varies between Min and Saddâki (Sadducee). It is usually said that the latter word is due to the Christian censor, who objected to the word Min, but in some cases the reference is certainly to the Sadducees, while yet the word Min, or possibly both words, may have been read. The writer of this article proposed another derivation of the word Min (op. cit. p. 352), but now surrenders it in favour of the one just set forth.

The Minim, then, were Jewish heretics of some kind. The question is, Of what kind? The answer resolves itself into a choice between Jewish-Christian and Jewish-Gentile. As a Jew is beyond dispute, for a Gentile is never called a Minim, unless in one or two instances through ignorance or inadvertence. The only conspicuous advocate of the Gentile interpretation is Fried-
MINISTRY (Early Christian) — An attempt will be made in this article to collect the more important facts in connexion with the ministry of the first five or six centuries of our era are concerned. The facts themselves there is general agreement; but the interpretation of the facts has been disputed. A summary will be made, as briefly as possible, of the theories that have been formed from the facts as to the institution of a ministry by our Lord, and its development in subsequent ages. But a discussion of these theories is not part of the present article.

1. The Apostolic Age. — In Acts and in the Epistles of the NT we find in active operation a ministry of two kinds, itinerant and local.

The hostility towards, and dread of, the Minim went on, that the Temple had been destroyed ten years before. As long as the Temple stood, Jewish-Christians in Jerusalem appear to have taken part in the ritual observances equally with non-Christian Jews. After the destruction of the Temple, however, it was possible to argue that the ceremonial law was not merely de facto suspended (as the Jews admitted), but de jure abrogated; and this is the link which connects the original Jewish-Christians with the Minim. The latter appear, from the notices of their doctrines, to have held a theology closely akin to that set forth in the Ep. to the Hebrews; and, if so, the inference is ready to hand that it was the symbolic in nature of the ceremonial law that opened the way for a Christology more highly developed than that of original Jewish-Christians.

The hostile feelings towards, and dread of, the Minim went on, and the work of the 2nd cent.; afterwards they declined, till in the 3rd cent. there was a comparatively friendly relations with them. The Minim of Cesarisae applied to R. Ahab to find them a teacher, and he sent them R. Saphra, a Babylonian Jew of unquestioned orthodoxy (Bab. Abodshith Zaraah, 44). The meaning of this gradual change is that at first it was not evident to the Rabbis that the Christian Church would not develop on Jewish-Christian lines. When, in course of time, it appeared that the Minim did not represent the length of the Christian movement, there was the less reason to dread it; there was less danger to Judaism from a Gentile Christianity than from a Jewish form of it. Of Gentile Christianity the Rabbinical literature speaks, as Jews say, with horror, but does not allow of illustrations of the polemics between Minim and Jews, or of the anecdotes which represent the former as being not only apostates but licentious. It must suffice to say that they appear to have been a dwindling sect, in Judaism but not of it, spurned alike by Jews and by Christians. In their theology they departed from the strict monotheism of Judaism, and held a doctrine — called the Doctrine of the Two Powers in Heaven — which corresponds with the relation between God and Christ set forth in the Ep. to the Hebrews. No mention is made in any of their polemical discussions of the Messianship of Jesus, nor is there more than one very slight trace of the doctrine of the Trinity (Jews, Ebr. 129, 130). Jerome identifies them with the Nazarenes, and the name, Nērōnia, is found in two passages (Bab. Abodshith Zaraah, 66; Bab. Teuan. 27b). The name Ebonite does not occur in the Rabbinical literature.

MINISTRY (Early Christian) — An attempt will be made in this article to collect the more important facts in connexion with the ministry of the first five or six centuries of our era are concerned. About the facts themselves there is general agreement; but the interpretation of the facts has been disputed. A summary will be made, as briefly as possible, of the theories that have been formed from the facts as to the institution of a ministry by our Lord, and its development in subsequent ages. But a discussion of these theories is not part of the present article.

1. The Apostolic Age. — In Acts and in the Epistles of the NT we find in active operation a ministry of two kinds, itinerant and local.

The hostility towards, and dread of, the Minim went on, that the Temple had been destroyed ten years before. As long as the Temple stood, Jewish-Christians in Jerusalem appear to have taken part in the ritual observances equally with non-Christian Jews. After the destruction of the Temple, however, it was possible to argue that the ceremonial law was not merely de facto suspended (as the Jews admitted), but de jure abrogated; and this is the link which connects the original Jewish-Christians with the Minim. The latter appear, from the notices of their doctrines, to have held a theology closely akin to that set forth in the Ep. to the Hebrews; and, if so, the inference is ready to hand that it was the symbolic in nature of the ceremonial law that opened the way for a Christology more highly developed than that of original Jewish-Christians.

Barthabas and Saul, also Symeon Niger, Lucius of Cyrene, and Manac (Ac 13: 3); Judas and Silas (15: 2); and an unmentioned number in 1 Co 12: 26 (see § 2). Epis. 5th-6th (see § 2), possibly in 1 Th 2: 3; also in Rev 18: 22. They are coupled in Epis. and Rev. with apostles. They are described as receiving revelations (1 Co 12: 9). Christian prophets are also mentioned (Ac 21: 8, 11). But it may be doubted if 'prophets' ought to be described as a class of the ordinary Christian ministry. Their office was purely charismatic (see below, § 8).

It is otherwise with 'evangelists.' These are mentioned in Ac 2: 10. (Philip), Eph. 2: 20. (Paul, possibly in 2 Th 4: 1 Timothy). This name would seem to be that given to those who, though not apostles, because they had not the qualification stated above, yet were itinerant officials and not of the local ministry. Eusebius (HE III. 52) gives the name to those who 'occupied the first place among the successors (ἐπίσκοποι) of the apostles' and were itinerant preachers of the gospel. He says that, when they had only laid the foundations of the faith in foreign places, they appointed others as pastors (τρισκλεῖς) and then went on to other countries and nations. A few lines later he talks of 'pastors or evangelists,' and seems to mean by the former the local, by the latter the itinerant, ministry.

Also related to the men of the same class are the deacons mentioned in the Didache (§ § 10-13), a manual probably of the beginning of the 2nd century. These were normally itinerant officials, and were perhaps identical (see Did. § 11). The value of this evidence is discounted by J. A. Robinson (in Philo. 1102) of, who thinks that the writer does not describe the conditions of his own day, but those which he thought had been in force at an earlier time. This theory, however, is very doubtful (for Robinson's earlier view see his Com. on Ephesians, London, 1894, p. 98, n.).

The function of the itinerant ministry was evangelistic (cf. 1 Th 2: 7, 1 Th 2: 1). The itinerants might settle for a time at a place, as Timothy settled at Ephesus, Titus in Crete, and St. Paul himself at various places where he founded churches; but this was not their normal work. In the Didache it is recognized that a prophet may settle in a place (§ 10).

II. THE LOCAL MINISTRY. — Under this heading are included in the NT 'bishops,' 'presbyters,' and 'deacons.' For other names of these officials see § 2. The functions of the local ministry were administrative and pastoral. Thus baptism was first to be administered by local officials (cf. 1 Co 14: 3), and perhaps 19: 4 (ct. v. 6). In the beautiful story of St. John and the young robber related by Clement of Alexandria (Quis dixit, 42), the apostle does not himself baptize the young man, but gives him over to the local bishop-priest to baptize (see below).

(a) Bishops. — During the period covered by the NT, we read of this name being given to Christian ministers only in Gentile churches — at Phillipi (Ph 1), at Ephesus (Ac 20: 17, 1 Th 3: 1), in Crete (Tit 1: 7). So St. Peter, writing to the churches in most of the provinces of Asia Minor, uses the participle εὐαγγελιστὴς, 'exercising the bishop's office.' The word has been specially entrusted to them (cf. 1 Co 14: 3), and perhaps 19: 4 (ct. v. 6). In the beautiful story of St. John and the young robber related by Clement of Alexandria (Quis dixit, 42), the apostle does not himself baptize the young man, but gives him over to the local bishop-priest to baptize (see below).

1 In Eph 2: 20 the Church is said to be built upon the foundation of the apostles and prophets (so a note before 'prophets'). But there are at least 20 names of apostles that are not mentioned in the New Testament. All the apostles were probably prophets, though all the Christian prophets were not apostles.
that the Seven were the prototypes both of the diaconate and of the presbyterate, and that at some later date the office was divided into those two branches. Another view is that the appointment of the Seventy (or Seventy-two) in Lk 10:2 is the foundation of the presbyterate. The Seven of Ac 6 were appointed in the expectation of the coming of the Holy Spirit (v.5), but that they were also preachers of the gospel is seen from the history of Stephen and Philip, and might be inferred from their solemn ordination with prayer and laying on of hands.

iii. The Position of James the Lord's Brother at Jerusalem.—Christian antiquity agrees in giving St. James a local ministry at Jerusalem, and yet in making him, in a real sense, equal to the Twelve, and in ascribing to him a rule or presidency over the presbyters, though nothing is said of any autocratic powers possessed by him. This account of his position is borne out by the NT writers. In Ac 12:1 Paul bids those who are assembled in Mary's house tell of his escape 'unto James and to the brethren.' In 13:2 the apostolic council, and gives the decision, i.e. interprets the evident sense of the assembly. In 21:18 Paul and his companions visit him at Jerusalem, and he presides at a formal meeting. In 1Cor 1:10 he is, perhaps, called an apostle (see § 2); he and Cephas are visited by Paul at Jerusalem. In Ac 15 he is named before Cephas and John, and the three are 'reputed to be pillars.' In 1Cor 9:2 Paul describes his commission to the Gentiles as coming from James. Of the Fathers the earliest to bear witness to St. James's position in Jerusalem is Hegesippus, known as the father of Church history (c. A.D. 160). He says that James, the brother of the Lord, was the head of the Church in conjunction with the apostles' (Eus. HE ii. 23); he describes the appointment of Symeon, a cousin of the Lord, as 'the next bishop' (iv. 22). So Eusebius, who includes Hegesippus, says (iii. 11) that they pronounced Symeon to be worthy of the throne of that diocese (βασιλεύων), and (iii. 32) that Symeon was the second bishop of the Church of Jerusalem; in the former passage he says that this was at a second Apostolic Council on the occasion of Symeon's election. The last statement is very doubtful; but the tradition probably gave rise to the detailed pseudopigraphia of the Church Orders, which assign all sorts of directions to the apostles. The fact that the second supposed council has been thought by some to have decreed the establishment of diocesan episcopacy; but the latter was probably of gradual growth rather than the result of an enactment of a formal council (see below, § 4). The position of James is also spoken of by Clement of Alexandria (Hypotyposes, bk. vi., quoted by Eus. HE ii. 1):  

Peter, James, and John, after the ascension of our Saviour, as also preferred by our Lord, strove not after honour, but chose James the Just (bishop of Jerusalem). . . . The Lord after His resurrection imparted knowledge to James the Just and to John, and they imparted it to the rest of the apostles, and the rest of the apostles to the Seventy, of whom Barnabas was one.

The phrase about imparting knowledge to James in this passage is probably to be considered as a reference to 1 Co 10.5. The description of him as 'bishop of Jerusalem' is an anachronism of nomenclature, but it roughly describes his position. His office at Jerusalem is a favourite theme in the 'Clementine' literature, but the date of these works is uncertain.

iv. Angels in the Apocalypse.—The 'angels' in Rev 12:7-122 have been taken by some to be the chief ministers of the Church in the province of Asia. But this interpretation is so doubtful that no attention can be built upon it.

v. There is no certain trace of any local officials in the NT inferior to the 'bishops and deacons.' Interpreters are mentioned in 1 Co 12:28 for those who speak with tongues (cf. 1Co 12:29). But there is no indication that an ecclesiastical office is intended.

2. Fluidity of Phraseology.—It is important to remember that the names of Christian ministerial offices were not stereotyped in the Apostolic Age. Many theologians of the church have suggested that the supposed identity of offices in different centuries, because of the identity of names. In the earliest age the names of the orders of the ministry were in a fluid condition, and if the functions and duties of these were fixed, which is doubtful.

(a) The name 'apostle.'—This is used in the NT of the Twelve (see above, § 1). It is also used of certain other persons who had equal authority with the Twelve in the early Church — Paul, Barnabas, probably James the Lord's brother (see Lightfoot, Galatians, pp. 84, 95; cf. 1Co 15:23), probably also Andronicus and Junias, who were 'of note among the apostles' (Ro 16:1; but some think that the latter was the name of a woman), perhaps Silvanus, who was associated with St. Paul in writing to the Thessalonians (1 Th 2:2; cf. 1Co 4:14). Timothy might have been included under the same designation but that he is excluded from the list only by 2 Co 1:1, and we have seen Christ (see § 1). The name is also used in the NT of messengers simply (2 Co 8:20, Ph 2:20), and of our Lord Himself (He 3:1; cf. Jn 20:19). In the Syriac-speaking churches it was given to any missionary; and in the Latin ChurchGeneric definition' is also used (I.e., lv. xx. 1): 'After the twelve apostles, our Lord is found to have sent forth seventy apostles.' Tertullian (adv. Marc. iv. 24) gives the name to the Seventy as well as to the Twelve ('the chosen and also seventy other apostles of the Lord,' which Note that St. Luke (10:1), in describing the appointment of the Seventy, says that Jesus 'sent them forth' (απαθανευον), whence the name ἀπαθανευον comes at once. It means 'one commissioned.' Certain persons, called 'false apostles,' arrogated the name to themselves (2 Co 11:15, Rev 2:2).

(b) The names 'bishop' and 'presbyter.'—We have already seen that the name 'bishop' was used in the 1st cent., in a sense different from that which it afterwards acquired. And we may notice how fluid was the phraseology with regard to both 'bishop' and 'presbyter.' Our Lord is called a 'bishop' in 1 P 5:2; St. Peter a 'presbyter' in 1 P 5:1 (ἐρασαρποι), St. John in 2 Jn, 3 Jn. In the 2nd cent. the name of presbyter was used somewhat as we use the term 'the Fathers.' We may also notice how easy was the change from 'presbyter' to 'old man'; so much so that it is not always easy to determine in any given passage which translation ought to be taken. In 1 P 5:2 St. Peter, who has been addressing the presbyters, suddenly says: 'Likewise, ye younger [men], be subject to the elder' (ἐρασαρποι). Clement of Rome (Cor. 1) says: 'Submitting yourselves to your rulers (ὑπακούων), and reverend to the presbyters [Lightfoot: 'older men'] among you honour, etc.; and so in § 21. A little later Polycarp, after saying that the 'young men must be blameless,' goes on to exhort the Philippians to subdue themselves to the presbyters and deacons' (Phil. 5). The association of the presbyterate and old age survived for a long time. It is found in the Apostolic Church Order (Bohairian version), where it is said that presbyters should live 'after the manner of the men' (§ 18). Interpreters in Coptic, London, 1848, p. 20. The ordination prayer of a presbyter in the Testament of our Lord (c. A.D. 350) speaks by a paronomasia of the Spirit ['minas'] of the presbyterate who doth not grow old (I. 26). Pseudo-Polycarp (4th cent.) in the Life of Polycarp (§ 17): Lightfoot, Apost.
MINISTRY (Early Christian)

Fathers, pt. ii., 'Ignatius and Polycarp,' iii. 447 f.) unhistorically makes Polycarp to be an old man before he is ordained presbyter. So perhaps Hermas, Tit. ii. 4 (2nd cent.), where the presbyters are the officials of the προέδρον ("aged worried presbyters") and the hierarchs the priests, is not as late as the Church of A.D. 110. Tertullian at the end of the century speaks of the bishop as 'high-priest' ('summanus sacerdos,' de Bap. 17), and, in reference to the Christian ministry, speaks of 'functions of priesthood' ('sacerdotalia munera, de Pler. 41). Hippolytus, early in the 3rd cent., uses similar language (Herm. i. pref.): 'We being their [the apostles'] successors and participators in this grace of high-priesthood,' etc. In Cyprian the bishop is frequently called 'sacerdotes,' and his office 'sacerdotium.' The Older Didascalia (3rd cent.) calls the bishops 'high-priests' (Funk, Didasc. et Const. Apost., Faderborn, 1905, i. 102), and says that the Jewish priests and levites now correspond to the deacons, presbyters, widows, and orphans. The names 'high-priest' for the bishop, and 'priests' and 'levites' for the presbyters and deacons respectively, were frequently used in the 4th cent. and onwards, and are often found in the Church Orders (for references see Maclean, Church Orders, pp. 405-6). In the ordination prayer for a presbyter in the Apost. Const. viii. 16 (c. A.D. 370) and in the Epitome known as Constitutions through Hippolytus, § 6 (Funk, ii. 89), his functions are called ἵππος, 'priestly duties. Of other terms we may take as an example Epiphanius, who uses ἵππος for a Christian priest (Exp. Pud. 17), and whose 'priesthood' (ἱππόσην) includes subdeacons, but not readers (ib.). Jerome calls his famous treatise on the ministry 'Concerning the priestly dignity' (Hisop. hipostas, 4th cent.) the Coronation of Cyprian (c. A.D. 390, can. 27, 30). 'Hierarchs' (ἱεραρχεῖς) are the bishops, priests, and deacons, as opposed to the 'clerics' (εὐρήκον), who include the minor orders. In Apost. Const. iii. 15, and in the Apost. Constit., c. A.D. 400, the minor orders are included among the 'hierarchs.' In the Syriac-speaking Churches the word βαβυλήθα (which is the translation of ἵπποσην) is used for all orders of the ministry.

The use of this language does not mean that a new conception of the ministry was entertained by those whose writings it is first found. It was not likely to be used as long as any Jewish priests or levites were in the ranks of the Christian ministry. For example, Barnabas was a levite (Ac 4:36), and he was not described as a priest. He was a 'priest' without considerable confusion. When 'hierarch' language was first used in the Christian Church, it was a new nomenclature, but did not imply any new functions. It is a failure to describe some 2nd cent. Christian writers as unsacerdotal, and some as sacerdotal. The use of 'hierarchic' language meant that the writers who employed it ascribed to Christian officials the ministry delivered by the Great, and in the strictest sense the Only, High Priest. Our Lord Himself. The writers like Ignatius who do not use 'hierarchic' language are even more emphatic about the authority of the ministry than those who do.

3. Charismatic ministry. — This term properly indicates those who are endowed with any spiritual gifts, called χάρισματα ('gifts') in 1 Co 12 or simply τέκταγμα (spiritual things) in 12:4; but it is conveniently used for those who had 'extraordinary' charismata. We must distinguish between the 'charismatic' and the 'sacerdotal' offices. The long, holy, extraordinary charismata continued, the two went on side by side. Yet the same person might be of...
both ministries; thus St. Paul was an apostle, and yet he received tongues more than all (1 Cor. 14:8). The charismata enumerated in 1 Cor. 12:1-30 include wisdom, knowledge, faith, healings, tongues, prophecy, discerning of spirits, tongues, interpretation of tongues. Of these probably the most prominent is tongues, which Christian prophets are mentioned as speaking.

Thus his gift is recognized in the passages which Christian prophets are mentioned as speaking (cf. 1 Cor. 14:18). Thus those whom we shall call 'prophets,' as not being of the official ministry, spoke in the Christian assemblies (ib.). But women were not allowed to do so (v. 34), though they might be prophets (Ac. 21:9). In 1 Cor. 14 the charisma of tongues is somewhat disparaged as compared with prophecy.

Prophecy long continued. For the prophets in the Didache see above, § 1. Quadratus, early in the 2nd cent., was renowned for his prophetical gifts (En. HE iii. 37). Polycarp is called in the letter written by the Smyrneans 'an apostolic and prophetick teacher' (Mart. Pol. 16; A.D. 155 or 156). However, it is said that his Shepherd of the Church (A.D. 150) was widely received as a prophetic writing. Even in the 4th cent. the Church Orders speak of charismata, and, in particular of revelations, being expected; e.g., the Test. of our Lord speaks of the chosen of the Lord, the prophets, presbyters, widows, and by any Christians (i. 21, 23, 29, 31 f., 40); gifts of healing or of knowledge or of tongues are referred to as being a possible endowment of any Christian (i. 47). Such a one was not to be ordained ('a hand is laid on him'), but to be in had in honour (ib.). See also below, §§ 6-8.

The term 'charismatic ministry' is capable of being misunderstood, as if the official ministry was considered a purely mechanical one, and only of human appointment. But St. Paul clearly recognizes the official ministry as charismatic in another sense. Timothy had the charisma in virtue of his ordination (1 Ti 4:4). The official ministry had the 'spiritual gift,' though it was not of the same nature as that of those who had extraordinary endowments; and the two ministries, as we have seen, might overlap.

4. Bishops, presbyters, and deacons from the 2nd cent. onwards.—(a) Bishops. In the Epistles of Ignatius (c. A.D. 110) we find bishops in the later sense of the word fully established. We may here make an endeavour to collect the facts with regard to the diocesan episcopate, postponing a statement of the theories that have been advanced as to its origin. The phrase 'diocesan episcopate' is perhaps the best that we can use, as it begins no question as to the relation of the bishop to the presbytery; the phrase 'monarchical episcopate,' which is used by many writers, is open to this objection.

The establishment of bishops in the later sense in the Churches of the province of Asia and elsewhere is ascribed by a steady tradition to John the Apostle. Clement of Alexandria (Quis dives, 42) says that 'after the martyrdom of John, (c. 110) he turned to Ephesus from the isle of Patmos, and went away,' being invited, to the contiguous territories of the nations, here to appoint bishops, there to set in order whole Churches, there to ordain such as were marked out by the Spirit. There is similarly said (I ad. Marc. iv. 5) that 'the order of the bishops' (of the Seven Churches of Asia, or of all the Churches of the province) 'when traced up to their origin' rests on John as their author. As all the Muratorian Fragment (c. A.D. 180) says that John was excommunicated by 'his fellow disciples and bishops' to write his Gospel, Ignatius speaks of bishops being established all over the world (Ep. 3). But we do not find the diocesan episcopate established in all places at an equally early date. Thus Ignatius writes to the Philippians, but makes no mention of their bishop. Clement of Rome (c. A.D. 88) likewise does not make any allusion to the episcopate in his letter to the Corinthians. It is, of course, possible that the office at Philippi and Corinth was vacant at the date of these letters; but this hypothesis cannot be proved, and the deduction has usually been made that the diocesan episcopate was not established in these two places so soon as elsewhere. The position at Rome at the end of the 1st cent. has been considered doubtful. Clement writes in the name of his Church (not of the presbyters), but he does not call himself his bishop, nor does he name himself at all; we have to gather information about the authorship of this Epistle from subsequent writers. Clement obviously held a prominent position in the Roman Church; and, though nomenclature and organization matured themselves more slowly at Rome than elsewhere, the testimony of all antiquity must be taken as showing that he held the first place in it. The Irenaeus makes the third bishop of Rome in the list which he gives of bishops of that city up to his own time (Herm. III. iii. 3). He says that Linus, the first bishop, received the office from the apostles Peter and Paul, and that Anacletus succeeded him, who in turn succeeded by Clement. Before Irenaeus, Hegesippus had already made a list of the bishops of Rome, as all the Greek MSS and the Syriac versions of Eus. HE iv. 22 assert (see Lightfoot, Apost. Parch., p. 153). The alternative (rejected by Lightfoot but accepted by Harnack) of διακοψα for διακοψει is a conjecture based on the loose paraphrase of Rufinus. But, as Hegesippus's list is not extant, we cannot tell where it began. We notice that Ignatius, in writing to Rome, mentions no bishop there, and that, as G. Salmon remarks (Introd. to the NT, London, 1892, p. 519, n.), all through the first two centuries the importance of the bishop of Rome is merged in the importance of his Church. Dionysius of Corinth (c. A.D. 170) writes to the Church of Rome, not to Soter his bishop, though he mentions him in the third person.

Long before the end of the 2nd cent. the diocesan episcopate was universal. It has been seen that so much so that writers like Clement of Alexandria, as we have seen, did not know that the 'bishops' of the NT were the same as the presbyters. It is therefore unnecessary to carry further an investigation into the spread of the system in the 2nd cent., and the information reference may be made to Lightfoot, 'Dissertation,' in his Philippians. But it is desirable to refer to the conception of the episcopate which we find in the works of Cyprian, bishop of Carthage in the middle of the 3rd century. Ignatius and Irenaeus had described the bishop as a centre of unity, and Cyprian emphasizes this still more in his treatise de unitate ecclesiae and in his Epistles. In this connection he dwells strongly on the sin of schism from the visible unity symbolized and guarded by the bishop. It has been said that he 'magnified his office,' and extended its claims to autocracy; yet no one emphasizes more than he the necessity of constitutional action on the part of the bishop, and his obligation to carry his clergy and laity with him (see below (b)). He also dwells on the election of the bishops by the people (see art. LITY, § 4). There is no real foundation for Hatch's view, from which it is inferred, that the rule of the bishop in each community was not fully
established before Cyprian's time, and was due to his dispute with Novatian (Organization of the Early Christian Church, p. 103; for an account of Cyprian's view, compare, e.g., G. E. W. Brooks, The Church and the Ministry, pp. 151-156, with his quotations in the footnotes).

It would seem that at the first the primary object of a local ministry was liturgical. Thus the Didache immediately after the opening words declares: 'Appoint (εἰςπροφυρίαν) for yourselves therefore bishops and deacons' (§ 15). And so in the succeeding ages one of the principal functions of the diocesan bishop was to celebrate the Eucharist. In the 4th and 5th centuries the newly-consecrated bishop himself begins to exercise his functions by doing so, rather than the principal consecrator, as in modern times. The same idea underlies the ancient practice, still preserved in some parts of Christendom, of 'concelebration', that is, of the newly-ordained presbyters joining with the bishop who has just ordained them, in consecrating the Eucharist. (In the early ages concelebration was not confined to ordinations.)

When the custom, which also survives in a newly-ordained deacon reading the liturgical gospel, that being one of his functions which he immediately begins to discharge. In this connexion we may notice that the bishop and the presbyters exchange (like the bishop and deacons) the kiss of peace after the Eucharist is celebrated, and in the Councils of the 4th and 5th centuries the newly-consecrated bishop himself begins to exercise his functions by doing so, rather than the principal consecrator, as in modern times. The same idea underlies the ancient practice, still preserved in some parts of Christendom, of 'concelebration', that is, of the newly-ordained presbyters joining with the bishop who has just ordained them, in consecrating the Eucharist. (In the early ages concelebration was not confined to ordinations.)

The Council of Nicea enacted that bishops were not to be translated from one see to another (can. 15; A.D. 325). But this rule was almost immediately disregarded by Athanasius. The Nicene Council applied it also to presbyters and deacons.

(6) Presbyters.—In early Christian literature the presbyters are frequently recognized as the counsellors of the bishop. Ignatius, who says that the presbyter is attuned to the bishop as strings to a lyre (Eph. 4), bids the people submit to the bishop and presbyters (Eph. 2, 20, Tract. 13, and do nothing without them (Magn. 7, Tract. 21, 7); he speaks of 'the bishop presiding (εἰςπροφυορίαν) after the likeness of God, and the presbyters after the likeness of the council (φωνησίας) of the apostles' (Magn. 6); in Smyrn. 8, the bishop is compared to our Lord, and the presbyters to the apostles (cf. v. 4). With young and revered bishop and with the fifty-wreathed spiritual circlet of your presbytery, and with the deacons who walk after God.

In the same way, more than a century later, Cyprian says (Ep. xiv. 4, vii. 4), 'To the presbyters and deacons, and all the people,' (Epp. 133, 155). He was determined from the beginning of his episcopate to do nothing without the advice (consilium) of the presbyters, and the concerning feeling (consensus); see art. LAITY, § 8 of the people. The presbyters are here recognized as counsellors of the bishop in a higher sense than the laity. This is not quite the same position as in Ep. xxxvii. (xxvii.) I ("To the presbyters, deacons, and people"), where Cyprian speaks of consulting them all before he ordained clergy. This is the equivalent of the more modern Si quis or public intimation of a proposed ordination. Origen likewise compares the 'counsellors' and 'rulers' of the Church with those of the city, clearly meaning the presbyters and the bishop (c. Ces. iii. 30). A similar state of things is seen in the Older Didasc. (ii. 26, 3rd cent.; Funk, i. 108), where it is said that the presbyters are 'honoured as apostles and counsellors of the bishop, and the crown of the Church, for they are the council and church, the presbyters and deacons.' (Apost. Const. ii. 26) use nearly the same language.

It is for this reason that the bishop had his throne in the church with the presbyters sitting round him on either side. Thus in the Apost. Ch. Ord. (c. A.D. 300; for the Syrian text and tr. see JThSt iii. [1901] 59) the presbyters are appointed by the bishop, and sit on either side of him, the one on the right being the regulators of the service of the altar, those on the left the regulators of the people; and the presbyters are 'sharers in the mysteries' with the 'shepherd' (the bishop; see above, § 2). In the Council of the 4th and 5th centuries the newly-consecrated bishop himself begins to exercise his functions by doing so, rather than the principal consecrator, as in modern times. The same idea underlies the ancient practice, still preserved in some parts of Christendom, of 'concelebration', that is, of the newly-ordained presbyters joining with the bishop who has just ordained them, in consecrating the Eucharist. (In the early ages concelebration was not confined to ordinations.)

The presbyters were charged with celebrating the Eucharist, at least when the bishop was absent (see above), and with pastoral duties to the flock.

In the 4th cent. the Apost. Const. thus sum up the functions of bishops and presbyters (viii. 28):

'The bishop blesses, but does not receive the blessing; he lays on hands (εἰςπροφυορίαν), ordains (εἰςπροφυορίαν), offers (the Eucharist), receives a blessing from the bishop and other bishops; the bishop exercises discipline (κατασχημα) over every cleric who deserves discipline, except over a bishop, for alone these cannot (do this). The presbyters pray in the name of the bishop (i.e. the younger ones; see above, § 2) for the last-mentioned blessed and for the presbytery and old age) sit on the left. For an ambiguity as to the position of the bishop and presbyters when ministering at the altar, see Maclean, Ancient Church Orders, p. 32.

The presbyters were charged with celebrating the Eucharist, at least when the bishop was absent (see above), and with pastoral duties to the flock.

In the 4th cent. the Apost. Const. thus sum up the functions of bishops and presbyters (viii. 28):

'The bishop blesses, but does not receive the blessing; he lays on hands (εἰςπροφυορίαν), ordains (εἰςπροφυορίαν), offers (the Eucharist), receives a blessing from the bishop and other bishops; the bishop exercises discipline (κατασχημα) over every cleric who deserves discipline, except over a bishop, for alone these cannot (do this). The presbyters pray in the name of the bishop (i.e. the younger ones; see above, § 2) for the last-mentioned bishop and for the presbytery and old age) sit on the left. For an ambiguity as to the position of the bishop and presbyters when ministering at the altar, see Maclean, Ancient Church Orders, p. 32.

An interesting feature is that the presbyters are allowed to confirm, for this seems here to be the meaning of εἰςπροφυορίαν, blessing and ordering being mentioned as different actions. Ordinarily the presbyter baptized, and brought the neophyte to the bishop for confirmation; this is the regular practice in the Church Orders and was the earlier custom in both East and West. In the East the presbyter has for many centuries confirmed, both in the Orthodox and in the Separated communions, but he uses chrisma consecrated by the bishop. The same thing is also found in the West, but only in exceptional cases. Innocent I, in his Epistle to Deaconus (§ 3; A.D. 416) shows that Western presbyters had the power by custom, though he did not approve of their exercising it. The Council of Orange (A.D. 411) and the Council of the Lateran (A.D. 433) confirm similarly. The absence of a presbyter may receive penitent heretics, marking them with the chrism and benediction, i.e. (apparently) confirming them. Still earlier the first Council of Toledo (A.D. 408) shows the same thing by implication. In the West it had determined from the beginning of his episcopate to do nothing without the advice (consilium) of the presbyters, and the concerning feeling (consensus); see art. LAITY, § 8 of the people. The presbyters are here recognized as counsellors of the bishop in a higher sense than the laity. This is not quite the same position as in Ep. xxxvii. (xxvii.) I ("To the presbyters, deacons, and people"), where Cyprian speaks of consulting them all before he ordained clergy. This is the equivalent of the more modern Si quis or public intimation of a proposed ordination. Origen likewise compares the 'counsellors' and 'rulers' of the Church with those of the city, clearly meaning the presbyters and the bishop (c. Ces. iii. 30). A similar state of things is seen in the Older Didasc. (ii. 26, 3rd cent.; Funk, i. 108), where it is said that the presbyters are 'honoured as apostles and counsellors of the bishop, and the crown of the Church, for they are the council and church, the presbyters and deacons.' (Apost. Const. ii. 26) use nearly the same language.

1 One good MS reads: 'ordinis, does not lay on hands.'
2 It has, however, been interpreted of the baptism of penitents. C. H. Turner (JThSt xvi. [1911] 61), who adopts the alternative reading, interprets this 'laying on of hands' of the custom of the presbyters laying on hands at the ordination of a presbyter. Against this, however, is the fact that in the Apost. Const. that custom is not mentioned, and is perhaps negated (see below, § 8 (a)).
tion,' p. 231) makes the surely strange error of supposing that this 'consignatio' means 'ordination.'

There are traces in our period of a very close connexion between presbyter and bishop. Thus in the Canons of Hippolytus, which in their present form appear but a portion of the 4th cent., but which adhered very closely to their 3rd cent. source, we read that a bishop and a presbyter are ordained with the same prayer except for the name of the office, and except that in the case of the presbyter enucleation is omitted. 'The bishop is in all things put on an equality with the presbyter, except the name of the throne and ordination, for the power of ordination is not given to him,' i.e. to the presbyter (can. iv.; ed. H. Aelius, Leipzig, 1891, §30–32). So in the Egyptian Church Order (§ 32) there is only one ordination prayer for bishop and presbyter. The later Church Orders have separate prayers.

A bishop is still called a 'presbyter' in the 2nd and later centuries (see, e.g., Ireneon, H. E. III. ii. 2, 'successions of presbyters,' which in ii. 2 he explains as 'successions of bishops'). In his letter to Victor Irenaeus speaks of 'the presbyters before Soter who presided over the Church which thou rulest' (Eus. H. E. v. 24). Dionysius, bishop of Alexandria (c. 250), speaks of 'the bishop and the presbyters' (Eus. v. 334). For Clement of Alexandria see above, § I (b), and for Firmilian see below, § 8 (a).

(c) Doxology.—This was a numerous and important group of the early ages. The deacon's functions are summarized by the author of the Apost. Const. (viii. 28), by saying that he does not bless or baptize or offer [the Eucharist], but that, when a bishop or presbyter has offered, he gives the sacraments to the people. He is a priest (episkopos) but as one who ministers to the priests. He is described in the oldest as well as in the later liturgies as assisting at the Eucharist, and especially as saying the short exhortations and the catechesis, or litany (see, e.g., the liturgies in the Test. of our Lord and in the Apost. Const. viii.). He keeps order in service time (Test. i. 34; Oldier Didasc. ii. 57, etc.); he assists at baptism in all the Church Orders which describe the rite; in some authorities he is allowed to baptize in the absence of bishop and presbyter (see art. LITANY, § 5); he often reads the liturgical gospel at the Eucharist. (Sozomen, H. E. vii. 19; Test. i. 27), as at this day in the West; he administers the eucharistic gifts in Justin Martyr (Apol. I. ii. 44), and in the Church Orders (for details see J. Cooper and A. J. Maclean, Test. of our Lord, Edinburgh, 1902, p. 223; for Apost. Const. see above); he has many pastoral duties, such as visiting the sick (Test. i. 34, Apost. Const. ii. 42, 44, iii. 18, Eppg. Ch. of. Gather. iii. 23, etc.), entertaining the bishop for burials (ib. and Eus. H. E. vii. 11). The deacon also attends to the eucharistic offerings and is often the almoner of the Church (Oldier Didasc. ii. 57; Apost. Const. iii. 19). In some authorities the bishop and presbyters exercise the discipline of the laity through the deacons (Test. i. 361; Apost. Const. ii. 16; Ethiopic Const. § 4). At this time the deacon has relegated several of their lesser functions to the minor orders. We find several writers representing deacons for this reason—e.g., Cyprian (Ep. iii. [ivix.] 13, 'ad Rogatannum'), the Council of Arles (can. 15; A.D. 314), which says that many deacons attempted to celebrate the Eucharist, that of Nicaea (can. 18; A.D. 325), and almost all the Church Orders, the Test. of our Lord being a solitary exception, for in that manual the position both of deacons and of 'widows who preside' is greatly extolled.

(d) Number of the clergy.—Cornelius, bishop of Rome, writing to Fabian or Fabius, bishop of Antioch, A.D. 251 (the letter is given by Eus. H. E. vi. 43), enumerates the various orders and classes at Rome as follows: one bishop (about this he is emphatic), 46 (vnr. locv. 36) presbyters, 7 deacons, 7 subdeacons, 42 acolytes, 52 exorcists, readers, and doorkeepers, and more than 1500 widows and clerics (Christians in the city). We have (i. 34), besides the bishop, 12 presbyters, 7 deacons, 14 subdeacons, 18 'widows who preside' (the Greek original no doubt had ρησθησάντια). Seven was a very ordinary number for the deacons, because of the Seven (the Episcopa), and the number of the 16. On this day (56th cent.) there were only 7 deacons in Rome, though 'in other Churches the number of deacons is a matter of indifference.' The Council of Neo- Cesarina, appealing to Acts, says that even in the largest towns there are not to be more than 7 deacons (can. 15; A.D. 314, or perhaps a little later). The number twelve for the presbyters in the Test. of our Lord may be due to the comparison of their order to the apostles. Eutychus (10th cent.) describes Alexandria in old days as having had twelve presbyters; but his evidence is quite untrustworthy (see below, § 8 (d)).

(e) Age of ordination.—At Neo-Cesarina it was enacted (can. 11) that no one was to be ordained a presbyter or deacon when in the Church Orders (for details see J. Cooper and A. J. Maclean, Test. of our Lord, Edinburgh, 1902, p. 225; for Apost. Const. see above); he has many pastoral duties, such as visiting the sick (Test. i. 34, Apost. Const. ii. 42, 44, iii. 18, Eppg. Ch. of. Gather. iii. 23, etc.), entertaining the bishop for burials (ib. and Eus. H. E. vii. 11). The deacon also attends to the eucharistic offerings

1 The present writer can find no good instance of 'consignare' or its Greek equivalent ἀποστείλειν, or their substantive, being applied to ordination. The Greek ἀποστέλλειν is a 'missionary' or 'mission' to the Egyptian mystics (see also Lightfoot, Apost. Fathers, pt. i., 'Clement,' ii. 226, n.; Maclean, Test. of our Lord, p. 109). In the former Latin Fragments (ed. Hauler, p. 150) 'consignare' is used to confine ordination to the part played by the presbyters at a presbyter's ordination (see below, § 8 (b)).

2 It has been suggested that the 'young men' of Act 5:19 (see above, § 8 (d)) were the bishops ordained by the bishop-elect (episkopos ordinarius); the deacons and subdeacons (diacones et subdiacones) were the deacons and subdeacons of the terms in this respect. For the episcopi or 'grave-diggers' (mentioned by Epiphanius, Exp. Fid. 21), and the 'president of the sick' see J. Wordsworth, Ministry of Grace, p. 106.

3 Development of the supervisory officers.—(2)
MINISTRY (Early Christian)

Metropolitans,—The name is first found in the 4th cent., before which there is no certain trace of provincial organization, the 'eparchy' in the Apost. Ch. (see above) being apparently without a chief. At Nicea metropolitans are mentioned by that name (can. 4, 8), and the word 'eparchy' is apparently used of an ecclesiastical province, though, as the civil and ecclesiastical provinces normally coincided, this is not quite certain. Bishop Antioch in Eusebius (A.D. 341) metropolitans are recognized in effect, though the name is not given to them (can. 9, 19); * the bishop presiding in the metropolis (i.e. in the civil capital) is the phrase used, and the corresponding verb is employed in can. 19. The word 'metropolitan' is used at Laudanum (can. 12; c. A.D. 380). On the other hand, there is no mention of a metropolitan in the Church Orders, and this is a cogent argument against their being dated later than the 4th cent., and for their not being assigned to any of the great centres like Alexandria or Antioch. In these manuals the neighbouring bishops come together for the election of a bishop, and the whole assembly of clergy, and laity elect, just as they do in Cyriac (4th cent.) and elsewhere in the East (canon 4, c. A.D. 162). In these circumstances, there is perhaps just a faint trace of a primacy in Apost. Const. viii. 4, which speaks of *one of the first bishops* saying the ordination prayer of a bishop; and so in the Canons: *the bishop among them*. But this is all. A rather stronger trace is to be seen in the Apost. Canons (can. 35 [also numbered 34 or 33]; c. A.D. 400). After the 4th cent. metropolitans became practically uniform in the East.

Although there was no regular organization of provinces before the 4th cent., yet bishops of certain important cities, like Rome, Carthage, Alexandria, Antioch, wielded great influence over the neighbouring bishops. We see this in the case of Cyriac. At Nicea the authority of the bishop of Alexandria and Rome is spoken of as an ancient custom, and no one is made bishop of the province without the metropolitan (can. 6). Alexandria is to have, as before, authority over Egypt, Libya, and Pentapolis, i.e. over more than one civil province (ib.). The growth of this influence was promoted by the holding of synods, when external circumstances permitted. Synods would ordinarily be held in the chief city of an ecclesiastical province or eparchy, and the bishop of that city would naturally preside. So the civil metropolis tended to become the ecclesiastical metropolis. But this was not always the case with synods. At that of Carthage, the metropolitan rights went to the oldest bishop of the province, and that the same thing held good in Spain before Constantine's time (Hist. of the Councils, Eng. tr., Edinburgh, 1872, i. 162).

In spite of his position at Carthage, Cyriac affirms that all bishops are equal. Thus in de Unitate, 5, he says that the episcopate is one and that all bishops are full partners in it with joint and several responsibility; for this is the meaning of his phrase *unius a singulis in solitudinibus presbyteris* and *in ejusdem* (Eus. iv. 24; ad Antiochium), he says that every bishop dispenses and directs his own acts, and will have to give an account of his purposes to the Lord. Cf. also Epp. ivii. (iii.) 5, lxiii. (iv.) 14, both to Cornelius; Cyprian says that appeals are not to be carried outside the province in which the cause began.

The custom of giving the pallium to metropolitans hardly falls within the limits of this article (see DCA ii. 1174).

(b) Patriarcha.—The name 'patriarch' was probably borrowed from the Jews. In the LXX of 1 Ch 27:2 they were used—the head which tributereal the West 241 and some MSS of 9 23b for the head of a *patriarch*, or subdivision of a tribe. In the NT it is used of David (Ac 228), the sons of Jacob (725), and Abraham (He 79). In 4 Mac 710 (ed. W. R. Charlton, Eusebius and Agrippa, London, 1884) it is used of Abraham, Isaac, Jacob, and others. In the early centuries of our era a Jewish 'patriarch,' or representative of the nation, is several times mentioned—e.g., by Cyril of Jerusalem (Cath. xii. 17; A.D. 348), who speaks of the Jews' 'recent measures relative to their patriarchs as they now call them.' The Emperor Hadrian (A.D. 1341) refers to the Jewish patriarch in his letter to the consul Servianus about religion in Alexandria (see Lightfoot, 'Dissertation,' p. 225). Hadrian vives the term in the same way, and the historian Gregory of Nyssa's *Funeral Oration on Melitian*, bishop of Antioch († A.D. 381), when he exclaims 'Behold these your patriarchs,' is perhaps purely oratorical; he is referring to the bishops who attended the second Ecumenical Council at Constantinople. Gregory of Nazianzus explicitly uses the term of senior bishops (Orat. xliii. 29); 'aged bishops or, to speak more accurately, patriarchs.' But it came to be used of the bishops of Rome, Constantinople, Alexandria, Antioch, and Jerusalem, though not by canons of councils till long after our period—not before the 9th cent.; the whole subject is treated in detail by Hatch in DCA ii. 1573 (art. 'Patriarch'). The growth of the authority of these sees is shown by the 6th can. of Nicea, and the 28th of Chalcedon; the latter was rejected by the bishop of Rome. The ultimate result was the joining together of several provinces or eparchies, each of which was governed by its own metropolis, or eparchy, the jurisdiction of which was somewhat loosely defined, just in the same way as in civil affairs several 'eparchies' were grouped together into one 'diocese,' which was a very different thing from our 'diocese.'

(c) Archbishops. A bishop successively holding the positions of bishop, metropolitan, and patriarch, became the customary title of metropolitans, was not so used in the East. It was a title of honour conferred on bishops of some of the greatest sees, though its application was not always uniform. In the 4th cent. Eusebius says of Bishop Macrobe (Early Church), bishop of Ancyra, that the title of archbishop was applied to him (Ep. clii. 18); 'He is the bishop of Ancyra, the patriarch of Asia, and the chief of the bishops.' The title is not considered to be a canon proper; see Hefele, iii. 422.

(d) Chorepiscopi.—These 'country-bishops' were assistants to the diocesan bishops for the work of the rural districts. In the Greek-speaking Churches and in the West they were, at least normally, bishops—such is the trend of the evidence, though Morinus denies it—but in the Syriac-speaking Churches, at a later date, they were often counted among the *superi*, or visitors, and were presbyters. They stood next to the diocesan bishop as assistant ('suffragan') and conductor bishops of the present day, in that they worked under the direction of the diocesan bishop, though their
functions were not entirely the same. They are first mentioned at Ancyra (can. 15 [see below, §§ 32, 33]; Neo-Lycia [can. 14; A.D. 354 or a little later], Nicea (can. 8; A.D. 325). From the 10th can. of the Council of Antioch in Ecumenis (A.D. 341) we may perhaps gather that not all chorepiscopi were bishops, for it uses the expression 'the ruler of the diocese,' and its phraseology is similar to that of the 'leader of a chorus of deacons, although it may have been assigned to that date, though some place it later; but even there it is not the name of a distinct office. Neither the name nor the distinct office is found in the Church Orders, though in the Text of our Lord, xxxvi (see Appendix) it is referred (He 2, 25) calls Athanasius the 'leader of the chorus of deacons, though a young man.' There is no archdeacon in Corinna's list of Roman officials (above, § 4 (a)) Jerome (Ep. xxvi, 'ad Evangelum') mentions archdeacons as an order, and after this time they were common in both East and West. In the Ordo Romanae Prima the archdeacon plays a very important part in the enochaistic liturgy at Rome (e.g., §§ 18, 29, ed. E. G. C. F. Atchley, London, 1905). But this work is probably of the 8th cent., though founded on a similar document of the 6th (Atchley, p. 7). The archdeacon was at first a deacon, and in some cases the senior deacon succeeded automatically to the office; but later the deacon was not always appointed Sarapion as archdeacon, and therefore he could not have succeeded automatically. There was only one in each diocese in the time of Jerome (loc. cit.). For the later development of this office see UDC i. 198.

In the East Syrian Church the archdeaconate is the middle subdivision of the second order, i.e. of the presbyterate (see above). The office is still used in that Church as an honorary one, and as an influential position for the son of an archdeacon. In the West the office is in frequent use, and in most Western countries each bishop has at least one archdeacon, called the 'eye of the bishop.' The archdeacon is a senior presbyter, deputed to relieve the bishop of some of his minor functions.

6. Development of the lesser offices.—At an early date we find the existence of some orders of the ministry lower than those of bishops, presbyters, and deacons. We read at various times of subdeacons, readers, singers, deaconesses, doorkeepers, acolytes, exorcists. There was also a ministry of women—widows, presbyteresses, deaconesses. It must be noted, however, that some of these offices were not always and in all places regarded as having the same rank or long considered to exercise a charismatic ministry, and were reckoned as being outside the ordinary roll of the clergy.

(a) Readers (ἀναίσθητοι, lectores).—This is probably the oldest of the minor orders. In Justin Martyr's description of the Enucharii (Apd. i. 67; c. A.D. 150) the reader of the lections plays an important part, though Justin may not mean that he was of a separate order in the ministry. In the Apost. Ch. Ord. (§ 19; c. A.D. 200) he comes before the deacon, and Harnack thinks (Sources of the Apost. Canons, Eng. tr., London, 1895, p. 71 f.) that his office was at first a charismatic one, and that he was not originally included among the clergy. Stress is laid in the manual just named on the necessity of the reader being learned. He must be 'able to instruct' or 'narrate' (ἐπισταμένος), and he 'fills the place of an evangelist.' This qualification is not always insisted on in the case of a bishop who was not specially ordained. For the ordination of a bishop does not know letters, at least he is to be meek. The Test of our Lord also insists that the reader must be learned, and have had much experience (i. 45). Probably he had, at first, the duty of expounding what he read; but, when he

office of an archdeacon is found before the end of the 4th century. The name is found in the Fil.

functions were not entirely the same. They are first mentioned at Ancyra (can. 15 [see below, §§ 32, 33]; Neo-Lycia [can. 14; A.D. 354 or a little later], Nicea (can. 8; A.D. 325). From the 10th can. of the Council of Antioch in Ecumenis (A.D. 341) we may perhaps gather that not all chorepiscopi were bishops, for it uses the expres-
MINISTRY (Early Christian)

was limited to the mere reading of the lections, his position fell, as it did at Rome in the middle of the 3rd century (see above, § 4 (d), where the readers are chasmed with the exorcists and doorkeepers, below the acolytes). In the other Church traditions they are called acolytes, before, and sometimes after, the subdeacon. In Sarapion's Sacramentary (§ 25; e. A.D. 330) the minor orders are 'subdeacons, readers, and interpreters,' There are indications in some of the authorities that readers were not numberless. In the Older Didasc. and the Apost. Const. (i. ii. 28; Funk, i. 108 f.) suggest that it is probable that a church may not have a reader at all; and in several Church Orders there is an indirect indication that there was only one in each place (Mucian, Ancient Church Orders, pp. 141, 87). Readers come below deacons in Tertullian (de Præscr. 41). They are frequently mentioned in Cyprian; and they often had the important duty of reading the liturgical prayer at the Eucharist; this they did from a desk, or asbò (Ep. xxxix. [xxxiii. 4], 'About Celerinus'). In the Diocletian persecution they had the custody of the Scriptures (J. Wordsworth, Ministry of Grace, p. 159).

(i) He says (ποιάντες, ἐπιτραπέζιον, συνεξορεύοντες, ministri).—Those officials, whose chief duty was to assist the deacon at the Eucharist and in their other functions, are mentioned in the 3rd cent. by Cornelius at Rome (above, § 4; he speaks of seven) and also by Euseb. in Asia Minor (Ep. 67), that the presbyters and deacons: he speaks of two subdeacons by name and a certain acolyte), and in the Older Didasc. (E. Hauler, Vernon Latin Fragments, Leipzig, 1909, p. 49; Funk, i. 116; see below, p. 50). In the 4th cent. we find them in Spain; at Elvira (can. 30; c. A.D. 305; no other minor order is mentioned in these canons), in Egypt in Sarapion's Sacramentary (§ 25), in the Church Orders (but not in the Apost. Ch. Ord.), at Neo- Cæsarea in Cappadocia (can. 10; A.D. 514 or later), at Antioch in Eusebius (can. 10; A.D. 341), at Laodicea (can. 20–22, 25; c. A.D. 380), and in Athens (Hist. Arion, ed. Monouchos, 60; A.D. 538). At Neo-Cæsarea and Laodicea, and in the Apost. Const. iii. 11, and elsewhere the subdeacon is called ἐπιτραπέζιον or 'minister.' The existence of subdeacons in the East before the 4th cent. has been disputed, and it has been thought that the passage in the Didasc. where they are mentioned is an interpolation; yet it is found in the Latin, and in the Syriac versions. Eusebius (HEE viii. 6) makes their existence in most parts of the East during the Diocletian persecution certain. He says that a royal edict directed that the presidents (ἐπισκόπηται) of the Church everywhere should be imprisoned, and that the priests were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the Canons of Hippolytus (can. xxxvi. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent.) form of the Canons; the omission of deacons may be a mere clerical error.

(c) Acolytes, or acolytes (ἀκολούθοι, ἀκολύθι, acoliti, acoliti).—These are first mentioned by Cornelius (above, § 4), and by Cyprian (loc. cit.). They are also mentioned in the Gallican Statutes (as J. Wordsworth has conveniently named them [Ministry of Grace, p. 159]), in Statum Ecclesiae antiquae, a collection of canons which used to be ascribed to the so-called 'Fourth Council of Carthage.' (can. 6; Helde, ii. 410; their real date is c. A.D. 500). Acolytes assisted at the Eucharist, and performed various minor functions. They are found only in the West, where they became very numerous. Cornelius says that there were 42 at Rome in the 3rd century. As there were 14 regions in that city, there would be one deacon or subdeacon and three acolytes for each region (Harnack, Sources of the Apost. Can. i., p. 95). An acolyte was sent by Cornelius as a messenger (Cyprian, Ep. 49; see below, p. 96). (d) Singers (ψαλται, ψαλωται, cantores, psalteri, etc.).—In the earlier Church Orders singers are mentioned, but not as a separate order. They had, however, already become such in the Apost. Const. (iii. ii. vi. 17; c. A.D. 375), at Laodicea (can. 23), in the Apost. Canons (can. 33 [42], 69 [68]; c. A.D. 400), and in the Arabic translation of the Test. of our Lord (i. 45), which adds a chapter to that manual about their appointment, and reduces the lesser orders in the Test. (see above, § 4) to 'four subdeacons and readers, three widows and singers'; the date of this Arabic translation is unknown. Singers are a separate order also in the Gallenian Statutes (can. 10). (e) Interpreters (ἰεραπότης, ἑραπότης, interpreters).—These are not mentioned in the Church Orders. They naturally are found only in bilingual countries. Eusebius mentions them in Palestine (Mart. Pal. cit. longer version, § 1, tr. A. C. Metcalf, xiv.; see above, § 3), and in Egypt in the 3rd cent., and also in the West, as in the Apost. Const. (ii. 57, iii. 11), and the Ethiopic Didasc. (§ 10), but not in the other Church Orders, which retain (as indeed do also the Apost. Can., rather inconsistently) the old direction that deacons are to guard the doors. For the devolution of the deacon's functions see above, § 4 (c).

(f) Deacons (ὁ διάκονος, deacon).—These are mentioned in Cornelius's list, and in the Apost. Const. (ii. 57, iii. 11), and the Ethiopic Didasc. (§ 10), but not in the other Church Orders, which retain (as indeed do also the Apost. Can., rather inconsistently) the old direction that deacons are to guard the doors. For the devolution of the deacon's functions see above, § 4 (c).

(g) Exorcists (ἐξορηταὶ) in the NT, Josephus, and elsewhere, but ἐξορηταῖοι in Apost. Const. viii. 20, and Epiphanius, Exp. Fid. 21, exorcist).—The Jewish exorcists are mentioned in Lk 11' (where 'your sons' can hardly mean the disciples, but must be the Jews), Ac 19', and Jos. Ant. viii. 5 (he is speaking of the time of Solomon). Christian exorcists are used both in the Latin Church, and in the Syriac versions. Eusebius (HEE viii. 6) makes their existence in most parts of the East during the Diocletian persecution certain. He says that a royal edict directed that the presidents (ἐπισκόπηται) of the Church everywhere should be imprisoned, and that the priests were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the Canons of Hippolytus (can. xxxvi. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent.) form of the Canons; the omission of deacons may be a mere clerical error.

(h) Ministry of women.—It is not very easy to distinguish between the 'widows' who were on the Church roll for relief and those who were, in some sort, in the ministry. The widows in Ac 6' come under the former category; those of 1 Ti 5' perhaps under the latter, in order to imply ministering. A deaconess, Phoebe, is mentioned in Ro 16', though Hirt (Christian Ecclesial, p. 208)
thinks that ἵδαξων (fem.) is here used in a non-technical sense, and thereby means that Phebe ministered to the needs of the church. Many think that 'women' in 1 Ti 5:10 (προῖκες without article) means deaconesses; note the qualifications for the office, however, given Deut 4:20. We held a paper by Prisca (Priscilla) joining with Aquila in his evangelistic work (Ac 18:24); this was no doubt in private teaching, as St. Paul forbid a woman to speak in church (1 Co 14:1, 1 Ti 2:12). In the Church Orders of the West from about 300, we find frequent mention of a ministry by women. In the Apost. Ch. Ord. one of the 'widows' is to visit the sick, while the other two are to pray and receive spiritual revelations (see above, § 3). In the Test. of our Lord the 'widows who preside' (πρεσβιτέραι) are an important order; they are also called 'presbytresses,' as corresponding to presbyters, while deaconesses are mentioned as corresponding to deacons; deaconesses carry the Eucharist to a sick woman (ii. 20), just as a deacon does to a sick man (cf. Justin Martyr, Apol. i. 65). At Laodicean presbytresses (πρεσβιτέραι) are identified with those who preside (can. 11); and their appointment for the future is to be forbidden. Though the interpretation is not quite clear. In early times widows or deaconesses were employed especially in the baptism of women. The deaconess is sometimes called ἵδαξων (Ro 16:1), but more often the expression (Nic. can., 2. v.); Presbyt. Ch., viii. 19; Epiphanius, Exp. Fid. 21). For further details see Maclean, Ancient Church Orders, p. 83 f.; J. Wordsworth, Ministry of Grace, ch. 1.

It may be interesting to give here Epiphanius's list of clergy and other classes of Christians in Exp. Fid. 21. He mentions bishops, presbyters, deacons, subdeacons, readers, widows, virgin; those who marry deaconesses (especially for baptism), exorcists, interpreters, grave-diggers (or speciand, see above, § 4 (69), doorkeepers; and see add. a, b, c, d, e, f, g, h (i) Promotion.—It is a common, and in the West the usual, thing for a deacon and the lower officials to be in due course promoted; but it is doubtful if this was often the case in the first three centuries. The 'good step' (ἀρνύν καίνα) see § 8 (g) of 1 Ti 3:2 has been interpreted by Ambrose, Jerome, and some moderns, of promotion, though this is not very probable, and does not well suit the rest of the verse. The only instance of such a course in the 1st cent. is perhaps Philip, who in Ac 8 is one of the Seven, without authority to lay on hands, but in Ac 21:1 is called 'the Evangelist,' that is (probably) one of the 'apostolic men' like Timothy and Titus, though he has not apostles, yet shared the apostolic office (above, § 1 (d)). But, at any rate from the 4th cent., perhaps earlier, promotion from the lower to the higher offices became common. Those of readers and subdeacons are referred to in the Test. of our Lord (i. 44 f.), Apost. Const. (vii. 22, readers), and are implied by Basil (Ep. canon. tert. ccxvii. 69). Cyprian (Ep. xxxix. [xxxii.] 5, 'To the clergy and people') speaks of promoting readers to the presbyterate—this was because they had been confessors (cf. § 7 below). The promotion of deacons is mentioned in the Apost. Ch. Ord. 22 (to the episcopate), Apost. Const. viii. 17 f., Ethiop. Ch. Ord. 24, and probably in the Test. i. 88; explicitly in the Codex Canonum Ecclesiae Africanae (can. 31; Hefele, ii. 470). Polycarp is said by the 4th cent. pseudo-Pionius (see above, § 2 (b)) to have been successively deacon, presbyter, and bishop (§§ 11, 17, 23); and the Council of Sardica (A.D. 343) says that a bishop must have been a reader, deacon, and presbyter, some time before becoming bishop.

7. Honorary offices. — It appears from the Church Orders that confessors, i.e. those who had been apprehended in the persecutions and had confessed their religion, but had escaped martyrdom, enjoyed an honorary presbyterate. A confessor (ἰδαξωνικόν) had the honour of the presbyterate by his confession (Epp. Ch. Ord. 34; Ethiop. Ch. Ord. 25; Canons of Hippolytus, v. 1. [ed. Ashlin], 45-47). The text is not clear. It is, however, enacted in these manuals that, if a confessor is wanted for a bishop, he must receive the laying on of hands, or ordination. There is no evidence that confessors would ever be allowed to minister, or to celebrate the Eucharist, without ordination. Indeed the Canons of Hippolytus (loc. cit.) say that a confessor has not got the form of the presbyterate, but he has obtained its spirit. An honorary presbyterate was possible in the churches, where there were many presbyters in each place; but an honorary episcopate was not possible, both because there was only one bishop in each see and because the bishop had the duty of ordaining others, which an unordained person could not do. It is noteworthy, and a sign of the earlier date of the Church Orders above mentioned, that the Apost. Const. (vii. 23; c. A.D. 353), while giving honour to confessors, yet repress their undue claims. This work says that confessors are not to be ordained unless wanted as bishops, priests, or deacons, in which case they are to be ordained. It says nothing about the honorary presbyterate.

That confessor (Ep. 19) in some cases entitled to an honorary office is not the same thing as saying that confessors were preferred to others for the higher offices of the church when they became vacant. Tertullian (ad. Valer. 4) tells us that Valentinus was a presbyter, when he expected to become a bishop, because another was preferred before him by reason of a claim which confessorship (προεσχοπεία) had given him. It is not said that the confessor who was preferred was made a bishop without being ordained. Eusebius (HE v. 28), quoting an unlearned writer about the heresy of Artemon, mentions a confessor Natalius who was chosen by the heretics as their bishop, apparently because of his confessorship (early 3rd cent.). Hippolytus (HE, ix. 7) relates how Callistus, having been imprisoned in Sardinia, succeeded Zephyrinus at Rome as bishop. Asclepiades, a confessor, became bishop of Antioch (Eus. HE vi. 11). But these and other instances prove nothing as to confessors becoming bishops without ordination.

8. Transmission of the ministry. — In this section we enter on the consideration of a series of facts whose significance is much disputed. An endeavour will be made to state the whole of this subject as they are relevant to the early period with which this article deals. For a description of rites used in transmitting the ministry see art. Ordination.

(a) In the NT we find, in the case of the Seven (Ac 6:5-6), that the people 'elect' (v.2 ἐκλέκτοι), while the apostles 'appoint' (v.3 καταρτίζουσι) and set apart by prayer and imposition of hands (v.4), a self-asserting 'confessor' is to be cast out; confessor (προεσχοπεία) presbyters 'for' the people of Pisidian Antioch, Iconium, etc. The word used is a general one, and does not necessarily imply laying on of hands. It is used for election by a show of hands, for (as here) to set apart for any office, and simply for appointment in the case of the elders (presbyters) at Ephesus, Hort (Christian Ecclesia, p. 90) remarks that there is no indication that St. Paul appointed them. Yet the phrase the Holy Greek hath made you bishops (Ac 20:28), cannot be pressed to mean a direct authority of the presbyters received from God without human intervention, such as St. Paul himself had (Gal 1). God works through human means; and the analogy of 6:6, 14* will lead us to suppose that, though
the people probably elected their presbyters, St. Paul appointed them. St. Luke is not accustomed to repeat details of this nature. In 1 Ti 3:2 the presbytery are said to have laid hands on Timothy, and in 2 Ti 1st St. Paul is said to have done so; probably here we have the counterpart of the custom which is found in later ages of the presbyters and bishop joining in the ordination of a presbyter (see below). In 1 Ti 5:2 Timothy lays hands on, though it is doubtful if ordination is here referred to. In Tit 1:7 Titus ‘appoints’ (καταφέρει) presbyters in every city in Crete. We may notice, by way of analogy, another laying on of hands: Ac 8:19, which is not ordination; this is reserved for the apostles in those passages, though ordinarily they did not baptize (St 10:19, 1 Co 10:6). For the sub-apostolic period we have very little evidence on the point which we are now considering. But Clement of Rome describes in general terms how the ministry was appointed. 'Baptizing everywhere in country and city, appointed their first bishops, when they had moved them by the Spirit, to be bishops and deacons. . . . They, appointed (καταφέρειν) the aforesaid persons (the bishops and deacons), and afterwards they provided (καταφέοι) that if these should fall asleep, other approved men should succeed to their ministry. Those therefore who were appointed by them (the bishops), or afterwards by other distinguished (Διδακτοί) men who were not bishops, were to be considered as to be unjustly thrust out from their mission' (Clement 45,46).

That we have popular election, and ‘appointment’ (καταφέοι; for this word see art. Ordination) by ‘distinguished men,’ i.e., not by the ‘bishops and deacons,’ but by such viri apostolici as Timothy and Titus.

For the 3rd cent. we have evidence that only a bishop (in the later sense) could then ordain; for Novatian had to get, by a disreputable trick, three bishops to ordain him (see below (c) and (f)). Firmilian of Cappadocia, writing to Cyprian about the re-baptizing of heretics (Cyprian, Ep. lxxv. [Ixxiv.] 7.1), denies that heretics can be baptized, and says that ‘all powers and graces are established in the Church where the presbyters preside who possess the powers both of baptizing and of imposition of hands and of ordaining.’ Then, referring to St. Paul’s having baptized (vitæ) John Baptist’s disciples again, and having laid hands on them that they might receive the Holy Ghost, Firmilian goes on to say that the ‘bishops of these times’ can by means of this laying on of hands alone give the Holy Spirit (c.e. by confirmation). His argument is against admitting heretics without re-baptism, because of St. Paul’s action in Ac 19; but his words necessarily mean that none in his day but bishops could receive heretics by means of this laying on of hands, as they used to give Baptism. And though he says that he does not mean to say that bishops must alone have the power of the Holy Spirit, he certainly means that the bishop is the only person who can be said to have that power. We have here another instance, besides those mentioned above in § 4(b), of bishops being still called ἀποστολεῖς.

At least from the 4th cent. onwards we find explicitly stated the rule that only a bishop can ordain; possible exceptions will be noted below. As the Conones of Hippolytus, though not in the present form of the 3rd cent., reproduce very faithfully the language of their source, which probably goes back to Hippolytus’s time, and may even have been written by him, it seems likely that this explicit rule also goes back to Hippolytus’s time at least (see above, Conones, § 22): ‘the power of ordination is not given to presbyters’ (§ 317).

In and after the 4th cent. (we have no earlier evidence on the point) we find a custom which is still prevalent in the West, that at the ordination of a presbyter the bishop should lay on hands together with the bishop, though he alone says the prayer of ordination. This is found in the Epig. Ch. Ord. (§ 32), the Ethiop. Ch. Ord. (§ 32), the Test. of our Lord (I. 30), the Gallonio Scriptures (§ 3; Hefele, i. 441). The ordination of a presbyter is the same as that of a deacon; the presbyter lays on hands with the bishop, and the bishop says the prayer of ordination. This is found in the Early Latin Fragments (Haller, pp. 108-110). These manuals emphasize the fact that the bishop acts alone in ordaining a deacon. This (as the last manual says) is because the deacon is ordained for the service of the bishop, and does not take part in council with the clergy, while ‘on a presbyter the presbyters also lay (their) hands, because of the common and like spirit of the clergy (ελεημ.), for a presbyter can only receive, he cannot give (this spirit), and therefore he does not ordain the clergy, but at the ordination of a presbyter he signs when the bishop ordains’ (see above, § 4(b)).

The custom of presbyters joining in the laying on of hands when a presbyter is ordained, does not appear to be known to the writer of the Apost. Const. He says (viii. 16): ‘When a presbyter is ordained, a bishop, lay the hand upon his head in the presence of the presbyters and deacons. And this act uses almost exactly the same words about the ordination of a deacon, while he does not, as the other Church Orders do, emphasize the fact that a bishop acts alone in ordaining a deacon. So in ii. 38 we read, according to the best MSS: ‘A presbyter and a deacon [are to be ordained] by one bishop and [are] the other clerks.’ Three MSS here read ‘by one bishop and the other clerks;’ but this cannot in any case be the right reading, for deacons were never ordained by bishops and presbyters jointly, and moreover ‘clerks’ must here mean the minor orders. See also above, § 4(b).

The limitation of the power of ordaining to bishops is found in a large number of writers. For the Conones of Hippolytus see above. The Apost. Const. say that a presbyter cannot ordain even the minor orders (iii. 11, 29, viii. 28). So also the Ethiopic Didasc. (§ 14) limits ordination to bishops. Jerome, who energetically emphasizes the closeness of the relation between bishop and presbyter, yet denies that the latter can ordain: ‘What does a bishop,’ he writes, ‘that a presbyter does not except ordination’ (Ep. cxxi. 4, ad Evagnemum). The case of Ischyras, who is thus quoted by Isebut (see above), is important in this connexion, and is related to Athanasius (Apol. c. Arius. 111. f. 76). Ischyras had been ordained presbyter by Colluthus, who was, Athanasius tells us, never other than a presbyter. When after the 4th cent. Cyprus passed to Egypt at the beginning of the 4th cent. Alexander (bishop of Alexandria, A.D. 313-326) admitted the presbyters who had been ordained by Meletinus (bishop of Lycaon), Ischyras was not even numbered among them, and therefore he did not receive ordination in that quarter (§ 11); but he was ordained presbyter by Colluthus, and all ordained by that man were, after the schism, reduced to the rank of laymen: and, Athanasius adds, no one doubts it (§ 12). The same writer quotes (§ 76) a letter of the clergy of Mareotis (in Egypt) saying that Ischyras was no presbyter; that he had been ordained by Colluthus who preceeded to the episcopate [this is significant for the point of view of the clergy of Mareotis]; and that all ordained by Colluthus resumed (at the end of the schism) the same rank that they had before, and so Ischyras proved to be a layman. Alexander himself, in a letter quoted by Athanasius (Hæ 5. 3), accused Colluthus of ‘making a trade of ordination here,’ and says that he set up his seat before Arius’s separation. Colluthus was declared by the Council of Alexandria (A.D. 321) to be only a presbyter. We must notice that the refusal to
recognize Isaias' ordination was not due to the fact that Callistus was in schism (as also Meletius was), but to the fact that he was only a presbyter, and therefore could not ordain (on Callistus see also Epiphanius, Hist. Hier. 27). We may now consider certain possible exceptions to the above-named rule.

(b) The 13th canon of Ancyra (A.D. 314).—This canon, according to one reading, seems to say that under certain circumstances a presbyter was allowed in Galatia to ordain. It runs thus:

'It is not permitted to episcopi to ordain presbyters and deacons, unless permission is granted by the bishop in writing in every case, (i.e., diocese) where episcopi are given the permission to ordain in every case, (i.e., diocese).

The words left untranslated are uncertain both as to the reading and as to their signification. The dative ἐπισκόπων is adopted by Lightfoot, who translates 'nor even to city-presbyters, except permission be given in each parish by the bishop in writing.' This would recognize that city-presbyters might, if allowed by the bishop, ordain. On the other hand, Routh, Gore, and Rackham read the accusative, and the last writer has gone into the readings with great care (in Studia Böld. et Eccles., iii. [Oxford, 1891] 139, 194). This would forbid episcopi to ordain city-presbyters without leave. If so, there is still a doubt as to the meaning of ἀλλὰ χωρὶς χειρός. Routh renders 'unchless,' not, as Rackham follows Lightfoot here and translates 'not even'—he takes the middle clause as a parenthesis, and understands the canon to say that episcopi may not ordain presbyters and deacons in another parish, even if the bishop had given them his permission (in their own parish) without the bishop's permission. On the whole, the readings of this canon are so uncertain that no argument can safely be built upon it. It is a decided objection to Lightfoot's general interpretation that, if it were the true one, this canon would stand absolutely alone in 4th cent. literature; the Alexandrian case (see below) is quite different. Another objection is that it would place the city-presbyters on a higher level as to powers of ordination (cf. 'not even') than the episcopi, who at any rate were normally bishops. For detailed discussions on this canon see Lightfoot, 'Dissertation,' p. 232f.; Gore, Church and Ministry, note 2). This was argued by [ed. Archib.] § 10] with regard to the ordination of a new bishop that 'one of the bishops and presbyters, who lays his hand on his head,' is to say the ordination prayer. This canon has sometimes been quoted as if it were (as generally) 'one of the bishops (and presbyters)' that is to say the ordination prayer. As we have seen, the Connors say that a presbyter cannot ordain, and therefore this is clearly not a possible interpretation. But what does the canon mean? Gore (p. 135, n. 3) supposes that in the original (we have the text only in a translation of a translation) the direction was that one bishop and one presbyter were to lay on hands and to say the prayer. This would be in accordance with the close relation between these orders elsewhere hinted at in the Connors (see above, § 4 (b)). Yet this explanation does violence to the grammar of the text as we have it; for all the verbs are in the singular. Another explanation may therefore be preferred, that ' unus ex episcopis et presbyteris' means 'one who has both the episcopate and the presbyterate,' for we have already seen (in § 4 (b)) that a bishop was not considered to cease to be a presbyter when he became bishop. The facts of the transmission of the Connors, unless it proceeds simply on an interpretation of a single translation of the words; but they cannot be adduced as an exception to the rule which we are considering.

(d) The succession at Alexandria.—Much more important than the above is a peculiarity said to have existed at Alexandria in the earliest ages. (The matter is full of difficulties and may be studied in detail in Lightfoot, 'History of the Church,' ii. 129 ff., and in JThSt ii. [1901] 612f. [E. W. Brooks, Turner], iii. [1902] 278 [Gore]). Jerome says (Ep. cxvii, i [180] that at Alexandria till the middle of the 3rd cent. the presbyters nominated (nominabant) as bishop one of their own number, and placed him in a higher grade, as if an army were to appoint (dictavit) a general, or deacons were to choose from their own body one whom they knew to be diligent, and to call him archdeacon. He does then goes on to deny that the presbyterate was ordained in the way in the words cited above (a). Somewhat similarly, Severus, Monophysite patriarch of Antioch in the 6th cent. (we have his letter only in a Syriac translation), says that the bishop of Alexandria used in former days to be appointed (the Greek verb was doubtless ἀνακοινώτατος) by presbyters, but after the solemn (or mystical?) institution of their bishops has come to be performed by bishops. The word rendered 'institution, or consecration' (Istitutione, or 'ordination' (R. A. Payne-Smith, Thesaurus Syriacus, Oxford, 1870-1901, ii. 275). Jerome may mean, as some later writers understood him, that the Alexandrian presbyters elected their bishop (their bishop) and in that paper, the bishop, though they delegated the function of ruling to one of their number. Or the meaning may be that, unlike other presbyters, the presbyters of Alexandria had the right of electing their own bishop without the intervention of the neighbouring bishops.

Confirmation of Jerome's statement has been found in three writers besides Severus. Ambrosiaster's testimony, however, as we have already seen (in § 4 (b)), is irrelevant. In the apocrypha of the Egyptian monk Poemen (JThSt ii. [1901] 613) it is said that certain heretics accused the archbishop of Alexandria (probably Athanasius or his successor) of having his ordination (ἐξορισμὸς) performed by presbyters. This was in the 3rd cent., and Jerome distinctly states that the custom which he mentions had ceased a hundred years before. Certainly Athanasius was elected by the people and the bishops, and ordained by the pope (cf. Acts or presbyter) in a general council. Poemen, in his meekness, made no reply; but, though the accension was doubtless a pure calumny, it may probably be an echo of some former peculiarity at Alexandria. The third writer is Eutychius, an Arab patriarch of Alexandria in the 6th cent., who says that twelve presbyters of Alexandria, when the patriarchate was vacant, chose one of their number, and the remaining eleven laid their hands on him, and blessed him, and created him patriarch, and that this lasted till the time of Bishop Alexander (A.D. 313-326). Those who are familiar with the late ecclesiastical histories of the Eastern Churches, which are full of fables and of impossible statements, will hesitate to accept Eutychius' testimony as an independent confirmation of Jerome. He probably depends on Jerome at third or fourth hand, and it is not surprising that he flatly contradicts him. We are, then, met with a perplexing series of contradictory statements. But they can hardly be all dismissed as entirely devoid of truth. Probably there was at Alexandria in very early times some peculiarity in the appointment or in the
ordination of bishops, whether it took the form of the presbyters electing him or of their ordaining him. A great difficulty in the way of the latter supposition is the fact that the change to have taken place in the time of Origen. Yet Origen, who suffered much from the autocratic authority of the bishops of Egypt, and especially of the bishop of Alexandria, and who was prompt to denounce bishops for going beyond their powers, gives no hint that in his own day a great change was taking place by which the Alexandrian presbyters were being deprived of their rights (on this point see, further, Gore, Church and Ministry, p. 121), as the whole passage (JThSt ii. 613) seems just, that "it becomes harder than ever to discover the history and character of this exceptional system in detail."

(c) Some other exceptions which have been alleged are due to a misapprehension. Thus Paphnutius, a presbyter and hermit in the Scectic desert in Egypt in the 4th cent., is said by his younger contemporary Cassian, the historian of Oriental hermits (Conferences, iv. 1), to have 'ordained' a certain Daniel to the diaconate and presbyterate. The meaning here must certainly be 'to nominate,' as is often the case even with the words 'constitutere,' 'ordinare,' and the like. We read, e.g., of kings 'ordinating' bishops and popes (see Gore, p. 341). To suppose that he would have in a 4th cent. a presbyter in Egypt had hands to ordain, and that Cassian, writing at Marseilles in the 6th cent., mentioned it without surprise, would indeed be an anomaly.

Another instance is the statement by Cyprian that Novatus, a schismatical presbyter in Africa in the 3rd cent., appointed (ep. iv. 11v., 'ad Cornel.'). The meaning here is capable of being tested. A few lines later on Cyprian says that Novatus, who had 'made' (feci) (Novatian) a bishop. But Cyprian tells us (Eus. HE vi. 43) that Novatian got three rustic bishops from a remote part of Italy to come to Rome, and when they were drunk to appoint them to the episcopate and to invest them with hands of ordination. Thus 'making a deacon or bishop here means 'ordaining.' (Kühner calls Novatian 'Novave'; on this see DCC iv. 58.) The story of Aidan lies outside our period, but it may be here briefly referred to. Bede says (HE iii. 1) that the sons of Iona, A.D. 634 or 635, 'ordinating' (ordinantes) Aidan, bishop, sent him to their friend King Oswald to preach the gospel. Here 'ordinating' can only mean 'procuring the ordination of.' We know that the Irish and Columban monks had a bishop with them for episcopal acts, though they had no system of diocesan episcopacy. But in any case it is impossible to believe that Bede, the ardent upholder of the customs of Rome, would have accepted (as in fact he did accept) Aidan as a true bishop if he had been ordained by presbyters only.

(f) Bishops ordained by not fewer than three bishops. The earliest example of this rule, as a definite enactment, is at the Council of Arles in Gallican Gaul (A.D. 314), which says that at any rate not fewer than three, bishops are to take part in the ordination of a bishop (can. 29). The 4th canon of Nicea says that a bishop is to be appointed (constituere) by all the bishops of the episcopal province; at any rate shall meet and ordain, the other bishops giving their assent in writing. The Apost. Const. (iii. 26) says that a bishop is to be ordained (χορηγάω) by three bishops, or at least by two, and is not to be appointed (constituere) by one; so A.D. Canon. 1, Ethiopic Didasc., § 16. But this rule must have been in force long before the 4th century. Cornelius was ordained by 16 bishops (Cyprian, Ep. iv. [II.] 8, 24, 'ad Antonianum'), Novatian was ordained by 20; he must have had the rule not been then in force, he would have been content with getting a single bishop to ordain him. Much stress is laid by Athanasius on the number of bishops who took part in his own election (see art. § 15). At the third council of Carthage (A.D. 397) it was proposed that twelve bishops should be the minimum; but this proposal was not carried (Heide, ii. 408).

An exception to the rule is found at Rome, where in the election of the Cononards, the pope acted alone in consecrating bishops (Duchesne, p. 361). And in the Celtic Church it was common for a bishop to be consecrated by a single bishop. The object of the rule seems to have been to secure the assent of the comprimordial bishops to the election. But in the ordination itself there is a variety of usage as to what part the bishops took (see art. Ordination).

(g) Appointment of the minor orders. In the 4th cent., when minor orders were developed, there was a certain discrepency of usage as to whether certain classes of persons were 'ordained' at all, i.e. set apart by some solemn ceremony; and also a distinction was frequently made between ordination with, and ordination without, laying on of hands. Basil distinguishes the bishops who were ordained without it from those in orders ('τεμπετός, Ep. can. tert. ccc. C. H.'). Furthermore, Origen (82 [81]) speak of τὸ διάκονον βάπτισαν, meaning 'ordination to the higher ministry.'

In the Test. of our Lord (i. 44 f.), Canons of Hippolytus (vii. [ed. Achelis, § 48 f.], Epig. Ch. Ord. 53 f.), Eth. Ch. Ord. (27), subordinate and readers are ordained without imposition of hands; so the reader in the Const. through Hippolytus (13); and the subdeacon in the Gallican Statutes (§ 3), which take the same thing for granted in the case of the ordination of an acolyte, exorcist, reader, doorkeeper (§§ 6-9). On the other hand, the Apost. Const. (viii. 21 f.) prescribes the laying on of hands, and appoints it for the ordination of both subdeacon and reader. The Const. through Hippolytus appoints it for a subdeacon (§ 19).

In many of these manuals persons holding charismatic offices are not ordained at all. Such are confessors, virgins and ascetics, widows, exorcists, but there are exceptions, in which some of these classes receive an ordination, though without imposition of hands. In the Test. widows "who preside" are ordained (i. 41); in the Canons of Hippolytus (vii. [ed. Achelis, § 53 f.] one who wishes to be ordained because he has the gift of healing is not to be ordained; the meaning has made clear that the gift of God is not to be obtained, i.e. merely for that reason; in the Gallican Statutes (§ 7) an exorcist is ordained, and a book is given in which the exorcists are written. Virgins (ascetics) receive a blessing on their profession, not from presbyters, but only from the bishop, in Gallican Statutes (§ 11) and the 3rd canons of the Council of Carthage, A.D. 399 (Heide, ii. 399).

9. The institution of bishops &c. by our Lord.—We now enter upon the consideration of theories as to the origin and development of the ministry. There are two main trends of opinion, and an attempt will be made to summarize them, without going into quibble at least till now, and without going beyond general principles.

(a) It is held that our Lord founded a ministry to be a means of bestowing grace on the Church and for its government. For this purpose He founded an apostolate, and gave to it a commission apart from the Church at large. It is clear from Acts, and to a certain extent from the Epistles, that the apostles exercised an authority over the Church, and it is difficult to conceive that that authority was due to delegation from the people themselves. Of such a delegation there is no trace in the NT, and the position of the apostles after Pentecost appears to presuppose a distinct commission from our Lord Himself. The ministerial questions, as a whole, were not bestowed till after the Resurrection; but our Lord foretells the gift in more than one passage. Whatever be the true expression of the promise to St. Peter after his conformation, it must mean "Upon this rock I will build my Church," the
passage about giving the keys of the kingdom of heaven carries a commission of binding and loosing, i.e. of government. It is not a commission then given, but a promise that it will be given; and the promise was fulfilled, not here promised to the Church as a whole. On the other hand, in Matt. 28:18-20, the Church is directly spoken of as exercising discipline, and our Lord then gives (apparently to the Twelve, but this is disputed) that promise of binding and loosing which had already been given to St. Peter. The supernatural authority does not lie in the Church as a body, but the Church has (not by her own but by Christ's authority) executive officers, and it is through them that her judicial power is put into effect (Gore, Church and Ministry; p. 267). A distinct stage in the development of the Church is the powers promised to the whole flock, is foreshadowed in the parable of Lk 12:32-45. This parable, as F. Godet remarks (Conn., Eng. tr., Edinburgh, 1887, ii. 108), assumes that the apostolate will be perpetuated till Christ returns, and that the ministry of the Church is established by Christ. The same writer adds that the theory which makes the pastorate (and the Church as her representative) not Biblical; this office is one of the essentials of the apostolate, and therefore mediately an institution of Jesus Himself. It may be added that in the parable the stewardship is appointed by the Lord (note the future: 'shall set over his household'), in order that the household may be fed, and that it will last until the Lord comes.

The more probable conclusion seems to be that the special ministerial commission was given to the apostles to hold on in perpetuity to succeeding generations, although the Church at large was given a supernatural authority to be exercised by divinely appointed ministers. For a fuller exposition of this view see Gore, op. cit., ch. iv. and (in the later edition) pp. 673, 737.

(b) A very different view is taken by Hatch (Organization of the Early Christian Church) and Hort (The Christian Ecclesia). Hort holds that the commission was given to the Church as a whole, and that the Church as a whole appointed the apostles, whose authority was due to the spontaneous homage of the Christians in Judea. He thinks that the apostles were not commissioned by our Lord to govern the Church, but only to be witnesses of His resurrection; that they were not, strictly speaking, officers of the Church as the Seven were (p. 231). He doubts if they had any authority outside Judea. An indefinite authority grew up round them because they were personal witnesses. 'The Ecclesia itself, i.e. apparently the sum of all its male adult members, is the primary body, and, it would seem, even the primary authority (p. 229). With regard to the mission in the apostles, besides the apostles were probably present, and that, though perhaps the charge was 'directly and principally' spoken to the apostles, yet it was spoken to them as representing the whole community (p. 32 f.). [There is no scriptural authority for Hort's addition of 'adult male' to the narrative.]

On these various views it may be remarked that it is common ground that the apostles were given the commission in An 2:36-38, with the gift of the Holy Ghost (i.e. πνεύμα ἡγεμόν without the article) and the power of binding and loosing, was given on the evening of Easter Day, when only ten of the apostles were present, Thomas being absent (v. 31). This was not divine commission: 'As the Father hath commissioned (ἐξοικονόμησεν) me, I also send (σταυρισμός) you.' But it is uncertain whether others were present on this occasion besides the Ten. 'The disciples' are mentioned (v. 35), but this often means the apostles. In the description in Lk 24:48, which seems to refer to the same appearance of our Lord, we read of 'the Eleven and them that were with them.' The number 'eleven' is only a general way of speaking; for Thomas was not present, and this passage was possibly written after the commission. Putting the passages together, we may conclude that it is probable that others besides the Ten were present, but the indications point to the commission having been given only to the apostles. That Thomas had the commission given to him at another time can only be conjectured. In the First Gospel the commission is given when the 'eleven disciples' are assembled on the mountain in Galilee: 'All authority hath been given unto me in heaven and on earth; Go therefore, etc.' It has been suggested by H. Alford (Conn. in loc.) that others besides the Eleven were then present, because 'some doubted.' But this is against the grammar. The 'some' must be the apostles, as in the case of the Eleven, nor is it at all improbable that the apostles, or some of them, though they believed on Easter Day, yet allowed doubts to assail them afterwards. This hesitating faith was characteristic; it was finally confirmed only by the Pentecostal gift. We do not know what St. Mark gave of the ministerial commission; but the author of the Appendix certainly conceived the commission as having been given to the Eleven ('Mt 16:20').

1 This word 'marks nothing more than the immediate relation of the sender to the sent,' while the other verbs denote a delegated authority (see B. F. Westcott, Conn. in loc.).
the one hand, the second view is compatible with the highest doctrine of apostolic succession, such as Jerome himself held. And, on the other hand, the first view is compatible with the belief that the apostles derived all their authority from the people.

Whatever view be taken of the matters touched on in this and the preceding section, it is important to notice a point on which all are agreed. The Christian Church is in its origin and purpose the church of the people, and in its organization, though most of the decisions are made in the places of worship, the decisions are not made by the people from its own representatives. The members of it do not form a class having a closer relationship to God than the laity, for every Christian holds personal communion with the divine Head of the Church (Lightfoot, pp. 11, 12; Evans, p. 76). And all have direct access to God, and the minister does not perform the people's religion instead of them. He represents the people to God by acting as their mouthpiece, but the worship which he offers is the people's and not merely his own. The sacrifice of prayer and praise is offered by all, though the minister may be the only one who gives audible utterance to it. He represents God to the people, as the human instrument by whom the word is preached and the sacraments are administered. But he is not a barrier between God and the people.

**MINOTAUR.**—1. The myth.—Minotaur (Δημητέριος, Δημητέριος καὶ Δίκαιος, "the Minos-bull" or "bull of Minos") is in Greek myth the offspring of Queen Pasiphae's union with a bull, and is represented as a man with a bull's head and tail. As Apollodorus tells the story,2 her husband, Minos, had become king of Crete through the good will of Poseidon; after telling the people that the god had called him and would grant whatever he asked, he prayed Poseidon to send a bull from the sea that he might sacrifice it. But he broke his vow, for, when the splendid creature came forth from the deep, he added to it his herd and offered a substitute on Poseidon's altar. To punish him the god inspired Pasiphae with an unnatural passion, gratified through the artifice of Daidalos, who concealed her in a wooden cow. She bore a child, Asterios, surname 'the bull of Minos', who had a bull's head; but was otherwise like a man. Warned by an oracle, Minos imprisoned the monster in the labyrinth built by Daidalos. Moreover, the bull from the sea was made savage by Poseidon, and it was one of the labours of Herakles to kill it, and carry it to the Peloponnesus; thence it wandered to Marathon in Attica, and ravaged the country. Androgeus, son of Minos, having come to Athens and beaten all opponents at the games, King 'Egues challenged him in single combat. He killed him, and Minos, to avenge his son, made war on Athens, and exacted as a condition of peace that every year every ninth year, according to Phutarch, *Theseus,* 14) the Athenians should send seven youths and seven maidens to be devoured by the Minotaur. On the third occasion Theseus, who had overcome many robbers and, last of all, had captured the Marathonian bull, was chosen by lot to be one of the victims. When he landed in Crete, Ariadne, daughter of Minos, fell in love with him, and, on his promising to take her to Athens as his wife, contrived with Daidalos that he should escape from the labyrinth, giving him a clew of thread which he was to make fast at the entrance. Holding the thread, he penetrated to the Minotaur's lair and slew him with his fists. Then he made his way out and escaped by night with Ariadne and his comrades, but lost his way home.

Apollodorus omits the incident of Minos' ring and Poseidon's recognition of Theseus as his son.3 The story is further rounded off by Pherecydes;4 Theseus sacrifices the Minotaur to Poseidon, and the injured god at last gets his due.

In this form the story owes much to Attic dramatists, who depicted Minos as a cruel tyrant, while the general tradition saw him in a wise law-giver and founder of Hellenic civilization. The Attic version shows an intrinsic connection with the Daidalos which Daidalos was almost as much the hero as Theseus. It credits Athens through him with the miracles of Minos' craftsmanship. It emphasizes Minos' fraud on Poseidon, because the god's son, the Attic minster Theseus, is to be the instrument of his vengeance. When, outwitted by Theseus, Minos imprisons the other Athenian hero, Daidalos makes himself wings, and his escape is the motive for Minos' futile campaign and ignominious death in Ithaca.

The genuine Cretan elements in the rambling composite tale are the sea-born bull, so closely resembling the divine lover of Europa, the Minotaur and the labyrinth, both figured on coins of Knossos, and the fall of the Minotaur Empire in a Sicilian expedition (cf. Herod. vii. 170). The break between prehistoric and Hellenic Crete was in many respects complete, but the coins make it probable that the legend of a bull-monster clang to the pre-historic palace at Knossos, and was adopted by the Dorian settlers. A. J. Evans, the excavator of the site, has shown how the complex of ruined walls, adorned with frescoes of bull-fights, in which boys and girls took part, and processions of tribute-bearers, must have been preserved as a living story.4 The name of the labyrinth is explained with the help of *Ασύρ, the Lydian word for 'double-axe', as meaning 'house (or place) of the axe', a sacred emblem which stood in shrines within the palace and was often engraved on the walls and pillars. This may have been the ancient name of the palace, placed under the protection of a deity with whom both axe and bull were closely associated (hence the frequent juxtaposition of double-axe and horns; see art. *EGYPTIAN RELIGION*, vol. i. p. 145, fig. 5). The remarkable preservation of the ruins proves that they were respected by the Greek and Roman inhabitants, perhaps as the remains of the labyrinth, where the ancients located at Knossos. Diodorus mentions 'the foundations of Rhea's house and a cypress-grove

2. *Ig., P. I. 97 (PIG.)*—schol. to Od. xii. 229 (Theseus is told how to surprise the Minotaur as he sleeps in the mausoleum, evidently the central point of a conventional maze; cf. § 3 below).
3. *This view is discussed in the Platonic dialogue* *Hyp.,* 510a and 510d, which is against the *Thes.* 15. Both writers remark that Minos made a mistake when he quarrelled with a city like Athens, whose tragic poets could make or mar a reputation.
5. *Hist. Quot. Græc. B. 2.* A cypress would be called the *Labraunda, the Carian town where an axe-wielding Zeus was worshipped.*
The Minotaur is one of the most significant figures in Greek mythology. It is often depicted as a man with the head of a bull and a body of a man, usually associated with the Labyrinth, a complex of underground chambers and passages. The Minotaur was said to be the offspring of Minos and Pasiphae, and was raised by Pasiphae's nurse. He was kept in the Labyrinth and fed on the boys and girls from Crete sent in tribute to Medusa. The hero Theseus was sent to destroy the Minotaur and was guided to the Minotaur's lair by Ariadne, who gave him a thread to help him navigate out of the Labyrinth.

The Minotaur is often represented in art and literature, and its story has been the subject of many works of art, including paintings, sculptures, and literary works. The Minotaur has also been the subject of much scholarly study, with many theories proposed about its origins and significance in Greek mythology.

The Minotaur's story is a complex one, involving themes of morality, hubris, and the consequences of actions. It has been interpreted in a variety of ways, and continues to be a source of inspiration and fascination for scholars and artists alike.
MIRACLES

the overthrow of Cretan rule. Herakles, who goes to Crete to capture the bull, stands for the Doric colonists: Theseus, who overcomes the same monster and Attica, deliver the country from the Cretan conqueror. 1 On somewhat different lines J. E. Harrison argued in a paper read before the Hellenic Society in 1914 that the slaying of the Minotaur, son of the sea-born bull, expresses the downfall of Cretan sea-power; the Minotaur was the primitive "point de repère" round which ultimately crystallised the complex figure of Poseidon.

(c) The solar interpretation. — Pasiphae's name connects her with the moon; her bull is often held to be the sun. Two recent writers have seen in the Minotaur a human actor impersonating the sun-god. J. G. Frazer maintains that Cnossus was the seat of a great worship of the sun, and that the Minotaur was a representation or embodiment of the sun-god, 2 and suggests that Arindle's dance, the track of which was the labyrinth, may have been an imitation of the sun's course in the sky. A. B. Cook, after showing that in Cretan myth the sun was conceived as a bull and that the labyrinth was "an orchestra of solar pattern presumably made for a ministic dance," goes on to suggest that the dancer who impersonated the sun masqueraded in the labyrinth as a bull—the Minotaur. 3 The bull-god, says the Kossonian Prince wearing a bull-mask, a piece of ritual borrowed perhaps from Egypt. 4

(d) The suspicion of human sacrifice. — The Minotaur, like the horses of Damole, is a man-eater; the native traditions that it was necessary to feed Pasiphae to gratify this appetite. W. Helbig 5 saw in the story another version of Kronos devouring his children; Kronos was banished by Zeus to the under world, the Minotaur by Minos to the labyrinth. There was a tradition that did not make a bull in Crete the Kouretes had offered human sacrifices to Kronos, 6 and the "feast of raw flesh" 7 which Euripides mentions in the famous chorus from his tragedy The Cretans, as part of the initiation to the service of Minotaur, was open to a similar suspicion; in a recently discovered fragment of this play Pasiphae taunts her husband in terms which leave no doubt as to the charge. 8 Euripides probably had in mind the Cretan mysteries in which the votaries tore with their teeth the living bull in commemoration of the eating of the boy Zagreus by the Titans. 9 But these mysteries stand in no direct relation, so far as can be seen, to the substratum of Minoan religion; they explain the cannibal element in the Euripidean story, but not the bull-form of the man-eating demon. Frazer has conjectured that in Crete, as in other parts of the Mediterranean, children were sacrificed to a Moloch-like image with the head of a bull. 10

Phoenicians and Cartaginians sacrificed children to a bronze image of Kronos (= El), so contrived that victims laid on its outstretched hands fell into a furnace beneath. 11 Rabbinic writers describe Moloch's image in similar terms, and add that it had the head of a calf. 12 Now Tulos, the brazen coast-guard of Crete, who killed strangers by lunging them to his red-hot breast, was by some called Taurus (Apolloed, i. ix. 29), and a gloss of Heirsichy makes him a by-form of the sun-god. A tradition

2 Bull. Pontif. Ital., 1900, p. 159-177; Mom. Ant. dei Littori, xxiii. (1910) 313-326. These temples may be the very buildings in which Greek writers attested to biaduns; see pseudo-Arist. de Mirab, 190 (2); Dod. Iv. 49, v. 16.

3 G. Murray, Hist. of Greek Religion, Oxford, 1911, p. 156 f., thinks that Minos' periodic visits to the cave of Zeus imply a ceremony of sacrifice and propitiation, and adds that children—"triumphal—children" may have died with, or for, the king in the cave of the bull-god.

4 Cf. also la Vasilion (Mt 219), la inda (Lk 197), apothesia (Lk 259).

5 It is a fact that psychic gifts are often possessed by unattractive and bad people.

3. The miraculous in the ethnic religions.—

Miracles occur plentifully in religions at a higher level than those of savagery, and are freely ascribed to the great men, or, in the case of savages or ascetics in those religions. Asceticism and austerity are, in fact, sometimes a necessity as well as a guarantee of miracle, as they are also in the case of Christian saints.

1 For wonders ascribed to holy men, it should be clearly noted that they themselves made no claim to work miracles. This statement is supported by their own sayings in most cases, or it may be proved from the early writings describing the origin of these religions. In the Gatha, the earliest part of the Avesta, there are no miracles, and no very high place is ascribed to Zoroaster. Concinus was largely indifferent to spiritual matters and avoided anything dealing with the supernatural. He is most unlikely to have made any claim to miracles, and in fact he said:

"To search for what is mysterious, and practise marvellous arts, in order to be mentioned with honour in future ages: this is what I do not do."

Lao-tse was opposed to all magic, and was a man of humble mind. Buddha himself protested against miracles, and, though he knew of miraculous powers, he was inoffensive to them. When a disciple gained an almsbowl by a display of miracles, he caused it to be broken and forbade these. Some sayings of his point to his dislike of miracles:

"There is no path through the air, a seemly way by outward acts—perhaps reference to the supposed gift of walking on air. When an ascetic flew through the air, Buddha is represented as reproving him: 'This will not endure either to the conversion of the unconverted, or to the increase of the converted, but rather to those who have not been converted remaining unconverted, and to the turning back of those who have been converted.'" He also said: "I commanded my disciples not to work miracles, as a sign of sorcery, not as divine acts. God's revelation to the Prophet was the true miracle, and the Qu'ran contained it."

Nor did any one of the great ethnic teachers lay claim to divine, or, if in some of this and of their own utterances about miracles, miracles are freely ascribed to them, sometimes even in the actual works which contain such disclaimers. How soon this process began it is difficult to say, yet probably it was no very long time before the growth of miraculous legend. In many cases, however, as in similar instances in Christian hagiography, it is possible to trace the growth of a miraculous story in successive versions of the same incident. The magical and supernatural events associated with the lives of these men are either connected with their conception and birth or acts alleged to have been performed by themselves. The miracles of the former class are invariably lacking in lives contained among the Dalai Lamas in Tibet, see SBE xxiv. 46; L. A. Waddell, The Buddhism of Tibet, London, 1895, pp. 247, 249; and for those connected with future beings in Zoroastrian belief, SBE xvi. 115 ff., 111 ff., 115.

In the miracles of the second group beneficial acts are extremely rare, i.e. miracles performed to benefit others. As a rule, the miracles merely exalt their worker, and sometimes they are of a kind to force belief in him. Lao-tse is said to have raised the dead, and Buddha to have healed wounds; but these are occasional, and are in a minority compared with the great number of thaumaturgic acts. These largely consist of power over nature and complete control over its processes, and are often of a most
MIRACLES

I. Buddha

Frequent levitation, flying through the air, ascent to heaven, transformation, and walking on water, are some of the miracles associated with Buddha. These are said to prove his divinity and to confirm the truths of his teaching.

II. Muhammad

Muhammad is credited with performing many miracles, such as raising dead animals and even whole flocks of sheep to life. He is also said to have healed the sick and healed the sick of lepers, bringing them back to normal health.

III. Jesus

The miracles of Jesus are numerous and diverse. They include healing the sick, raising the dead, calming storms, walking on water, and feeding thousands with a few loaves and fishes. These miracles are seen as evidence of his divine nature and his authority.

IV. Mohammed

Mohammed is said to have performed many miracles, including turning the shadow on his face into the image of an angel, healing the sick, and even raising the dead. These miracles are seen as proof of his prophetic nature and his mission to reveal the truth.

V. Allah

Allah is said to have performed many miracles, including the creation of the world, the parting of the Red Sea, and the sending of the Prophets. These miracles are seen as evidence of his power and his sovereignty.

VI. Other religions

Other religions also have stories of miraculous events. For example, the Gospels of Islam describe the miracles of the Prophet Muhammad, while the Gospels of Hinduism describe the miracles of Lord Rama. These miracles are seen as evidence of the divinity of their respective prophets.

VII. Modern miracles

In addition to these ancient miracles, there are reports of modern miracles, such as healings, visions, and apparitions. These miracles are seen as proof of the continued presence of divine power in the world.

VIII. Conclusion

Miracles are a common theme in many religions, and they serve as evidence of the divine nature of the prophets and the power of the gods. They are also used to inspire faith and to strengthen the beliefs of those who seek to understand the mysteries of the universe.
great wonders to relics of gods or heroes. Some of these were multiplied exactly as mediæval relics. They were miraculously found, and various places disputed their possession. 1 Healing also took place at certified of heroes, common sources of miracles by human wonder-workers. Tacitus speaks of Ve-spasian curing blindness and lameness, 2 and the fictitious life of Apollonius of Tyana byHospitalius contains miracles at his birth and death, healings, and exorcizing of demons. He may have had supernormal healing gifts, but some of the stories are modelled on the NT miracles. Others are told by none but Philostratus. 3 The existence of the imposture of Abonutschis (g.e.), according to Lucian's life of him, credited him with healing and with raising the dead. 4

5. On the whole the miracles of ethnic religions do not possess an air of truth. They are incidents ascribed to this or that person, some of whose doings, on account of his greater insight or skill, may have seemed miraculous. Some, however, may be supernormal phenomena. As to the cases of healing, they are seldom asserted of individual healings—rather of the whole science of healing, for the miracles of the OT fall into two groups, those connected with Moses and Joshua, and those connected with Elijah and Elisha. The documents describing these are of a date far removed from the events described; and their external value is thus small. Some of the miraculous events are doublets of each other, and in those of Elijah and Elisha a kind of artificial parallelism is to be observed. The narratives are in some cases composite, and a more or less non-miraculous substratum is to be traced. Many of the miracles have a strong thaumaturgic aspect, and they suggest that, as in the case of ethnic religious teachers and the Christian saints, it was no uncommon thing that the outstanding character, insight, and leadership of Moses or Elijah should be recorded, but miracles should also be ascribed to them. While, in the case of Elijah and Elisha, it is not impossible that they had some gift of healing, it is more likely that the point of departure of the miraculous legend attached to their history—it is remarkable that in the case of the greater prophets, save once with Isaiah (2 K 20:22), there is no thaumaturgic element. The idea of God who performs the miracle story is the loftiest kind, but rather that of men at a lower spiritual level. The spirit animating some of the miracles resembles that which animates barbarous men. There is aggressiveness, ruthlessness in dealing with human life where men do not know or worship God, and intolerance. Few of the miracles have that beneficent aspect which we find in the majority of the NT miracles. Again, there is a certain materialism in the method of describing the miracles—e.g., in the idea of speaking face to face with God. Some of the miracles are magical, and are alleged to have been copied by pagan magicians (Ex 7:11-23 $\S$). Others seem to reflect the traditional beliefs of the nations, e.g., that God's manifestation in fire—or the spirit of God leading to—beings in the presence of which they grope. 5 As a result, some of these miracles are not miracles of power to God, as He does His teaching (Jn 14:19). There is a real divine working being done (Lk 11:2, Mk 5:39, Lk 9:18; cf. Jn 9:11-40, 14:19). So also the witnesses of the miracles regard them (Mk 2:2, Mt 9:18, Lk 7:9 (4.18)). Yet power is inherent in Christ, as the method of the miracles shows, or the definite 'I will' (Mk 6:5). Here also the people recognize this inherent power (Mk 7:5). All power is delegated from God, as Christ taught. Hence the power to work miracles is not necessarily confined to Christ (Mt 12:27), though He has that power in a supreme degree. 6

7. The miracles of Christ.—(c) When the documents composing the Gospels are examined, it is found that even in the earliest there is no non-miraculous substratum; all alike contain miracles. By every one Christ's teaching is admitted to be marvellous, yet authentic. This raises a presumption that the marvelrous deeds are also authentic. The date of the documents is sufficiently near to the events reported in the points of authenticity, and the evidence is as good as anything short of actual scientific evidence is likely to be. The writers were men who knew themselves to be witnesses, and had regard for truth.

(c) Christ as sinless is a moral miracle without an a priori like of the sinless. Christ as sinless is a priori objection to His miracles, which generally tend to rectify an unnatural, disordered state in the world. Unlike Buddha, Christ had not to grope His way to perfection—an instructive contrast. The sinless to Elijah—

the latter a reminder that miracles as outward phenomena parallel to thunder, fire, etc., are a lower kind of testimony to God. Some of the miracles—e.g., the ten plagues—are regarded as direct divine interpositions. It is possible, doubtful, less, to suppose that God made use of existing phenomena to effect His purposes. It is equally possible that phenomena coincidental with a crisis in the nation's history may have been regarded as direct Providential agents. It would this be the case if prayer for deliverance had preceded them. Such answers to prayer must not be ruled out, and all such answers have a genuine thaumaturgic or associated with rather ruthless methods. Again, we need not doubt that God led His people 'with a mighty hand, and with an outstretched arm, ... and with signs, and with wonders' (Dt 29:1). We need not doubt that in the events described by the accounts of history He does 'make a way to His indignation' (Ps 78:26) against the unrighteous. But whether the leading and interpositions were in the manner depicted is open to question. A strong belief in divine deliverance is only possible to the historian as a legend of accounts of history. The real miracle in the OT is the growth of the idea of God, the strong sense of the divine presence in the world, divine guidance in the affairs of the universe and of men. The real religion of the OT lies elsewhere than in the accounts of separate miracles. It is found in the growth of a spiritual religion, in such documents as that which tells of creation, in the records of spiritual experience and aspiration, in the phenomenon of prayer may be true. 2

He was certainly more than man. His power would thus be greater than those of ordinary men, and might therefore be miraculous.

(d) Christ's miracles are in harmony with His personality and teaching. There is an air of naturalness about the miracles that is not found elsewhere. He never doubts His own power to work them, never falters in exercising it. His method, unlike that of other healers or exorcists, causes amazement, showing that it was not similar to theirs. He casts out demons with a word, or distance, and no mere faith-healing or magical exorcism accounts for these cures. Yet there is an economy in the use of miracles which we do not find in ethnic narratives, while, again, Christ never works for Himself.

(c) But, if miracles are so easily ascribed to great ethnic teachers, why should they not have been ascribed to Christ? This is certainly a possibility, and need we deny that there was time enough for a miracles legend to grow. But all the facts must be faced. The greater part of the Gospels is from eye-witnesses who had no wish to deceive. No miracles are recorded of John the Baptist. The basis of the narrative is true, and it contains miracles as well as the wonderful teaching. In several cases the teaching is intimately connected with the miracles, indeed springs out of them.1 If Christ wrought miracles at all, it is not impossible that there would have been a tendency in a biographer to ascribe the miracle to Christ. But, again, the miracles as a whole are very different from those ascribed to ethnic teachers, as may be seen by comparison. We have every reason to believe that Christ wrought miracles, even if the truth of any given miracle cannot be decided by investigation. The miracles are in keeping with Christ's personality, and _vice versa_, and the impression made by them on the people, on inquirers (Jn 2), and on hostile critics who admitted their truth is of great importance.

(f) Comparing Christ with ethnic teachers or Christian saints, we find that they never claimed to work miracles, and disliked them, while Christ made such a claim. If He refused to work a sign from heaven (Mk 6:33), this is really a proof of His power to work signs of a kind,2 but not of the kind so liberally allowed to ethnic teachers. Christ's miracles are beneficent, never egoistical like Buddha's or even those of Christian saints; their source is the love of Christ and not the egoism of the ethnic religions; they are harmonious with the character of the worker; they have invariably a moral and spiritual quality not found elsewhere.

(g) Miracles, properly regarded, assist faith. But this is not the primary purpose of Christ's miracles? Were they mere credentials of His mission? This is doubtful. Benevolence was primary, and often forestalled the faith of the person concerned (Mk 3:5, Lk 7:9, Jn 5:18), as it did in the case of demoniacs. Crowds of people were doubtless influenced by the miracles, especially by their unique character, for their produced fear or amazement even if that was followed by praise to God (Lk 7:9, Mt 15:22). The result was that crowds of people flocked to Christ and flocked on Him a popularity which He disliked and from which He sometimes withdrew (Mk 1:25, Lk 5:12). One of whose credentials miracles would have added nothing else. The multitude connected the miracles with Christ's Messiahship (Mt 12:28; Jn 10:41)—a belief which He did not at first encourage (cf. Lk 4:24, Mk 12:34). When John sends to know if He is Messiah, He points to His works of mercy (Mt 11:28); the stress is on these, rather than on Messiahship. Miracles are not wrought to establish belief in it; miracles are works of mercy, and their merciful rather than their miraculous character is important. They are part of a spiritual mission rather than proofs of it. Disbelief in the worker's power shows want of faith in mercy and love displayed, rather than the miraculous power, are spurned (cf. Mk 3:13, 5:36, 6:57, Mt 11:1-2, Lk 10:12-19). Mere popularity was distasteful, and silence about a cure is often enjoined.

The exception in Mk 5:39 is explained, Christ was unknown in Gadara and was leaving it. What the man was told of was the divine mercy.

True, Christ's compassion often overcame His dislike of mere popularity, while this popularity might sometimes indicate a genuine faith and love. But, if Christ works miracles at all to evince faith, it is not the faith of a fickle crowd, but the faith of the individual. Such an individual or those who intervened for him would already have faith, and that faith would be augmented (Jn 4:43, Lk 17:19). Yet even here it is an existing confidence that is rewarded rather than a divine mission that is proved.

Christ does not appear to rank His 'works' very high, as the phrasing of Jn 5:37 shows. Works are of less importance than the personal appeal of Christ (Jn 10:33-; cf. 12:18). Christ's personality and His words are witnessed by His works (Jn 5:36, 6:69; cf. v. 50). This lower position corresponds to the refusal to work a sign in response to the request of the faithless (Jn 4:46). The disciples follow Christ first as a result of the impression which His personality had made on them. Later the effect of His miracles—those only of the non-healing group—on them is sometimes noted. In spite of the comment in Jn 20, the disciples must have been interested or disinterested, the cases new thoughts are suggested to them, or a confession of belief is made (Mk 4:41; cf. Mt 14:31). The miracles, however, were not wrought primarily for these purposes, but to quell fears or to confirm existing confidence. Even the lesson of the withered fig-tree is not that of the power of Christ, but of faith in God and of what faith can do (Mt 21:21). The true attitude is seen in Jn 21, when recognition follows the miracle. The act is consonant with a personality already known and loved. The cumulative effect of miracles was no doubt to quicken understanding of Christ, and we remember that the great miracle of the Resurrection was what finally convinced the disciples of Christ's true nature (Mt 28:6). The miracles were not meant to force belief or to act as credentials. They were part of a divine mission, and had their value, but it was rather that of contributing to a better understanding of a personality, not as a proof of it. 

2 _Ezech_. 1:2.
Here and elsewhere in this Gospel a theory of its author that miracles were false belief is at work (24:23 f.). In this miracle belief of a specific instance of Christ's power over death—it be taught to those who believed in him already.

Generally healing is the reward of faith, Christ's power working with the person's faith. There is thus more than subjective faith-healing, for with Christ there is 'power to heal,' obvious enough where the faith of the person healed is not in question. Where there was no faith, but conscious opposition, miracle was naturally impossible (Mt 9:1). Christ could have forced a miracle, but this was against His method, though even here He did heal 'a few' who believed. A writer who recorded this was not one who was likely to invent or imagine miracles. Christ also Himself had faith in God, as His words show (Mt 9:28; cf. Mt 14:36).

The miracle in Mk 5:28 shows in a crude way that power to heal is not to be confused with temporary saying he would be healed, obvious enough where the faith of the person healed is not in question. Where there was no faith, but conscious opposition, miracle was naturally impossible (Mt 9:1). Christ could have forced a miracle, but this was against His method, though even here He did heal 'a few' who believed. A writer who recorded this was not one who was likely to invent or imagine miracles. Christ also Himself had faith in God, as His words show (Mt 9:28; cf. Mt 14:36).

The miracle in Mk 5:28 shows in a crude way that power to heal is not to be confused with temporary saying he would be healed, obvious enough where the faith of the person healed is not in question. Where there was no faith, but conscious opposition, miracle was naturally impossible (Mt 9:1). Christ could have forced a miracle, but this was against His method, though even here He did heal 'a few' who believed. A writer who recorded this was not one who was likely to invent or imagine miracles. Christ also Himself had faith in God, as His words show (Mt 9:28; cf. Mt 14:36).

(b) Possession.—Not all but certain kinds of sickness were regarded by the Jews scientifically or colloquially as possession. Only once does Mark connect illness with possession (10:17); Matthew and Luke do so on three occasions. In Mk 9:27 a dumb spirit is mentioned: Luke (8:26) makes it a case of possession, Matthew (17:15) of epilepsy (λυκανθάριον, 'epileptic'), though later the demon is said to be cast out. Epilepsy was a kind of intermittent possession (cf. Mt 15:21), as also was lunacy (Mk 5:2; cf. Jn 10:19), or any apparent eccentricity. The recorded cases are eight in number, with a few general instances. Whatever be the explanation of the case, the fact of the spirit is not in question. Christ's healing of it was thorough, masterly, immediate, probably permanent, and sometimes αὐτάμετρον. His method was not that of mere exorcism, as has been insisted. Both the manner of the cure and the result show that it differed in degree, if not in kind, from that of the exorcist. Yet Christ taught that others might or did use it, if they had faith (Mt 17:17, Mk 11:22). Serious cases are healed by a word, and the superlative nature of the cure is recognized even by hostile witnesses (Mk 3:2; cf. 6:56). It had thus a miraculous quality: here was the 'finger' or the 'spirit' of God (Lk 11:12, Mt 12:28).

Possession by a demon is a world-wide savage, savage practice, and sickness, disease, of high levels, of certain diseases, where the symptoms seemed to suggest the demon's movements or his speech in a voice different from that of the patient. But was the disease more than epilepsy, lunacy, hysteria, demoniac, or such a psycho-pathological state as that of alternating personality, 'temporary control of the organism by a widely divergent fragment of the personality, self-suggested in some dream-like manner into hostility to the main mass of the personality, appertaining curiously to Mt 13:28. As by J. M. Thompson, Miracles in the NT, London, 1911, p. 157.

For the Jewish method see Josephus, Ant. Hist. b. 5.

1 Cf. Mt 15:8, Mk 9:21, Lk 4:33, Jn 11:37.

4 ‘No demon could by possibility produce more fearful results by entering into a man than I have often seen resulting from epilepsy.'

Super-normal knowledge is often a characteristic of these beliefs. Even in the case of Christ which He wishes to be kept secret, or they assume that He has power over them. The fragmentary or sub-conscious self, identifying itself with a demon, speaks in accordance with the belief that Messiah would destroy demonic power and asserts that Jesus is Messiah. Yet these men, in lucid intervals, may have heard that He was so regarded. Thus their knowledge would not be super-normal. Lunatics often dread one particular person.

A man's belief in his possession by a demon is paralleled by the belief that he is a soul. Both are pathological states and where the belief in transformation disappears, hypnotism is apt also to disappear. This is more or less true of the belief in demons and the suppression of possession (see LXX figures).

Demon-possession as a belief continued long after, as it had existed long before, Christ's time. It is not explained, therefore, by saying that demons were allowed to torment men while He lived, so that they might in after years have then accommodated Himself to an existing belief, yet He did not accept it in all its current forms, and some at least of what is ascribed to Him may be the thoughts of His reporters. Christ could hardly have been satisfied with or anticipated the scientifically accepting their point of view. So also for the sake of retarding an argument He accepts the point of view of the Pharisees, without categorically saying that He actually casts out demons: (Mk 12:23, Lk 17:19, cf. Mt 10:1). An accurate explanation would not have been understood, and might even have gone beyond present-day science. Or, with power to heal, was Christ's knowledge here limited? Did He believe in possession? In any case there is no doubt about His healing this strange disease instantly and permanently, and differently from exorcists, or from modern physicians in the cases of apparent possession. Of course it is a large assumption to say that there are no existences which might not take possession of a human personality and act through it. Psychical research tends to admit that there are such existences in the case of disarranged human spirits, but has no evidence of diabolical or hostile possession. This Christ, as a matter of course, speaks in explanation—e.g., by some alien power at the centre of man's being where consciousness and will reside. Yet an unexplained mental disease is not necessarily possession. In a sense, it is true, there was possession if disease was caused by sin or vice, disease being objectively regarded as evil. But there is no clear proof that the cases cured were directly the result of sin.

For alleged demon-possession in modern China and elsewhere see J. L. Nevius, Demon Possession and Allied Themes (London, 1897), though it is doubtful whether the cases are not explainable on other grounds. Much of the evidence comes from Christian natives, whose earlier belief in demons was still strong. Heathen-trained and life-giving influence of Christianity may explain the cases where pugun methods failed, as Justin long before asserted (Apol. ii. 6) and also H. A. Junod, of Thonga cases (The Life of a South African Tribe, Neuchatel, 1892). In Jewish theory see W. R. Newbold, Prose, of Soc. for Psychical Research, v. (1897) no. 2.

(i) Healing.—Christ's miracles of healing are not explainable by M. Arnold's moral therapeuticism, i.e. the cure of nervous diseases by mental influence.

2 Cf. AE. 1897, p. 161; B. S. Pottier, Multiple Personality, New York, 1915, p. 151.

3 John does not appear to accept the theory of demon-possession, though he refers to the Jewish belief.

4 The demons, if they existed, were not necessarily like the horrible figures of later imagination.

5 Myers, ii. 195.
MIRACLES

Many of these diseases were not neurotic, and were such as do not yield to mental treatment, while the evidence for their cure is as good as that for neurotic cases. Often the miracles at Lourdes are also wrought on more than neurotic diseases, and they suggest an influx of healing power from without. But Christ’s miracles of this kind are more than occasional. He is more likely to prove the power of the Lord (Lk 5:16) wrought through Him. It was neither variable nor uncertain, and it enabled the patient to throw off disease immediately. It was communicated to the sick by an act of will, a word, a touch, or sometimes a mere presence. To this use of such a power there is no authentic parallel. If it be said that Christ had merely superior access to an x region, to which others might have access, yet His access was so superior as to be miraculous. His faith in the power awakened faith in the patient, so that in a sense there was suggestion both from without and from within. There was more than mere ‘faith-healing,’ a word which is apt to be used loosely. If it is used as mere auto-suggestion, there was obviously more than that. Diseases which apart from scientific diagnosis were plainly most serious were cured without difficulty. If Christ merely did what one day may be more generally possible, the least He did act perfectly in a way as yet undiscovered.

(j) Raising the dead.—The instances of this are so few in number as to raise a presumption of their truth, for here is exactly where miracles would probably be expected in a fictitious narrative. The possibility of catalepsy or trance cannot be excluded, yet we may assume that Christ would know the truth. To Him, indeed, death was no more than a sleep (Mk 5:41, Jn 11:11-19), from which the dead might be roused in the presence of the Lord of life, who could command the return of the principle of life to the lifeless body, whenever He was beside the dead.

(k) The nature group.—The evidence for these miracles is as good as for those of healing. Here again their small number—six (or, admitting duplicates, five)—suggests genuineness, as do also generally the narratives which relate them, as well as the manner of the relation. The attempts to interpret them as synecdochic or teaching related to the miraculous action do not command respect any more than the various rationalistic methods of explaining them away. The real questions are concerned with their adequacy to the occasion, with the degree of involvement of the others?—with the method of its use—to excite wonder or to minister beneficence. Was there again a real breach of the order of nature?—a statement which no one is competent to assert (§ 15). For, though it is easy to assume a ‘reversal of the natural physical order,’ some of the miracles of healing are just as contrary to our experience. If Christ’s was a unique personality, we must take account of what may be proper to Him either in or out of this uninvolved plane. Such a role on occasion may as easily walk on the sea as on dry land. These miracles suggest the superiority of the spiritual and moral order to the material. They, with one possible exception, are in keeping with the personal and imber of the occasion, and the question of adequacy to the occasion may be safely answered.

2 See a suggestive passage in Stewart, p. 182 ff.
3 Contrast the large number of raisings from death by the relics of St. Stephen alleged by St. Augustine, as Civ. Del. 29, 105, 2.
4 Little touches of exasperation in the story of Lazarus need not be regarded as essential fact.
5 W. S. BILBRIGHT, Bishop Gore’s Challenge to Criticism, pp. 19, 231.
6 There is no question of working these miracles in answer to any demand for a sign.

In the affirmative as regards stilling the tempest, walking on the sea, and feeding the multitudes. In the first two, lessons of faith were immediately taught, but they also have a permanent value in this direction as well as in showing the supremacy of spirit to matter. In the third the adequacy is seen in the beneficence of the action involved. In Christ’s power to make water into wine, there is more likely to prove the power of the Lord (Lk 5:16) wrought through Him. It was neither variable nor uncertain, and it enabled the patient to throw off disease immediately. It was communicated to the sick by an act of will, a word, a touch, or sometimes a mere presence. To this use of such a power there is no authentic parallel. If it be said that Christ had merely superior access to an x region, to which others might have access, yet His access was so superior as to be miraculous. His faith in the power awakened faith in the patient, so that in a sense there was suggestion both from without and from within. There was more than mere ‘faith-healing,’ a word which is apt to be used loosely. If it is used as mere auto-suggestion, there was obviously more than that. Diseases which apart from scientific diagnosis were plainly most serious were cured without difficulty. If Christ merely did what one day may be more generally possible, the least He did act perfectly in a way as yet undiscovered.

(j) Raising the dead.—The instances of this are so few in number as to raise a presumption of their truth, for here is exactly where miracles would probably be expected in a fictitious narrative. The possibility of catalepsy or trance cannot be excluded, yet we may assume that Christ would know the truth. To Him, indeed, death was no more than a sleep (Mk 5:41, Jn 11:11-19), from which the dead might be roused in the presence of the Lord of life, who could command the return of the principle of life to the lifeless body, whenever He was beside the dead.

(k) The nature group.—The evidence for these miracles is as good as for those of healing. Here again their small number—six (or, admitting duplicates, five)—suggests genuineness, as do also generally the narratives which relate them, as well as the manner of the relation. The attempts to interpret them as synecdochic or teaching related to the miraculous action do not command respect any more than the various rationalistic methods of explaining them away. The real questions are concerned with their adequacy to the occasion, with the degree of involvement of the others?—with the method of its use—to excite wonder or to minister beneficence. Was there again a real breach of the order of nature?—a statement which no one is competent to assert (§ 15). For, though it is easy to assume a ‘reversal of the natural physical order,’ some of the miracles of healing are just as contrary to our experience. If Christ’s was a unique personality, we must take account of what may be proper to Him either in or out of this uninvolved plane. Such a role on occasion may as easily walk on the sea as on dry land. These miracles suggest the superiority of the spiritual and moral order to the material. They, with one possible exception, are in keeping with the personal and imber of the occasion, and the question of adequacy to the occasion may be safely answered.

6 There is no question of working these miracles in answer to any demand for a sign.
Miracles

Parallels to incarnation and virgin-birth have been alleged from pagan sources, but there is no real analogous idea of divine humanity in human flesh. The human being was alien to Jewish thought, and probably also to pagan. Hence it is really impossible to assert that the story was invented in Jewish-Christian circles at the early date alleged. That it is an early Christian myth is undoubted, and the evidence for the two versions of it in Matthew and Luke must go back to Joseph and Mary. There is some evidence that it was known even as early as the first century. It was not Josephus—a knowledge apt to be perverted by hostile critics. As to the story itself, it has only to be compared with the versions of it in the Apocryphal Gospels to see how an existing story could be exaggerated without being reconstituted. The lack of such exaggeration in Matthew and Luke points to genuine nature. Comparative mythology is often relied on to show that virgin-birth is a universal myth, but examination of the instances shows it is a myth.

Thus far this story of the divinity of Jesus has been considered in a material sense, or some material means, is always involved. This is true even of the late miraculous stories of the birth of Buddha, whose human father appears all through, and also of the later stories of future savior, born in Zoroastrianism. Yet, even if such stories were more nearly parallel, the question should be faced—Do myths never come true?

(a) The Resurrection.—Arguments against the Resurrection usually emerge from the disconcerting paradoxes in the narratives. Are these more than may be looked for regarding such an event? Or do they really discredit the central fact to which all bear witness? Without discussing them in detail, may it be said that the good as that for the Crucifixion, and, if they do not prove a real resurrection, do they prove anything at all about Christ? Certain facts are important: the empty tomb, the definite date never varied from, as well as the personality involved—no ordinary man whose resurrection to a normal human life might be rejected, as Huxley would have rejected that of the hypothetical ordinary man—and the vast change effects in being apostles, characters, and methods of action. We must consider the main modern explanations.

(1) Visions, subjective or objective, or telepathic impulses are really inadequate to account for the story. Experiences have never produced such a result, and they could not have given rise to the story of the Resurrection or of the empty tomb, or have so changed the discples. A phantom would only have made them afraid. The disciples already knew of the existence of Christ's spirit, for this was the common Jewish belief, and as Jews they also looked forward to a future resurrection. How could such alleged communications from such a spirit have so alarmed them or originated such a belief in the Resurrection with the definite meaning which the word had to any Jew? If it be said that it was precisely this Jewish belief in a future resurrection that made the disciples believe in a resurrection of the Christ, then it was really that of a Risen Christ, this is in effect to make them the most credulous and untrustworthy of men—which no one really believes of them.

(2) Huxley explained the story by the theory which would derive the story from myths and cults of slain and risen gods. It is claiming too much to assert that the apostles were influenced by those, supposing they knew of them, which is unlikely. Was there: any such myth as the possibility of every died and risen again on earth? The revival even of Osiris took place in the Other-world. No such myth had ever been applied to the history of any man, as the theory supposes, as does to that of Jesus. Such myths were sensuous, and had sprung out of nature-cults. How could they originate a whole new world of ethical and spiritual ideas? The theory produces the greater out of the less with vectors and accords with every shred of historical evidence, while it has never explained why Christianity supplanted such myths and cults as it is alleged to have sprung from.

On neither theory is the Resurrection or its vast results explainable, and each postulates a miracle as great as the miracle of the Resurrection itself. The change involved in the Resurrection is beyond our ken; yet there was a change, not merely the resurrection of a dead body. We know too little of the laws of human change ever to prove a real resurrection, or that there is no law of resurrection of whose working Christ's resurrection is the first instance. The new theories of matter seem to make the change conceivable, if the 'basis' or 'substance' of matter is a constant matter of change and giving rise to the electrons of which the atom is composed. Ether is described as sub-material, while electrons might conceivably be resolved into ether again. Matter would thus be destroyed. Others regard matter as a complex of forces, and to these theories be true, might not Christ's body be resolvable without corruption into the ultimate constituents of matter and then re-formed as a new etherial body, since ether is sub-material, the indwelling person or evidence of the fullness of the material body, yet not subject to the limitations of such a body? At all events these new theories lessen the difficulties in the way of accepting the Resurrection.

(e) The Ascension was probably a final vanishing (Lk 24:33), from the sight of the apostles, interpreted conventionally and symbolically as ascension, and, as far as the vision of angels is concerned, objectively. Heaven being regarded as a place above, this was inevitable, and was in keeping with the symbolism of up and down, high and low. Christ vanished out of space conditions into a higher state, and this is the essential truth behind the descriptions, while it is the natural corollary of the Resurrection.

8. Miracle in the Apostolic Age.—The miraculous powers included in the apostolic commission may have received additions—e.g., raising the dead (Mt 10:8); Mk 16:17. Probably is an addition mingling the authority with the record in Acts and this passage in Luke. Certain it is that some miraculous power was transmitted to the apostles or made accessible by their ministry. In Acts we see it in work. Faith on the part of the recipients of cure is also clearly in evidence, sometimes of a superstitious kind (5:12) perhaps resulting in cures by auto-suggestion. St. Paul in his letters never speaks of these powers of healing and refers to them (Ro 15:19; 1 Co 12:3, Gal 3:5). They are regarded as credentials of the apostolic mission—perhaps not a sound theory. Those who believed because they saw signs and wonders had the highest worth.
unless the signs were accepted as tokens of divine love. It is obvious that St. Paul meant more than mere faith-healing; some actual miraculous gift, by means of which he acquired a reputation in a material world. Such an impression would be difficult to describe, but it is no more than what might be expected on such an occasion. A distant analogy may be found in the phenomenon of light or of a cold breeze accompanying phantasmal appearances. As to speaking with tongues, the phenomenon is no more than an ecstatic utterance, and it is one which is apt to be degraded.

The kindred phenomena of trance-utterance and inspirational address studied in our day have little value. Whatever might be the value of the tongues at Pentecost or at other times, St. Paul came to have a low opinion of the gift. The effect of a spiritual invasion would vary with the nature of the person invaded. The real miracle of Pentecost was the power shown by St. Peter and his followers, and the spiritual results following.

The stories of release by means of an angel have been regarded as symbolic accounts of conscience or friendly interposition interpreted as divine aid. Yet, as wonders of being exist, they might so intervene, and might have power over matter.

The real question is one of adequacy to the occasion, and we find no such intervention in the case of James (Ac 12).

St. Paul's experience on the way to Damascus is really similar to that of the Resurrection appearances, though there is more splendour, so that he is blind for a season. If these appearances are accepted, St. Paul's vision at once falls into place, even if the accounts vary. That he himself should cause blindness is perhaps more wonderful than that he should heal. Did his words cause a temporary auto-suggestion of blindness to Elymas? The incident of the viper (28:5-6), though viewed as miraculous, is not necessarily so. This is also true of the death of Ananias and Sapphira. Emotional shock might account for the death, and this would lend itself to a miraculous interpretation.

9. Ecclesiastical miracles.—The question as to the time when miracles ceased, if at all, used to be much debated. Some account them up to the 3d, 4th, or 5th cent.; others, like Middleton, made them end with the age of the apostles and characterized all later records of them as stupid and untrue. The evidence alleged for miracles is continuous to the present time; how far it is based on fact is an open question if miracles are possible at all. The miracles of some individuals in the early Church are far more amazing and numerous than those of Christ. They were wrought not only on the sick or the dead, but on nature. Miracles of the last class are of a most stupendous character, incredible on the face of them and quite beyond all adequacy to the occasion. The age was doubtless one of considerable credulity, when miracles had to the full share of a place in the Church, and the ecclesiastical writers believed, though attributing them to demons. Many accounts of miracles are too rhetorical to be taken seriously—e.g., the Benedictine editors of Chrysostom's account of the miracles of St. Babylas say that his history is rhetorical and for the most part de dilito of truth. In some cases, again, natural

10. Medieval miracles.—During the Middle Ages nothing seemed too incredible to be related or believed. Every saint was expected to work miracles, and miracles freely adored the popular lives of the saints. That was the present time; how far it is based on fact is an open question if miracles are possible at all. The miracles of some individuals in the early Church are far more amazing and numerous than those of Christ. They were wrought not only on the sick or the dead, but on nature. Miracles of the last class are of a most stupendous character, incredible on the face of them and quite beyond all adequacy to the occasion. The age was doubtless one of considerable credulity, when miracles had to the full share of a place in the Church, and the ecclesiastical writers believed, though attributing them to demons. Many accounts of miracles are too rhetorical to be taken seriously—e.g., the Benedictine editors of Chrysostom's account of the miracles of St. Babylas say that his history is rhetorical and for the most part de dilito of truth. In some cases, again, natural
The folk expected miracles, and miracles were freely provided for them. Many of the miracle stories are repeated in hospitals. Lives of saints or other biographical or biographical-plagiarized from another, and later Lives are often more full of miracles than the earlier Lives of the same saint. Biblical miracles were freely imitated; only in any given case they were more or less confused. Other miracles belong to a floating tradition, and repeat those already found in ethnic sources or in classical writings. Some are versions of folk-tale incidents. Frequently the quite ordinary or the particular may be traced into the general, as with Lancashire faith-healing, hypnotism, or suggestion.

Of prolonged Christian memory, perhaps the Baring-Gould, J. R. E. B. Baring-Gould, is not the only authority that can be quoted. He has said to her about these. The number of pilgrims amounts to some 6,000,000 yearly, but no more than 2 per cent of the cases are regarded as genuine. The reason for this is an almost instantaneous nature.

Christian Science is associated with a theory of the unreality of matter and of pain. Disease is the result of false thinking. The Divine Spirit heals by casting out "mortal-mind."

All these various methods of healing are traced to the spiritual value in the creed or theory or practice with which they are associated. Yet some of them flatly contradict each other. They are rather means by which a cure is mediated, quite apart from the truth or value of that which it suggests. A key to the problem is perhaps the medical theory of healing, which may be traced to suggestion. This is probably the main factor behind the cures effected by these various methods. It is the power of the unconscious as well as the suggestions which may be directed to the body, when once an idea has been accepted. Existing beliefs are strengthened; new hopes are initiated; fears and inhibitions are removed; and the psychological processes by which such conditions are removed begin to be noticed.

Thus in all the various methods the differences are subjective rather than objective, differences in the mind of the sufferers, rather than in any scientific evidence as to the nature of the healing agency. Susceptibility is concerned in the outcome; however, whether any other exterior force works in connection with the vital healing force inherent in the organism, and in motion by suggestion. If so, we should be in presence of the miraculous.

12. Mental and spiritual healing in relation to Christ's miracles of healing. — Psychic forces affect the body in normal life, and of these suggestion is one. But is there at all times, with the healing suggestion or as an answer to prayer, an influence from outside, divine, spiritual power to heal? This would correspond to the exaltation of mind by spiritual influences in inspiration. It would be a particular and outstanding instance of what we have already said. If all life is dependent for its energy on some all-enveloping Life. It might not be regarded as miraculous or supernatural, for, if miracle is part of the process of the universe, in a sense it is natural. But in so far as the result confirms clearly to processes outside our ken, to the power of a divine person thus making Himself

MIRACLES

known, the current of whose energy is entering our life for a particular purpose, this is a sign, or miracle. The spirit has left the soul: giving forces which swept before them, and overwhelmed disease, whose very mind more than menced, it has added a divine source, and it has added the unconscious mind. That this has never taken place cannot be affirmed, though a leader of the movement for applying the spiritual powers of the Church to diseases. In connection with medical treatment is still seeking for an authentic instance. The appeal to spirit in one form or another has been made in all religions where healing was practised, and doubtless the divine spirit has not confined His work to any one of them, if thus He works at all. But, while uncertainty attaches to all mental therapies, our Lord’s healing methods were never uncertain. He always foretold, the disease which was healed, whether His own or acting through Him as a perfect channel, unacceptable to disease. This is seen by His words, “I will, be thou clean.” The result was swift and certain cure. The Church as healer differs in degree only from all media of occasional cures. That He cannot effect such cures where perfect faith exists is not credible.5

13. Hostile criticism of miracles. — Though the Science has probably refuted current objections to miracles, no serious criticism appeared until the 17th cent., with Spinoza’s attack. The laws of nature are the decrees of God. Miracles cannot happen because they violate the order of nature, and thus God would be contradicting Himself for nature is fixed and changeless. Miracles could tell us nothing of God, since they surpass our powers of comprehension.4

Spinoza’s view is mechanical and takes no account of the intervention of existing laws,” their interference with each other without violating the order of nature. This may also be true of miracles as action. The material universe may be subject to the spiritual order. God may bring in new forces from time to time, or combine existing forces for a definite end, and His guidance exists through all. Moreover, even miracle, are incomprehensible, they do tell us certain definite things about God, as Christ’s miracles did. Spinoza’s pantheistic doctrine of God deprived God of all real freedom. The Deists opposed miracles on the ground of a fixed order of nature, God, having made the world, never interfered with it, and to assert that miracle was a kind of treason to Him. Hence the Gospel miracles were explained away or allegorized. Miracle was a possibility, but it never occurred. This was also the position of Thomas Huxley, but he did not put it so. The miracles primary, when regarded by Him as invulnerable. Miracle was a violation of the laws of nature by a particular volition of deity, of whose attributes or actions, however, we could know nothing otherwise than from our experience of them in the ordinary course of nature. No testimony could establish a miracle, unless its falsehood would be more miraculous than the alleged miracle itself. The belief in miracles arises from the pleasing sensations which they arouse, and they are common adjuncts of religious enthusiasm. A miracle could never be proved so as to become the foundation of a system of religion.5

Huxley criticizes Hume’s argument on the ground that every change of situation in nature and proof to the contrary is impossible. Called ‘our often verified experience a law of nature adding nothing to its value,’ since we cannot affirm that the experience will be verified again. Any seeming violation of the laws of nature would be investigated by science, and its existence would simply extend our view of nature. Miracle is conceivable, and involves no contradiction in the context for it must be completed. It may be added that Hume’s experience is such as he only would admit. His own criterion of evidence, even when sickness and divine, whose mind more than mind cure; faith has tapped a divine source, and it has added the unconscious mind. That this has never taken place cannot be affirmed, though a leader of the movement for applying the spiritual powers of the Church to diseases. In connection with medical treatment is still seeking for an authentic instance. The appeal to spirit in one form or another has been made in all religions where healing was practised, and doubtless the divine spirit has not confined His work to any one of them, if thus He works at all. But, while uncertainty attaches to all mental therapies, our Lord’s healing methods were never uncertain. He always foretold, the disease which was healed, whether His own or acting through Him as a perfect channel, unacceptable to disease. This is seen by His words, “I will, be thou clean.” The result was swift and certain cure. The Church as healer differs in degree only from all media of occasional cures. That He cannot effect such cures where perfect faith exists is not credible.5

events' happening, would widen its view of nature. All that would thus be shown would be that all events, no matter how long or short, are not to be incomplete. There would be no necessary divine power behind such a wonderful event. But, while science might investigate any 'wonderful event,' it has no need of so large a field as this. Christianity regards all events as expressions of divine will, direct or indirect, and such as are miracles are more striking evidence of the fact that nature to some extent, but because their appeal to what is ethical or spiritual in us. They witness to the supremacy of spirit over matter (§ 15).

On the whole, the scientific attitude to miracle is less hostile now than it once was. Many scientific men are also religious men, and the new vistas open to science have made a spiritual interpretation of the universe more possible.

14. The Agnostics—The Agnostics generally connected miracles with prophecy, and showed that they fulfilled predictions of such deeds made long ago. They are by no means the sole evidence for Christianity, though, as the Greek Patrists pointed out, those who through sin could not see God in His works. Origen pointed out that Christ's miracles were not done for show, like a juggler's wonders, and that, unlike a juggler, He demanded a new way of life. Thomas Aquinas, maintained that what He appeared to the miracles done in their day, and Arnobius devotes much attention to miracles as proving Christ's divinity. Augustine first gives a philosophy of the miracle—Christ's will is the ultimate source of all things, and nothing can be contra naturam which happens by God's will. Everything is natural, to us, but to God. Miracles are part of an established order. They are not contra naturam, but may be contrary to what is known to us of nature. The Schoolmen start from this idea of uniformity, forestalling the ideas of science, but not on experimental grounds. There is a higher and a lower order of nature, the former at once nature, uncreated, the latter the ideal plan. In it are causales rationes et praeordinales of miracles. In the actual order, known to us, with its chain of causes and effects, miracles could not originate, but these have the capacity for higher powers being inserted in them—all parts of God's original plan. Miracles are not such to God, who can interfere with the ovo secundarum causarum which is subject to Him. Miracles are praetor hanc ordinem—the order known to us—but not contra naturam. Again, as we have said, uncreated things can be change by creaturely power, so God's power may bring an event to pass otherwise than in the usual course, so that men may know His power. This is equivalent to the view that there may be genuine miracles, as by a juggler, and again, as when nature's 'laws' were known to them. Bishop Butler wisely points out that, while we see nature carried on by general laws, God's miraculous interpositions may have the same effect on nature, however external or unusual they may be. These laws are unknown to us. There may be beings to whom the miraculous is as natural as ordinary nature is to us. Butler was arguing against the Deists, but he sometimes forestalls Huene's objections, as when he says that miracles may be compared not with ordinary but with extraordinary events in nature. With the Schoolmen he tends to regard miracles as part of the original plan of things. He again forestalls Huene when he argues that such fraudulent miracles do not disprove those of Christianity, but he is on less sure ground when he says that Christianity offered and won, is not to be incomplete. There would be no necessary divine power behind such a wonderful event. But, while science might investigate any 'wonderful event,' he has no need of such a field as this. Christianity regards all events as expressions of divine will, direct or indirect, and such as are miracles are more striking evidence of the fact that nature to some extent, but because their appeal to what is ethical or spiritual in us. They witness to the supremacy of spirit over matter (§ 15).

On the whole, the scientific attitude to miracle is less hostile now than it once was. Many scientific men are also religious men, and the new vistas open to science have made a spiritual interpretation of the universe more possible.

In opposition to German rationalism Schleiermacher, in his Der christliche Glaube (Amsterdam, 1820-31), maintained that nature is the activity of new elements, consonant as it was to God's will and work, even if conditioned by it. Nature may contain the cause of the miracle, but it appears only when God wills it. Christ had a supernatural origin and, as such, was not a moral miracle. Yet the Virgin-birth, Resurrection, and Ascension were set aside along with many of the miracles, though some were admitted, since God has complete power over nature. Our belief in Christ, according to him, does not depend on miracles. Thus, though Schleiermacher still opposes certain miracles, he offers a constructive theory of miracle. Later A. Ritschl refused to regard miracles as contrary to nature, but he regarded them as examples of Providence. A. Kaftan argues from the same side that 'laws of nature' are unreal, a mere formula allowing us to grasp the course of nature. Miracle is such an unusual event as will awaken us in a special manner to God's living government of the world. He works in all things, but can use special means to enable faith to trace His presence. Hermann Lotze also refuses to regard miracle as setting aside laws of nature. The general law of the universe of its internal connexion with the inner states of things, can alter these and so modify the result of the laws. Law is thus turned to account. Even if there be mechanical necessity, this change in the internal state of particular result will produce an external miraculous phenomenon. The elements of the universe are not 'selfless and void points of attachment for unalterable forces,' but living parts of the living One. No law is altered when miracle occurs, but the hearts of the forces obedient to these laws are altered. The conditioning cause of miracles is in God and nature both, hence there is no arbitrariness in miracles. Yet Lotze sets aside Christ's miracles, partly he was before the change in man's conceptions of nature has made them dubious. 1

On the whole, modern theology tends to regard the universe as plastic to God and miracles as the evidence of his action, as well as of the existence of nature not producible by nature itself. Such a view is elaborated by H. Bushnell. 2 Again, as by

MIRACLES

J. E. Illingworth, divine immutance is made the ground of miracle. There is unity rather than uniformity in nature; it is due to spirit which uses matter for its purposes, and the moral aspect of miracles is also emphasized by him and by other writers. Christ's miracles do not interfere with law, but restore laws which were broken. Disease is here regarded as due to sin. As to the Resurrection, there is no reason why a sinless soul should not remain at will a sinless soul.¹ The suprenacy to an extraordinary degree of spiritual force over the mere material is also emphasized by A. C. Headlam in his recent book on miracles.²

Proponents of a mechanical view A. Wallace argues for miracles on the ground that intelligent beings, unperceived by us, have power over matter, producing super-normal phenomena, the occurrence of which has been noted in all ages. By this view he claims that Christ's miracles as well as answer to prayer find new support.³

15. The question of the miraculous.—Miracles are certainly frequent events, breaking upon us in a fixed order of nature. Both they and that order are evidences of divine will. The more the nature of the universe is revealed to us, the more impossible is it to believe that it all merely happened, if there was no guidance or control to produce such a vast and complex result. This impossibility is only the more increased by recent discoveries in science. If there is an infinite number of ultimate elements that are precisely, or in any form, it is more unlikely that all these should have happened upon the same form. Neither matter nor energy possesses the power of automatic guidance and control. Hence some form of guidance is essential, some directing mind and will. Life is outside the categories of matter and energy, yet it can use both, guiding and controlling them in accordance with the laws which govern them. Such guidance should not be denied to a supreme will and source of order, if such guidance is granted, then miracles—particular instances of that guidance—become possible. A fixed order of nature does not necessarily mean that nature is self-contained and self-sufficing or subject to unalterable mechanical necessity. We do not know all of that order, nor is it likely that it is the only possible order. We cannot assert that a limit has been set to every combination of matter and energy, to every method of guiding these, to every possible result. If the universe is not a mechanical nature, which, modifying St. Augustine's formula, a known and unknown, may be regarded as one of which we do not know everything. As to the 'laws of the universe,' all that this means is governance of the universe by the law of law. If things are always happen in an unvarying sequence, this does not exclude guidance, nor does it mean that the ultimate cause of the sequence has been discovered. Nor, if some phenomenon happened but once, would it be outside law however one is guided from guidance. Man can interfere with nature, utilizing its forces to produce new results, without breaking any single law of nature. What man can do is possible for the mind and will behind the universe. Law, again, if it exist in the material, must also exist in the super-natural universe which interacts with the former. By its laws those of the material universe may be suspended, and in so far as any such action is purpose and beneficent it reveals a law of love, a universe governed all through according to law by a competent and good will. A miracle would thus be beneficent and intelligent control and guidance of existing forces in accordance with law by a supreme spiritual power. This is the miracles of Christ. They were natural actions to Him, either because of what He was or because He was in perfect harmony with that supreme spiritual power.

It is easy to hold a wrong idea of the uniformity of nature or, rather, its unity, to adopt Illingworth's dictum. Theology has been apt to insist upon miracle as a sort of catastrophic gap in an existing uniformity. Science has tended to forget the possibility or, rather, the fact of endless variety in that uniformity. Such variety is only the more in evidence with the new discoveries of science, which now postulates either an energy as the only physical reality or a sub-material basis of matter with a physical significance. But from that, how endless is the diversity even in a uniform nature, not even two blades of grass precisely the same! Nor is life explainable in terms of mechanical uniformity. It uses and controls matter and energy, and may exist apart from them. Unity, with endless variety, is a better description of the universe than mere mechanical uniformity. In the interaction of the forces of the universe a slight increase of one force will produce a different result. And, if the forces, the interaction, the result, are guided and controlled, this would not detract from, but only augment, the theory of science that this is an orderly universe. Such guidance and control are not occasional but continuous, for if there is a God outside the universe, interfering with it on occasion, He always does what is best for it, and all that the universe contains—not merely its physical contents—is utilized for definite ends. Thus, if a slight increase of one force in any combination of forces—a re-arrangement of forces—will produce a different result from what is generally produced, miracle becomes possible. The result would show more definitively will and benevolence in the guiding process. Science might reproduce this result, might even conceivably reproduce it. Could it explain the process? Could it tell how Christ could do such things in a pre-scientific age? There must have been some influence working with Him or in Him to produce such purposeful, intelligent results. Science might create life, say, out of certain chemical combinations of dead matter. But could it explain why precisely that combination, that arrangement of forces or conditions, produced life of the order of life? The result, might, ethereal, be built into the universe. The setting in motion of certain forces already possessing the potency of life. Why or how they possessed this would remain unexplained.

As there are physical so there are moral and spiritual facts, not explainable in terms of the former, though they interpenetrate. Miracles, as such, are not isolated physical phenomena or prodigies. They are not unrelated to any moral or spiritual sequence. They have a moral and spiritual purpose, a clear relation to surrounding circumstances. Unlike the vast majority of ethnic miracles, Christ's miracles have that moral and spiritual quality which differentiates them from physical prodigies. They are distinct revelations of God or of God's nature in relation to the universe and man. As in a less degree in all His miracles, so in a higher degree in the Resurrection, there is a union of spiritual and physical, such as is seen also wherever mind and physical control matter and energy. Matter is here completely controlled, spiritualized, and such an event could scarcely ever has been imagined or invented. All miracles imagined or invented would have been little else than wonders which what we find the miracles of Christ. They were natural actions

³ Miracles and Modern Spiritualism.

system of the universe as a whole. So again many alleged supernormal phenomena, are not miracles; they do not show a direct moral, purposive action on the part of a divine spirit, but reveal unexpected and unexplained human powers. If God directs the whole universe, miracles are in no sense a rectifying of His own mistakes. They are instances of the overcoming of evil and disorder in the universe. Without these, evil and where evil may have been necessary to the world-process, a stage on the way to perfection. Yet that perfection is being brought about, and miracles are an instance of this; since they clearly show God's purpose, more clearly perhaps than the more quietly-working process. They show, as Lotze says, that God is so related to matter that it cannot resist Him at all. So Christ's healing miracles show that spirit and will are superior to the causes which produce disease. This in no sense is miracle contra naturam; rather is it an expression of divine action in ways which may contradict our ordinary experience, i.e., our real ignorance of the universe.

The unchangeable nature of radium might have been regarded as an unalterable law; yet the lapse of time (it takes 2300 years for one half of radium to decay) shows that this was a mistaken view, a parable of our knowledge of the laws of the universe.

The divine will, acting normally in certain ways, may act in different ways perhaps in our limited view contrary to these. One set of laws is put aside for the moment, just as man can transcend the physical order by his will. Yet order is not interrupted, for the whole order of nature—all that happens—is just the divine will to which, e.g., a swift 'miraculous' process of healing may be as natural as a slower process, or the turning of water to wine as natural as the slower growth of the vine. In either case there is a quickening of a natural process, and yet it is one that quicker may be perfectly normal. Does this take away the miraculous from the way we call 'miracle'? In a sense it does, for we tend to draw too straight a line between natural and supernatural. All events, inasmuch as they express the divine will, are natural, yet they are supernatural in so far as they all end for us in mystery. What constitutes a miracle is its quality, its instant suggestion of divinity and goodness. Man's spiritual vision is clouded, and he does not always see in the ordinary event, nor is that always the fullest revelation of God. All things speak of God, but some speak more clearly. Yet these are by no means all, they do not occur on all occasions, nor do they contradict the fundamental laws of experience. The reign of law is not set aside, for the ways in which miracle is brought about are still in accordance with law, even if the miracle happen but once.

Certain persons, for no very obvious reason, seem to possess supernormal powers, or these are manifested through them; others have genius; others, men of God, have spiritual gifts. What powers may not be open to one like Christ, in whom divine power existed and whose sinless will was in perfect harmony with God's? He claimed to possess divine power, and He said that He came to do the Father's will. Things were therefore natural to Him which might have been unnatural to another. Yet His miracles were in subordination to the moral miracle of His sinless personality, and therefore in harmony with it. Divine power and goodness overlapped, as it were, from Him upon nature. Such cases are perfect examples of the control of the material by the spiritual, and they prove that all force, all guidance, are in the last resort spiritual. Yet the real reason for following Him was Himself, not His signs. The power by which He wrought these was in Him because of what He was. It might be open to all who live upon the same plane, as He pointed out.

As has already been said, there is no evidence in Christ's miracles of the lawlessness breaking of a 'law of nature.' Rather is it as if existing forces were being directly influenced, whether neutralized or quickened, or as if a new force was working with a natural force and where a result different from what the latter could produce. In the case of healing disease a slow process gives place to a swifter process. So in the calming of the sea a natural process is changed into the supernatural, or rather this is the power of will. When walking on the sea Christ must have exerted a power which witnessed to some law quite as much as the law which for the moment it displaced. When water was changed into wine, was this more marvellous for Christ than the transmutation of one element into another as proved possible by science?

In the case of feeding the multitudes analogy is more difficult to find. Were bodily needs forgotten through a miraculous mental exaltation, so that a sacramental partaking of a small portion of food sufficed? This does not account for the fragments that remained. We cannot transfer to its limited vision that which, according to our limited vision, need not detract from its miraculous aspect. Those most concerned to show that a miracle had occurred, unless the texts are wholly fictitious.

In Christ it is not a question of divinity breaking through a humanity in acts which are supernatural, but of a constant supranatural influence in one who is its perfect type. It is therefore no stranger that His actions should be more wonderful than those of other men than that His teaching or His sinless life should surpass theirs.

Apart from the supernatural guidance of the universe, divine will may work through normal or supernatural actions, or may act directly in specific cases, for what are to us miraculous purposes. Speaking is a normal action, but what man speaks under the guidance of the Spirit there is inspiration. Healing by suggestion is supernatural, but, if the suggestion is aided by spiritual influences, there is a miraculous cure. Again, as in some of Christ's miracles, we trace more direct action upon material things. Such action may be regarded as supernatural because mysterious; yet to God it is natural. All action, human or divine, is part of an ascending series; we cannot say where the natural ends and the supernatural begins. What we can assert is that Christ's confidence in His power or in God's power working through Him never faltered. He intimates that, if men had faith enough, they could do even greater works.

Have we yet so profound an insight into the depths of personality, or used to the full the power of the divine spirit working with us?

16. Prayer.—The relation of miracle to prayer may be briefly touched on. If miracle is a special instance of divine control, then prayer has a miraculous aspect. Human mind and will can control existing physical forces or overcome the laws which govern them. There is readjustment without catastrophe. To every single fact there are countless antecedents, and a little of less or more will produce a new result, as is seen, e.g., by the different chemical products obtainable by even the slightest increase in the number of similar atoms combining with others to produce these. Man himself can produce new effects in the physical world. Must we deny this power to God? He can surely guide, deflect, or neutralize one force by another, or act directly upon matter and energy to produce a new result. Human nature is limited to every limitation of reason and order. How little exercise of power on God's part would be necessary to cause rain in answer to prayer! Since man and man's actions and thoughts, hence also his prayers, are a part of the forces of the universe, when we do not pray, the result, even in
MIRACLE-PLAYS, MYSTERIES, MORALITIES. —I. Introduction. —As was indicated in the introduction to the art, DRAMA, the origin of the medieval drama, as such, is to be found in religious observances. It is true that from the earliest reigns of Norman kings in England secular pageants were common features of any day of special rejoicing; but these were not strictly dramatic in their nature, and they did not contribute to the essential development of the form. The true beginning of the long course which leads up to Shakespeare and Racine is found in the Churches; the most striking fact in the history of the medieval drama is its evolution from the simplest germs in the responses of the liturgy into an elaborate new form without the influence of either antecedent or contemporary dramatic material. Though many steps and many dates in the history of the Middle Ages and the Renaissance are still to be covered, and their due place to be assigned to many influences, it is possible to write a clear history of the drama in the Middle Ages from its origin in the antipodal tropes of the liturgy to its final expression in the great Passion-plays, 'Mystères,' and 'Miracle-cycles.'

The probability of some survival of classical influence in the medieval drama has led some writers to trace an all-will that plan of accomplishment when man's will is at one with God's will. It is His will that we pray, and every answer to prayer, as a direct manifestation of His will, is so far miraculous, and yet, like all miracle, quite natural, or else none at all. The modern will happen in the universe; therefore I foresee whether we shall pray, and whether any particular prayer will be answered in one way or another. If the occurrence of certain things in God's plan depends on prayer, then we must pray. Are we then not free? Still we have the feeling of acting as free agents, and feeling is perhaps here truer than reason.

LITERATURE.—The following works for the most part deal exclusively with miracles. For others, patristic, scholastic, and medieval, see the H. O. A. P. Bruce, J. T. Strong, C. N. Sutis, and Introduction. Dearmer, the Church, and Parsons. T. G. Bonney, The Present Relations of Science and Religion, London, 1901; A. B. Bruce, The Miracle as an Element in the Gospel, d. 1880; G. Campbell, Dissertation on Miracles, Edinburgh, 1828; C. G. Clarke, art. 'Miracles,' D. B., 1890; W. E. H. Lecky, History of Rationalism, London, 1895; J. J. MacCollough, MIRACLE-PLAYS, MYSTERIES, MORALITIES. —II. The liturgical drama. —The antithesis of Eastern origin, introduced into Italy by St. Ambrose, was the germ from which the medieval drama developed. Certain antiphonal services had many dramatic possibilities, which more or less unconsciously began to take form in the tropes, or interpolations in the liturgical text for certain feast-days. The most important from the standpoint of dramatic history were the tropes of the Easter Mass, the earliest mass produced, which is the 'Quem queritis.' This, assigned to about the year 900 and ascribed to the trope-writer Tutilo of St. Gall (Karl Young, The Origin of the Easter-Play, in Publications of the Medieval Language Society, q. v. Dearmer, May 1914), seems to have developed into a considerable play as a trope of the introit for the day, and to have sent out branches which, combining with other ceremonies, such as the 'Visitatio sepulchri,' and other dramatic forms, such as the passion plays, grew into the great Passion-plays and Miracle-cycles.

This earliest form is: —

'Interrogatio.

Quem queritis in sepulchro, Christo dicete?—

Beati sunt qui in sepulchro.

Iesum Nazarenum crucifixum, o christo.

Non est hic, surrexit ex sepulchro;

ita, sustine me qui surrexit de sepulchro.'

Resurrexit.'

The last word, 'Resurrexi,' is the first word of the Easter introit of the Greek, is to be found in popular additions from the Vulgate, but more often by 'free composition,' and by the development of a dramatic setting (the 'sepulchrum') and truly dramatic personalities (the three Marys, the angel at the tomb, etc.), this trope grew into a well-developed though brief liturgical play (JS Brescia, 15th cent., quoted by Young), and attained a much larger development as a 'Visitatio sepulchri' at the end of the Easter masses. The altar served as the setting for the 'Quem queritis' plays, as was natural, for it symbolized the tomb of Christ (Young, p. 45). This made easy the transition to the use of the 'Quem queritis' as part of the 'Sepulchrum' ceremony at Eastern Easter; and these altars were still to be the model of the 'Auloratio crucis' and 'Deposito crucis' on Good Friday; the ceremonies were symbolical of the burial and resurrection of Christ. This second
and dramatically more fruitful use of the 'Quem queritis' grew by textual additions, such as the sequence 'Victime paschali,' and by additions of incident—first, details of the Biblical story (e.g., the visit of the three Marys to the tomb, and of Peter and John); secondly, secular imaginative details (e.g., the visit of the 'septulmentarius,' or dealer from whom they bought the necessary spices, a character who later became popular in the vernacular Passion-plays).

Though there was a considerable dramatic development of the 'Quem queritis,' it remained strictly a liturgical drama; it was chanted, the parts were taken by churchmen, there was little real dialogue, and the setting was of the simplest. In certain late forms there are introduced motives that do not belong to the events of Easter morning, such as the kiss of peace accompanying the greeting ' Surrexit Christus,' or the ' Tollete portas' ceremony prescribed by the ritual for the dedication of a church. These point to the possibility of a development of the Easter play which, however, was not to take place in the 'Quem queritis' proper. This matter will be considered in speaking of the Passion-play.

But 'Quem queritis' was not the only drama of Easter-week. The 'Peregrini,' attached to the vespres of Easter Monday, established in the 12th cent., was known in England, France, and Germany. The simplest form tells of the journey to Emmaus and the supper there (Petit de Julleville, Les Mystères, i. 67; Chambers, ii. 37). In others Mary Magdalen appears, or the Virgin and the other Marys greet the risen Christ; or a new scene is added of the incredulity of Thomas; or there is even a new version of the 'Quem queritis,' the 'Peregrini,' and the Easter morning ceremony of the ' Elevatio crucis."

Parallel with the plays of the Resurrection, other liturgical plays developed as parts of the office of other feasts. The Christmas season was the most productive; but there were plays for Epiphany and certain saints' days, particularly that of St. Nicholas. Though evidence of their existence has been found, the plays for many occasions have entirely disappeared. A Christmas drama, the 'Pastores,' commemorating the visit of the shepherds, grew out of a Christmas introit-trophe, modelled on the Easter ' Quem queritis.' It begins with the Miserere: ' Quem queritis in praesepe, pastores, dicite;' and is a pure liturgical form, and of infrequent occurrence in the MSS, but is of interest for its connexion with the ancient and still popular representations of the crib, or creche, of the infant Christ (see BAMEINO), and for its influence on the more fruitful dramatic forms into which it was absorbed. The essence of the play is the visit of the shepherds, a crib with images of the Virgin and Child, the announcement of the birth of Christ by a boy in similitude angeli, the singing of the ' Gloria in excelsis ' by the angels and a hymn by the shepherds, a dialogue between the shepherds and two priests ' quasi obstetres,' the adoration of the shepherds, and a final hymn.

A more common form of Christmas drama was the 'Stella,' a play of the visit of the Magi, originally consisting of antiphons and simple prose dialogue, representing the following of the star, the visit to the infant Christ, the offering of the gifts, and the warning to the Magi (Creuzenach, Geschichte des neuen Dramas, i. 60; Chambers, ii. 45; Petit de Julleville, i. 51: texts in du Meril, Origines latines, and in Coussemaker, Drama literarique). The simplest and probably the earliest examples are from Rouen and Limoges. This form of liturgical play developed early. Dates are uncertain, but MSS of the late 11th cent. have the play in a well-developed form. As the Easter 'Quem queritis' centred about the ' Sepulchrum,' and that of Christmas about the ' Presepe,' the 'Stella' had as its starting-point the star. A gift star, the points sometimes holding candles, was lowered from a hole in the ceiling or held up by an assistant. Unlike the 'Sepulchrum,' it was sometimes partly from dumb show, and the simpler forms continued parallel with the expanded forms and outlived them.

The dozen or so complete extant versions of the play vary considerably. The drama developed by the representation, in action instead of narrative, of the visit to Jerusalem, by the addition of various scenes in which Herod plays a part, as, e.g., his anger at the escape of the Magi and his order for the massacre of the innocents, a representation of the massacre, and finally the lament of Rachel, which had received independent dramatic treatment. As Chambers puts it, 'the absorption of the motives proper to other feasts of the Twelve Nights into the Epiphany play has clearly begun' (ii. 48). This absorption was to result in certain larger and more complex plays made up by the joining of the 'Pastores,' the 'Stella,' and the 'Rachel.' It was the result of this fusion and of the expansion of certain parts that the 'Stella' is of great importance for the later history of the drama. The part of Herod grew by expansion and emphasis even to take the first place in the English Corpus Christi cycles.

More important for the future of the medieval drama than any of the forms thus far considered was the 'Prophetes,' which had a curious origin, and was studied by a devotional play of the 'Quem queritis,' 'Les Prophetes du Christ,' It was based on the apocryphal Sermon contra Judaeos attributed in the Middle Ages to St. Augustine, but really of later origin, and used in many churches as a lesson in the Christmas offices. In this passage so impregnable, the author is told of the presence of thirteen witnesses to the divine mission of Christ and calls upon them to predict His coming. The prophets invoked are Isaiah, Jeremiah, Daniel, Moses, David, Habakkuk, Simeon, Zacharias, Elisabeth, John the Baptist, Vergil, Nebuchadrezzar, and the Sibyl. The dramatic growth of this sermon had certainly begun by the 11th century. In the earliest forms the play follows the sermon closely, but is written in verse. Classical language and certain prophetic form of are not found. In later examples from Laon and Rouen the dialogue is expanded, the 'preceptor' is replaced by two 'appellatores' or 'vocatores,' and Balaam is added an entire dramatic form into which it was absorbed. The essence of the play is the visit of the shepherds, a crib with images of the Virgin and Child, the announcement of the birth of Christ by a boy in similitude angeli, the singing of the ' Gloria in excelsis ' by the angels and a hymn by the shepherds, a dialogue between the shepherds and two priests ' quasi obstetres,' the adoration of the shepherds, and a final hymn.

A more common form of Christmas drama was the 'Stella,' a play of the visit of the Magi, originally consisting of antiphons and simple prose dialogue, representing the following of the star, the visit of the infant Christ, the offering of the gifts, and the warning to the Magi (Creuzenach, Geschichte des neuen Dramas, i. 60; Chambers, ii. 45; Petit de Julleville, i. 51: texts in du Meril, Origines latines, and in Coussemaker, Drama literarique). The simplest and probably the earliest examples are from Rouen and Limoges. This form of liturgical play developed early. Dates are uncertain, but MSS of the late 11th cent. have the play in a well-developed form. As the Easter 'Quem queritis' centred about the ' Sepulchrum,' and that of Christmas about the ' Presepe,' the 'Stella' had as its starting-point the star. A gift star, the points sometimes holding candles, was lowered from a hole in the ceiling or held up by an assistant. Unlike the 'Sepulchrum,' it was sometimes partly from dumb show, and the simpler forms continued parallel with the expanded forms and outlived them.

It will be seen that at this stage of development the 'Prophetes' necessitated a much more complex setting than was usual with liturgical drama—the throne of the prophet, the 'Stella' dress (described in the rubrics), Balaam's ass. This was a beginning of the complexity that was to characterize the great Miracles.

This complexity and the fusion alluded to above may be seen in a Latin play preserved in a 12th cent. MS (Royal Library, Munich; text in du Meril). It is a combination of most of the Christmas dramatic forms. St. Augustine sits with the
prophets at his right, the chief of the synagogue and the Jews at his left. The prophets foretell the Messiah; the head of the synagogue is angered at their blasphemies. A new character, the 'bishop of the church' enters. The question of the head of the synagogue at his right, and the head of the church at his left, should be questioned. The Rabbi in the church, the Pharaon, questions the head of the synagogue. The argument is taken up by the choirs of prophets and Jews, the one singing 'Rex miranda,' the other 'Rex neganda.' So far the play is an expanded 'Prophetes,' still mostly liturgical in feeling and form. The prophets take their places in the church, and a play of the Apocalypse begins abruptly. The Scriptural dialogue between the Virgin and the angel is followed by the visit of Elisabeth. The next direction is that Mary 'vadat in lectum suum... et parit filium.' The choir celebrates, and immediately the 'Stella' begins. A star shines forth, the three kings follow it, and appear before Herod; an angel announces the coming of Christ to the shepherds (the 'Pastores' element). The devil hints that the angel has delayed; they enter, but they dance to the chanting of 'Gloria in excelsis' by a heavenly choir; they seek the cradle and worship Christ; they meet the Magi bearing gifts. The Magi are warned not to return to Herod, who orders the kings to search for the innocent children in their lost children (the 'Rachel' element); Herod falls dead, and is seized by demons. An angel announces Joseph into Egypt. The king of Egypt advances, accompanied by a choir singing 'sce topogato.' The Holy Family the idols fall, and the priests, unable to restore them, are converted. Finally the choir chants a maladiction against Herod and the Jews. The last part is free and individual in composition. Petit de Julleville thinks it unlikely that it was played in church (because of the 'episcopus puero rum'), and that more likely it was given in a monastery school.

As this play well represents the form attained by the liturgical drama through the combination of types and free composition, certain plays found on the stories of Daniel and Lazarus represent another development—the expansion of single scenes in the older plays into independent dramas. The 'Adam' (text in Latin, 1st liturgical, partly attributed to a definite author, is the 'Daniel' of Hilaris, a cosmopolitan Goliardic scholar, disciple of Abelard, who flourished in the first half of the 12th cent. (text in J. J. Champollion-Figeac, Histoire de la Liturgie en France, in du Ménil). The 'Historia de Daniel representanda' opens with the feast of Belshazzar; the mystic words appear, and Daniel interprets them; Darius enters Babylon with his army and kills Belshazzar; Darius appears at court, refuses to worship the king, and is thrown to the lions; the angel brings Habakkuk to him; Daniel is again in favour. The play is expanded by choruses in honour of the various personages, 'conductus Danielis,' 'conductus regum,' etc. The chant to Daniel (also in the similar play from Beauvais) is a hymn in honour of the birth of Christ. This, as well as the rubrics, indicates the connexion of the play with the liturgy; but the note at the end, 'This done, if the play has been given at matins, let Daniel sing the Te Deum, if at vespers the Magnificat,' indicates that it was not a regular part of the office. In this partial detachment from the liturgy we see the beginnings of that development which was to take the drama entirely out of the hands of the clergy.

3. The secularization of the drama.—The indications of a tendency to make the liturgical drama more popular that we have seen in the expansion of certain themes in the 'Prophetes,' in the freer and more poetical composition of many of the later liturgical plays, in their comparatively independent and allegorical treatment of the church plays, are emphasized by the gradual change in the language, spirit, and setting of the plays, as they progressed towards that final and almost complete secularization which should take them out of the Church and put them at the disposal of all, and make them great popular spectacles rather than expessions of Christian faith. The degrees of popularization were innumerable. In the 15th cent., even when the purpose was edification, whole scenes were often frankly secular. This part is brief.

The vernacular came by slow degrees to replace Latin. At first the two languages appear side by side; in the earliest examples the local speech appears only in refrains or in the lines of a few minor characters, or in the less impressive passages. But there is no discoverable rule; the same character may speak in a literal Latin or a dreamy French in another. One of the earliest cases of the two languages used together is the 'Sponsus,' a 12th cent. play of the wise and foolish virgins from Limoges (text in Romanus, xxii. [1583]; du Ménil). Here a comic character in the play speaks in French, the angel who announces the coming of the bridegroom sings only French, the virgins both languages. The refrains are in French. The final words in which Christ condemns the foolish virgins are first Lyra, then in French, ending thus, perhaps to make the lesson clear and impressive to the congregation:

'Amen dico
Vos ignoro,
Nam caritis unione;
Quasi qui portans [MS permutat] Pretiosi pergunt.
Vobis aulae minime,
Alet, chaitv e. alet, malabresens!
A tot jors mais vos penas terreus;
En efert ora mere memores.'

Occasionally, as in the 'St. Nicholas' of Hilaris, the vernacular is found only in the refrains. In other plays it is a translation of the preceding Latin lines—an indication of the reason for the use of the common tongue—as in the 12th cent. 'Adam,' 'Juliette,' 'Christometheie du Pape d'Anjou,' 'Touris,' 1584; K. Bartsch, Chrestomathie du Piancinque
françois, Leipzig, 1889), and in many German plays. Latin and the vernacular were even mingled in the lines, as in the Beauvais 'Daniel' (text in Consameker, n. o.).

'Vir prophytae Dei, Daniel, vici al Rot;
Veni, desiderat pastor tuae coloni,' etc.

Some later dramas are wholly in the vernacular, except for refrains or certain impression passages.

In France particularly the development of the drama was marked by the adoption of a more varied versification. The earliest liturgical plays were entirely in prose, the later ones mostly in verse.

In these later forms the versification is rather complicated, very varied; almost all are written in stanzas. But these stanzas differ in the number of lines and in metre; the lines are syllabic, but vary in length from four syllables to ten (Petit de Julleville, i. 2). Duets in hexameters also are used, sometimes leonine, as in the lament of Rachel in the Fleury 'Interfecto puero rum' (cf. Petit de Julleville, i. 49; text in du Ménil; MS in Orleans Library):

"O dolor! O patrum mutataque gaudia naturam!"

Occasionally lines are quoted or imitated from the classics: e.g.,

"Quae rerum novitas aut quae vos causa subigit
Ignatas templarum vas? Quo tenditis ergo?"

"Quem venit? Unde ducit? Parsimoniae fortis, armae!"

(cf. En. xii. 112-114).

As important as this change in language is the
gradual secularization of the spirit of the plays. The last part of the composite Munich play referred to above will illustrate this point. Though written in Latin, one finds two original secular poems in praise of spring, bidden with pagan allusions and with no liturgical or Biblical connotation. The introduction of the comic element and of the melodramatic in the passages relating to Helen and Heracles, may, in the secular influence, one that was to lead to some of the most striking and unfortunate developments of the great Mysteries and even of the Passion-plays of the 15th century. We must not make the mistake of regarding all liturgical and liturgical in a naive and simple taste for such things; as Petit de Julleville points out, even in plays as early as those of Hilarians a conscious vulgization has begun, a conscious appeal to an audience rather than to a congregation, and the author's intention is even satirical.

The secular tendency which perhaps had most to do with the final almost complete secularization of the medieval drama was the elaboration of the setting required by the constantly increasing length and complexity of the plays; for this development brought about the transference of the plays to the open (first the churchyard or square in the town, then the whole town, or several places at once), and, still more important, gradually brought the plays under the control of the laity. It is a long way from the simple 'sepulchrum' or 'presepe,' the two almost identical parts, the lack of appropriate costume, the 'Quem queritis' to the varied setting, the many characters, the costumes of the 'Conversionis Pauli' (Pett de Julleville, i. 69; text from Fleury MS, mentioned above, in du Méril, and in Consemel, ii. no. 52, with 3 plays of St John, Judas, etc., its 2 scenes, Jerusalem and Damascus, its armed men, and its 'lectus' for Ananias, or the Munich 'Prophetes' described above, with its 'sedes' for the prophets, its 'lectus' for the Virgin, its shining star, its mouth of hell, its many characters. Henceforth the change in setting was one of degree rather than of kind; the elaboration merely followed the increasing complexity of the plays as they added one incident after another. Within the church, the crucifixion, the altar, the 'sepulchrum,' the rood-loft (representing heaven), and the crypt furnished the chief accessories of the play. To these, which were in the sanctuary and choir, were probably added in the 14th century, and later, the 'spaiulchrum' or 'presepe,' the rude, mud and brick 'stalls' or 'loci' extending down the nave. This natural arrangement was apparently followed when the drama left the church, as in the 12th cent. Norman 'Resurrection.' Chambers (ii. 83) suggests such an arrangement of the 'ius,' 'mansiones,' and 'estalls' required by the prologue, following the analogy of a Donauschlingen Passion-play of the 16th cent., the plan of which is extant (given in Froning, Die Drama des Middlesalters, p. 277). The prologue gives the order of the required sets: the crucifix, the monument (sepulchrum), the gaol, heaven, hell, Emmaus, Galilee, and six 'estalls' or 'sedes.' The only other extant French religious play of the same form, the 'Adam' in Rennes, the first act of the drama had outgrown the simplicity of the 'Quem queritis.' The Latin rubrics indicate not only a complex setting, but great care in stage management, even extending to the garments and voice of the actors.

For instance: 'Let there be built a paradise in a higher place; around it let there be depictions of silk. . . . There shall be sweet flowers and foliage; various trees from which shall hang fruits. . . . Then the savour shall arise; clothed in a dalmatic; before him shall be placed Adam and Eve, Adam in a red tunic, Eve in a woman's white robe and a veil of white silk' (Chambers, ii. 80).

The rubrics mention not only the costumes for the two characters, and the localities—paradise, hell, a cultivated field—but also 'properties'—a spade, a rake, original secular poems in praise of spring, bidden with pagan allusions and with no liturgical or Biblical connotation. The introduction of the comic element and of the melodramatic in the passages relating to Helen and Heracles, may, in the secular influence, one that was to lead to some of the most striking and unfortunate developments of the great Mysteries and even of the Passion-plays of the 15th century. We must not make the mistake of regarding all liturgical and liturgical in a naive and simple taste for such things; as Petit de Julleville points out, even in plays as early as those of Hilarians a conscious vulgization has begun, a conscious appeal to an audience rather than to a congregation, and the author's intention is even satirical.

The secular tendency which perhaps had most to do with the final almost complete secularization of the medieval drama was the elaboration of the setting required by the constantly increasing length and complexity of the plays; for this development brought about the transference of the plays to the open (first the churchyard or square in the town, then the whole town, or several places at once), and, still more important, gradually brought the plays under the control of the laity. It is a long way from the simple 'sepulchrum' or 'presepe,' the two almost identical parts, the lack of appropriate costume, the 'Quem queritis' to the varied setting, the many characters, the costumes of the 'Conversionis Pauli' (Pett de Julleville, i. 69; text from Fleury MS, mentioned above, in du Méril, and in Consemel, ii. no. 52, with 3 plays of St John, Judas, etc., its 2 scenes, Jerusalem and Damascus, its armed men, and its 'lectus' for Ananias, or the Munich 'Prophetes' described above, with its 'sedes' for the prophets, its 'lectus' for the Virgin, its shining star, its mouth of hell, its many characters. Henceforth the change in setting was one of degree rather than of kind; the elaboration merely followed the increasing complexity of the plays as they added one incident after another. Within the church, the crucifixion, the altar, the 'sepulchrum,' the rood-loft (representing heaven), and the crypt furnished the chief accessories of the play. To these, which were in the sanctuary and choir, were probably added in the 14th century, and later, the 'spaiulchrum' or 'presepe,' the rude, mud and brick 'stalls' or 'loci' extending down the nave. This natural arrangement was apparently followed when the drama left the church, as in the 12th cent. Norman 'Resurrection.' Chambers (ii. 83) suggests such an arrangement of the 'ius,' 'mansiones,' and 'estalls' required by the prologue, following the analogy of a Donauschlingen Passion-play of the 16th cent., the plan of which is extant (given in Froning, Die Drama des Middlesalters, p. 277). The prologue gives the order of the required sets: the crucifix, the monument (sepulchrum), the gaol, heaven, hell, Emmaus, Galilee, and six 'estalls' or 'sedes.' The only other extant French religious play of the same form, the 'Adam' in Rennes, the first act of the drama had outgrown the simplicity of the 'Quem queritis.' The Latin rubrics indicate not only a complex setting, but great care in stage management, even extending to the garments and voice of the actors.

In England.—The early dramatic history of England is difficult to trace, for much the larger number of plays have been destroyed. The development of the liturgical drama in England must be partly guessed at from that of France. Only the slightest indications of what it originally was are extant. The earliest dramatic piece is the 'Quem queritis' from the Winchester tropers dating probably from about 978 (text in W. H. Collier, The Winchester Tropers, p. 965). This is not nearly so simple as the St. Gall 'Quem queritis' mentioned above. More interesting is the very full account of the 'Quem queritis' ceremony in Bishop Ethelwold of Winchester's Concordia regularis, which probably dates from 988 to 975 (Chambers, ii. 14, 306; text in Anglia, xii. (1891) 365). This includes a simple trope not much more elaborate than the St. Gall one. Of it, however, Chambers (i. 10) says:

'The liberal scita' 'sades' from concordia regularis makes plain the change which has come about in the "Quem queritis," since it was first sung by alternating host choirs as an inter-trope. Dialogues chant and mimetic action have come together, and the first liturgical drama is, in all its essentials, complete.'

The only other extant English text of the liturgical period is a 14th cent. 'Quem queritis' from Dublin. But church inventories, account-books, and statutes indicate the existence of the 'Pastores,' Perigrini, 'Resurrection,' 'Stellas,' 'Prophetes,' etc., at a number of places, including York, Lichfield, Winchester, and London. William Fitzstephen, writing of the late 12th cent. in London, records:

'“representaciones miraculum que saecuti confessores operanti sunt, quibus representationes passionis et gloriosae crucis sancti martyris' (P. S. Thomao, quoted by J. P. Collier, History of English Drama, p. 70, as 'Stones.')'

Of a Beverley 'Resurrection' (c. 1290) the (bilingual) text of only one actor's part remains. So little do we know of this early period that it cannot be decided whether the liturgical drama passed directly from Latin to English, or whether there intervened a Norman-French period.

The full development of the English Miracle-play came in the 14th cent., and during the next two centuries and more it can be studied more clearly from extant texts. Whether or not the English drama received a special impulse from the establishment of the Corpus Christi festival in 1311, the most characteristic English dramatic form, the Corpus Christi Play, was founded soon after that date. The Chester plays were probably given first in 1328. The dates of the beginnings of the other cycles are not known, but references to them are found as follows: Beverley, 1377; York, 1378; Coventry, 1392; and in 1359 there is a reference to a "Judicium filiorum Israelis" at Cambridge. From this time on there was the greatest activity throughout the country.

It will be impossible to analyze at all adequately, even the chief monuments of the period under consideration; the four great Corpus Christi cycles
and the minor instances of dramatic activity can hardly be mentioned. Generally the English Miracle-plays were represented in separate scenes, each by a different trade—gild, on its own pageant.

A high pile with two rows, a higher and a lower, upon four wheels. In the lower they appeared themselves, and in the other house. They began first at the aby gates, and when the first pageant was played it was wheeled to the high'crose before the mayor, and so to every street in which the plays were given resorts, and also scaffolds and stages made in the streets in those places where they determined to play the pageants." (Archdeacon Rogers' "History of the English Drama," 1901, quoted by Pollard, "English Miracle Plays," p. xxi.)

Though the plays were given by the gilds, they were under the direction of the town council, which made the strictest rules concerning the manner, thoroughness, and promptness of the performance—e.g., at York (1415):

"...the mayor of York then brought further the pageants in order and course by good players, well arrayed and openly speaking, upon page of legging of Gs, to be made to the chamber without any jorden." (York Plays, ed. Lang Tounsin Smith, p. xxxiv.)

The plays of the cycle were not the work of one author, but an "organic growth." The number of gilds participating; hence there was also a variety in the number of plays or scenes. The play for each gild was often slight in subject—e.g., 'Adam and Eve, an angel with a spade and a distaff assigning them to work,' played by the armourers at York,--containing the main events of the original cycle (probably composed towards the middle of the 14th cent.) will give an idea of the wide range of the plays:

the Creation; the Temptation, the Fall, Noah and the Ark, the Sacrifice of Isaac, Moses in the Wilderness, the Prophecies of Christ, the Annunciation, the Birth of Christ, the Shepherds, the Presentation of Christ in the Temple, the Man of Sorrows, the Woman taken in Adultery, the Raising of Lazarus, Judas, the Last Supper, the Crucifixion, the Harrowing of Hell, the Resurrection.

Although this list is incomplete, we can see in it all the elements that we have found in the Continental liturgical plays, and may be permitted to suppose that the Miracle-cycles developed by the extension and amalgamation of liturgical forms such as the 'Prophetes,' the 'Stella,' the 'Tastesors.' Though, like their French and German contemporaries, the authors allowed themselves considerable freedom in expanding the Biblical text (as, e.g., in the part of Herod), yet the characters most freely drawn are almost exclusively those of persons to whom neither Scripture nor legend ascribes either name or individuality. Such personages as "garcon," or servant, Noah, wife, the shepherds, are introduced for the sake of relief—often inappropriately, it seems to us, as in the Crucifixion scene.

"It is to this desire for dramatic relief that we owe the story of Mak and his sheep-stall in the Coventry cycle—our first English comedy" (Pollard, p. xii.

In the Coventry cycle there are various characters that link the Miracle with the Morality, the dramatic form more characteristic of the later years of the pre-Elizabethan drama. Such characters appear as Death, Veritas, Misericordia, Pax. The earliest known English Morality is lost. It was a 14th cent. play, setting forth the goodness of the Lord's Prayer in which play all manner of vices and sins were held up to scorn, and the virtues were held up to virtue." (J. Tounsin Smith, "English Gilds, London, 1639, p. 127)

The earliest Morality that has survived is "The Castle of Perseverance." Its purpose was "to trace the spiritual history of "Mary Magdalen..." from the day of her birth to her appearance at the Jesus' feet, in which personity the feet by whom his path way is bent, the Guardian Angel by whose help he resists them, and the ordinances of Confession and Penance by which he is strengthened in his conflict to come." (Pollard, p. xiii.)

The play is wordy but impressive; it has logical development and unity of purpose. The stage directions show that it was elaborately presented.

The most famous morality is 'Everyman,' composed in the 15th cent.; it is thoroughly dramatic in language and treatment. The great Morals were followed by shorter ones dealing with narrower subjects, such as "The Play of the Dumb" or "The Play of the Blind," and "The Play of the Deaf," etc. Pollard calls them. From these are derived most of the common notions regarding Morals.

One of the earliest is 'Hycke Sooner.' Some are written in praise of religion, others in praise of learning (e.g., 'The Interlude of the Four Elements'). Some of the later interludes are real plays, in the modern sense—e.g., 'A New and Pleasant Entertwine; intitlel the Marriage of Witte and Science,' licensed 1508-70. The amusing lines, the act-division, and the characterization make the play modern rather than mediæval. John Heywood's plays illustrate still better the change that was taking place in dramatic art—a change which was to lead rapidly to the splendid Elizabethan drama.

5. France.—The development of the liturgical drama outlined above carried us into the 12th century. In France there are few plays known of the 12th and 13th centuries, the period when the drama became thoroughly secularized. Of the 13th cent. two plays are known: the Miracle of the Virgin of Saint Nicolas and Rantelen's 'Miracle de Théophile.' In the 14th cent. the French drama first acquired its national character. Petit de Juvellie says that forty-three plays of the period are known. A large number of these, either 'The Passion of Our Lord,' 'The Passion of Our Lady,' 'The Passion of the Virgin' (see the MS in the Bibliothèque Nationale. These plays, however they vary in style and in source, all have as a central theme a miraculous event brought about by the intervention of the Virgin—always a mechanical and unexpected intervention. In other respects—style, stage-management, songs—the plays are so similar as to make them seem, if not the work of one author, at least the repertoire of one company; and this is the more likely as such plays were performed by societies, called 'Plays,' formed for the purpose.

In the 15th cent. for the first time the word 'Mystère' appears as a dramatic term, and in this century it means a representation of a Biblical story or the lives of saints. The NT was more used than the OT, for, as we have seen, the interest of the Middle Ages in the OT was chiefly in the foreshadowing of the redemption of mankind. This view accounts for the inequality at a lack of dramatic feeling in the use of OT story. Furthermore, the medieval drama was not original; it did not build up a play from a situation as did Corneille or Racine, but transcribed the Scriptural narrative regardless of dramatic form.

Though the French 'Mystères' seldom approach the completeness of the English cycles, they are often cyclical in form and extremely long. The famous 'Passion' of Arnaud Grecan is about 65,000 lines, a length attained not merely by prolixity but by following the career of each of the apostles after the Crucifixion. The French Passion-plays, the most notable of the 'Mystères,' centred, of course, around the Passion, which they developed in a highly realistic manner; but they were extended at the pleasure of the author by the addition of any scenes preceding or following the main event. The Mystères based on the legends of the saints, also popular in this period, had often a local interest.

Many were composed for a certain province, city, or brotherhood, in order to celebrate a patron saint, or to give sanction to a pilgrimage. (Petit de Juvellie, L. 330)
6. Germany.—The early texts are scarce in Germany, but from those that are extant it appears that the liturgical play had much the same history as in other countries, and that the transition from the Latin to the vernacular took place in the same manner as in the 12th century. The Teutonicum 'Anti-christus' (text in Froning, p. 206), though written in Latin, has several secular characteristics: an ambition planned, allegorical figures, and particularly a political motive, for it is a subtle vindication, on the one hand, of the Empire against the Papacy, on the other of the 'rexit Teutonicorum' against the 'rex Francorum' (Chambers, ii. 64). In the 14th and 15th centuries the region of the Rhine and Germany, its most characteristic form being the Passion-play, of which numerous texts survive. There were also some cycles, such as those for Corpus Christi from Swabia (15th cent.). The Passion, which came in the 14th and 15th centuries to be the chief theme of the religious drama in France and Germany, had seldom been represented in the liturgical drama. The nearest approach to a Passion-play was found in the dialogue versions of the 'Planctus Mariae' ('Miserere mei'). The earliest Passion seems to have been in Italy (Sienna, c. 1200; Padua, 1244). The earliest text is German from Benediktbeuren.

Like other medieval dramatic forms, the Passion-play grew by additions and by amalgamation with other forms. As early as the 14th century it seems to have been the custom in Germany to divide a Passion according to the events following His Passion. By the 14th cent. the form was well developed, but its main period in Germany was from 1400 to 1515. Great 'Passions' were played at Frankfurt, Ahsfeld, Friedberg, and other places. Some of the oldest 'Passions' at Eger and Donaueschingen were in cyclical.

7. Modern survivals.—Traces of medieval dramatic custom can be found here and there in Europe to the present day. In general the survivals are more than dampnish like the popular creche, or representation of the infant Christ at Christmas, which, however, rather a reversion to the ceremony from which the Christmas play was derived than a survival of the play. Most notable in this way are the representations of the Passion-play that have been either kept alive in out-of-the-way places or revived, most famous among them being that of Oberammergau, which was represented in 1633, and in 1792 Rosner's bombastic version was simplified by Knipfelberger. This present simple and dignified form is the work of two authors, P. O. Weiss and M. Dausenberg.

The play is given every ten years, in pursuance of the original vow or deliverance from pestilence. Other versions of the Passion-play have been performed in recent times at Brixlegg and Vorder-Glieriese in the Tyrol and at Höriz in southern Bohemia (A. Hanfmann, Uber das Höriz'sche Passionspiel, Bamberg, 1890). In 1662 the text was altered by the weaving into it of the version of Sebastian Wild, the Augsburg Meister-singer. It is the result of all that of the middle of the 18th cent. It was further remodelled by the Benedictine Rohmer after the model of the Jeuitt drama, and in 1789 Rohmer's bombastic version was simplified by Knipfelberger. This present simple and dignified form is the work of two authors, P. O. Weiss and M. Dausenberg.

MIRROR

by artists. Metal mirrors were known in northern India by the Christian era, and they were used to adorn the temples of the Hindu and Ceylonese peoples, while the Hebrews were familiar with them at an early period for women's use. In Greek art Aphrodite is sometimes represented as holding a mirror; and in the Indian marriage ritual a mirror is placed in the left hand of the bride to enable her to dress her hair. A mirror and a comb are not infrequently found on Scottish sepulchral monuments of the early medieval period, but their precise signification is still uncertain.

The mirror-case continued to be popular among the rich, but the mirror itself became smaller, and was usually carried on the person.

"Probably the largest mirror known in the Middle Ages did not exceed the size of a plate." The circular shape was retained. The reflecting surface was usually of polished steel or other metal, and steel mirrors were still in use in the sixteenth century. There is a reference to a round "looking-glass" of Catherine of Aragon, which was probably a polished metal surface with a sheet of glass over it. An arrangement of this sort had been employed since the thirteenth century, and in the inventories of the Dukes of Burgundy in the fifteenth century, we hear of the \"Ferre a miry\", evidently a looking-glass.

This method is a noteworthy, but futile, attempt at a combination of metal and glass. A great quantity of metal was manufactured for windows from the thirteenth century onward, it would have been curious if the idea of employing a substance admitting of no polish had not suggested itself to the mirror-makers of the day. But until a really satisfactory metallic backing was discovered, the advantage of a looking-glass over a steel mirror would be slight, and this fact may account for the persistence of the latter for domestic use down to so late a period. The amalgam of mercury and tin which gives the modern looking-glass its efficiency was not known before the sixteenth century.

A final improvement was effected in the middle of the eighteenth century by the French invention of plate-glass. Backing for glass was known in the thirteenth century, and in the fourteenth there was a gild of glass-mirror-makers in Nuremberg, but it was first in Venice that mirror-making acquired commercial importance.

The mirror naturally lent itself to the production of curiosities, mostly the result of experimentation. The effects of concave and convex surfaces have been known at least by early times in both the East and the West. The 'magic mirror' of China and Japan refers on a screen an image of its back. In mediæval Europe small spherical glass mirrors were known as **Ochsenaugen**. The use of mirrors to produce lights and heat was early discovered, as by the Greeks and Central Americans. Mirror-writing is often practised by ambidextrous persons, as by Leonardo, and it also occurs pathologically in forms of aphasia.

3. Superstitions connected with the mirror. The property of reflecting images naturally inspires wonder, and thus tends to produce superstitious beliefs and practices. Most of these are connected with the common idea that the reflexion of a person is his soul.

"A savage who had been made to look into a mirror exclaimed, "I see myself!" One of Darwin's children, at some point in childhood, turned to the looking-glass on hearing his name called." These two cases illustrate the connexion between

1. **Meditation-iDha**, iv. 160 (SEE xxv. [1890] 139).
13. Ibid., p. 214.
On the other hand, a mirror, as when set in a ring, may be used to repel demons.1

Divination by means of a reflecting surface is an ancient and world-wide practice, its principle being that figures representing the souls of persons at the moment of future actions may be seen. A pool of ink is a common object (cf. art. CRYSTAL-GAZING), and a combination of mirror and pool of water was used at Demeter's sanctuary at Patro, where was a sacred spring, but its use was permitted only in cases of sickness.

'They tie a mirror to a face cord, and let it down so far that it will not plunge into the spring, but merely graze the surface of the water with its rim, - they look into the mirror, and it shows them the sick person either living or dead.2

It is also used, especially in German and Slavic lands, to discover one's future husband or wife.3

Divination by mirrors is a variety of a widespread method of ‘seeing,’ the most frequent instrument being the crystal ball.4 A magic mirror possessed of the power of speech is not uncommon in folk-tales;5 and in Shintoism actual worship is rendered to mirrors which, originally presented to deities, have come to stand for the divine beings themselves.6

The supernatural associations of mirrors are equally numerous, but one or two of a miscellaneous order may be noted, as illustrating the general subject.

Pausanias describes a temple near Megalopolis, within which was a mirror on the wall, by which even he who looks into this mirror will see himself either very dimly or not at all, but the image of the gods and of the throne are clearly visible.7 The Greeks kindled sacred fires by means of the mirror or crystal, and the same was the case in China and Iran, while in the Inca kingdoms the two were used for similar sacrifices by means of a concave mirror turned to the sun.8

4. The mirror in metaphor.—The optical properties of the mirror are so important and impressive to all races of men that their influence is accentuated by idiosyncratic derivation therefrom. One or two only can be cited. The Hebrew paronomasiographer says: 'As in water face answereth to face, so the heart of man to man,'9 while the Buddhist sutta in speaking of 'a way of truth, called the Mirror of Truth.'10 The Mirror was a favourite component of titles of books in Elizabethan literature, in its meaning of 'true description,' and its meaning of 'pattern, exemplar, model' is similar. Shakespeare writes the 'mirror of our souls, the Pains' grate as his lord the mirror up to Nature' uses the simplest connotation of the term. An interesting metaphor is used of psychic processes; the 'mirror of the mind' occurs both in Chaucer and in Shakespeare. As regards sources of metaphor it is remarkable biological and chemico-physical analogies to the optical fact of mirror-image (in which right becomes left and vice versa). All vertebrate animals, many invertebrate, and the leaf and other systems of plants are bilateral, one side being the mirror-image of the other, while the formation of right- and left-handed crystals is connected with the division of acids into right and left according to the effect produced in relation to plane polarized light.

LITERATURE.—With the exception of the well-known archaeological works on antique mirrors and popular folklore collections, the relevant literature is included in the article.

A. E. CRAWLEY

MISHMIS.—The Mishmis are a tribe who inhabit the Mishmi hills, a section of the mountain

ranges on the northern frontier of Assam, which shut in the eastern end of the Brahmaputra valley, between that river and the Dihing, a region practically unexplored, consisting of steep ridges, covered as a rule with tree forest, and including some peaks 15,000 ft. in height (I.G.I. xvii. [1908] pp. 377 ff.). These are divided into three distinct but probably connected languages. The most western tribe is known as Midu, Midhi, Nedu, or Chulikata, 'hair-cropped'; they inhabit the Dihing valley with the adjoining hills. To their east are the Mishmee, or 'outcasts,' who speak practically the same language. East of the Behabiyas are the Taying or Digara Mishmis, beyond the Digaru river. The Mishmis are still further east, towards the Lams valley of Dazayu, a sub-tribe of Lhotse. Most of these live beyond the British frontier. The numbers counted at the last three Censuses in Assam were 217, 98, and 271 (Census Rep. Assam, 1901, i. 260; 1911, i. 139; 1911, i. 134).

1. Ethnology.—The Mishmis have been identified by some authorities with the Minnotzi or Ihmeng, the aborigines of Yunnan, whose name has been interpreted to mean 'children of the soil,' 'roots,' or as a contemptuous reference to their 'simple diet' (A. G. Scott and J. P. Hardiman, Gaz. Upper Burma, pt. i. vol. i. [Rangoon, 1900] p. 597 ff.).

'So far as the means at our disposal permit us to draw conclusions, it may be stated that Mishmis neither belong neither to the Thotho-Namlyau nor to the Assam-Burmese branch of the Thoto-Burmese languages. They seem to be descendents of clans which, when the partitioning of the world between the two branches took place, accompanied neither, but made their way by a different path into the hills over-looking the Assam valley from the north' (G. A. Grigson, Census Rep. India, 1901, i. 260).

2. Relations with the British Government.—The British first came in contact with the Mishmis in 1825, when Lieut. Burlton reported that the 'Mishmee' were inhabited by tribes 'who were very averse to receive strangers.' Other officers visited them between that time and 1851, when M. Kriek, a French missionary, was murdered by them. Then followed a succession of outrages. In 1883 one of their headmen was taken to visit the Calcutta Exhibition. Soon after his return he died, and the tribe, holding the British Government responsible for the murder, decided that the head of a British subject should be buried with him, in order to propitiate his spirit. So they slew a British subject and carried off his head. An expedition in 1890-1900 reduced them to submission, and more recently they have given little trouble. But they are keen worshippers of nature, and it has found expedient to prevent them from crossing the Brahmaputra into British territory for that purpose (B. C. Allen, Gaz. Lakhimpur, 1905, p. 55 f.).

3. Religious beliefs.—The best account of their religious beliefs is that by E. T. Dalton, Descriptive Ethnology of Bengal, Calcutta, 1872, p. 16 f.: 'The religion of the Mishmis is confined to the propitiations of demons whenever illness or misfortune visits them. On these occasions the spray of a plant is placed at the door to intimate to strangers that the householder is in the ordinary manner tabu. They appear to have no notion of a superior or benevolent deity. They worship Mogilikrah as a god of destruction, Dianau as god of the chase and knowledge, and Tablah as a god of wealth and disease, and a great many others without name. It appears both from Lieutenant Rowlett and the Abbé Kriek's reports that the Mishmis have priests, but they are few in number and have to be brought from a distance when required. M. Kriek describes one that he saw at a funeral ceremony. . . . For several days previous to the arrival of a priest, an attendant was employed in singing a devotional chant to the accompaniment of a bell. There was also a preliminary sacrifice of a red cock and hen, the blood of which was put on an image containing some other fluid and the mixture carefully examined, as it is supposed to indicate if the result will be fortunate or otherwise. The priest, after an oration, dressed in a robe, and attached
to the front of his head-dress, two appendages like horns. For two days, at intervals, the priest and his son employed themselves in putting on various fantastic and ridiculous costumes, marking the time by waving a fan and ringing a bell; on the third day he put on his chief's Tibetan robe, and assumed what may be regarded as his professional dress—a tight-fitting coat of colored cotton, a small apron, a deer skin as a mantle; from his right shoulder descended a long gossamer hair dyed bright red, and over his left shoulder he wore a broad belt embroidered with four rows of tigers' teeth, and having attached to it fourteen small bells, he placed a bauble ornamented with shells, and round the knot of hair at the top of his head a marvellous plume which turned like a weathercock. This was followed by a wild and demoniacal dance; but whether it was a par soul by the priest, or one in which the people generally joined, the object was, however, to make as much noise as possible to frighten the devils. After this, lights were all extinguished, till a man suspended from the priest's head remained a fresh light, and the priest took care not to touch the ground as he produced it, as the light which obtained was supposed to be the same from heaven.

About 1872—the writer gives no clear dates—T. T. Cooper (The Mission Hills, London, 1873) relates, and gives a good account of the appearance, dress, manners, and customs (p. 180 ff.).

An earthquake occurred, and they told the chief, Chowosam, 'that the devil residing in a neighbouring mountain had angered the mountain, the monster.' The missionaries bring polytheists, though of the lowest order, it was not difficult to make Pase [another chief] understand the existence of one Great Spirit above all' (p. 197). 'The Missions,' he said, 'are very unfortunate. We are everywhere surrounded by demons; they live in the rivers, mountains, and trees; they walk about in the dark and live in the wind; we are constantly suffering from them... . In answer to a question as to whether he thought the strongest, after hesitation he said that the demon of fire was the strongest and most dangerous, as he dried up the water and burnt the mountains.' The mountains were also good lookouted, as he warned them and cooked their food' (p. 193).

'To religion, their notions are very vague. Polytheism, encountered with all the rites and ceremonies of fetishism, is their true creed. The yearly sacrifice and feast in honour of their deceased parents shows that they have some idea of a future state, but I could not find out their particular idea, and death is a disagreeable subject of conversation among them, and Chowosam was declined to interpret questions relating to it' (p. 258). 'The two most important ceremonies of the people are those of the bloodily attended deaths and marriages. In the case of sickness a soothsayer is called in, and he generally prescribes the sacrifice of fowls or pigs, according to the command of the patient. These sacrifices are propitiations of the demon who is supposed to be instrumental in bringing the illness. When death occurs, particularly in the case of a chief, mithunen (within, also called geyoi, per frontalia (W. T. Blanford, Fauna of British India, Mammalia, London, 1842, p. 437 ff.), pigs and fowls are killed with the utmost impunity, and all the old men and women feast to their heart's content, hospitality being considered a great virtue. They eat in honour of the departed, talking of his great and good qualities. The body is burnt after two days, and the ashes are collected and placed in a miniature house erected close to the family residence. This unique tomb is then surrounded by some of the skulls collected by the chief during his lifetime, which serves as a monument of his past hospitality, while the rest of his treasures are divided amongst his sons, the non-sacred, and heir to the tomb's share. When there are no sons the skulls go to the near male relations. The eldest son takes the title of chief, or chief, and holds a yearly feast in honour of his deceased father, which is considered one of the most sacred observances among them' (p. 327).

When Cooper suffered from an abscess in his ankle, a soothsayer or exorcist was called in. He was dressed like the other Mishmis, but allowed his hair to fall long, uncombed masses over his shoulders. After inspecting the patient's foot, he stripped himself naked except for a small loin-cloth, and produced a handful of rushes from his waist-belt. These he began to plait and unplait, measuring the operation with a buzzing noise, as though he were counting. Occasionally he would place his hand on the painful spot, and then massage the rushes over it, keeping his eyes shut the whole time. After nearly an hour he announced that two fowls must be killed, which would ensure recovery. He declined to answer what devil had been at work, and what effect the rushes had on him (p. 252).

MISSALS.—See Ritual.

MISSION (Inner).—Die innere Mission is the name used in Germany to describe the sum-total of those efforts which are made by the Protestant Churches to ameliorate the conditions of the suffering of mankind, to bring the institutions and usages of society into harmony with the will of God. It is to be distinguished from die äussere Mission ('foreign missions') in that it confines its activities to Germany and Germans resident or sojourning in foreign lands. It is an endeavour to overcome the heathenism found within the borders of a country professedly Christian. It is to be distinguished from mere humanitarian effort in that it definitely makes temporal and material aid a means to spiritual redemp- tion and from the official activity of the pastors and paid officers of the Church in that it works through the voluntary agency of individual Christians or groups of Christians, the pastor's office being to arouse the spirit of willingness and marshal its powers for the purpose of redeeming love. It aims at realizing in sacrificial service the universal priesthood of believers.

The movement originated after the close of the Napoleonic Wars when orphaned homes were established for children whose parents had lost their lives in the war (Johannes Falk, Graf Adalbert von der Rieke, C. Heinrich Zeller). A number of societies and institutions arose organized on a large scale for the care of the poor, the nursing of the sick, and the saving of destitute children. This grew out of the pietistic movement (see Pietism), and was largely inspired by the efforts of Great Britain in the foreign missionary field, the foundation of the Bible Society, the work of Mrs. Elizabeth Fry, and the City Missions. Conspicuous among the leaders were Johann Hinrich Wichern (1805-81), who in 1833 founded at Hamburg the Realhe Heime (a reformatory institution built upon the household plan, and with a training home for lay-workers); and Theodor Fliedner (1800-64), who in 1826 founded at Kaiserwerth the first society for prison-visiting in Germany, in 1835 the first refuge for discharged female prisoners, and in 1836 the famous Distrosenset Oehneth, for the training of nurses and infant teachers.

The name 'Innere Mission' was first employed in a narrower sense by Friedrich Lücke, of Göttingen, in Die zweische, innere und äussere Mission der evangeliischen Kirche (Hamburg, 1843), to mean work among the lapse members of the different Christian communities and the fortifying of a weak church with the help of a strong, while Wichern broadened out the meaning of the term to include all practical Christian work in the homeland and among Germans in foreign lands (Diaspora).

It was Wichern who first organized the movement on a comprehensive scale in 1848. The revolution of that year roused the Church from its apathy, and opened its eyes to the glaring evils of heathendom which had grown up in the midst of the nation. A Church Diet was summoned at Wittenberg, where 300 representatives of Protestant Germany met and agreed. Standing on Luther's grave, Wichern delivered a bold address, picturing the wide-spread power of the paganism which had arisen in their midst and the fruits which it had produced, and calling upon the
Churches to join hands in remedying these evils. He sketched on large and state-manlike lines the programme of the remedial activities needed, and proposed the formation of a central committee (Centralausschuss), consisting of ministers and laymen, to make a survey of the fields of work, place the various societies already at work in touch with one another so as to save overlapping; point out the need of more effort and help such efforts to succeed; announce the movement as a whole, and, above all, make it clear that all the several ministries, of whatever kind, were animated by the one divine spirit of redeeming love in Christ. Thus was established a free colony for equalization of all the activities of the Protestant Churches, so far as these were extra-official. The object of the Inner Mission, as defined in the first report of the Centralausschuss, is "that the Christian Church with all its resources, and through all its agencies, may fill and quicken the whole life of the people in all ranks of society, inspire all social arrangements and institutions with the might of a love energizing heart and life—and through all its living members labour to save the neglected and make the poor." Thus the Inner Mission was to be "the practising doctor in the great hospital of the people." Its programme and policy are set forth in full in Die innere Mission der deutschen evangelischen Kirche, eine Denkschrift über die aktuelle Christenmission (analogous to Christian Endeavour Societies).

The programme and policy of the Inner Mission are sketched in the second volume of the series, Denkschrift über die innere Christenmission (analogous to Christian Endeavour Societies). The scope of the work and the relations of that work to the activities of the State on the one hand, and of the Churches on the other, have been ascertained by the work of the last twenty years. Wichern remained practically the directing spirit. Pamphlets (Fliegende Blätter) were published annually at the Hauske House giving reports of the various agencies carried on.

The most comprehensive survey of the work is given in two Jubilee publications of the Centralausschuss in 1869 (Statistik, Fünfzig Jahre). These contain reports by different authoritative writers on the work done in each of the following departments:

1. The care of children, orphans, infant schools, care of orphans, Sunday schools and children's services, refugees and orphans, country holidays for city children.

2. The care of adult women and homes for Savings (Sparhäuser), homes for the poor, boys' homes, schools of domestic economy, rescue homes, Jugendbund für entrückte Christenmänner (analogous to Christian Endeavour Societies).

3. The care of the homeless, and the homeless, colonies for un-registered persons, homes for the poor, colonies (analogous to Christian Endeavour Societies), Girls' Friendly Societies and Lodges, missions to soldiers and sailors, river and canal boat populations, save-waysmen, navvies, brick-layers, waiters, care of the aged.

4. The quickening of the Christian spirit, city missions, men's brotherhoods, support of weaker Churches, Christian art associations, lectures.

5. Work among emigrants and Germans in foreign lands (Deporta), pastorate at holiday resorts.

6. Care of the poor, sick, and infirm, district nursing associations, sick cross work in war, homes for infants, epileptics, inebriates, blind, deaf and dumb.

7. Combating of social evils, Sunday observance, housing reform, prison missions, temperance work, savings banks, anti-gambling work, friendly societies, building of city missions, work for Christian education.

9. Organizing and propagating according to province and district, conferences.

10. Training of workers for prisons, asylums, unemployed and employed, workhouse, nursing, etc., courses of instruction for social workers.

As the result of the Inner Mission the whole of Germany has been covered with a network of philanthropic agencies, united with the Christian spirit; the social conscience has been quickened and enlightened, and the efforts of the Churches have been co-ordinated and wisely directed. The State has co-operated. In 1852 the brothers of the Hauske House were allowed to act as warders in Prussian prisons, and Wichern was commissioned to visit the prisons, investigate their conditions, and suggest reforms. Later, Wichern was appointed Councilor of the Ministry of the Interior, and a member of the Evangéidischer Oberkirchenrat. The work of the Inner Mission paved the way for the social legislation which followed the Franco-German War. The most notable results of the Inner Mission are in the fields of philanthropy and Christian work, especially in sick-nursing, the Elberfeld system of poor-relief and its extension to other German towns, and the work of Pastor F. v. Bobedschwingh (b. 1831), who founded at Bielefeld a system of co-ordinated medical service, with the help of the Government, the national scheme of relief-stations for tramps.

In the Church the Inner Mission has given the laity, and especially women, their sphere of service; it led to the establishment of the diocesan and district social work in the Evangelical Church in 1856, and gives material expression to the universal priesthood of believers. It has filled a place in the educational system by caring for orphans and infants, and counteracting the movement for the secularization of schools.

The movement has affected other countries, especially Switzerland (J. A. Bost), Denmark (Wilhelm Beck), Norway (P. Haren), and Holland (J. G. Heldrinon, written by Wichern at the instance of the Central Committee and published in 1849. This book sets out the scope of the work and the relations of that work to the activities of the State on the one hand, and of the Churches on the other for twenty years. Wichern remained practically the directing spirit. Pamphlets (Fliegende Blätter) were published annually at the Hauske House giving reports of the various agencies carried on.

The most comprehensive survey of the work is given in two Jubilee publications of the Centralausschuss in 1869 (Statistik, Fünfzig Jahre). These contain reports by different authoritative writers on the work done in each of the following departments:

MISSIONS.

Buddhist (M. ANESAKI), p. 700. Christian—

Zoroastrian (L. H. GRAY), p. 749.

MISSIONS (Buddhist).—1. In China.—Buddhist missionary enterprises outside of India were started by King Asoka in the latter half of the 3rd cent. B.C. On the other hand, a later Chinese record informs us that in 217 B.C. (in the reign of Shih-Huangti of the Ts'in dynasty) eighteen Buddhist monks were brought to the capital of the empire. The authenticity of the information may be questioned, but, when we take into account the facts that Chinese Buddhists used to ascribe to the 7th cent. B.C. to Asoka's reign, and that, in spite of that, the date of the story almost agrees with the historical date of Asoka, the tradition seems not to be a mere forgery. About one hundred years after that event, as stated in an official record, another contact of Buddhism with the Chinese took place. An expedition sent to the Western regions by the Emperor Wu, the most ambitious sovereign of the former Han dynasty, in 121 B.C. brought a golden statue and prisoners; and in 2 B.C. the Yuechi ambassadors are said to have brought four Buddhist scriptures. These statements point to the spread of the Buddhist missions in Central Asia in the centuries immediately after Asoka's missionary enterprises.

Historical records agree in assigning to A.D. 67 the first official introduction of Buddhism into China. The Emperor Ming, stimulated by a dream, sent an expedition in search of the golden man of whom he had dreamt (A.D. 64), and, when the expedition returned in 67, it brought not only Buddhist statues and scriptures, but also two monks, both Indians, Kasyapa Maitaiga and Dharmaraksa by name. The first Chinese Buddhist book, containing the forty-two sayings of Buddha, was written by Kasyapa, and translations of several texts are said to have followed it. The Pai-na, or White Horse Temple, was built in Loyang, the capital, and soon after the emperor's brother built another temple. Conversions en masse are said to have taken place in 71, many massacring their native gods being among the converts. The new religion was received with open arms and heart, the way must have long been prepared for it.

There is a gap of about eighty years between the mission of the first missionaries and the advent of two other monks, one of whom was Shih-kao of Parthia, who came to China in 148 and worked till 170. He is said to have been of royal blood and to have left his country because of the fall or decline of his own royal family. This is one of the evidences that Buddhism had a strong foothold in Parthia and Central Asia. It is quite conceivable that Chinese Buddhism had its source close to China's western borders at that time. Shih-kao's works are mostly texts from Agamana,1 the counterpart of the Pali Nikayas, and some of them treat of hygienic matters, connected with the practice of counting the respirations, or anapana. Perhaps we may see here the first of the medical works of the missionaries.

For a century after the great Parthian translator we have only scanty records of missionaries, yet we have reason to suppose that missions were going on slowly. The Buddhist propaganda in

701

(1) Chang-an (the modern Sîng-an), (2) Lo-yang (on the Hoang-ho) in the north, and (3) Chien-yeh (the modern Nanking) in the south. During the first half of the 3rd cent. the last two were the respective capitals of two of the Three Kingdoms, while the third was situated far in the west, beyond the reach of Buddhist influence. After a short interval of unity (280–302) these three places remained as the three centres of China in all the vicissitudes of rival dynasties. Thus the missionaries who came to China by land routes worked mostly in the north, deriving their sources from Central Asia or the north-west of India, though some went further to the south.

The 3rd cent. was a period of confusion in China, caused by a hopeless division of the country and by intrusion of invaders from the north. Yet Buddhist missions proceeded to cover the greater part of the land, and many of the contending rulers welcomed missionaries from Central Asia. To one of these men, Fo-tun-chen, who came in 310 to Lo-yang from a "western country," laboured not as a translator but as a social worker. It is said that he was "well versed in magic formulae and saved many people from diseases and sufferings by his supernatural attainment." 1 No fewer than 893 monasteries and sanctuaries were established by him, and his "disciples" numbered 10,009. But his influence in China remained limited to those who came from or through Central Asia, the southern, the Sung dynasty, invited missionaries from S. India, who came by the sea route. Moreover, the repeated persecutions of Buddhists by T'ang rulers and the rivalry of the northern missionaries and Chinese monks to the south, and it was through them that a start was made in establishing groups of men of similar tendencies, which became the origin of sectarian division in China, an internal Buddhism.

Among those who worked in the north the most prominent was Kumārājīva, a native of Karachar. He came to Chang-an in 401, having been invited by the prince of the Ts'un dynasty, and, being highly esteemed by the prince, was honored with great success for more than ten years. His lectures were attended by crowds from various classes of people, and his work of translation was assisted by the best scholars and men of letters. It is no wonder that the translations ascribed to him are ranked as classical Chinese, and that his translation of the *Lotus of the True Law* (q.v.) *Saddharmapundārīka* remains the most valued and revered of the Chinese Buddhist scripture books.

Kumārājīva was apparently a monk, but his conduct was very irregular, for he lived with many concubines; yet his talent was so appreciated and his fame so high that his patron and the people loved his company, despite his neglect of Buddhist discipline and in spite of attacks heaped upon him. A powerful rival, however, appeared in the person of Buddhhabhadra, who was invited to Chang-an in 398. He is believed to have arrived at the coast of Shantung by the sea route, having once failed to come by land. In contrast to Kumārājīva, he observed austere rules of monastic life, and instructed his followers in discipline and in meditation. At last a critical rupture between the two great men broke out, and Buddhhabhadra took refuge in the south, where Tso-an's disciples were living in a monastery on Mount Lu-shan, in the modern province of Chiang-hsi.

The leader of the group was Hui-yüan (+416), and its members were monks, poets, and philosophers who were disgusted with the troubles of the world and devoted themselves to meditation and conversation with one another. Here Buddhhabhadra found men more congenial than the Buddhists of the north, and instructed them further in the secrets of Buddhist mental training. In this group of thinkers we see Chinese Buddhists quite re-climatized to the native soil, especially to the poetic and transcendental mood of the southern Chinese, preparing for further union of Buddhist meditation with Chinese quietism. It is among these thinkers we see Chinese Buddhist quietism in its final stage, embracing the Ch'an School, a development of the native Chinese contemplative spirit. The Chinese Buddhists were more immediately under the influence of the K'ūn (the famous king of India) than the Chinese, and perhaps that explains why the last great Ch'an leader, Hui-yüan, was able to come to China by sea in 520, the further source to be found in the group of reclusees at Lu-shan who welcomed Buddhhabhadra. After all, we can assign the foundation of Chinese Buddhism, relatively apart from foreign missionaries, to Tso-an and Hui-yüan. Yet, parallel with this native movement, missionary work was proceeding, both in the north and in the south.

As we have mentioned, the south welcomed Indian missionaries, many of whom came by sea, and we find a sudden growth of sea-communication with India from the dawn of the 5th century. The pioneer of the sea-voyage from Ceylon to China was the K'ūn, who came to China in 407, from Ceylon, via Java, in 424. He laid the foundations of two monasteries called Chao-ti (Chetthiya) and Chi-yuan (Jetavana) in Nanking. Here he instructed his followers in the strict discipline of the Vinaya and instituted the system of ordination into Buddhist mysteries, by establishing a special centre for the purpose, after the model of the Sima of Nalanda (q.v.). The arrival of a number of Sinhalese nuns in 434 under the leadership of a certain Tissara (+481) was an important event, and from them a line of nuns and intended for starting nunneries after the model of Sinhalese Buddhism. Another group of nuns came from Ceylon in 438. Among those who followed the footsteps of Gunnarvanam are to be mentioned Kályayana and Dhammapavitra, both translators of Mahāyāna texts; Gunabhadra, the translator of the *Samyukta-agama*; and Saṅghabhadrā, the translator of the *Pali Samanta-pāda-dikā*, a commentary on the *Vinaya* written by the famous Buddhaghosa. The last of these is said to have come together with his master, a Tripitaka-achārya.

In the 6th cent. we have two notable instances of sea-journey. One was the monastery of Moōhi-dhārma, mentioned above, who is said to have remained silent for nine years after his arrival in China, but who yet succeeded in impressing his spiritual influence and in opening a powerful stream of meditative naturalism in China and Japan.

1 See J. Takakusu, *Pali Chrestomathy*, Tokyo, 1900, pp. lxiv-lxvi, and *J.R.A.S.*, 1899, pp. 416-429. Takakusu's conjecture that this master of the Three Presidents might have been Buddhaghosa himself is plausible, but requires further corroboration. The translation of the *Samanta-pāda-dikā* is dated 459.
The next instance was the voyage of Paramārtha, who arrived in China in 546 and was invited to Nan-jo, 148. To him the cultivation of many of Asanga's and Vasubandhu's works and some other books. He was the first propagator of the Yogācāra Buddhist in China, even before Yuen-ch'ang, the great translator of the 7th century.

Thus the Buddhist missionaries came to the Middle Kingdom from two sides by two routes, one via Central Asia and the other via Ceylon.1 Their works of translation laid the foundation for the further development of their religion in the East, and have given us a rich store of information. On the other hand, we must not forget the pious zeal of the Chinese pilgrims who went to the West in search of truth and scriptures, the most prominent of whom was Fa-hian. It is related that the missionaries coming eastward and the pilgrims going westward met one another everywhere in the 5th and 6th centuries. By the conjoint labour of these men were completed the translations of the four Agamas, together with several of their single parts; the Vinaya texts in various versions, belonging to different schools;2 and the important Mahāyāna texts, such as the Lotus, the Floor-garden (Vasanta), etc. From these works we see how ideas and expressions were naturalized in the Chinese language, which is totally of different structure from the originals. These books and expressions now form an integral part of the Chinese language and literature.

Up to the 6th cent. Buddhist missions in China consisted chiefly in the work of translation, through we may suppose that popular propaganda was not neglected. Besides those, the monastic institutions were an integral part of the Buddhist religion. The first translation of the Pratimoksha (Pāli Pātimokkha) and the regular monastic discipline based on it were carried out by Dharmakāla, an Indian, who came to Lo-yang in 259. In the 5th cent. we see a further establishment of the regular method of ordination under the government's patronage and supervision, carried out by Gunavarman in the south, as mentioned above. The sanctity of these ordained monks and nuns was early recognized by the rulers as well as private persons. We hear that, when, in 446, Emperor Ta-wu of the northern Wei dynasty persecuted Buddhist, there were 3,000,000 of these monks and nuns in his territory alone. This may be exaggerated; but it is quite conceivable that there were 83,000 ordained patrons of the Emperor Wu (reigned 562-549) of the Lāng (southern) dynasty, the great protector of Buddhism, and himself an ordained monk. Besides these regular monks many ascetics were revered as saints by the people, and they contributed much to the propagation of the religion, but as much to the dissemination of superstitions. They formed an eclectic element in Buddhism by adopting Taoistic and Indian ways of living and practices, but there were some who were really saintly, or at least beyond the world. Their lives are described in the Book of Saints and Miracles (Nanjio, no. 1544) and are eminently hard to be distinguished from the Taoist 'men of mountains.' The people accustomed to look upon the Taoist miracle-workers as holy men were also attracted to these Buddhist 'saints.

If we can use translation as only one instance of a definite record of charitable work. That was a method of famine relief, called Seng-chi-su, or 'Church grain' (Seng-chi = Pāli Sthāpatika), which was inaugurated by Thān-yao, a man of unknown origin, in the southern kingdom of 469; a certain percentage of the crops was stored in monasteries and distributed in cases of famine.

While missionary work was advancing, the foundations of doctrinal division, based on the schools prevalent in India, began to arise. The man who stood foremost in systematic treatises on doctrines was Tao-au, mentioned above, who wrote commentaries and essays and emphasized the vacuity of the phenomenal world. In his time a translation of an Abhidharma text (Nanjio, no. 1273) was produced, and prepared for the promulgation of Vasubandhu's philosophy by Paramārtha sixty years later. The group of Lo-shan, already mentioned, was another sign of sectarian division, and these men opened the way for the later growth of the meditative Shān-no school and of the pietistic religion of the Buddha Amitābha. These were, however, only precursory movements for real sectarian division and dogmatic differentiation; a really independent growth of Chinese Buddhism and formation of branches date from the latter half of the 6th cent., and then we pass from the missionary stage.

The unity of China achieved by 580 and the rise of the glorious T'ang dynasty in the beginning of the 7th cent. mark a new era of Chinese history, political as well as religious; and we may close our survey of the Buddhist missions with this time. It remains to be added that, in the 8th cent., the mystic Buddhist doctrine of the Mandara sect, was introduced by two foreign missionaries, Subhakarasimha and Amoghavajra. This form of Buddhism became influential in Japan after the 9th century. Towards the close of the 10th cent. there was again an influx of Indian missionaries, but they are of no great significance.

2. In Tibet.—As in the case of China, the early history of Buddhism in Tibet is shrouded in nebulous legends. The missionaries dispatched by the King Asoka reached the Tibetan borders, probably along the western parts of the Himalayas; but it is more than a hundred years after his time that legend tells us of the establishment of a Buddhist temple on the Tibetan side of the Himalayas. This legend and the story of the miraculous descent of four caskets containing Buddhist treasures, in the 4th cent. A.D., may be taken as indications of Tibet's contact with Buddhist missions. Dismissing these legends, the first date that can be assigned with certainty for Buddhism in Tibet is the 7th century. The reigning king was Srong-btsan Gampo (+ 658), and Buddhism was introduced into Tibet by his marriage with a Chinese princess and also with a Nepalese princess. The former marriage is confirmed by Chinese history; the name of the princess was Wen-ch'eng, and the marriage took place in A.D. 641. She brought with her Buddhist statues and books, and probably some priests, and established a firm footing for Buddhism in that country, which had gradually been coming into contact with the religion through its eastern and southern borders. The Nepalese princess was the agent in introducing the occult worship of the Vajrayana and Hamsa goddess Tara, the event which determined to a great degree the nature of Buddhism destined to prevail in Tibet.

The legends concerning this introduction of Buddhism into Tibet and the succeeding events throw little light on the nature of the missionary labours undertaken by the Buddhists; we are
The construction of temples and of the arrival of missionaries, both Indian and Chinese, from China, but little information is given of how they worked in their propaganda, this fact being partly due to the circumstance that these records were compiled by the Confucian hands of the rulers. The stimuli given by the Buddhist consorts of Srong-btsan Gam-po caused him to send his able minister Thanmi Sambhota to India, where he performed a great service for Buddhism and for Tibet by inaugurating a Tibetan alphabet, after the model of the Skr. Devanāgarī. Translation of Buddhist books, partly from Chinese, but much more from Sanskrit, was made possible by this system of Tibetan letters. A decisive step in the work of translating Buddhist books into Tibet was taken more than a century later, in the reign of Khri-Srong De-btsan (reigned 740-768), who was a successful conqueror of borderlands. It was he who invited learned Buddhists from India, and a decided turn to the nature of Tibetan Buddhism, because those Indians mostly advocated occult mysticism based on the belief in the efficacy of dhyāna, or mystic formulae, and magic practices. Among these agents of mystic Buddhism two mention Tibetan: Padmasambhava, or 'Lotus Growth,' with an allusion to the lotus as the womb of the cosmos, who introduced many writings, and his disciple, Pagur Vairocana, the next translator.

The 9th cent. was a period of confusion in Tibet, and the fate of Buddhism passed through various vicissitudes in association with the inclination of the rulers and with their rise and fall. From the latter part of the 10th cent., we see four streams of N. Indian Buddhists and a firmer establishment of mystic Buddhism. Besides the translations, many original writings, historical and doctrinal, were composed in Tibetan; and the necessity of translating these was closed in this period. After all, accessible material concerning Buddhist missions in Tibet is scarce, and what is known relates only to political support by the government, and to translations produced by Indians and Tibetans. The 13th cent. was an epoch-making period in the history of Tibetan Buddhism, in connexion with the conquest of Asia by the Mongol Kublai Khan. Buddhist missions seem to have been active in this time, and the Mongol conquerors were partly converted to Tibetan Buddhism, though all of them were eclectic of promiscuous nature. Tibetan Buddhism was definitely established as a theocracy by the energetical ability of Bha-sac-ya Khan, and its influence was extended to the northern countries and even to China. The definitely independent, and totally isolated, growth of Tibetan Buddhism is to be dated from the latter part of the 14th cent., when the Mongol dynasty in China fell and the Tibetan reformed Tsong-Kha-pa arose.

3. In Korea.—When, in the 4th cent., Buddhism was being naturalized in Chinese culture, its propaganda further eastward began. At that time Korea was divided into three kingdoms and several minor States. Of these three Koryo (or Kokuryo) was situated in the north, and first came into contact with Buddhism. In 374 two monks, Atao and Shuntao, both of whom are said to have been foreigners, were invited from N. China to the capital of Koryo (the modern Pien-yang), and in the next year two temples were built for them, while in 384 a certain Mālananda was welcomed by the court of Chch'jang. The Koryo alphabet was in the middle of the country. Historical records tell of the names of these temples, Syo-mun and I-pul-ban, sound neither Chinese nor Korean.

1 This teaching (Dharma) is the most excellent of all teachings. It brings infinite and innumerable fruits to its believers, even to the final enlightenment (bodhi). Just as the Chintamani jewel is said to give inexhaustible wealth to its possessor, so the jewel of this glorious Law never ceases to give response to those who seek for it. Moreover, it has come to Korea from India, far distant, and the peoples of the countries lying between these two are now adherents of it, etc.

These words, accompanied with a fine image and works of art, were a marvellous revelation to a people who knew nothing of religion, and were exposed to be little superior to men. The court, on the other hand, was divided into two parties, one favourable to the new worship, and the other hostile, the point of their dispute being whether the newly-offered deity was more powerful than the national deities or not. The hidden motive of the difference, however, was the political clan strife, intermingled with the difference of progressive and conservative policies. During fifty years of strife the fate of the new religion seemed always uncertain. But the presents were followed by an incessant influx of priests, monks, artists, and physicians, as the rearguards of the religion. It was natural that elaborate rites and the practice of medicine should be most effectual means in the conversion of a rather primitive people like the Japanese at that time. Though the religion was not yet accepted officially by the court, some sovereigns cherished it as their faith, and the Soga family, the blood of the progressivists, because its zealous advocates. They built temples, and we hear of a nunneri founded by the family in 554. The fall of the conservative party in 587 marked a decisive step in the progress of Buddhism, and to confirm this, we shall be told that a temple was built,
MISSIONS (Buddhist)

for the first time at State expense. The erection of these and other Buddhist buildings caused constant importations of Buddhist statues, utensils, etc., accompanied by artists and artisans, and these displays of art were associated with works of charity. Three institutions—an asylum, a hospital, and a dispensary—were attached to a temple built in 593, and similar institutions were founded here and there in the subsequent centuries. In the regency of Prince Shōtoku, the Constantine of Japan (reigned 593-622), the new religion became the State Church. Not only were missionaries and learned monks invited from Korea, but direct communication with China was opened (605), and Japanese monks were sent to China for study. The number of the Korean missionaries who worked in this period was considerable, and their achievements in preaching and teaching Chinese, especially amongst the nobles, was great, but the new religion found native teachers in less than a hundred years after its introduction. The prince himself gave lectures on Buddhist subjects and organized various institutions. In short, the Buddhist propaganda in this century consisted first in the display of forms, then in works of charity, chiefly medical practices, and lastly in the efforts to Christianize the government and to unite the divided clans by religion, on the other. The development of religious institutions and the management of State affairs assisted each other.

After the decisive step of the adoption of the Buddhist faith, there had been a long process in which the progress of the religion was slow and steady. Its influence was propagated gradually from the capital to the provinces. Many Korean immigrants, some of whom were usually monks and nuns, were offered homes in various provinces, and the number of native workers increased, some of whom studied in China or Korea. The donations given not only to large monasteries and to clergy of higher ranks, but also to the poor and aged monks and nuns, showed that the former were patronized by the nobles and the latter by the native workers, were therefore independent of the Chinese influence. Besides these Korean and Japanese priests, a certain number of Chinese, Indians, and other foreigners carried on the Buddhist propaganda, the most famous of whom were Kan'jin, a Chinese Buddhist missionary, and his assistant fotō. The former founded the central institution for ordination and monastic discipline, and was appointed archbishop (754-765 in Japan). He was also an organizer of medical practice and founded a botanical garden. The Indian was of the Brahman family Bhāradvāja. He came to Japan in 730 with his Ammannae and Chinese followers, some of whom were musicians, and worked as a bishop till his death in 760, being known as the 'Brahman bishop.' These missionaries brought many useful arts and things Indian, which contributed to the influence of the religion, such as musical instruments, Indian hars, and the bas-relief in the Greco-Bactrian style, preserved in the Imperial treasury, dating from the 8th century. Among the native workers who laboured mostly in the capital as teachers and bishops; others were practical men who worked in the provinces in bridging rivers, constructing roads, canals, harbours, and public buildings, opening mountain passes, planting avenues, etc. We do not know how or where these men learned their arts and crafts, but their works were so wonderful to the people that many miraculous stories are told of them even to this day. The mention of some Aina monks, whom the court favoured with gifts in 699, shows the advance of the propaganda to the far north east.

The elaboration of medical works and the dispatch of combined bands of monks and physicians into the provinces are connected with the central government of the late 8th century. In addition to these methods, religious ceremonies for the welfare of the ruling families and for the tranquillity of the country became the order of the day in the courts as well as in the temples, and were patronized by the government and by the nobles. These pious deeds were extended to the provinces, and scriptures were distributed wherever there were any priests. The founding of provincial cathedrals (bokubō) was followed by the founding of the capital, of the central cathedral, which was dedicated to the great statue of Lochana Buddha, now known as the Daibutsu in Nara, and was completed in 754. These works and dedications converted the whole of Japan into a Buddhist kingdom before the close of the 8th century. There are many remains of these works to this day, and Japan owes the sculptures, which have never been excelled by later works, to the same period.

It is obvious that the methods of the religious mission contributed to the unification of the country. Charitable works were regarded in the provinces as the boon not only of the Church but also of the State. Religious buildings were held to be signs of the power of the court. It was not merely by the mysterious efficacy of the worship and ceremonies that the security of the throne and the tranquillity of the country were maintained and increased; the Buddhist mission in the provinces during these two centuries was at the same time a political mission.

By the 9th cent. the unity and centralization of the national government were complete. From that time Japanese Buddhism began to stand on its own feet, even though the Japanese Buddhists were still indebted to their co-religionists on the continent. The two brightest stars of the Buddhist history of Japan, Dengyō († 822) and Kōbō († 855), were once trained missionaries and opened the way for the development of Japan's own Buddhism. Thus the beginning of the 9th cent. may be taken as the end of the Buddhist mission in Japan.

One thing remains to be added, viz. a new influx of Chinese influence in the latter half of the 13th century. The introduction of the Zen (dhyāna) Buddhism, which was produced by Bodhidharma in China, as mentioned above, necessitated a fresh influx of monks and artists, whose great influence upon Japanese art, literature, and social life in the 14th and 15th centuries must be recognized. The, fans, kakemono, and similar things, now known in the West as 'things Japanese,' Japan owes to these communications with Chinese Buddhism.

Taking a general survey, we see a remarkable contrast between the Buddhist missions in China and those in Japan. In China works of charity seem to have played rather an insignificant part and translations of scriptures an important part: the opposite was the case in Japan; no Japanese translation of the Buddhist scriptures was made till quite recent times. Chinese has remained the sacred language in discourses and writings throughout, though there have been some original writings in Japanese. This antithesis is due to the different levels of civilization on which China and Japan stood at the time of the introduction of Buddhism.

1 Travels of Kanjūin, tr. J. Takakusu (in preparation).
MISSIONS (Christian, Early and Medieval).

1. From the close of the Apostolic Age to the conversion of the Empire (A.D. 100-323). Missions in the main external activity of the Christian community in the earliest time. Before the middle of the 2nd cent. (c. 140) Justin Martyr claims for them a very wide field of operations—not mere converts in the Helleno-Roman world, but beyond.

There exists not a people, whether Greek or barbarian, or any other race, by whatever title or manners they may be marked out, however ignorant of art or of agriculture, whether they dwell under tents or wander in covered wagons, among whose prayers are not offered in the name of a crucified Jesus to the Father of all things" (Diad. Trith. 17).

Much to the same effect, but more guarded, Irenæus tells us (c. 180) that even then many barbarous nations held the Christian faith, written more with pen than by heart, but in the Holy Spirit in their hearts (Adv. Haer. iv. 2. Tertullian likewise (c. 200) boasts of the rapid spread of the Church:

"[Portions cut]

yet and yet we have filled every place belonging to you... your very camp, palace... we have left you your temples only. We can count your axes; your number in a single province will be greater" (Apol. 37).

Britons beyond the Roman pale, Sarmatians, Germans, and Scythians are among the more distant peoples whose wars or races as already touched by Christianity (Adv. Julianos, 7). Origen (c. 230-240) declares the gospel not merely to have won myriads of converts among all nations, but, more precisely, to have penetrated into many parts of the world (c. O. i. 27, li. 13); while Arnobius (c. 304) denies that any nation of the barbarians was then without some Christian influence (Adv. Gentes, i. 16, li. 5). From Eusebius (c. 320-370) we hear of the ex-Sieco Panethus of Alexandria undertaking a missionary journey to India about 180 (HE v. 19); here Panethus is said to have found a Gospel of St. Matthew in Hebrew which had been left there by the apostle Bartholomew. Later, he journeyed into Lesser or Third India of some early geographers, including parts of S. Arabian and of Abyssinia, this is a noteworthy journey. Origen again, about 215, was invited to teach the Gospel in Persia and Armenia, and accepted the invitation (Eus. HE v. 19). From Eusebius of N. Mesopotamia, where the Church was firmly settled by 150, Christianity was propagated in the Persian kingdom, even to Bactria. Bishop John, of Persia and Great India, addressed the Nican Council in 325, Armenia, which may, however, be reckoned as usually within the Roman Empire, or at least within its sphere of influence, till the disasters of the later 4th cent., was won by the Church, shortly before the pains of the Empire, at the end of the first 3rd century. Gregory the Illuminator was the leading person of this mission (c. 302), and Armenia was the first country in which Christianity was adopted as the national religion. In the early days of Constantine (c. 311) Bishop Hermogenes of Jerusalem sent missionaries (Ephraim and Basil) to 'Seythia' and to the Crimea, part of which at least may be considered Roman. About A.D. 100 St. Clement, the fourth bishop of Rome, had been martyred at Antioch, and then sent to the Persian province of Sevastopolis.

2. From the conversion of the Empire to the rise of Islam (c. 323-632). Important extensions of Christianity followed the conversion of Constantine.

(a) Africa. Among these one is African. The Abyssinian Church was founded, or at least Christ-
missions (Christian, Early and Medieval)

The radical principle of the new faith, he thought, ‘gave birth to perfection and fixed the will.’ It ‘was exempt from curiosity, and considered only good. No one could distinguish in it what was “useful to man, and should be published under the whole extent of the heavens. . . . And I conceived the magistrates to erect a temple of this religion in the Imperial city, and twenty-one religious men shall be installed therein.’

T'ai-t'ung’s successor was no less friendly.

‘Olopan’ himself became a ‘Guardian of the Empire,’ and ‘Lord of the Great Law.’

Then followed, from about A.D. 683, a time of disfavour and oppression. Chinese conservatism rallied against the new worship.

The Chinese of China (the Sinites) resorted to violence, and spread their calumnies; low-class men of letters put forth frants.

But after a time the Nestorian Church in China, as in India (and about the same time), revived. Fresh missionary enterprise was one cause of this, in both fields.

In A.D. 714 ‘there was a religious man of Great China named Kho, who travelled for the conversion of men; he on arrival in the Middle Kingdom, illustrated persons united to reason the fallen Law.’ In 747 the emperor brought back ‘the venerable images to the Temple of Pelican; he raised new altars; with his own hand he wrote a tablet (probably for the great church of the capital). His three successors all honoured the luminous multitude.’ One observed Christian communism in his council of war, and several governors of provinces rendered perpetual service to the luminous gate.’ The inscription closed with words of thankfulness: ‘never had the mission been more prosperous than when’ in the year of the Greeks 1052 (A.D. 741), in the days of the father of Patricks, the Patriarch Han-sen-yesnash, this man by Pope Gregory I. to England in 597 was concerned with a country lying within the Old Empire, and so outside the proper field of this article. It was, however, the commencement of a movement which in course of time penetrated to non-Roman lands—Scotland, Ireland, Central Germany, the Scandinavian kingdoms—and played a great part in winning them to Christianity, or in turning them from their native Church to Roman allegiance.

1. From the rise of Islam to the Crusades (632-1056).—The vigour, or at least the extent, of Nestorian missions in South Asia in the first age of Islam is evident from a letter of bitter complaint from the Nestorian patriarch to the bishop of Fars (or Persia) about 650. On his neglect, the patriarch declares, that the people of Khorassan had lapsed from the faith, and that India, ‘from Fars to Colom’ (Kulam, or Quilon, near Cape Comorin), was now being deprived of a regular church. We find the same patriarch writing to the Christians of Socotra and of Balkh, and undertaking to provide a fresh supply of bishops for his spiritual subjects of the Upper Oxus. His successor, in order to appease an old quible between the Christian and the metropolitan of Persia, visited Balkh about 661.

But the crowning achievements of early Nestorian enterprises were in China, and of these we have an account in the famous moniment of Sin-gan Fu. In 635-636 a missionary, who appears in the Chinese Record as ‘Olopan’ (Rahbân), entered the ‘Flowery Land,’ and reached Sin-gan Fu, the capital of the Tangdynasty. He had come, we are told, from ‘Great China’ (the Roman Empire); he was received with favour; his teaching was examined and approved; his Scriptures were translated for the Imperial library; and within three years an Imperial edict declared Christianity a tolerated religion. With the permission of the empress (one of the greatest of Chinese rulers) T’ai-t’ung welcomed any religion whose spirit was ‘virtuous, mysterious, and pacific.’

other lands east of the Euxine (see bk. iii. and xi., esp. p. 178 f. of F. de Montfaucon’s ed. [Coll. nova Patr. et Script. Graec. Paris, 1706, ii. 118 ff. = PG lxxviii. 108 f.). At no time, perhaps, till the Roman conquest, was Christianity more strongly supported in Eastern lands than at this time.

(c) Europe.—St. Patrick’s conversion of Ireland (from c. 430) opened to Christendom a land that had never been Romanised, and was practically unknown to Continental Europe, after Honorius withdrew the legions from Britain. The full discovery of Ireland was the work of Christian missionaries. Within a century of St. Patrick’s death the Irish took up a great mission-work of their own. From about 550 to 800 the Irish Church showed its greatest energy abroad, and perhaps reached its highest prosperity at home. Its followers preached with remarkable success among the English who had overrun Eastern Britain. They carried the gospel further into Caledonia than Agricola had ever carried Roman conquest.

Some of their pioneers reached the Orkneys, the Faeroes, the outermost Hebrides, and even Iceland (in which last Irish monks were the first discoverers, in 795).

Despite the fictions with which the early history of Scotland is overlaid, it need not be questioned that some progress was made by Christian missions beyond the birth of Patrick forth even in the 5th century. St. Ninian, the founder of ‘Candida Casa’ in Galloway, who was apparently working in the south-west and centre of modern Scotland about 390-430, is specially associated with these enterprises.

The bishop dispatched to England in 597 was concerned with a country lying within the Old Empire, and so outside the proper field of this article. It was, however, the commencement of a movement which in course of time penetrated to non-Roman lands—Scotland, Ireland, Central Germany, the Scandinavian kingdoms—and played a great part in winning them to Christianity, or in turning them from their native Church to Roman allegiance.

1. From the rise of Islam to the Crusades (632-1056).—The vigour, or at least the extent, of Nestorian missions in South Asia in the first age of Islam is evident from a letter of bitter complaint from the Nestorian patriarch to the bishop of Fars (or Persia) about 650. On his neglect, the patriarch declares, that the people of Khorassan had lapsed from the faith, and that India, ‘from Fars to Colom’ (Kulam, or Quilon, near Cape Comorin), was now being deprived of a regular church. We find the same patriarch writing to the Christians of Socotra and of Balkh, and undertaking to provide a fresh supply of bishops for his spiritual subjects of the Upper Oxus. His successor, in order to appease an old quible between the Christian and the metropolitan of Persia, visited Balkh about 661.

But the crowning achievements of early Nestorian enterprises were in China, and of these we have an account in the famous monument of Sin-gan Fu. In 635-636 a missionary, who appears in the Chinese Record as ‘Olopan’ (Rahbân), entered the ‘Flowery Land,’ and reached Sin-gan Fu, the capital of the Tangdynasty. He had come, we are told, from ‘Great China’ (the Roman Empire); he was received with favour; his teaching was examined and approved; his Scriptures were translated for the Imperial library; and within three years an Imperial edict declared Christianity a tolerated religion. With the permission of the empress (one of the greatest of Chinese rulers) T’ai-t’ung welcomed any religion whose spirit was ‘virtuous, mysterious, and pacific.’
From the end of the 9th cent., however, this Nestorian expansion began to be seriously checked. The Nestorians had been in high favour, not only with the Chinese emperors, but also with the Muhammadan khâlis, as guides to the Greek treasures of letters, science, and medicine. But, as Arabic learning progressed, the Nestorian position became less nexus ample; the spread of Islam tended more and more to contract the area still left open for Nestorian activity in many regions; and in China the old conservatism revived. The disorders of 878 and the years following produced an ascetic reaction; and the 11th cent. saw how fresh triumphs in Central Asia. About 907-08 the Khân of the Kairaites (one of the four main branches of the Mongol Tatars, living in the basin of Lake Baikal) was converted to Christianity, and the Russian Monastery of Arshan was founded by a Christian monk from the ‘extremity of the East’ or the heart of Asia, supposed to unite in himself royal and sacerdotal power and office, to have great military and political importance, to rule extensive dominions, and to uphold the faith of the Cross, though surrounded by unbelievers, and cut off by vast distance from the main body of the Church. This is the story, as it takes shape in the 12th cent., and as it is referred to by the great European travellers of the 13th; not till the 14th (from c. 1350) do we find it transferred to Africa and associated with the ‘Emperor of the Ethiopians’ or Negus of Abyssinia.

In Northern Europe, beyond the limits of the Old East, the Roman missions advanced rapidly in the 8th cent., after success in England had once been achieved, and largely as a result of the reflex action of that English mission. The movement that Gregory had started flowed back upon the Continent with new force from the converted island. In Frisia, Thuringia, and Bavaria the tribes beyond the Rhine were gradually converted by Frankish, Irish, and English missionaries in the obedience of Rome; chief among these were the church-statesman and martyr St. Boniface or Winfrith of Crediton (809-755), who became the ‘apostle of the Germans,’ the first bishop of Mainz and prince of Germany, the reformer of the Frankish Church.

Charles the Great’s very forcible conversion of the Old Saxons, between the Ems and the Elbe, again advanced the borders of Christendom on the North (772-804). The same emperor compelled the Succersi of the Slav Czechs of Moravia to receive baptism (801); but the real conversion of this people, as well as of the neighbouring sister-race of Bohemia, was begun by the Byzantines Cyril and Methodius. The Benedictines, the ‘Bishops of the Slavs,’ from about 863. Cyril had already worked with great success among the (Turkish?) Khazars of S. Russia. Like Chilias with the Gothic script, Cyril and his brother formed a Slav alphabet still prevailing in Russia, Serbia, and Bulgaria, and in Moravia down to the 16th century. Greek formed the basis of the ‘Cyrillic’ letters in most cases; but some were entirely new—either invented by the missionaries or adapted from various Oriental writings. By the diplomacy of Pope Nicholas 1., Cyril and Methodius were brought into close relations with, and obedience to, Rome, and all their Central European work was turned to the profit of the Roman Church. By the end of the 9th cent. the victory of Latin Christianity among most branches of the Greeks in Russia received as

The conquests of Charles the Great brought Frankish Christendom into close proximity to the Scandinavian peoples and the Slavs of the North European plains, and soon after the death of Charles the conversion of these races was seriously commenced. Ansgar or Anskar, the ‘apostle of the North,’ was born about 801, and about 826 left the monastery of Corbie for the ‘Northern mission.’

First he worked (with his helpers) in Norðalbing (or Holstein) on the Danish border, and in Schleswig; obliged to quit this field by a pagan reaction, he made his way even to Sweden in 829, preached before the king, won a great measure of success, and introduced the Bishop of Hamburg. He was driven hence by a Scandinavian invasion about 835; but in 848 he was appointed to the vacant see of Bremen, with which the missionary diocese of Hamburg was now united. He continued his work in Denmark (848-853), won the favour of the Danish king, converted a large part of the people, and again opened his campaign in Sweden (c. 853). At his death in 865 Danish, Swedish, and perhaps even Norse Christianity was firmly established. The bishopric of Hamburg, with its conversion triumph, was not reached for more than a century.

The Bulgarians of the Balkans, settled within the limits of the Old Empire, received Christianity from Constantinople about 845-865, largely by means of the patriarch Photius. This was fiercely disputed between Rome and the East, for the Bulgarian Czar, instructed and probably baptized by Photius, also turned his inspiring mind to Pope Nicholas 1., and received from him a further supply of Christian teaching and practical advice. The struggle over Bulgaria was one of the chief surface-causes for that schism of Eastern and Western Christianity which now became decisive, and was never really healed again. But the Orthodox Church remained important among the Eastern and Central European Bulgars—indeed, even in the 15th cent. the Bulgars of the Balkans were converted by the same pope, and the establishment of Latin Christianity was completed, under the great conqueror Boleslav, who first raised Poland to the position of an important European State.

The earliest mission among the heathen Prussians was probably undertaken by Adalbert (or Vojtysch), second bishop of Prága, who travelled into Prussia in 996, and was martyred on the borders of the Prussian heathen in April 997. This was the ‘Great’ of Poland, who had encouraged this mission, but the establishment of Latin Christianity was completed, under the great conqueror Boleslav, who first raised Poland to the position of an important European State.
The Hungarians, whose attacks on Germanic and Italian Europe were finally ended by the defeat on the Lechfeld in 955, at the hands of Otto the Great, were rapidly won to the Western Church by mission enterprise. By about 975 considerable progress had been made; the reigning Hungarian prince Geisa (972-997) was a nominal, if semi-pagan, Christian; but the complete victory of Christianity was gained by the first king, Stephen 'the Saint,' baptized by Adalbert of Prignitz about 987. Stephen was called to succeed his father Geisa in 997; he took the royal title in 1000; he put down the pagan opposition; and before his death in 1038 he had completed the establishment of the Latin Church in his kingdom, had organized that kingdom with remarkable success, and had given it a first impression of civilization. He founded colleges, hospitals, and monasteries for Hungarians in Rome, Ravenna, Constantinople, and Jerusalem, and his hospitality to pilgrims was so generous that the overland route through the Hungarian plain came to be generally preferred by the mass of those travelling from Western Europe to Constantinople and Syria.

Roman Christianity, as introduced by Ansgar, was the champion of the Slavonic tongue and culture; but he was not popular as a promoter of the religious classes of Denmark in the days of Harold Bluetooth, or 'Blue Tooth,' a century after Ansgar, from about 966. Yet even after this there was a pagan reaction, accompanied by some persecution (1000-04), under Sweyn, or Swegon, the German king of England, the conversion of England was facilitated between the old heathendom and the new faith, but finally embraced the latter, after his triumph in the West. Chot the Great, Sweyn's son and successor (1014-35), was almost a Danish Clovis, and identified his policy with the work of the Christian Church in all ways.

Christianity in Sweden, likewise founded by Ansgar, did not become the faith of the court and the governing classes until the close of the first millennium, under Olaf the 'Lap King' (955-1022). Pagan reactions still occurred till far on in the 11th cent., a final one on the eve of the First Crusade—but the battle was really won by 1020.

The first faint beginnings of (Latin) Christianity in Russia may also be traced back to Ansgar's time. Under Haakon I. (935-961) it began to struggle for predominance; the king for a long time endeavoured to promote it, but in his later years, his political and other reasons, he yielded more to the party of the pagans. He and his Christian struggle for ascendancy till the short and brilliant reign of Olaf Tryggvason (995-1000), who forced the gospel on the 'bulk of his subjects with every kind of violence and every art of persuasion.' The work was completed by Olaf the Saint, the godchild and third successor of Tryggvason (1015-39).

From Norway Christianity was carried to the Norse colonies of Iceland and Greenland. The German prince Thidivald, a missionary, who killed opponents in single combat, was sent to Iceland by Olaf Tryggvason in 997; in 1000 the new faith was accepted (with some important concessions to heathenism) in a National Assembly; and at the same time the gospel reached Greenland, where it soon won the allegiance of the colonists.

Leif Ericson, probably the first discoverer of America, was a Christian, by Olaf Tryggvason in 1000 to proselytize the country, on his return from the court of Norway to his home in Eric's Fiord, but the missionary journey was interrupted by storms, which drove Leif to Vinland (Nova Scotia).

Russia was not really won till the time of Vladimir the Great ('St. Vladimir,' 960-1015). The patriarch Photius, it is true, claims (c. 867) that the fierce and barbarous Russians had already been converted by the missions of the Eastern Church, but even a century later the mass of the people were thoroughly heathen. Decisive Christian influence was then brought with the first Russian state, the princess-regent of Kiev, and widow of the grand-prince Igor, who visited Constantinople in 955, and was there baptized into the Greek Church. The full triumph of the faith was delayed for a generation by the refusal of Olga's son Svyatoslav to abandon his heathenism. The work was finished by Vladimir, son and successor of Svyatoslav, and the most effective and powerful head of the Russian people that had yet appeared, under whom Russia gave premature and deceptive promise of playing a first-class part in the world, in the 10th and 11th centuries. After his capture of the Imperial (Byzantine) dependency of Kherson in the Crimea (on the site of the later Sevastopol), and his marriage with an Imperial princess in 988, he accepted the Christianity of the Eastern Church; and his court and the mass of his people followed the example of the grand-prince of Kiev. The progress of the faith was both rapid and deep; but it did not find a firm hold on the Slavonic tribes until the 11th century, and then only to its Christianity, and no nation perhaps has done more to spread the Christian faith, as it has understood the same. Vladimir died in 1015, but under Yaroslav the Lawgiver (1019-54), who with his father must 'work out the Christianization of the earlier and freer age—before the Tatars—the establishment of the Church was completed.

4. From the First Crusade to the end of the medieval time (1096-1453).—Thus, before the close of the 11th century, nearly all Europe had been converted to Christianity of the Roman or the Greek allegiance, and the borders of Christendom had been extended, to North and East, far beyond the limits of the Old Empire—to Greenland and Iceland, to Norway, Sweden, and Denmark, to the shores of the Baltic, the plains of Poland, the Carpathian highlands, and the western regions of Modern Russia—Kieff, Smolensk, Novgorod. Novgorod enterprise, it is probable, had by 1096 carried the religion as well as the trade of that great Republic of Norway and Sweden, and among some of the tribes of the furthest North and North-East—in the White Sea basin and in the valleys of the Dvina and Pechora.

A little later, in 1121, the bishop of Greenland undertook what was probably a missionary journey to America—he 'seeks Vinland'—but we hear no more of him.

Christendom, as thus constituted, included some pagan enclaves, mainly along the South and East of the Baltic, such as the countries of the Lithuanians, the Finns of Finland (and N. Russia), the Old Prussians, and the Wends and other Slavs of Pomerania and other lands afterwards included in Eastern Germany. In the 12th cent. much of this land began to be colonized. The Finns of Finland were conquered by the Swedes in a war which had something of a crusading character (c. 1157-58), and the profession of the Roman Catholic faith was gradually enforced. Russian Christianity meanwhile appears expanding in the far North and East by its foundation of the St. Michael's monastery, on the site of Archangel (in the 12th cent.), and of the important Novgorod colony of Vyatka, north of Kazan (1174). Latin missions in this territory of Germanism beyond the Elbe in the 10th century. The pagan and anti-German reaction which set in about 983 was equally injurious to Tventicn Christendom and Empire, and much of the new missions of the Polish and German attempts to convert the Pomeranians led to small result till well on in the

708 MISSIONS (Christian, Early and Medieval)
The mission the 1200 Brethren Livonian He wish nominal the 1226. duty of Magdeburg, and the Knights apostle of lessnessed or colonization) stronger. progress accused brought time for them then died in 1196, without having attained the Order trans-ferred mon. German German ticism German founded, seat of the Early 13th, the Order of the sovereignty of all such territories as they had acquired by gift or should win by conquest. A long, bloody, and desperate struggle of over fifty years brought about (by 1233) the complete submission of the Prussians, the partial extermination of the race, the enforced conversion of the remainder, and the German colonization of a great province which was to become one of the most Teutonic of lands, and to give name, by union with Brandenburg, to the chief German state of modern Germany the creator and core of the present German Empire.

The opening of intercourse in 1245 between Western Europe and the new Mongol masters of Asia, through the embassies sent by Pope Innocent IV. to the second crusade, was the beginning of an important and romantic chapter of mission history. Among the distant enterprises of the Christian Church, or the forgotten incidents of past intercourse between remote civilizations, there are few more interesting than the Teutonic missions in Further and Central Asia, and in the border-lands of Eastern Europe. We have seen how, in the earlier Middle Ages, Nestorian missionaries carried the gospel to China, Turkestan, and the Indies. Almost to the close of the crusading period, their creed was practically the sole representative of the Nazarene faith in Asia, outside the narrow limits of the shranken Byzantine Empire and the crusading principalities. But in the 13th cent. the Church of Rome began to be heard of in the depths of Tartary, and between 1245 and 1255 the great overland travellers of the first generation, the Friars John de Piano Carpini, William de Rubruquis or Rubronc, and Andrew of Mina, and the Venetian missionaries, were first in the Volga, or in the Baikal or Balkhash basins. Yet their work was primarily that of diplomatists, of envoys from the pope or the king of France, in their capacity as Christian leaders; the missionary was not prominent in their work; Rubruquis alone, of this famous group, seems to have spent time or energy in doctrinal discussions or proselytizing efforts, and even he does not claim in any way to have founded a mission church in Asia or in Russia.

The Polos, again, who represented Roman Christ-tendom among the Mongols from 1299 to 1295, and gave us our first good account of the Chinese and Indian worlds and of so much of Central Asia cannot be considered active propagandists. Kublai Khan expressed a desire for official Christian in-structors; but his wish remained unfilled. Marco Polo and his relatives were primarily mer-cants, adventurers, men of the world. No mission work can be ascribed to them.

But, while the Polos were still in China, the founder of the Latin churches both in Cathay and in India started on his way. Friar John de Monte Corvino, a Franciscan like Carpini and Rubronc, and a man of untiring energy, courage, and pati-ence, began his life-work in Asia about 1275, and
in 1280 was sent by Pope Nicholas iv, with letters to the great men of the Tartar empire and of neighbouring lands—the supreme Khan in Cathay, the Ihkk in Peking, the "emperor of Ethiopia," and others. Corvino reached Cathay in 1292 or 1295, apparently by the South Asiatic sea-route from Orumz, making a long halt upon the way in the Madras region (or "St. Thomas's country"). He achieved conspicuous success in the Far East; he was repeatedly reinforced from home; and his work led to the creation of a regular Roman hierarchy, with at least two bishoprics, in the "Middle Kingdom." He was even credited, by one tradition, with having established in China the "true faith," so to fix the capital of Prester John" (ib. vi. 70). The "Prester John" and Prince George here referred to are probably of the royal house of the Kerait Tatars, of the Baikal basin, apparently convertors of Nestorian Christianity in the 11th century (cf. above p. 247). Nor was this all. Prince George's heir was named after the missionary; a translation of all the Roman service-books was ordered and begun; many Nestorian Chinese embraced the Christian faith.

With the death of King Goedelon, however, the sky was again overcast; apostasy succeeded conversion; there was no more translation of the Latin ritual; and Corvino was left alone to endure the slanders of the Nestorians—a community professing the Christian name, but deviating from the Christian faith, and now so powerful in Cathay that they would tolerate no Christian rivals (ib. vi. 69).

At last the prospect brightened; a leading enemy confessed; in 1303 the friar was at last permitted to live at court; in 1304 Brother Arnold joined him; with a little more aid the emperor himself, 'Imperator Chinn,' might be gained. The writer was composed to himself, and after spending two years, he was now building a second church in Peking; New Testament and Psalms he had just done into the language most used among the Tatars. For one thing he had beseeched the Church, of his Order. Twelve years had passed in silence; and now a Farrago of incredible blasphemies about the court of Rome, the Order of St. Francis, and other matters of the Western world had been spread abroad by a Lombard surgeon newly come to Cathay—"ante duos annos," otherwise in 1302 or 1303. Brother John, therefore, on every account was anxious for fresh help; but, warned by his own troublous sea-voyage, he laid down the best route for subsequent travellers—by the Crimea, the Volga, and the Steppes. By this overland path, travelling along with the Imperial messengers, a man might get through to Peking in six months.

Corvino's third letter is also from Peking, and was written on Quiquinas in a Sunday, 13th Feb. 1306. Its tone is hopeful; its record is one of steady progress. In 1305 a new church and adjoining mission buildings had been commenced in "Cambales"; and here Messer Marco Millione may have met the man who was to represent Christendom in the "Middle Kingdom" during the next thirty years, as the Venetian merchants had done for the past thirty.

We next meet with Corvino in China itself—at the Imperial city. His second letter (of 8th Jan. 1305) is dated from Peking, or "Cambales," and tells how for eleven years, from 1293, he had laboured in Cathay; how he had struggled against prejudice and calumny; how brilliant successes had followed dismal failures; and how, in 1304, he had at last been joined by a colleague, Friar Arnold of Cologne. Probably he landed at the great port of "Zayton," or Amoy, in Fukien; apparently he made his way immediately to Peking. In any case, he failed to convert the emperor, Timur Olijaith, son and successor of Kublai, and a great favourite of the Buddhist haunts—a nimis inveteratus in idolatris, as Corvino puts it. But he was not long without a triumph. In his first year at Cambales he won the Nestorian Prince George, "of the family of the great Prester John of India" (Walshing, Annoles Minorum, vi. 69). George died in 1299, but before his death he found time to build a fine church for his new allegiance, "called the Roman Church," at a place twenty days' journey from Peking—perhaps at Tatung in Shan-si, just east of the great Huang-ho elbow, where Friar Odoric seems also to have fixed the capital of Prester John." (ib. vi. 79.) The "Prester John" and Prince George here referred to are probably of the royal house of the Kerait Tatars, of the Baikal basin, apparently convertors of Nestorian Christianity in the 11th century (cf. above p. 247). Nor was this all. Prince George's heir was named after the missionary; a translation of all the Roman service-books was ordered and begun; many Nestorian Chinese embraced the Christian faith.

With the death of King Goedelon, however, the sky was again overcast; apostasy succeeded conversion; there was no more translation of the Latin ritual; and Corvino was left alone to endure the slanders of the Nestorians—a community professing the Christian name, but deviating from the Christian faith, and now so powerful in Cathay that they would tolerate no Christian rivals (ib. vi. 69).

At last the prospect brightened; a leading enemy confessed; in 1303 the friar was at last permitted to live at court; in 1304 Brother Arnold joined him; with a little more aid the emperor himself, 'Imperator Chinn,' might be gained. The writer was composed to himself, and after spending two years, he was now building a second church in Peking; New Testament and Psalms he had just done into the language most used among the Tatars. For one thing he had beseeched the Church, of his Order. Twelve years had passed in silence; and now a Farrago of incredible blasphemies about the court of Rome, the Order of St. Francis, and other matters of the Western world had been spread abroad by a Lombard surgeon newly come to Cathay—"ante duos annos," otherwise in 1302 or 1303. Brother John, therefore, on every account was anxious for fresh help; but, warned by his own troublous sea-voyage, he laid down the best route for subsequent travellers—by the Crimea, the Volga, and the Steppes. By this overland path, travelling along with the Imperial messengers, a man might get through to Peking in six months.

Corvino's third letter is also from Peking, and was written on Quiquinas in a Sunday, 13th Feb. 1306. Its tone is hopeful; its record is one of steady progress. In 1305 a new church and adjoining mission buildings had been commenced in "Cambales"; and here Messer Marco Millione may have met the man who was to represent Christendom in the "Middle Kingdom" during the next thirty years, as the Venetian merchants had done for the past thirty.

We next meet with Corvino in China itself—at the Imperial city. His second letter (of 8th Jan. 1305) is dated from Peking, or "Cambales," and tells how for eleven years, from 1293, he had laboured in Cathay; how he had struggled against prejudice and calumny; how brilliant successes had followed dismal failures; and how, in 1304, he had at last been joined by a colleague, Friar Arnold of Cologne. Probably he landed at the great port of "Zayton," or Amoy, in Fukien; apparently he made his way immediately to Peking. In any case, he failed to convert the emperor, Timur Olijaith, son and successor of Kublai, and a great favourite of the Buddhist haunts—a nimis inveteratus in idolatris, as Corvino puts it. But he was not long without a triumph. In his first year at Cambales he won the Nestorian Prince George, "of the family of the great Prester John of India" (Walshing, Annoles Minorum, vi. 69). George died in 1299, but before his death he found
appeal was not unheeded; and the authorities of the Church, fired with his own enthusiasm, took up the mission that he had begun with something of the spirit that he desired.

New conquests seem to have opened up to the Church of Rome. Friar John was created archbishop of Cambaluc (with exceptional powers) in the spring of 1307, and seven bishops (of whom three only persevered) were dispatched to consecrate and support the 1353, but in the summer of 1354. In 1348 these three suffragans—Gerard, Peregrine, and Andrew—reached China, and carried out the consecration of Corvino. Each of them appears successively in the history of the mission as bishop of ‘Zayton’ in Peking, where a powerful Latin mission was gradually established, and where some Genoese traders appear to have settled in the early years of the 14th century. A Franciscan tradition maintained that the emperor Khaides Khan Kalak in China, and grandson of the great Kublai, was converted by Monte Corvino; and it may have been the news or legend of this success that led Clement V, in 1322, to send three more suffragans to the aid of Archbishop John; in any case, we find one of these later bishops, Peter of Florence, becoming head of a monastery in this harbour-town of Zayton.

The remaining fragments of our knowledge of Corvino are soon told. In 1322 he appoints Andrew of Perugia, one of his first group of suffragans, to the see of ‘Zayton’; in 1326 Andrew, writing home, refers to the Archbishop, without naming him; and in 1327 to the year 1354, the Franciscan chronicler, John of Winterthur, makes a confused allusion to what is evidently Corvino’s first Peking letter, supposed by the annalist to be the work of a nameless Franciscan of Lower Germany, possibly the very man—Arnold of Cologne—who, according to the Franciscan tradition, preceded Corvino in Zayton, in 1304. Lastly, in 1328, we hear of the death of that aged missionary who first carried Roman Christianity as an active faith to India and China, who perhaps converted the ‘Emperor of Emperors,’ and who was the first and last effective European bishop in the Peking of the Middle Ages.

The best and brightest hopes of the Chinese mission really closed with the life of its founder; but the Church at home showed no consciousness of the falling energy. A certain Brother Nicolaus, apparently a Franciscan like Corvino, was nominated to succeed him, and, with twenty friars and six laymen, set out for Cathay. We are not sure, however, that he ever reached the Middle Kingdom. He has left no record of his journey to record his mission; whereas he originated in the modern capital, the modern capital, New Delhi, and in 1341.

Shortly, in 1328, we hear of the death of that aged missionary who first carried Roman Christianity as an active faith to India and China, who perhaps converted the ‘Emperor of Emperors,’ and who was the first and last effective European bishop in the Peking of the Middle Ages.

The best and brightest hopes of the Chinese mission really closed with the life of its founder; but the Church at home showed no consciousness of the falling energy. A certain Brother Nicolaus, apparently a Franciscan like Corvino, was nominated to succeed him, and, with twenty friars and six laymen, set out for Cathay. We are not sure, however, that he ever reached the Middle Kingdom. He has left no record of his journey; whereas he originated in the modern capital, the modern capital, New Delhi, and in 1341.

In 1341, Nicolaus, who had been sent by Pope John XXII, wrote to the Great Khan Il-Khan, which was forwarded to the throne of the Middle Kingdom, and recommended the establishment of a Latin mission in the capital, and the creation of a new bishopric in the region.

Meanwhile, a little earlier (in 1338), an embassy from the Great Khan then reigning—Timur Ukhana—had reached the capital of the Khans, and had been received by the Bishop of Peking, who had arrived in 1341. After four years in China, they returned, like the Polos, by the southern waterway from Amoy to Ormuz, making a lengthy stay in Southern India, and finally re-appearing at Avignon in 1353. The historian of this embassy, John de Marignoli, draws a glowing picture of the prosperity of the Roman Catholic mission in the Far East; but of the mission history after this time we know almost nothing. Of one thing we may be certain: the Chinese national reaction which broke out in 1348 set the Ming dynasty upon the throne, and expelled the Mongoi Yuan, put an end for centuries to Western Christianity and to European trade within the Middle Kingdom. When this calamity befell, it is said that the friars, flying across Asia from Peking to Samark and the Volga, carried with them the relics of the Grand Khan converted by Corvino.

In Persia, Mesopotamia, Armenia, and Caucasian lands the religious influence of the Western Church lingered about the middle of the 13th century. The Dominicans penetrated to Tiflis about 1240; in 1235 Rubruquis found several friar-preachers in Armenian towns, and tells us of their travels to Tonk in the twelfth century. It was only with the Tatar conquest of Bagdad, and with the overthrow of the khilijate, in 1258, that Roman Catholic influence assumed real importance in Persia. From this time to the early years of the 14th century, Latin missions and Latin trade played an important part in the empire of the Ilkhan; several of Hulagu’s successors seem to have been ‘almost persuaded’ to accept some form of Nazarene faith; not till about 1301 did they definitely and their religions become united to Islam. Even then, for more than half a century, Rome struggled bravely against the current; though her cause might be declining, she continued to maintain the airs of a conqueror—founders bishops, creating dioceses, vaunting the sub-mission of heretical patriarchs. In 1318 we hear of the inauguration of a complete Persian hierarchy, with a metropolitan at the Ilkhan’s capital of Susian, (a little south of the Caspian), whose jurisdiction included not only Persia, but also Central Asia, India, and ‘Ethiopia.’

Yet after the death of Aba’ Siad, the last true Ilkhan, in 1336, Roman proselytism seems to have completely lost its touch among the Mongols of South-West Asia; in the time of Timur (1338-1405) the Islamizing of the latter was fairly complete. The Middle, like the Farther East, though less completely, shut its doors on Christian enterprise before the age of Henry the Navigator.

The first trace of a Roman Catholic mission in India is the visit of Monte Corvino to the Madras region in 2041-52, an incident of deep significance, though only one of the greater events, leaving a new opening of intercourse between India and Europe, but also as bearing upon the Indian and Chinese enterprises of the Roman Church, and as representing the first joint effort of the Franciscan and Dominican Orders, under papal direction, upon the remoter heathendom of Southern and Eastern Asia. The chief incident in this chapter of European enterprise is the foundation of a Roman mission in the Bombay region and in Malabar, and the establishment of a Roman bishopric near Cape Comorin a generation later (1324-30). In the Letters and Miracles of Bishop Jordanis, the first and apparently the only occupant of this see in the Middle Ages, in the report of John de Marignoli, in the Travel Record of Friar Odoric, and in the official Annals of the Franciscan Order and of the Roman Church, we learn a little about this remarkable undertaking. Its history cannot be traced below the middle of the 14th century (c. 1340-50); but its leader’s references to Latin intercourse with Nubia and Abyssinia, and plans for a European fleet upon the Indian Ocean—like his repetition of Indian prophecies of a coming European domination, and his personal conviction of the case with which such domination could
be established—are among the curious things of medieval literature.

Perhaps something of the vigour with which the Latin missions and Western commerce of this time fought to win and maintain a position in China, in India, and in Persia. During the same period (1245-1570 or 1450) the fate of Christianity and of Islam were decided in Higher Asia, from which Latin missionaries and traders fought no less keenly, no less vainly, than in Cathay and Persia for the victory of their creed and commerce in Turkestan, in the Volga basin, and in the Caspian. But of the latter enterprises we have a slenderer record, and what we know of them is frequently incidental to the larger story of Roman Catholic proselytism in the Celestial empire or in Iran.

Before the great Tatar invasion of Eastern Europe, in 1237-43, Doulainian missionaries had penetrated into the countries lying east of the Middle Volga, even if the expeditions of Carpini and Rubruquis in 1245-55 had not to any large extent the character of proselytizing ventures. It was apparently in the early part of the 14th cent., and especially under Uzbek Khan (1231-40), that Rome exerted herself most strenuously for the winning of the North-Western Mongols, and that the stations at Astrakan on the Lower, and at Kazan on the Upper Volga, at Torlik, and other places on the west shore of the Caspian, at Khiva, near the Lower Oxus, at Samarcand, and at Kulja in the Balkhash basin, by the Russophone-Chinese frontier of to-day, came into being. Even more, perhaps, than in China or India, these Latin outposts, from the Caspian to the Kama, from the Caucasus to the Altai, represent the exploring spirit of the European at this time in its most daring form. For where could the enmity of nations and men be defied more readily? Were all the known world could distance, barbarism, sterility, and fanaticism present a more formidable combination of obstacles?

Even as late as 1362 we find traces of Roman Catholic effort in Northern Tartary. But about this year the Latin missions in Central Asia may be supposed to have ended in a final storm of persecution; and before Timur’s death, in 1405, European missionary activity had really withered away in central and Western Asia.

In Europe the later 14th cent. witnessed the conversion of the last considerable people which still professed heathenism. The ‘Litva,’ or Lithuanians, whose central region is the Vilna country, but who encompass the principality of the Russian nation, now lying, for the most part, helpless and crushed beneath the heel of the Mongol Tartars. Most of Western Russia had fallen into their hands (some valuable districts had become Polish), and the Lithuanian dukes aspired to a great position in the world. In 1382 the Polish throne was left to a woman, the daughter of Lewis the Great; and Yagielo (or ‘Jagellon’), the Litva prince, hoped that by marriage with this latter and spite of her strong distaste for his person he might become one of the chief European sovereigns. His hopes were realized; and a Roman Catholic Polish-Lithuanian State was thus founded by the marriage and conversion treaties of 1386. This State gradually became a Polish empire under one faith and one sovereign, with one (terribly defective) constitution and administration (1501: 1569). With Vitovt, or Vitol, the last great Litva conqueror, ended the brief hope that Litva conversion might after all turn to the profit of the Eastern Church.

For ‘Prince Vitovt,’ the Russian annalist laments, ‘had probably been a Christian . . . but he renounced the Orthodox faith, and afterward the holy churches to service hateful to God’ (Chronicle of Novgorod, a.d. 1579).

In the 14th cent. we also hear of the progress of Russian inroads, the pioneer or attendant of Russian colonization, in the least fertile of North-Eastern Europe. About 1376 the monk Stephen, afterwards canonized as the apostle of Perm (‘Stephan Permsky’), founded the earliest Russian Christian church on the Kama. It was a venture of some risk, for a foreign missionary in this country had been flayed by the natives, while they were yet but infants in the faith.’ Before his death (in 1396), however, Stephen had confounded the heathen priests and sorcerers of the Kama, and overthrown the idols of the Foipel and the ‘Golden Old Woman,’ stopped the sacrifice of reindeer, secured the triumph of Christianity, and founded Moscovite enterprises in a region from which, two centuries later, Moscow overthrew the Siberian Khansates. Under Stephen’s successors, Andrew, Isaac, and Pitirim (1397-1445), the Russian Church took root in the Pechora country, just as it did on the White Sea during the same period, through the foundation of the most famous monasteries of the Far North in the island of Solovki, or Solovetsky (1429). The Solovetsky monastery began with the hermitage of the monk Savvaty, or Savvatii, in 1429; after this, Zosima, with the sanction of Archbishop Ivan of Novgorod, joined in founding the community which became celebrated. On the neighbouring mainland Christian enterprise appears much earlier: the St. Michael monastery, the germ of Archangel city, was established in the 12th cent. by Archbishop Ivan of Novgorod. In Lapland, again, religious enterprise accompanied political and commercial. Like Stephen in the Kama, and Isaac in the Pechora, Ilya of Novgorod and Theodorite of Solovetsky appear as apostles of faith and culture to Kola and the Lapps.

The Portuguese, in their great overseas expansion of the 15th cent., especially from 1415, undertook mission-work with enthusiasm, perseverance, and at least considerable temporary success. Even from the beginning of his enterprise (c. 1415) Prince Henry ‘the Navigator’ did not entirely forget the duty of proselytism, though at first more absorbed by the idea of Crusade. His biographers, even in his earlier years, emphasize his purpose of ‘extending the Catholic religion; and in helping the heathen to better these ways of the holy faith,’ of ‘making increase in the faith of Christ.’ The new slave-trade was used to help to create a native African Church. From 1445 a policy of friendly intercourse with the Negroes, and with the Negro conquest from the Sahara was adopted, as leading to conversion, as well as trade, in place of the raiding and kidnapping of earlier time. For the prince’s purpose was ‘to make Christians of them.’ Professed missionaries were soon (before 1458) sent out to Negroland. And this history of the close of this development, and most of the Portuguese success in the mission-field, belong to times after the close of the mediæval period.

MISSIONS (Christian, Roman Catholic)

When Jesus Christ, the Son of God and the Redeemer of mankind, had fulfilled His divine mission in the world, He sealed it with His death, and endorsed it by His resurrection. He empowered His apostles, and through them His Church, to continue the same in His Name and by His authority. That apostolate of salvation was to be catholic, or universal in space, doctrine, and time, to teach all nations all things at all times 

(Mt 28:18-20). Mindful of the Last Will and Testament of Christ, the Church has always looked upon missionary work as an essential and solvent obligation, and upon its progress as an unfailling gauge of its own apostolic success. Since the day on which she received her baptism by the Holy Spirit, the Church has carried on the apostolate with more or less success in the midst of constant persecutions from within and without, and in spite of unfavourable political conditions and anti-Christian legislation. The missionary character which she displayed in apostolic and sub-apostolic times equally manifested itself in the Celtic, Germanic, and Frankish missions, till the Benedictine, Franciscan, Boniface, Anger, and Adalbert gave to the missionary movement its definite shape. When in subsequent ages new countries were discovered or opened up, the Orders of St. Francis and St. Dominic became important factors in the missions among the followers of Islam and the Mongols, in Morocco and Egypt, in Syria and Palestine, India and China. In 1522 a special missionary congregation was formed out of members of the two orders known as Societas peragruntorologica — Augustinians, Dominicans, Franciscans, or Jesuits — destined for the peaceful conquest of souls. To avoid political troubles and to further the cause of Christianity, Pope Alexander VI. in 1499, by the famous bull of dehacation, the subsequent Ignatius to the Portuguese and the West to the Spaniards, and with a remarkable zeal they devoted their protection for nearly three centuries to the spread of the gospel, though this Protectorate had its serious drawbacks for a healthy development. Franciscan missionaries accompanied Columbus in 1493, and they were followed by others to the Antilles (1500), Mexico or New Spain (1519), Yucatan, Guatemala, and Honduras, Nicaragua and Costa Rica. In S. America the Franciscans had missions in Colombia and Venezuela, in Peru and Ecuador. At the request of the king of Spain the Franciscans went to Chile and Bolivia, to the Indians in the Pampas of Argentina and in Gran Chaco, and in 1538 they landed in Southern Brazil. When in 1604 Narvaez undertook an expedition into Florida, five Franciscans went with him, and from there they extended their work to New Biscaya, New Mexico, Texas, and California. French Franciscans were the first missionaries in Canada (1615) and Nova Scotia, while in Africa they continued their work in Morocco, Tunis, Tripoli, Egypt, and Abyssinia. The Society of Jesus, or St. Ignatius Loyola (1516) in 1554, placed itself from the very beginning at the disposal of the Church for missionary work. St. Francis Xavier inaugurated in 1542 the Roman Catholic apostolate in India, Ceylon, Malacca, and Japan. — RAYMOND BEAZLEY.
MISSIONS (Christian, Roman Catholic)

taken up their work in the field, new missionary societies have been founded during the course of the century, producing colleagues and religious orders of women, formerly almost excluded from the missions, are now to be found everywhere, about 20,000 taking their share in the educational, charitable, and industrial work. To secure the inauguration of a mission universally, at least, the Association for the Propagation of the Faith (1822) and the Society of the Holy Childhood have done good work, while Popes Gregory XVI., Pius IX., Leo XIII., and Pius X., as well as the Roman Catholic Bishops of India, have given their support to promote the revival of missionary work among the heathen.

According to A. A. Kroos (Katholische Missionenstatistik, Freiburg, 1908), the total result of missionary work on the part of the Roman Catholic Church in the 19th cent., amounted to 8,521,963 converts from paganism. This flock is attended by 12,965 missionary priests, of whom 5,269 are natives, 4,885 brothers, and 1,724 sisters, with 30,414 stations, 2,736 churches, 1,784 schools with 201,878 pupils. When we add the results of the Roman Catholic missions since the time of the Reformation, we have in the Roman Catholic mission field 30,000,000 native converts.

The missionary societies and their respective missions given on the opposite page will help the reader to understand the position of the Roman Catholic missions in our own days.

The work in its strictest sense is concerned, Asia may be divided into: (1) India Proper, or the British Empire of India with Ceylon, Burma, and Malay Peninsula, (2) the Chinese Empire, including Mongolia, Manchuria, and Tibet, (3) Indo China, with Siam and Laos, and (4) the Japanese Empire, with Korea. The early history of missions in this continent has been outlined in the "Early and Mediaeval" section, above.

British India and Ceylon, with an area of 1,800,000 sq. miles and a population of some 300,000,000 souls, is one of the most important and probably one of the most difficult mission fields of the Roman Catholic Church. This gigantic and bilingual peninsula, with the three non-Christian religions (Hindu, Brahman, Buddhist, Muhammadan, pagan) and Christian denominations (40), and the prejudices of the highly developed caste system.

In 1888 Vaso de Gama landed in Calicut, the capital of Malabar, accompanied by the Trinitarian Pedro de Covilha, who in 1500 became the proto-martyr of the missions in India. In the same year eight secular priests and eight Franciscans arrived in Malabar. In 1562, three of whom were put to death by the Mahomedans. Yet, in spite of persecution and death, the Franciscans, and after 1568 the Dominicans, went forth to India as the pioneer missionaries, to sow the seed of Christianity in Cochin (1562) and Goa (1510), and gradually extended their work to Bombay, Madras, Danfio, Bengal, Agra, Ceylon, Malacca, etc., under Fathers Antonio do Lual (1530), do Porto, and Padeto. To establish the Church on a firm basis, the Pope in 1554 granted Bishop John of Albuquerque as its first occupant; the see was raised to an archbishopric by Paul IV. (1557) with three suffragans at Cochin (1557), Cranganore (1600), and Malacca (1606). Two Franciscans, James of Borluus and Vincent de Lagos, founded the college of St. Paul at Goa for the purpose of training a native clergy.

In 1571 the Jesuits entered the mission field of India and, at the request of John III. of Portugal, St. Francis Xavier, accompanied by Paul of Camerino and Francis Mansilhes, set out to inaugurate a mission universally. From Goa he extended the faith to the Fishery Coast, Travancore (1544), Cochín, Quilon, and Ceylon. His Jesuit successors took up and carried on his work: de Nobili among the Brahmins of Madura (1605-44), Capuchins (30,000,000 converts), Criminalis on the Fishery Coast (90-130,000 converts) (1602), de Britto among the Maravas (1633), Acquaviva at the court of Akbar the Great; Father Goes penetrated from India into China, and Andruz crossed the Himalayas and went to Tibet. They were followed by other members of the Society such as da Costa, Martinez, Laynez, Benechet, Martin, Calmette, Courdoux, and Constantin Breschi (1700-40), Franciscans in Agra and Delhi, Capuchins in Madras (1612), Barnabites and Augustinians (Archbishop Menezes of Goa (1594-1610) in Hyderabad and Bengal, Theatines and Oratorians (Father Vaz, apostle of Ceylon (1711)) shared with them in this new harvest of souls in India, which had recently been realized to some extent, had Portugal remained faithful to the duties and sacred obligations that she had promised in connexions with the Padroado the right of patronage—which the Holy See from Leo X. to Paul V. (1514-1610) had granted to her kings. When, however, the power and the influence of Portugal began to decline and the Dutch and the English took her field in the East, the supply of missionaries became limited, the missionaries themselves were put to death or expelled, the churches were destroyed, and the native Christians were cruelly persecuted. The Sultan Tippu Sahib of Mysore between 1782 and 1799 put 100,000 Christians to death, forced 49,000 into apostasy, and sold 50,000 to Benga- mudan dealers. The dispute regarding concessions to Hindu usages or Malabar rites, commencing with de Nobili in 1606 and ending in 1744 with the bull of Benedict XIV., Omnimus sollicitutibus, greatly divided the missions, and deprived of the advantage of their work, which suffered a heavy blow by the suppression of the Society of Jesus in the Portuguese dominions in 1755, in the French possesssions in 1762, and throughout the world in 1772. There were at this time 150 Jesuits in Goa, 47 in Malabar, and 22 in Pondicherry. True, their places were partly filled by Capuchins, by the Missionary Seminary of Paris (1776), and by some native priests, who were ordained without a vocation or an adequate training. The missions had been extended to India, which in 1700 numbered some 1,500,000 or even 2,500,000 Roman Catholics, were only rains and wreckages (600,000 or even less) in 1800. The archbishopric of Goa, with its three suffragans of Cranganore, Cochin, and Malacca, numbered 360,000 members with 400 priests, and outside the Goanese jurisdiction there were four missions—Agra, with 5000 converts under the care of 10 Capuchins, Pondicherry, with 43,000 and 6 priests, the Carmelite in the Diocese of Malabar, with 88,000 converts and 5 priests, and Ceylon, with 1 missionary and 20 native priests for 50,000 members. All this was due to the anti-Christian policy of Pombal and the neglected obligations of Portugal's right of the Padroado. The Holy See,

recognizing the inadequacy and the unwillingness of Portugal, began to provide for the neglected field of India. Hitherto only missionaries of Portuguese origin had lived and laboured in the only way of Lisbon and Goa. For years Portugal left the bishoprics vacant and in 1827 withdrew all material subvention. The misery was too evident, and Gregory XVI. took matters into his own hands without consulting the interests of Portugal. India was opened to all Roman Catholic missionaries irrespective of nationality or religious orders. In 1837 the French Jesuits entered Madura, and they were followed by the Germans (Bombay and Bengal, 1854, 1857), the Belgians (Calcutta 1839, Galle 1855), and the Italians (Mangalore 1878). The Missionaries of Paris took up their work in Malacca (1840) and Bums (1857), those of Milan in Krishnagati (1859), Hyderabad (1859), and E. Burne (1868), the Oblates in Jaffna (1847) and Colombo (1853), etc. In 1852 the Propaganda asked Portugal either to fill the vacant sees or to renounce the Padroado. As no answer arrived for two years, Gregory XVI. began to institute vicars-apostolic in Bengal and Madras (1834), in Ceylon and Pondicherry (1856), etc. But new trials and difficulties commenced. The Portuguese Government protested against sending missionaries into India and against the establishment of new vicariates and the cooperation of the kings of Portugal, and the patriarch of Goa placed himself at the head of a schism in India—the Goanese schism—which was maintained under the patriarchates of Goa, Joseph de Cliva, Torres and Pires. This was tried in 1857 to come to a settlement, but this was accomplished only by Leo XIII. on 23rd June 1886. A million and a half of native Christians were again under the allegiance of the Holy See when on 1st Sept. 1888 Leo XIII. established the hierarchy in India—8 archbishoprics: Goa, Verapoly, Colombo, Pondicherry, Madras, Calcutta, Agra, and Bombay, to which Simla was added in 1910, the patriarchate of Goa holding the dignity of primate, and twenty-five dioceses, etc. For the furthering of the mission work Leo XIII. also established a papal delegation for India in 1884, since which then has been administered by the titular archbishops Agiati (1884-87), Ajeti (1887-92), and Zaleski.

About a half of the 17th and 18th years of the Indian missions after the reorganization under Gregory XVI. was a period of reconstruction in gathering together and strengthening in the faith the remnants of the old Roman Catholic congregations. With the decline of the Goanese schism and establishment of the hierarchy a steady flow of conversions began, and since 1857 remarkable progress has been made, more conspicuously among the Tamil races in S. India and Ceylon, less so in the Aryan lands of the north. In 1857 the numbers of Roman Catholics in India were:

To complete the survey of the Roman Catholic missions in British India, we subjoin the general statistics taken from the *Atlas Hierarchic* (1913); the hierarchy consists of 9 archbishoprics, 27 dioceses, 3 vicariats, and 4 prelatures, with 126 foreign and 1259 native priests, 638 brothers, 395 sisters, 3,756 catechists, 4,792 native teachers, 2,215,632 Catholics, 1,106 parishes and 1,956 additional stations, 27 theological seminaries with 1,262 students of theology, 2,843 elementary schools with 162,936 pupils, 519 higher schools with 52,016 boys and 15,273 girls, 2,546 orphanages with 11,206 orphans, 26 hospitals, 17 dispensaries, 1 printing press, etc.

2. China.—The revival of Roman Catholic missionary activity in China after the close of the medieval period dates from the time when the Jesuit Father Ricci, in the reign of Ch'ien-lung (1735), resided in Peking and with the help of his Jesuit brethren started missions at Canton, Nanking, and Kiang-si, receiving converts from the lowest to the lowest classes of the population, till his death in 1610. The persecution which broke out in 1617 was brought to a speedy end by the invasion of the Mancheh Tatars. In 1628 the Jesuit Adam Schall arrived in Peking, and signed great treaties with the Emperor, to the advantage of religion. In the meantime the Dominicans, who in 1625 had established themselves on the island of Purnma, had also opened missions in Fu-kien. One of these Dominican missionaries, the native priest Gregory Lopez, or A-lo, known as the Chinese Bishop, the first and the only Chinaman who has been raised to the episcopate, rendered the greatest services to the Roman Catholic Church in his native land (1854).

At the request of Bishop Paiva, Clement XIII. divided China, which had hitherto been under the jurisdiction of the bishop of Macao, into two vicariates and entrusted the northern part to Gregory Lopez, consecrated bishop at Canton in 1855. About this time the sanhol or learned missionaries Christianity made great progress within a century, and when he died the Roman Catholic Church was in a flourishing condition, honoured at Court, professed by the highest mandarins, and numbering about 300,000 members. Since, however, the Roman Catholic religion was not officially recognized, and the natives were forbidden by law to embrace the faith, the local mandarins put many obstacles in the way and caused many a local persecution, till Father Gerbillon, in 1692, obtained an edict granting liberty to all his subjects to embrace and practise the Roman Catholic religion.

But, whilst the Church was enjoying peace from without, she was sadly disturbed from within by a controversy about the Chinese rites, i.e. the lawfulness of taking part in the Chinese ceremonies in honour of Confucius and of using the word Tien ("heaven") to express the idea of God, and whether the prostrations and sacrifices in honour of Confucius and of the ancestors were merely civil ceremonies or connected with idolatry and superstition. Instead of preaching the gospel, converting the infidels, and applying their abilities to other matters, missionaries of the first class wasted their talents, time, and work in useless and fruitless discussions, for Jesuits and Dominicans were divided in their opinions. Father Ricci, as well as the Chinese bishop, Gregory Lopez, and most of the Jesuit missionaries, considered the Chinese rites as merely civil ceremonies, while the Dominicans strongly objected to this view. In 1693, however, the controversy became acute by the action of Bishop Maigrot, vicar-apostolic of Fu-kien, who condemned the rites and threatened with interdict all missionaries who refused to conform to his command. To settle the dispute, a papal legate was sent to China in 1765, who, owing to lack of tact, only offended the emperor.
In 1706 Kang-hi made all the priests in China promise that they would teach nothing contrary to the teaching of the Church, and in the following year issued an edict, through the Foreign Missions of the Society for Foreign Missions of Paris and Lazarists worked hand in hand for the evangelization of China. Some shed their blood, while others, such as Gerbillion, Bouvet, and Parein, became the scientific advisers to the Court or wrote learned books and treatises or published works of piety for their converts. The emperor Kang-hi, during his long reign of sixty years, treated the Christians with justice, revoked all the edicts against them, raised them to the highest offices of the country, and made the Jesuit advisers to the emperor his companions, friends, and advisers. He died in 1721 without embracing Christianity, although he desired to be baptized in his last illness.

In the 18th century, a reaction took place. His son and successor, Yung-chin (1722-36), drove the missionaries from the Court, and ordered them to leave the country, with the exception of Father Parein and three of his colleagues. As the result of a edict was issued in 1724, the missionaries were seized and banished, and 280 churches were destroyed or turned into pagans.

In 1735 to the throne of China mitigated for a time the severity of the anti-Christian laws, but in 1745 a new persecution broke out in Fu-kien, where, in the following year, Bishop Sanz and four Dominicans were murdered, and soon this flame spread to other provinces. All the hatred was turned against the priests, who were obliged to seek refuge in flight.

Scarcely had the Church recovered from her trial, new misfortunes overtook her. The Jesuits, who from 1733 to 1773 had worked in China as elsewhere, were suspended. At the request of the Propaganda, the Lazarists took charge of the Jesuit missions in China—i.e., four large churches in Peking and the missions in 12 out of 18 provinces—1783. For many years, however, the Lazarists were unable to send a sufficient number of missionaries to continue the work of the Jesuits and the missionaries seem to be all that were present in 1775 to 1796. Finally the French Revolution cut off the supply of missionaries from France, and for over thirty years the Lazarists were unable to send a single priest to China. The Peking church of the Church in China, which in the reign of the emperor Kang-hi is said to have numbered 800,000 members, was reduced at the beginning of the 19th century to 220,000 members; among the Lazarists, the missionaries of Peking and Nanking, the Franciscans in Shan-si, the Dominicans in Fu-kien, the Lazarists in the missions of Paris in Sze-chuan, and the Portuguese secular priests at Macao and Canton.

Yet, in spite of bloodshed and persecution, of cruel edicts issued by the emperors, and the anti-Christian hatred of provincial and local mandarins, and notwithstanding anti-foreign policy fostered by the literati and carried into effect by members of secret societies, the Taiping and Boxers, the Roman Catholic Church has continued to make good progress during the course of the 19th and specially since the beginning of the 20th century. The Franciscans and Jesuits in China, the Lazarists and the Missions of Paris who have been in the Chinese mission field for two centuries, have strengthened their ranks and extended their work, while new missionary societies founded in the 19th cent., such as the Schenfeldt and the Sybil missionary societies, and the missionary societies of the new world, Rome, and Paris, have opened up new fields, and all the European missionaries engaged in China have strengthened their ranks with a large number of native priests.

True, the opening of the 19th cent. did not promise a bright future, for Kia-King (1796-1820) proved to be one of the greatest persecutors, having revived the old anti-Christian laws. Bishop Du-fresse was beheaded in 1825, Father Chet in 1820, and Father Perboyre in 1840. But China was shaken to her very foundations when in 1842 Britain declared war on her and compelled her to open certain ports, while France demanded religious liberty for the Roman Catholic missionaries in 1844. The Chinese Government acceded, and in 1844-45 two edicts were issued which, while still legal recognition in the empire, and in 1846 a third ordered the restoration to Roman Catholics of all the churches which they had lost since the reign of the emperor Kang-hi. The eighty missionaries who at this period were at work in China were strengthened in 1841 by the arrival of the first missionaries of the Society of Jesus, who were once more entrusted with one of their former fields of labour, the vicariate of Kiang-nan.

Though repeatedly granted by the edicts of 1844, 1845, and 1846, they remained a dead letter in many of the provinces in the interior. In 1851 the emperor Hien-feng revoked them, and renewed those against the Christians. The murder of Father Caupedelaine (1856) brought matters to a crisis. France joined Britain in a war against China, and the result was the Treaty of Tientsin (1858) and the Convention of Peking (1860); the churches were restored as well as the religions and charitable institutions, and soon new free passports throughout the empire, the faithful were guaranteed unrestricted exercise of their religion, in the edicts against the Christians were abrogated. Yet the Christians were not safeguarded from local persecutions, and in Kiang-si, Kiang-tung, Sze-chuan, Hu-nan, and finally in Tientsin in 1870. After the accession of Kuang-si in 1875 the Roman Catholic Church enjoyed a long period of peace, and, though the empress Tse-hsi was not favourably to Christianity, yet she did nothing against its progress and development. In 1895 and 1899 the French minister in Peking obtained new concessions for the Christians, among them the privilege that the Roman Catholic mission be an equal partner with the Chinese local authorities; a privilege which was cancelled a few years later.

The political plunders of Europe in China, by taking Kiao-su, which in China is the modern Shan-si (Germany), in 1898, Weihai-wei (Japan, 1898), and Kiang-chou-wan (France, 1898), resulted in the Boxer riots, which brought sad days for the missions. Bishops, priests, and sisters lost their lives; churches, schools, and hospitals were levelled to the ground; and native Christians were slaughtered.

Peace was restored only when a strong international army entered Peking on 14th Aug. 1900 and ten foreign Powers dictated their terms in the Chinese Capital on 7th Sept. 1901. A movement towards the Roman Catholic Church then began, a great
number of Chinese entering the list of the catechumens, and it has steadily advanced since the Boxer rising. The overthrow of the Manchu dynasty in China and the proclamation of a Chinese republic have not interfered with missionary work. Yuan-Shi-Kai, the first president of the new republic, promised absolute religious liberty, mandarins and governors envied the tact of the Roman Catholic missionaries, and Christian and non-Christian factions look with admiration to the spiritual power of the Church whose missionaries are living examples of the poverty, zeal, and heroism of apostolic times.

The flourishing period of the Roman Catholic Church in China, from 1583 to 1723, the hierarchy was not developed, though the Propaganda had resolved in 1634 to appoint a patriarch, two or three archbishops, and twelve bishops. In 1857 Gregory XIII created the diocese of Macao for China, and in 1890 the vicar-apostolic, French Tongking, both in 1569. But, in 1638 Alexander VII erected within the diocese of Macao two vicariates for China, and to satisfy Portugal Alexander VII created the diocese of Peking and Nanking in the jurisdiction of Gansu, which were added three vicariates, viz., Shan-shi, Fu-kien, and Sze-chwan. In 1800 there were in China five missionary districts divided between the Franciscans (Society of Jesus), the Missionary Society of Paris (Sze-chuan), the Lazarists (Peking, Nanking, Hu-nan, Hu-peh, Kiang-si), and the secular priests (Macao) with 200,000 members. Fifty years later the number had increased to 18 districts with 330,000 members, in 1890 to 40 ecclesiastical jurisdictions with 601,000 members; in 1903 we find 43 vicariates with 931,000 members, and in 1911–12, 48 vicariates and prefectures with 1,345,376 members (1913 = 1,341,000; 1914 = 1,346,912) extremely.

According to the Atlas Hierarchicus, we find for China and her dependencies, Mongolia and Manchuria, the following statistics: 49 missionary dioceses or vicariates and prefectures, 195 European and 721 native priests, 247 European and 400 native brothers, 743 European and 1429 native sisters, 537 male and 552 female catechists, 1,929 native teachers, 1,406,685 native Christians and 413,927 catechumens, 1442 principal and 12,580 secondary schools, 9214 churches and chapels, 54 theological seminaries with 16,628 students, 6730 elementary schools with 129,320 (p) pupils, 157 higher schools with 4429 (7) boys and 961 (3) girls, 49 orphanages with 22,156 inmates, 97 hospitals, 650 dispensaries, and 25 printing presses.

3. Indo-China.—Indo-China, the bridge between India and China, the most eastern of the three peninsulas of S. Asia, is politically divided into Upper and Lower Burma (British), the Malay Peninsulas, and New Guinea. It consists of Cochim, which consists of Cochim, Annam and Tongking, Cambodia and Laos, covering a total area of some 735,000 sq. miles with a population of 35,000,000 or 40,000,000 souls. As Burma and the Malay Peninsulas are ecclesiastically included in British India, we have to deal here only with French Indo-China, Cambodia, Laos, and Siam.

The area of French Indo-China has been estimated at 262,000 or 360,000 sq. miles with a population of 16,000,000 or 21,000,000 inhabitants. The first attempts to preach the gospel in French Indo-China were made in the 16th cent. by a French Franciscan, Bonier (1551), and two Portuguese Dominicans, Ga-yi-l of the Cross, who penetrated into Cambodia, and Sebastian de Canto; both were put to death in Siam in 1569. These were followed by Lopez Cordoso, Sylvester Azevedo, and Jahan Madera, who preached in Siam and Cambodia. Father F. P. El F. D. (martyred in 1690) went to Cochim China in 1596. These early missionaries, however, had little success. When the Jesuits engaged in the missions of Japan were expelled in 1614, they made their way to Indo-China; such were Francis Buzoni, Diego Carvalho, and Francis dei Pina, who in 1615 entered Cochim-China and Cambodia in 1617, and they were followed by Alexander of Rhodes, the pioneer missionary to Indo-China, and Father B. J. Shumacher, who, in 1658, extended the work to Tongking in 1629. In a short period of time the Church made such rapid progress that, in spite of repeated persecutions, the number of Christians amounted to 300,000 in 1641, while Father Tissandier on his arrival in 1638 found 300,000 converts under the charge of only 6 Jesuit priests and 30 lay catechists. To plead the cause of the Church in Indo-China and the insufficient number of workers, Father Rhodes returned to Europe to appeal for help. In the meantime persecutions raged against the native Christians in 1614, 1645, and 1647; but, on the other hand, a new missionary society was founded in Paris (Les Missions Étrangères), whose members were to devote the instruments for a rich harvest in the East. Among the first missionaries of the Society of Paris we find Fathers Chevrel, Haingnes, Brindeau, Mahot, and Vachedel, who strengthened the work. Alexander VII, on his arrival in 1632 recognized the actual founders of Les Missions Étrangères—viz., Francis Pallu and Pierre de la Motte Lambert, as vicars-apostolic of Tongking and Cochim China. Under their administration parishes were established, schools and seminaries were opened for the training of a native clergy, and de la Motte founded a congregation of native sisters called 'Les Amatrices de la Croix.' A persecution which broke out in 1664, during which the Jesuits were temporarily expelled till 1669, greatly reduced the number of native Christians, partly by martyrdom, partly by apostasy, so that on the arrival of the missionaries of Paris there were only 100,000 Christians left, but this number was increased to 300,000 in 1681.

To strengthen the position of the missionaries Pallu in 1672 urged Colbert, the French minister, to establish commercial relations between France and Indo-China, and persuaded Louis XIV. to use his influence with King Le-hi-kei for the freedom of Christian worship. In 1678 the vicariate of Tongking was divided into Eastern and Western Tongking; the former, since then divided into Northern and Central, was entrusted to Spanish Dominicans, and the latter to the 'Missions Étrangères' of Paris.

The rapidly growing religious influence exercised by both bishops and priests led to renewed persecutions, which have scarcely been interrupted till our own day. (Independent) French Indo-China, which consists of Cochim China, Annam and Tongking, Cambodia and Laos, covering a total area of some 735,000 sq. miles with a population of 35,000,000 or 40,000,000 souls. As Burma and the Malay Peninsulas are ecclesiastically included in British India, we have to deal here only with French Indo-China, Cambodia, Laos, and Siam.

In 1800 we find the following table of statistics for Indo-China; 1 vicar-apostolic, 5 missionary and 15 native priests, 50,000 native Christians (Missionaries of Paris), Tongking W.; 1 vicar-apostolic, 6 missionary and 63 native priests, 120,000 native Christians (Missionaries of Paris), Tongking E.; 1 vicar-apostolic, 4 missionary and 41 native priests, 140,000 native Christians (Dominicans)

3 bishops, 15 missionaries and 119 native priests, 310,000 Christians.

In the meantime the political movement had taken place in Indo-China which at first seemed very favourable to Diego Adrian, and in reality became the cause of serious hindrances, obstacles, and persecutions. During the civil war which commenced in 1777, Nguyen-anh, the ruler of Cochim China, implored the help of the European
Powers against the rebellions Tai-Shans. Britain, Holland, and Portugal willingly offered their help, but Pierre-Joseph Piganeux de Belioine, since 1841 vicar-apostolic of Cochim China, offered to enlist the help of France, and Nguyen-anh accepted the proposal. Accompanied by Prince Chan, the king's son, Piganeux set out for France, and, asplenio-consume, Mgr. de Lannoy opened a convention on 28th Nov. 1877, according to which France was to assist Nguyen-anh to recover his throne. But to his dismay the bishop, on his return to the East, found that France had abandoned the project, and, therefore, he returned to Cochim. The Annamese were thus left without a country, and in 1850 the French used the opportunity to increase French influence in Annam.

Owing to this success Gallong was favourable to Christianity, which made splendid progress throughout the Annamese empire. This period of peace (1820-29), however, was only a preparation for future trials. In 1819 the Christian community included 4 bishops, 25 European and 180 native priests, 1000 catechists, and 1000 sisters. Gallong was succeeded by his son, Minh-mang (1821-41), a cruel and profligate tyrant and a bitter enemy of the Church. He dismissed his father's trusted friends, summoned all the missionaries to appear at court, and resolved to obliterate the very name of Christianity within his realm. Though his object was defeated for a time, he inaugurated a period of persecution in 1833, ordering all Christians to renounce their faith, to trample the crucifix under foot, to raze all churches and religious houses to the ground, and to punish all the missionaries with the utmost rigour. Hundreds of Chinese and European priests and 4 bishops fell as victims to this tyranny—Fathers Gauglin (1833), Marchand (1835), Cornay (1837), de la Morte (1840), Mgr. Borie (1838), and Mgr. Delgado (1838), 48 years old. The persecution abated under Minh-mang's successor, Thien-tri (1841-47), who did not possess the energy of his predecessor, and was afraid of Britain's successes in China and of a threatened interference of France. Instead of being annihilated, the Church's missionaries and converts increased year after year in spite of all the edicts and tortures of Minh-mang.

In 1840 we find:

Cochim China: 1 vicar-apostolic, 1 coadjutor, 10 missionary priests, 60,000 Roman Catholics.

Tongking W.: 1 vicar-apostolic, 8 missionary and 36 native priests, 160,000 Roman Catholics.

Tongking E.: 1 vicar-apostolic, 1 coadjutor, 6 missionary and 41 native priests, 40,000 Roman Catholics.

3 bishops, 2 coadjutors, 24 missionary and 141 native priests, 42,000 Roman Catholics.

To facilitate the work of the missions in the Annamese empire, Gregory XVI. in 1844 divided Cochim China into two vicariates, Eastern and Western, and W. Tongking into Western and Southern in 1848, while in 1852 Cambois and N. Cochim China were also raised to vicariates. Though King Thien-tri did not shed the blood of the priests, yet they did not escape imprisonment; such were Fathers Gall, Bernex, Charrier, Mache, and Pje, who were secretly killed by the partisans of the Heroine in 1843. This and similar interferences by the French in 1847 and 1856 provoked the resentment of King Tu-duc (1847-83), whose reign of 36 years is one uninterrupted period of persecution of the bishops, priests, and Christians. In 1848 he issued an edict setting a price on the heads of the missionaries, and in 1851 he ordered the European priests to be cast into the sea and the native priests to be cut in two; Fathers Schiffer (1831), Homard, and Minh (1832) were martyred. In 1855 a universal proclamation of Christians followed, and in 1857 Bishop Pellerin, vicar-apostolic of N. Cochim China, appealed to Napoleon III. to intervene. In August 1858 France and Spain, moved by the slaughter of their countrymen, took joint action, and seized Touran (1858) and Saigon (1859). The persecution meanwhile raged with unabated vigour. Bishops Daza, Hermosilla, Garcia, Cuenot, etc.—together 5 bishops, 28 Dominicans, 3 Mlssionaries of the Sacred Heart, 100 native priests, and 5000 Christians were put to death, 100 towns, all centres of Christian communities, were razed to the ground, 40,000 Christians died of ill-treatment, and all the possessions of the Christians were seized. Peace was restored in 1862, when Annam ceded to France the southern provinces of Cochim China and guaranteed freedom of religion to all Christians. That peace, however, did not last long; it was broken by the interference of the French free-booters Dupuis, Dupré-Garnier, and Philastre, and Mgr. Puginier, vicar-apostolic of W. Tongking, because involved to the detriment of the missions. A new treaty was signed between France and Annam on 15th March 1874, which again guaranteed religious freedom and the safety of the missionaries, and from 1874 to 1882 the Christians enjoyed a period of relative peace, till the Annamese monarchy, however, was broken, the people was compelled France to interfere. Hieu was captured on 29th Aug. 1883, the Annamese were defeated, and on the same day the new treaty was signed, and on its ratification, 23rd Feb. 1886, Annam became a French province. The work of the missionaries was accomplished, the Christians, who were considered as friends of France and enemies of Annam, had to suffer severely. At the close of the year 1886 Tongking, Cochim China, and Laos had to mourn the loss of 200 European priests and 50,000 Christians; E. Cochim-China alone lost 8 European and 7 native priests, 65 catechists, 276 sisters, 24,000 Christians, 17 orphanages, 10 convents, and 255 chapels, etc. Yet the blood of the martyrs has been here as elsewhere the seed of Christianity, and surely during the 28 years of peace the Roman Catholic Church has made marvellous progress in Indo-China, and has never been in so flourishing a condition as she is to-day. Of this the statistics given below are ample proof.

Siam.—The first Roman Catholic missionary who entered Siam was the French Franciscan, Bonfer, who preached the gospel there from 1550 to 1554, but without result. He was succeeded by two Dominicans, Jerome of the Incarnation and de Cantu, who converted some 1500 Siamese from 1554 to 1569, when they were put to death. The Dominicans were replaced by Jesuits in 1606 and 1624, and in consequence of a persecution the field was abandoned till 1662, when Alexander Vlad, made it a vicariate and in 1669 entrusted it to the Missionary Society of Paris with Mgr. Lannoy as its first bishop. The Siamese king, Phra Narai, in 1667 signed the treaty of Lowry with Louis XIV. of France, by which the Roman Catholic missionary establishments obtained permission to preach the gospel throughout Siam. This was done till 1727, when a serious persecution broke out which lasted without interruption for three centuries. When the Burmese inroads and wars were over, the 12,000 Siamese Christians were reduced to 1000 with Bishop Florent and 7 native priests in charge. In 1820 and 1830 fresh European missionaries arrived, among them Fathers Bonnot, Barbe, Fulgoix, and Courvey. In 1834 Courvey was appointed bishop, and under his administration Siam had 6390 Roman Catholics with 11 European and 7 native priests. His successor, Bishop Fulgoix (1846-62), the best Siamese scholar and the most successful missionary among the Laos, induced Napoleon III. to renew the French alliance with
King Mongkut of Siam (1856). Thanks to the broadmindedness of Mongkut (1851-68) and Chulalongkorn (1868-1910), the Roman Catholic missions in Siam enjoyed peace under Pallavicini's successors, Bishops Dupont (1862-72) and Vey (1875-1900). In 1875 there were in Siam 11,000 Roman Catholics, 17 European and 7 native priests, with 36 churches; in 1913 we find 24,000 Roman Catholics, 45 European and 21 native priests, 35 European and 87 native sisters, 33 principal and 56 secondary stations, 56 churches, 76 elementary schools with 3740 pupils, and 4 high schools with 858 students under Bishop M. J. Perros.

The missions in Laos, which were commenced in 1760 and formally opened in 1853, were separated from Siam as a vicariate in 1899. In 1913 we find there 32 European and 4 native priests, 8 European and 14 native sisters, 12,500 Roman Catholics with 23 principal and 56 secondary stations, and 64 churches and chapels with 36 elementary schools.

4. Japan.—The existence of the island empire of Nippon, or Japen, 'the Land of the Rising Sun,' was first revealed to the Western world by the Venetian traveller Marco Polo (1255-92) under the name of Cipangu, but was not visited by Europeans until three centuries later. Famous among these was the Portuguese Mendez Pinto, who, on 23rd Sept. 1543, landed on Tanegashima and became instrumental in the conversion of three shipwrecked Japanese, Anjiro and his servants. In 1549 St. Francis Xavier, accompanied by the Jesuit Cosmo de Torres and by Brother Fernandez, set out for Japan and landed at Kagoshima, whence he extended his work to Hirado, Hakata, Yannaguchi, Meako, and Bungo, forming everywhere nuclei of promising Christian centres. Before his departure to China in 1551, St. Francis had obtained new helpers from Goa, such as Fathers Balthasar Gago, Gaspar Berse, Edward da Silva, and Peter de Alcavera, who were later on joined by Gaspar Coelho, Vilela, Louis Froes, Melchior, and Antonio Diaz. For forty years the Jesuits remained in sole charge of the missions in Japan, and their work progressed under the protection of Nobunaga, then actual ruler of Japan (1573-82). Torres is said to have baptized 30,000 converts and built 50 churches from 1549 to 1570. Thirty years after the death of St. Francis, we learn from Coelho's annual report for 1582 that at that time 'the number of all Christians in Japan amounts to 150,000 with churches great and small 200 in number.' Down to the year 1563 there had never been more than 9, down to 1577 only 18, and to 1582, 72 members of the Society engaged in the Japanese mission-field. In 1582 a Japanese embassy, consisting of four Japanese princes and a Japanese Jesuit, went to Rome and were received in audience by Gregory XIII. In the meantime Nobunaga had died that same year, and his successor, Hideyoshi Taikosama, became a fierce persecutor of the Christians, ordering the destruction of all the churches and the immediate expulsion of all the Roman Catholic priests (1587). The return of the Japanese embassy from Rome in 1590 and the arrival of Father Valignani with new European Jesuits effected a change, however, and the Japanese Christians began to breathe more freely. In 1593 the Japanese missions numbered 50 European Jesuit priests, 11 European scholasties, 87 Japanese Jesuit brothers, 5 Japanese and 3 Portuguese novices with 23 residences, and about 300,000 or even 600,000 members. Plus v. had appointed the Jesuit Antonio Vieira, bishop of Japan with Melchior Carnero as his conlocutor, but the latter died at Macao, and his successor, Sebastian Morales, who was appointed by Sixtus v., came only as far as Mozambique. Bishop
Pedro Martinez, also a Jesuit, appointed in 1591 and consecrated at Goa in 1595, arrived in Japan in the following year. In 1593 four Spanish Franciscans—Peter Baptist of San Esteban, Bartholomew Ruiz, Francis de Parilla, and Gonsalvo—arrived in Japan and started work at Mako, Nagasaki, and Osaka, thus trespassing upon the privilege granted by Gregory XIII. In 1595 to the Jesuits and Dominicans in Japan, Cespedez, who accused the Roman Catholic missionaries of being only political agents of Spain and Portugal, and Hideyo shi gave the signal for a crusade against them, during which 6 Franciscans, 13 Japanese Tertiaries, 3 Japanese Jesuits, and 2 servants, known as the '26 martyrs of Nagasaki,' were put to death on 9th Feb. 1597. Instead of destroying Christianity, however, the persecution only helped to make it known. Hideyo shi died in 1598, and his successor, Jeyasu Daifusuma (1605-15), left the Church in peace, which was then governed by the Jesuit Bishop Luiz Serequeta. In 1602 the Jesuits were reinforced by Franciscans, Dominicans, and Augustinians, and by the year 1613 we find in Japan 130 Jesuits and some 20 priests belonging to the other missionary societies. The actual number of native Christians, however, is doubtful. Between 1549 and 1598, 500,000, between 1598 and 1613, 200,000, and between 1613 and 1625, 25,000 adults were baptized, and we are told that the actual number of native Christians in 1614 amounted to 1,800,000. But the peace and prosperity were the prelude to one of the most terrible persecutions begun by Jesuits in the Far East. In 1614 Bishop Serqueyra died and was succeeded by the Franciscan martyr, Bishop Louis Soto le, who was burned alive in 1624. In order to weaken the Christians the Shogun arrested 117 Jesuits and 27 other missionaries, together with the Roman Catholic leaders, and transported them to the Philippines (1614); but many of them returned.

Jey sau died in 1615 and was succeeded by Hidetada, who renewed the edicts of his father, and from 1617 to 1640 the persecution went on without interruption. The 'Great Martyrdom' took place at Nagasaki on 2nd Sept. 1622, when 19 Jesuits, 6 Dominicans, 4 Franciscans, and 32 Japanese were put to death. The following Shogun, is said to have killed about 20,000 every year from 1623. Over 200 of the missionaries, some 800 native catechists, and 200,000 Christians suffered actual martyrdom. From 1641 to 1688 Christianity was exterminated in Japan; though sporadic efforts were made by Jesuits in 1642 and later, all these failed. Father John Sidotti was the last Roman Catholic priest who entered Japan (1709), and he was put to death on 15th Dec. 1715.

The blood of so many martyrs, however, was not destined to be shed in vain. When in 1632 Gregory X VI erected the vicariate of Korea, Japan was included. In 1644 Father Forcade and Kofu, a lay brother, landed in Korea, and they were joined by Father Loturdu in 1646. In the same year the vicariate of Korea was erected with Father Forcade as vicar-apostolic. But Japan was still a foreign land till, in 1853, the United States broke down the barriers by a treaty, which was followed by others with Great Britain, Russia, etc., and Father Petitjean was able to build a Roman Catholic church at Nagasaki, which, on 17th March 1855, became instrumental in finding that there were in Japan still 25 Christian villages with several thousand Christians who for 200 years had kept the faith. In 1866 Petitjean was appointed vicar-apostolic. Though some minor persecutions broke out, the Church made progress, and in 1873 the laws and edicts against Christianity were abolished. In 1876 Japan was divided into two vicariates, and under Leo XIII. two more were added in 1888 and 1881, till on 15th June 1891 Leo XIII re-establish the Roman Catholic hierarchy, i.e., the archdioceses of Tokyo with three suffragan sees of Nagasaki, Osaka, and Hakodate, which were placed under the care of the Missionaries of Paris, to which have since been added the prelatures of Shitoyu and Seidle. While the Church in Korea, which in 1570 amounted to 10,000 with 13 priests, reached 25,000 in 1859, 44,000 in 1899, and 100,000 in 1899, the Church in Japan with 150 European and 33 native priests, and 69,755 in 1913.

Korea.—From 1636 to 1875 Chosen, the 'Land of the Morning Calm,' was known only under the name of the 'Hermit Kingdom of the Far East,' on account of the rigorous enforcement of her policy of isolation against all foreigners. Yet Roman Catholic missionaries made their way and found their faithful children in Korea, whose very name became known in Europe as the symbol of persecution and martyrdom. When, in 1592-94, Taiko Sama of Japan sent his soldiers to Korea, the Jesuit Gregorio de Cespede accompanied the expedition as chaplain, and after the capture of Pusan and the taking of Osako, the Roman Catholic missionaries sent him to the Jesuit fathers in Japan, and in his spare time instructed the Koreans also, baptizing, on his return to Japan in 1595, some 300 Korean prisoners of war. Nothing, however, is known of the fate of his converts so long as unknown.

In 1715, the 17th cent., all traces of Christianity had disappeared from the land. In 1786 Seng-hun-i, one of the Korean literati, joined the annual embassy to Peking and interviewed there Alexander de Govea, the Franciscan bisho who baptized him by the name of Peter. On his return he was joined by two friends, Peki and Ill-sini, who became the pioneers of Christianity in Korea. From 1754 to 1794 they received some 4000 neophytes into the Church, who were persecuted by the Koreans from 1785 to 1794. An attempt made by de Remedios in 1791 to penetrate into Korea failed. In 1794 Father Jacob Tan (alias Padre Jayme Velloozo), a Chinese priest, succeeded in entering, and for nearly six years continued in the country. In 1801, when he was put to death by the Christians in Korea remained without a pastor in spite of repeated requests both to Peking and to Rome, owing to persecutions in China. In 1827 the mission field of Korea was entrusted to the Societe des Missions Etrangeres of Paris, and on 9th Sept. 1824 Korea was made a vicariate with Bruguiere as its first bishop, Fathers Chastan and Maniart being his only assistants. The bishop died in the sight of Korea, while Fathers Maubant and Chastan Kim Island, and they were joined by Father Leturdu in 1646. In 1598 the vicariate of Korea was erected with Father Forcade as vicar-apostolic. But Japan was still a foreign land till, in 1853, the United States broke down the barriers by a treaty, which was followed by others with Great Britain, Russia, etc., and Father Petitjean was able to build a Roman Catholic church at Nagasaki, which, on 17th March 1855, became instrumental in finding that there were in Japan still 25 Christian villages with several thousand Christians who for 200 years had kept the faith. In 1866 Petitjean was appointed vicar-apostolic. Though some minor persecutions broke out, the Church made progress, and in 1873 the laws and edicts against Christianity...
and Davely) and 10 priests. In 1866 the persecution raged again, and during it, 2 bishops with 7 priests were put to death and 3 priests had to leave the country. In 1867 attempts were made to reconcile the Hottentot, but after the mission under Bishop Haruy, who had reached the south coast of Angola in 1863, was expelled by the Hottentot and died in 1875. The treaties of Korea with Japan, the United States, Britain, France, and Austria again opened the doors of the Hermit Kingdom. Bishop Pinto found on his arrival in 1883 only 13,000 Roman Catholics out of 25,000 in 1865, but the flock numbered 16,500 at his death in 1890. During the long reign of Bishop Mutel (since 1890) the missions in the west of the kingdom in 1895, a Japanese protectorate in 1905, and a Japanese general residency in 1910, have enjoyed freedom. In 1897 we find 32 European and 3 native priests with 32,217 members in 697 stations. In 1899, 66 Europeans and 3 native priests with 68,016 members. At the request of Bishop Mutel, Korea was divided in 1910 into the two vicariates of Seoul and T'aian, and numbered, in 1913, 38 Europeans and 17 native priests, with 59,700 members and 975 out-stations, and 150 churches with 89,500 members.

II. AFRICA.—There is hardly a more glorious chapter to be found in the annals of the Roman Catholic Church in the Dark Africa. After the decay of early Christianity there was, for a few centuries, the spread of Christianity among the Abyssinians, Africa remained for many centuries a closed continent to Christianity, though the Franciscans and Dominicans who settled, and the Jesuits and the Missionaries of the Order of Our Lady of Mercy tried their best in the 13th, 14th, and 15th centuries, to alleviate the lot of Christian captives and to instil the lessons of Christianity into the hearts of the Mahommedans of Morocco, Tunis, and the Barbary States. When in the 15th cent. the Portuguese, under the leadership of Henry the Navigator, son of King John I. of Portugal, began their discoveries and expeditions along the west coast of Africa, the Portuguese Cape Colony (1482) reached the Rio de Oro (1482), and doubled Cape Verde (1444), they unfurled the banner of the Cross. In 1471 they crossed the equator, Diego Cam discovered the Congo (1484), Bartholomew Diaz doubled the Cape of Good Hope (1488), and Bartholomew Dias explored as far as Mozambique, Malindi, and Mombasa (1497). Pope Alexander VI. in 1494 assigned to Spain all the lands discovered and still to be discovered 370 miles west of Cape Verde Islands, and all the lands to the north, and to Portugal all the lands to the east, with the missionans, the east QUESTION: and west. Dominicans and Franciscans, Augustinians and Jesuits, Capuchins and Carmelites, supported by secular priests, and one mother, in carrying into effect the command of Christ 'to teach all nations.' Bishops were founded on the adjacent islands of the Dark Continent, viz. Las Palmas in the Canary Islands, Funchal in Madeira (1514), Sao Thome (1534), etc. The King Emmanuel of Portugal took a special interest in the evangelization of the Congo, and from 1603 to 1612 sent annually some missionaries of different religious orders (Dominicans, Franciscans, and Augustinians), who supported by the native King Alphonso, made good progress. The bishop of St. Thomas (Gulf of Guinea), to whose jurisdiction the Congo belonged, adopted the title of bishop of the Congo, transferred his seat to San Salvador, and erected a chapter consisting of 28 canons. As the missions already engaged in the Congo did not suffice for the growing demands, St. Ignatius, at the request of the king of Portugal, sent some Jesuits—among them Father Vaz, Ribera, Diaz, Soberan, Noguera, Gomez, etc.—who founded a college at San Salvador. From 1534 to 1592, 8 bishops occupied the see of San Salvador, and, when in 1592 the bishopric of Angola was united with that of the Crown the see of San Salvador was transferred to St. Paul de Loanda. With the growth and expansion of Portuguese power in the E. and W. Indies, however, Portugal neglected to supply the Congo with a sufficient number of missionaries. So that in 1587 we find only 12 priests for thousands of Christian villages. King Alvaro II. therefore applied to Rome for help in 1585; but it was only in 1610 that 6 Italian Capuchins under Father Francisco Pamporna were appointed to South Africa. The two riding between 1648 and 1653 by Italians and Portuguese, such as Dionysius Mareschi, Donavente Carriego, Joseph of Antiquera, Jerome of Puebla, Francis of Monteleone, and Anthony Zachelli, as well as by Carmelites who arrived in 1655. It seems that these earlier missionaries extended their work as far as Stanley Pool and to the valley of the Kasaai. Carmelites, Franciscans, Jesuits, and secular priests also started missionary work in Senegaluin, Sierra Leone, the Gold Coast, Benin, Angola, and Upper and Lower Guinea. Among these pioneers we may mention the Jesuits Barreiva (†1612), Fernandez, Barros, Almeida, Neto, and Alvareas, who were appointed to Senegal, and Angels of Valencia. On the east coast missionary work was commenced soon after its discovery—in Mozambique by the Jesuits Sylveira (martyred 11th Aug. 1561), Acosta, and Fernandez; at Sofala by the Dominican John dos Santos, John de Pietate, and Nicholas de Rosario; in Madagascar by the Lazarists (1648) Nacqur de Champmartin, Gendre, and Bourdais (1657). In Egypt the Franciscans continued their work among the Copts, and among the Ethiopians (Bermudez, John Nuiez, Andrew Oviedo, Melchior Carneiro, etc.).

The various wars waged between the Dutch and the Portuguese, the slave-trade which was encouraged by the Christian European Powers, the civil wars among the natives, the more promising colonies in the east and in the west, and the decrease of Portuguese power in Africa soon made the Portuguese forget their solemn obligation, and, instead of furthering the welfare and evangelization of the natives, they only became a standing obstacle to the work of evangelization, since they would not allow any missionaries but Portuguese in their colonies. Unable—or, rather, unwilling—to support the missionary enterprise in the west and east coasts of Africa become weaker and weaker, and it was the political, and religious disturbances, such as the sectarian policy of Pombal, the anti-Roman Catholic attitude of Holland and England, and, finally, the French Revolution, brought about a religious awakening in Africa to a stupend roll. According to Louvet (Les Missions catholiques au XIXe siècle), the total number of Roman Catholics of continental Africa at the beginning of the 19th cent., including the United States and Abyssinians, amounted to 47,000.

With the formation of the Society for the Propagation of the Faith in 1822 we perceive the first signs of a change for the better. The conquest of Algiers by France in 1830, which broke down the ramparts of Mahommedan fanaticism, and the opening of the missions among the Copts in Egypt and their kindred in Abyssinia by de Jacobs in 1830 were the preludes to the Christian awakening of the Dark Continent. The son of a Jewish Rabbi was destined to take up anew the Roman Catholic missions in Africa and to inaugurate the magnificent apostolic movement, for Liefmann became the founder of the Missionary Society of the Holy
Heart of Mary and the Holy Ghost, usually called the Congregation of the Holy Ghost, whose members (since 1845) have devoted themselves to the evangelization of the Negroes in Senegambia and Gabun (1844), Sierra Leone (1864), the Portuguese Congo (1873), French Guinean (1878), Cambelasia (1879), Kumeue (1882), Louango (1883), Lower Nigeria (1885), Ubangi (1887), Zambesia (1888), N. Madagascar, etc. When Mgr. Marion de Breuil returned from the depth of India to France in 1858, his feelings were drawn to the Dark Continent, and he founded the African Missionary Society, whose base was at Kilatata, in the districts known as the 'White Man's Grave'.

From Senegal came the Oblates, a branch of the Congregation of the Holy Ghost (1844), in the Transvaal (1895), and to the Cape Province in 1974, they have 81 priests, 53 brothers, 244 sisters, 2,250 catechists, 55 native sisters, 2 native priests in minor orders. They have 17,074 students, 79,521 pupils, and 341 charitable institutions.

Besides these three African Missionary Societies, 

1. The Congregations of the Holy Ghost, founded 1875, in the Congo, Nigeria, and in the Congo Free State (Mill Hill), and in the Transvaal, Orange, Kimberley, Lower Cambeasia, Basuto, etc.

2. The Franciscans, (1523), and the Dominican, (1535), and the Jesuits, (1542), and the Sulpicians, (1740), and the Oblate of Mary Immaculate, (Natal), the Franciscans, (1523), and the Dominican, (1535), and the Jesuits, (1542), and the Sulpicians, (1740), and the Oblate of Mary Immaculate, (Natal), the Transvaal, Orange, Kimberley, Lower Cambeasia, Basuto, etc.

3. The Oblate of Mary Immaculate, (Natal), the Transvaal, Orange, Kimberley, Lower Cambeasia, Basuto, etc.

4. Back to Africa, from the highlands of Abyssinia, the Soudan to the Cape, on the great rivers and lakes, in the desert plains, and in the equatorial forests, in the heart of the continent and in the islands, the Cross of Calvary is found to-day set up as the sign of redemption. Where the missionaries have been able to labour they have laboured, and where they could only die they have died. According to the Katotheke Missionen, Oct. 1912, Africa, as far as it is a missionary country, consists of 6 dioceses, 44 vicariates, and 28 prefectures apostolic, 1 prelature nuntius, and 7 independent missions, with 1,600,183 native members and 15,000 catechumens. When we add the dioceses of Africa and her islands which are not under the jurisdiction of the Propaganda, and, therefore, do not fall under the heading of the African mission field strictly speaking, we find the total number of Catholic missions amounting to 3,742,000—insignificant when compared with the number of inhabitants, which is said to amount to 165,000,000 or 180,000,000 or even 200,000,000 souls.

III. A. CH. AMERICA—When, in 1492, Columbus landed on the Island of San Salvador, he found a brown-skinned people whose physical appearance confirmed him in his opinion that he had at last reached India, and he called the inhabitants, therefore, 'Indios,' or 'Indians.' Subsequent navigators and explorers found that the same race was spread over the whole continent from the Arctic shores to Cape Horn, and that the people were more or less everywhere alike in their physical features, while they extended the name 'Indians' to these aborigines in both S. and N. America with the exception of the Eskimos in the extreme north. Much has been written about the atrocities and cruelties of the white invaders, who, in their zeal for the conquest and settlement of the new country, extended the name 'Indians' to these aborigines in both S. and N. America with the exception of the Eskimos in the extreme north. Much has been written about the atrocities and cruelties of the white invaders, who, in their zeal for the conquest and settlement of the new country, culminated in the 'Columbus expedition,' which was successful in the physical conquest of the Indian tribes.
Iglesias, to Chile and Paraguay, and later on to Maranhão. Names such as Nuñez, Coren, Nobrega, and Anchieta have become household words among the Indians in S. America, while the name of Azpevedo, who, with 20 of his fellow missionaries, submitted an appeal in 1550 to the Pope, stands for loyalty to duty. At the time of the suppression of the Society of Jesus the Jesuits were represented in Brazil by 445, in Maranhão by 146, in Paraguay by 564, in Mexico and California by 572, and in New Granada, Chile, Peru, Coahuila, by 192, 212, 520, and 209 members respectively.

Equally famous among the defenders of the Indians are the Dominicans Las Casas, Louis Bertrand, Antonio Montesino, Dominicus de Betanzos, Dominicus Ortiz, the Augustinian Francis John de Molina, etc. With the suppression of the religious orders and the downfall of the Spanish supremacy in S. and C. America came also the destruction of the flourishing missions. The Christian Indians and Negroes were allowed to drift, nay, were often driven back into paganism, their plantations were destroyed or ruined, their schools and churches were reduced to ashes, and their missionaries often rendered helpless among them by the self-sacrificing heroes of Christian charity during two hundred years with the greatest outlay of money and valuable lives was destroyed. The political upheaval and the monastic influence of the beginning of the 19th cent., with the subsequent secession of priests in the S. American Republics, scarcely allowed the missionaries to resume their work among the remaining Indians and Negroes. In recent years the Propaganda has once more appealed to willing workers among the various religious orders and missionary societies for help to establish missionary work among the Indians; yet it remains a difficult task to obtain a precise record of their work, since most of them are at the same time engaged among the numerous European colonists in the S. American Republics. In the following we give only the names of the vicarates, prefectures, and missions in the various States, the dates of their erection, and the missionaries engaged.

Colombia: V. González (Capuchins), 1905; V. Casanare (Augustinians), 1895; V. Llanos de S. Martin (Society of Mary), 1925; P. Capuchins (Capuchins), 1914; P. Choco (Inmaculate Heart of Mary), 1898.

Guatemala: V. Donars (Brit. Guiana) (Jesuits), 1837; V. Suriname (French Guiana) (Congregation of the Holy Ghost), 1912; V. Brasil (Brazil) (Oblates of Mary), 1895; V. Mendez y Gualiqua (Salvador), 1893; V. Napo (Jesuits), 1837; V. Zaniro (Franciscans), 1837; Peru: V. Pucallanas (S. Louis, Augustinians), 1900; P. Esquivel (Franciscans), 1900; P. Urbamad (Franciscans), 1910; M. Putumayo (Franciscans), 1912; Brazil: P. Santarem (Franciscans), 1903; M. Rio Branco (Benedictines), 1907; P. Araguaia (Pilgrims), 1911; P. Tocantins (Congregation of the Holy Ghost), 1916.

Argentina-Paraguay: V. Patagonia (Salvador), 1844; P. Patagonia (Salvador), 1850; Grand Chaco and Pampeas (Franciscans).

Chile: V. Altagracia (secular priests), 1835; V. Tarapacá (secular priests), 1894; P. Araucania (Capuchins), 1891; Mexico: V. California, 1874.

Colombia: V. Brasil (Brazil) (Jesuits), 1888 (1890), Antilles: V. Curacao, 1842; V. Janica (Jesuits), 1837.

Kroes (op. cit.) reckons the number of the unconverted Indians in America at 1,250,000 or 1,275,000, i.e., Brazil, 600,000; Paraguay, 100,000; Argentina, 30,000; Chile, 50,000; Peru, 350,000, Bolivie, 250,000; Colombia, 150,000; Venezuela, 25,000. To these must be added some 200,000 or 220,000 Coobies, Negroes, and Chinese. In these missions European colonists have always been in the majority of the Indians, etc. According to Kroes, some 401,000 are Roman Catholics, and, allowing some 150,000 as being European, there remains a Roman Catholic Indian and Negro population of 250,000 souls. In the whole mission field there were 476 priests, 236 brothers, 435 sisters, 450 missionaries, and 340 in churches. In C. America and the W. Indies there are still 240,000 or 600,000 pagans, among whom Jesuits, Dominicans, Redemptorists, and Lazarists are at work among 300 missionaries among 200,000 native Roman Catholics.

The United States of America is composed of former British, Spanish, and French colonies, and their population—91,972,266 (Census of 1910)—consists of a small remnant of the original American Indians (279,000), according to some, 350,000 and to 444,000, and 160,000 Negro slaves and their descendants (9,827,563), of yellow or Asiatic immigrants (146,803), and of white or European settlers and their descendants. In the former Spanish, (Florida, Texas, New Mexico) and French (Louisiana) colonies the Roman Catholic missionaries have worked for the conversion and Christian civilization of the Indians from the beginning of the colonial epoch. Dominicans entered Florida in 1560, and were supported in 1568 by the arrival of 12 Franciscans, 5 secular priests, and 8 Jesuits, among whom we may mention Fathers Martinez, Segura, de Quiros, and de Solis. In Texas and New Mexico Spanish Franciscans—Marcos de Nizza, John of Paulilla, and Louis of Escalon—had commenced in 1529, but made little progress. In Arizona Francis of Porras (1683) and in California Juniper Serra (1784) commenced missionary work among the Indians, and along the Mississippi we find Father Marquette. The conquistadores—N. Bertrand (1529) and Father Gomes ("The Indian Mission in the French West Indies," in The Catholic Mind, no. 13 [New York, 1904]), there remain in the United States some 270,000 Indians, of whom 100,000 are Roman Catholics, 40,000 Protestants (74,003), 110,000 "follow the old ways," and 20,000 have no church affiliation.

According to Streett (Amer. Historical Rev., 1914), there are in the United States 440,931 Indians, of whom 64,741 (67,255) are Roman Catholics. These are scattered in 33 dioceses, possess 306 churches, and are attended by 163 priests (Beneficentines, Franciscans, Jesuits, etc.) and 291 sisters; 100 schools are attended by 7,399 children. Famous among the Indian missionaries in the 19th cent. are Father de Smet and Bishop Marty. The Negro population in the United States (one-ninth of the whole population), descendants of the slaves who for two hundred and fifty years had been imported into America, have for the last fifty years been emancipated, but are still treated as outcasts. Owing to hostile legislation, the Roman Catholic Church in the United States, 1825 (1852); Calvene (French Guiana) (Congregation of the Holy Ghost), 1643; E. Rodriguez (Dominicans), 1895; V. Mendez y Gualiqua (Salvador), 1893; V. Napo (Jesuits), 1837; V. Zaniria (Franciscans), 1837; Peru: V. Pucallanas (S. Louis, Augustinians), 1900; P. Almamy (Franciscans), 1900; M. Putumayo (Franciscans), 1912; Brazil: P. Santarem (Franciscans), 1903; M. Rio Branco (Benedictines), 1907; P. Araguaia (Pilgrims), 1911; P. Tocantins (Congregation of the Holy Ghost), 1916.

The same course was pursued at the third council (1884) by Archbishop (Cardinal) Gibbons, who established a commission for Roman Catholic missionary work among the Negroes, and the Plenary Council of Baltimore (1856), Archbishop Spalding raised his voice for their conversion. The "Cardinal Board for Mission Work among the Colored People," in its semi-annual publication, 1912, gives the following statistics: churches, 72; priests work-
MISSIONS (Christian, Roman Catholic)

ing exclusively for Negroes; 99 schools, 120 with 11,270 pupils; charitable institutions, 57 with 2520 inmates; Roman Catholics, 260,000. Two hundred priests devote themselves exclusively to coloured missions, namely the Josephite Fathers and the Fathers of the African Missions ( Lyons). Besides these two there are eight oratories, one for the Jesuits, Franciscans, Dominicans, Marists, Lazarists, Fathers of the Holy Cross, Fathers of the Divine Word, and the Capuchins (see also Our Negro Missions, by the Fathers of the Divine Word, Techyn, III., U.S.A., 1914).

In Canada the descendants of the aborigines are divided into four families: (1) the Huron Iroquois, (2) the Innuit or Eskimos, (3) the Dénès, (4) the Algonquins. In 1605 their total number amounted to 107,657, of whom 38,553 lived inside, the others outside the reservations. In the earliest days of the Catholic missions the Hurons converted in 1615, the Jesuits in 1625, and the Sulpicians in 1657 devoted themselves to the conversion of the Algonquins and the Huron Iroquois—some 100,000 souls. Famous among these missionaries are d'Olbeau, Le Caron, Vial, Sagard (Franciscans), Bébè, Lallemand, Lejeune, Garnier, Chabanel, Daniel, Jogues, Jolliet, and Marquette (Jesuits). In 1659 the ecclesiastical hierarchy was established in Canada, and the Church entered from the missionary to the colonial period among the immigrants.

Of the 107,657 Indians to-day 35,060 are Roman Catholics; the remainder, with the exception of 10,906 who are still pagans, belong to various Protestant denominations, who are scattered in 155 dioceses. The Roman Catholics are attended by some 160 priests in over 110 stations, with 104 schools, and 290 sisters.

IV. OCEANIA.—The southern realm of islands which extend the Pacific Ocean has been named Oceania, and for convenience of reference has been divided into four districts, viz: Australia with Tasmania, Melanesia (New Guinea, New Pomerania, Bismarck Archipelago, Solomon Islands, New Hebrides, Loyalty Islands, New Zealand), Micronesia (Marianne, Caroline, Marshall, and Gilbert Islands), Polynesia, comprising all the smaller islands between Hawaii in the north and Easter Island in the east.

Discovered in the 16th and 17th centuries by Spanish and Portuguese admirals, such as Balboa, Magellan, Mendana, Quiros, and de Torres, who were followed by Dutch, English, and German explorers—Roggeveen and Tasman, La Pérouse and d'Urville, Cook and von Humboldt—they remained more or less in obscurity till the beginning of the 18th and even the 19th century. That heroic epoch of missionary colonization on the islands soon after their discovery, although only occasionally, is certain. Padre Pigafetta accompanied Magellan to the Ladrone Islands in 1521, another priest landed on the Marquesas in 1565, two Spanish mission residences visited Tahiti in 1774, and Abbé de Quelen converted a few natives in the Hawaiian group in 1819. As Spanish and Portuguese supremacy declined, the discoveries were of little consequence to Christianity, and, even in the political revolution in Europe, the suppression of religious orders, and the scarcity of missionary vocations and pecuniary support, the Roman Catholic missions were to a large degree forgotten. In 1856 the Marianne and Caroline groups were the only ones where progress was made. The former was visited by the Jesuit Diego de San Vittore, who landed with four other Jesuits on Guam in 1668, and these were followed by five more in 1670; but nearly all the Spanish missionaries were killed in 1670, 1672, and 1681. From 1700 to 1766 the Marianne missions were entrusted to German Jesuits, who in 1731 extended their work to the Carolines. After the suppression of the Jesuits the Marianne Archipelago was handed over to Spanish Augustinians in 1786, and the latter were replaced by German Capuchins in 1807.

Several attempts were made by the Jesuits on the Philippines to establish a mission in the Caroline Islands in 1709, 1708, 1739, and 1721, but all of them failed, till Father Cantova succeeded in 1731. Owing to the serious loss of lives, however, the Jesuits abandoned the field, and it was only in 1880 that twelve Spanish missionaries came to the Micronesia, and after the resumption of Guam was made an independent vicariate in charge of Spanish Capuchins. The vicariate of Guam numbered, in 1913, 12,000 Roman Catholics, and that of Marianne-Caroline had 905 in 1914. With the exception of these two, divided as they are into the beginning and development of Roman Catholic missionary enterprise in the Pacific belong to the 19th and 20th centuries. It was on 7th July 1827 that the Alexis Bachelot, accompanied by Abrahm Armand, Patrick Short, and Robert Walsh of the Pèpe Society, landed in Honolulu (Hawaii) to resume the apostolate in Oceania, the whole of which was placed under the ecclesiastical jurisdiction of Solagand, then prefect-apostolic of Oceania (1830). Three years later the vicariate of Oceania was established, and in quick succession the Roman Catholic missions were extended to the various island groups and entrusted to the two pioneer missionary societies in the Pacific, viz, the Missionaries of the Sacred Heart (Pieus) and the Society of Mary (Marists). From 1827 to 1845, under Cardinal Prefect Capelli of the Propaganda and under his pontificate as Gregory XVI., the Society of Pères sent tram its missionary, Father Hawaii (1827), the Gambier Islands (1834), the Marquesas (1838), and Tahiti (1841), while the Marists went to Wallia, Tonga, New Zealand (1857), New Caledonia (1843), Fiji (1844), and Samoa (1845). Gregory XVI. divided Oceania into two distinct vicariates: Eastern (1833-44) and Western Oceania (1836-48), from which Central Oceania was separated in 1842. These three vicariates form, so to speak, the roots of the present ecclesiastical Pacific Church, and the Eastern vicariate were separated those of Hawaii, Marquesas, and Tahiti (1844 and 1848), and from the Central those of New Caledonia (1847), Samoa (1851), and Fiji (1863 and 1887), while the Western vicariate was divided into the Caroline Islands (1844-89) and Micronesia (1844-97). From Melanesia were separated New Guinea and New Pomerania (1889), and from Micronesia the Gilbert (1897) and the Carolines (1886). Some of the two groups were again divided and subdivided, such as New Guinea and New Pomerania, from which were separated the Solomon (1897-98) and the Marshall Islands (1905). The Marianne group depended upon the diocese of Cebu (Philippines) till it was made an independent vicariate. The divisions demanded new helpers in the ever-expanding field, and during the colonial period of Oceania (1882-1903) three other missionary societies were asked to help: to the Carolines, the Caroline (1886 and 1904) and the Marianne Islands (1907), to the Pèpe Society the Cook or Hervey Archipelago and Kaiser Wilhelmshaven W. (1915), to the Society of the Divine Word (Steyr) Kaiser Wilhelmshaven E. (1906), to the Marists the New Hebrides (1887) and the Solomon Islands (1898), and, finally, to the Congregation of the Sacred Heart (Jassoun) New Pomerania (1852), New Guinea, British and Dutch (1884 and 1906), the Gilbert (1888) and the Ellice

hostile attitude of some of the European Powers that have divided the islands among themselves towards every Christian enterprise, and the fierce opposition displayed against the Roman Catholic missionaries from 1830 to 1880, the Roman Catholic Church has made slow but sure progress. She has become a Christianizing and civilizing factor in the Pacific, and as such she is now acknowledged by the various European governments and their representatives, by explorers and tourists, and by missionaries of every denomination, whatever their attitude towards the tenets of the Roman Catholic Church may be.

Famous among the Roman Catholic missionaries in the Pacific are the two pioneer missionaries (later bishops), Batullion (1843-77) of C. Oceania, the founder of the missions in New Caledonia, Fiji, Samoa, and Rotuma, and his fellow-worker, Pompallier of W. Oceania, Bishop Epalle, who was murdered in 1845, Bishop Rouchouze of E. Oceania, etc. Nor must we forget Father Chanel, the proto-martyr of the Pacific and the apostle of Futuna (1841), Father Damian Devenster, the leper apostle of Molokai, or Fathers Bontemps of the Gilbert and Castanid of the Cook Islands, and, lastly, Brother Eugene Eyraud, the lay apostle of Easter Island.

As space does not allow of a detailed history of the interesting work of Roman Catholic missionary enterprise in the Pacific, we give on p. 726 a table of statistics which will tell the story of the heroic work which the missionaries have achieved within the years 1830-1913 under very trying circumstances of persecution, hunger, poverty, and death.

In the following table of statistics we give the summary of missionary work during the 19th cent. and the results of previous centuries since the Reformation. These statistics we borrow from Krose (op. cit. p. 123).
extensive missions from the 16th to the 18th cent., the Reformed Churches during the same period were doing practically nothing. Indeed, their direct, if not total, subject of the Christian obligation to evangelize the world, were mainly occupied in elaborating arguments to show that the command of Christ to do this had lapsed in their day. The causes of this inaction are complex.

After the great crisis of the Reformation the Protestant countries of Europe had not only to adapt their religious life to new conditions, but also to maintain their political existence against powerful hostile confederations within their borders. Spain and Portugal, the great representatives of the old creed, that the discovery of America and of the Cape route to India had fallen. To them, accordingly, the pope had committed authority over these newly-found regions of America and Africa as well as the Indies, and this dominion they were able to, to a considerable extent, to make effective. The revival of the Roman Church which followed the Reformation naturally threw much of its best force into these national undertakings, sanctioned by ‘holy Church.’ With the armies and administrators of Spain and Portugal went the priests and friars, whose task it was to bring these new territories into the Roman obedience.

With the 17th cent. began the colonial expansion of England, which resulted in the Christianization of N. America, not by the labour of missionaries, but by the migration of Christian peoples. The English later the Dutch, freed from the rule of Spain, began to take over the dominions of Portugal in the East, and eventually founded a great empire in the Malay Archipelago; they also colonized the extremity of S. Africa and thereby founded the missionary nation in the time. To the Dutch also largely belongs the credit of opening commercial relations with China and Japan. Meanwhile, in the course of the 18th cent., the great Indian empire of Britain came into existence, and, following on this, relations with the Far East developed during the 19th century. The same period saw the penetration of Africa from south, east, and west, and its partition between Western Powers, among whom Britain and, lately, Germany, have played for the mastery in this quarter. It was through these political developments that the missionary sphere of the Protestant nations was opened up, so that, when their religious life was effecutively revived towards the close of the 18th century, the mission was the means of which they could specially responsible came to Reformend Christendom with irresistible force.

When we have indicated the main features of the expansion of Protestant nations, we have indicated also the main lines of their missionary development as compared with that of the primitive and the medieval Church. At first Christianity was conscious in principle of its universal destiny, but was practically confined by a limited world-outlook and the lack of communication between East and West. In the Middle Ages the Church on the one side was straitened by Islam, and on the other was grappling with the unfinished task of absorbing and training the barbarian nations of Europe. In both these periods the evangelist and the evangelized were, on the whole, of similar races and of cultures not radically different. In the modern period the world-outlook has become complete and practical, while, with the facility of intercourse, the greater progress since the 15th cent. by the Christianized nations has made the intellectual and social difference between the Christian and the non-Christian far greater than at any earlier time. This is at once the advantage and the impediment of modern missions as compared with ancient.

Modern missions generally are continuous with the primitive or early Christian, and in the case of Protestant missions in particular we may go back to the primitive records of the faith and to its early history in order to estimate their work. But in so doing we are at once struck by certain outstanding contrasts connected with the historical situation. Since in primitive times the missionary and his hearers belonged broadly to the same level of culture and to the same sphere of thought and language, and were members of the same or similar communities, the main problems connoted by the terms ‘home base’ and ‘foreign field’ was for them non-existent, and the economic problem of modern missions was present only in germ, or even in an inverted form, financial help being sent by the daughter Churches to the mother. Not unconnected with this feature of early conditions is another fact. The propagation of the faith was the work of the Church in each place, whether through its officers or through its ordinary members, for the Church itself was the evangelizing body. Hence in the early records of expansion the professional missionary, as distinguished from the ordinary minister or layman, is conspicuous by his absence. There were great leaders in the work of evangelization among the bishops and other officials; but for associations distinct from the Church, set apart for evangelism, there was no place. Finally, the political relation of the missionary to his hearers was either simply that of a fellow-subject of the same great empire, or of a stranger from a land of no very different conditions.

Following on the adoption of Christianity as the religion of the Roman State, the irritation of the barbarians, and the rise of monasticism, these conditions were neither temporary nor rare. The missionary trained and set apart for the work appears on the scene, more often as a member of an order than as an isolated evangelist. The conversion and control of virile and turbulent barbarians seemed to demand a sternly didactic discipline that the Church alone could exercise; repeatedly the arm of the State was vigorously used, and orders came into existence that were half-mock, half-warrior, such as the Knights of St. John and the Order of Teutonic Knights. The Reformed faiths of the West was largely accomplished through monastic and military agencies, though the individual missionary was not absent. In Asia the wide-spread missionary work of the Nestorians had little of the political element, but it an open world for which they specially responsible came to Reformend Christendom with irresistible force.

The doctrine of the Reformation insisted on the liberty of the individual conscience and the freedom of individual access to God, together with the absolute sovereignty of His grace in the work of salvation. The result of this-in principle, although slowly realized in practice, was the elimination of the political factor from the spiritual activity of the Church, more especially in missionary work. The missions of the counter-Reformation were still closely linked with political conquest and administration, arts and science, and the modern Protestant missions in the East. Both were in reality survivals of the medieval method. The modern missionary method, both in the Roman and in the Reformed communions, is substantially that
MISSIONS (Christian, Protestant)

of free associations, working on a basis of voluntary co-operation. The missionary orders of the Roman Church have indeed retained continuously their historical organization, adding new orders, as needed, on a similar basis; but the missionary societies of Protestant Christendom are, in effect, what they were in the 18th cent., nothing else. Nor do we find, in them, the exercise of individual freedom has been combined with obedience to superimposed organization and discipline for a common purpose. It would not be correct to say that Protestant missions are different from Roman Catholic missions on this account, though, the Church, for the good of the Church, has no objection to it, and, on the whole, prefers it to the exercise of absolute individual freedom. Similar conditions of service, in almost all cases, are directly administered by the controlling authorities of their Churches. There is, however, this obvious difference, that the missions of the Roman Church are and remain under the guidance and control of a single central authority which is conspicuously lacking in Pro- testant Christendom. On the other hand, the Protestant organizations are now systematically endeavoring to gain the benefits of unity, to churches—the first real Protestant missionary enterprise. In 1649 the Corporation for the Propagation of the Gospel in New England was formed, and it is still extant, but its activities have consisted chiefly in the collection of funds. In 1698 the English Church in Virginia, with the Church in Pennsylvania, was formed, which resulted in the formation of the Society for the Promotion of Christian Knowledge. During the 18th cent., this aided the Danish-Halle Mission and other missions in India, but its principal work since 1850, has been the translation and circulation of Christian literature, both at home and abroad. In 1701 the Society for the Propagation of the Gospel was founded to provide clergy for the colonies and dependencies of Great Britain and also to take steps for the conversion of the Indians. This work was done for the latter object till after 1817. These three societies are connected with the Church of England.

The revival of spiritual religion in Germany known as Pietism (q.v.) resulted in two missionary movements during the 18th century. Friedrich William iv., king of Denmark, feeling responsibility for his colonial dominions, found the men whom he needed in the colonial missions, but the Great Pietist leader, Gerhard August Francke, who was settled in the Danish settlement of Tranquebar in India, and there founded a work which was developed by many successors of note, especially Christian Friedrich Schwartz (1749-98). Their work was partly maintained by the S.P.C.K. The other far-reaching missionary movements of German origin was the Moravian. Members of the Unitas Fratrum of Moravia, driven from their homes for their faith, were settled by the Pietist Nikolaus Ludwig, Count von Zinzendorf, on his estate at Herrnhut in Saxony in 1722. Very soon their zeal led them to send missionaries to the Negroes of the Carib Indians, to the Danish settlers, to those who had been evangelized by the Norwegian, Hans Egede, but were left after his return unattended. This was the beginning of a world-wide work, carried on by a community never numbering more than 40,000 souls, but ships in direct service, and 15,000 members working abroad, and a roll of more than 2000 missionaries, sent out since its foundation. See, further, art. MORAVIANS.

The Presbyterian Society for the Promotion of Christian Knowledge, founded in Scotland in 1799, deserves mention, because among a few missionaries whom it sent to the Indians of N. America was David Brainerd, the evangelist of the Delaware Indians. He died after only three years' work, but his biography powerfully influenced William Marsden of New Zealand, William Carey and Henry Martyn of Bengal, and many others.

By the middle of the 18th cent., these early movements of Protestant missions had only slackened owing to the religious deadness which had overtaken the various Churches. But the antidote to this was already working in the evangelical revival connected on the Continent with the names of John Wesley and George Whitefield (1714-70). The inevitable result in the revival of zeal for the evangelization of the outside world became manifest towards the end of the century, when two great leaders and their immediate followers were ministers of the Church of England, but, owing to the deadness of their leaders and people, the movement, while powerfully influencing the Church, resulted in the formation of the strongest of the Protestant bodies, the Methodists of England and America. But it was to another dissenting body that the missionary call first came effectively. The great pioneer William Carey and his fellow founded the Baptist Missionary Society in 1792. In 1795 followed the second society, at first called simply the Missionary Society. It was founded by Church of England, Independent, and Presbyterian ministers. In 1796 two Scottish associations were established, known as the Edinburgh and the London Missionary Society. The Evangelical members of the Church of England decided to establish the Church Missionary Society, and the undenominational society already mentioned became known as the London Missionary Society. Though others are not included, it had been, since then practically remained the organ of the English Congregationalists. The British and Foreign Bible Society was set on foot in 1804 by the joint action of churchmen and dissenters. The Wesleyan Methodists had already been carrying on missionary work in East and West since 1786 under the personal guidance of Thomas Coke, but after his death in 1814 they established their own Missionary Society. The societies united together with the revival operations of the S.P.G., represent the formative beginnings of Protestant missionary work in Great Britain. The American Board of Commissioners for Foreign Missions, formed mainly by Congregationalists, and the American Baptist Missionary Union (1814) were the earliest societies in America. Before sketching the development of these and indicating the minor societies, it is desirable to mention two outside movements which greatly influenced the history of missions in Africa and the East.

It is reckoned that the African slave-trade during the hundred years preceding 1786 conveyed
MISSIONS (Christian, Protestant)

no fewer than 2,000,000 Negroes into British colonies, chiefly the W. Indies and British N. America; but even in England Negroes were sold and treated even in public. In 1752 Chief Justice Mansfield said: ‘As soon as any slave sets his foot on English ground, he becomes free.’ This formed the starting-point for the campaign against the slave-trade in the whole British empire. It was carried on in the House of Commons under the leadership of Lord Krapf, with the support of the British Government. The abolition of the slave trade did not end the struggle against slavery in the British colonies, but it marked a significant step forward. In 1818, the Anti-Slavery Society was founded, and in 1838, the Abolition of Slavery Act was passed. By 1873, the slave trade was abolished in all parts of the British empire.

It is interesting to note that the missionary movement in India was closely connected with the anti-slavery campaign. The abolition of the slave trade was seen as a moral victory and a step towards the establishment of a just society. The missionary movement in India was supported by the British Government, and the missionaries were given the same legal and administrative status as other British citizens. The missionaries were given the right to build churches, schools, hospitals, and other institutions, and they were allowed to convert non-Christians to Christianity.

In the late 18th century, the British government was interested in spreading Christianity in India. The British government provided financial support to the missionary societies, and the missionaries were given the same legal and administrative status as other British citizens. The missionaries were given the right to build churches, schools, hospitals, and other institutions, and they were allowed to convert non-Christians to Christianity.

Most of these societies have associations in Ireland and Scotland, but the contributions and missionaries from these countries are not separately given.

(b) **English Free Churches.** — Only the chief societies can be dealt with here. The earliest is the **London Missionary Society** (1795). The discoveries of Captain Cook, the founders to send their first mission to the South Sea Islands, where John Williams, after years of work, was martyred on the island of Eromanga (1839). In 1798 S. Africa was opened by John Cook with the labours of Robert Moffat, followed by those of his yet more distinguished son-in-law, David Livingstone, became classical. The most remarkable of L.M.S. missions was that in Madagascar, founded in 1820, and resumed, after long expulsion of the missionaries, with extraordinary fruitfulness. In N. and S. India L.M.S. work has been going on since 1804, extending to Bengal, the United Provinces, Madras, and Travancore. Robert Morrison of this society was the first missionary to enter China (1807), and missions are now planted in S., C., and N. China. C. Africa was taken up as a memorial to Livingstone in 1877. In 1913-14 this mission had 294 missionaries, an income of £214,000, and 316,000 adherents.

The **Baptist Missionary Society**, founded in 1792 on the impulse of William Carey, cobbler, preacher, missionary, and linguist, sent him out as its first messenger. Moved by the narrative of Cook's voyages to the South Seas, his first desire was to go there, but his destination was changed to India, and, being debarred by the E.I.C.'s regulations from settling in British territory, he started the first mission in Bengal at the Danish settlement of Serampore, which became the centre of a unique literary and linguistic work, carried on by Carey with the help of his colleagues, Joshua Marshman and William Ward. From Bengal the English Baptists extended their work eastwards to Assam, north-westwards to Agra, Delhi, and Simla, and southwards to Orissa; also to Ceylon, where a considerable work is done, to three provinces of China, and in Africa to the Lower and Upper Congo; they also did work in Kamerun, which was eventually made over to German missionaries when their government occupied the country. In 1913-14 they had 463 missionaries, an income of £99,000, and 25,170 Church members.

The **Wesleyan Methodists** had already begun work in S. and W. India before Thomas Coke in 1780, and in W. Africa from 1811. After his death the **Wesleyan Methodist Missionary Society** was founded as a separate organization, and the work advanced in 1814 to Ceylon, in 1815 to S. Africa, in 1817 to India, in 1822 to Australasia, and in 1851 to China. In the last region, and in S. Africa and the W. Indies, many of the churches are no longer under the management of the society. Like the Baptists in the north of India, the Wesleyans in the south have done much for the cause of vernacular literature. In 1913-14 their missionaries numbered 392, their income was £30,000, and their adherents 307,000.

Of societies connected with the minor sects of Methodism it must suffice to mention the **Methodist New Connexion** (1824), working in China; the **United Methodists** (1857), in China, E. and W. Africa, and Jamaica; and the ** Primitive Methodists** (1869), in Africa. The Methodist missions generally bear little or no integral part of the Church organizations. The Welsh Calvinistic Methodists (1840) are, properly speaking, Presbyterian. They have an exceptionally successful work among the Khasis of the Assam hills.

For convenience we may add here the **Friends Foreign Mission Association** (1855), working in Madagascar, India, Ceylon, China, and Syria. Like the Moravians, though very much later in time, the Friends prosecute their missionary operations to an extent that is in striking contrast to the smallness of their community, reckoned, as it is, at some 30,000 members.

(c) **Presbyterian.** — The Presbyterian societies, like the Methodists, are part and parcel of the Church organizations.

**Scottish Churches.** — The **Glasgow and Scottish Missionary Societies**, founded in 1798, carried on their work in the Indies, and the labours of Robert Morrison were followed by those of his yet more distinguished son-in-law, Robert Moffat, followed by those of his yet more distinguished son-in-law, David Livingstone, became classical. The most remarkable of L.M.S. missions was that in Madagascar, founded in 1820, and resumed, after long expulsion of the missionaries, with extraordinary fruitfulness. In N. and S. India L.M.S. work has been going on since 1804, extending to Bengal, the United Provinces, Madras, and Travancore. The Welsh Calvinistic Methodists (1840) are, properly speaking, Presbyterian. They have an exceptionally successful work among the Khasis of the Assam hills.

For convenience we may add here the **Friends Foreign Mission Association** (1855), working in
Salvation Army has been doing missionary work, principally in India; since 1875 its operations have been mostly of a social kind, such as industrial reclamation and rescue of criminal tribes. The North Africa General Mission works mainly in Algeria and Morocco; the Egypt General Mission as indicated by its name; the Regions Beyond and the Sudan United Missions in W. and C. Africa.

(c) Missionary publishing societies. — In all Protestant missionary work the rule has been to give convert and others access to the Christian Scriptures as soon as possible. Occasionally this may have resulted in premature productions which had afterwards been the cause of misunderstanding or hindrance, but, taken as a whole, the translation of the Scriptures into the languages of the non-Christian world has been one of the most signal and fruitful achievements of modern missions. The Bible, as a whole or in part, is now printed in about 200 languages and dialects. The great bulk of this work has been and is being done by the British and Foreign Bible Society (1804), which has issued 487 of these versions up to 1914. The number of these is being increased year by year, and the work of revision of older versions in the light of the best scholarship is constantly proceeding. Many scores of these languages possessing no actual script have been reduced to writing by the missionaries, who soon followed up the spelling-book and the school-reader with the Gospels, and gradually added the whole NT and in many cases the OT also. The B. and F. B. S. circuited the world 10,196 times, and its publications. It received a charitable income (exclusive of sales) of £110,000. The National Bible Society of Scotland and the Trinitarian Bible Society in the same year circulated respectively 2,792,616 and 138,060 copies of the Bible and its works (besides those dealt with by the larger society).

For the production of Christian literature of a more general kind the Society for the Promotion of Christian Knowledge, already noticed, is the oldest society. It helps Church of England missions in all parts of the world, principally with books of devotion and theology, but also with works of a more general nature. It has published in 99 languages. The Religious Tract Society (1799), with an income from donations of £7,186, does similar work on an idenpendentious basis, and it has been the means of founding several daughter societies in India and China. It publishes in 290 languages. The Christian Literature Society for India and neighboring countries (1848) has been a more general nature. It has published in 99 languages. The Religious Tract Society (1799), with an income from donations of £7,186, does similar work on an interdenominational basis, and it has been the means of founding several daughter societies in India and China. It publishes in 290 languages. The Christian Literature Society for India and neighboring countries (1848) has been a

The American Board of Commissions for Foreign Missions, founded in 1810, sent out its first missionaries to India in 1812; but, owing to the hostile attitude of the E. C., they did not secure a footing in W. India till 1814, and in the same year they entered Ceylon. The other principal steps forward were to Oceanian (1819), W. Africa (1830), S. E. Africa (1853), China (1847), and Japan (1868), with the cessation of the B. and F. B. S. activity.

1 The figures given are exclusive of work among Indians or others in home territories. Unless otherwise specified, they are as on December 31, 1912. Generally speaking, the American Boards are part of the official organization of their respective Churches. The principal ones only are mentioned.

Board of the Dutch Reformed and the Presbyterian missions the A.B.C.F.M. represents the Congregationalists and the United Church in Canada the Brethren in Christ, with an income of £209,978; missionaries, 615; adherents, 193,742.

The American Baptist Missionary Union came into existence in 1814, when Adoniram Judson entered Burma. In 1827 he began a remarkably successful work among the Karen tribe, which has come over in masses to Christianity. Another Indian mission of the A. B. M. U. in the Telugu country (from 1840) has been the sphere of a large movement. The Union entered China in 1843, the Congo Territory in 1856, and Japan in 1852. The Southern Baptist Convention, an offshoot from the main body, carries on missions in China, W. Africa, and Japan. Income, £222,885; missionaries, 701; adherents, 505,600.

The Methodist Episcopal Church represents the Wesleyan movement in the U.S.A. The larger, or Northern, branch carries on its missions to non-Christians in S. India (1833), China (1847), N. India (1856), Japan (1872), Korea (1885), and Malaya (1889). The Southern branch began missionary work in 1816, and carries it on in India, China, and Japan. The foreign work of this denomination has spread rapidly and widely. Income, £296,506; missionaries, 1,396; adherents, 687,368.

The Presbyterian Church in the U.S.A. is also a leading missionary body. It has carried its work from that of the A. B. C. F. M. in 1857, and has missions in Syria, Persia, India, Siam, W. Africa, China, and Japan. Its educational work in India especially is of a high order. The Presbyterians of the Southern States (Presbyterian Church in the U.S.A.; 1861) work in China, Japan, Congo Territory, and Korea. The United Presbyterian Church (1839) maintains a vigorous work in China, India, and Egypt (the last named chiefly among Copts); in their Panjshir Mission in Afghanistan, and in the Persian Gulf. The Disciples of Christ have missions in China, Japan, India, and Turkey. The first of these denominations in 1914 had an income of £561,142, 1,537 missionaries, and 570,238 adherents.

The Lutheran Churches of the U.S.A., numbering over 2,000,000 communicants (and, say, 16,000,000 adherents) has a large work in China, Japan, and elsewhere; whose first mission was undertaken in 1841. They work mainly in India, where their most important mission is in the Telugu country. Income, £208,907; missionaries, 81; adherents, 70,426.

The total budgetary for Protestant Missions in N. America amount to 6627 missionaries and 1,596,631 adherents.

Canada has eight leading Protestant missionary societies. The principal of these are the Baptist, the Presbyterian, and the Anglican.

In addition to the Boards connected with the various Churches, one organization, connected with no church in particular, has powerfully influenced the missionary life of all, not only in America, but in the United Kingdom, and on the continent of Europe. The going out of the 'Cambridge Seven' to China in 1884 excited great interest among the students of America as well as among those of Great Britain, and at a conference of students summoned in 1886 by Moody at Mount Hermon, Mass., the Student Volunteer Missionary Union was formed on the basis of a declaration by each member of his or her intention to become a foreign missionary. The same movement continued in a less organized form until it was officially established there also, in Edinburgh, in 1892. It soon became evident that the appeal for missionary

1 It is impossible to estimate accurately the distribution of income between home and foreign missions.
service could not be effective without a strengthening of the general Christian life of the student world at large, and in 1893 the Student Christian Movement for Great Britain and Ireland was started. This has now a membership of over 9000 students, including those of theological colleges, and it is affiliated to the World’s Student Christian Federation, with a membership of over 180,000 students in some 40 countries. The S.V.M.U. has become a department of the more general work.

Since 1896 it has systematized the study of missions among its members and outside by the formation of study circles and the provision of suitable textbooks for them. The Liverpool Conference of 1912 co-ordinated the foreign missionary and home social problems of the movement more closely than before, and the S.C.M. works at the solution of both as inseparable the one from the other.

From the British branch of the S.V.M.U. over 2000 students have left in thirteen years for the mission-field; 700 are still in college, and 600 are undergoing post-collegiate training for missionary work. The Union sends out no missionaries itself, but only through the societies.

III. GERMANY.—In the latter part of the 18th century, the colonization of the mission-field (Kwantung), and the missionaries being taken over by other societies. The Moravian quietly continued their work and celebrated their first centenary in 1832 with much cause for rejoicing; their influence was felt, too, in home undertakings elsewhere. During their second century the work has increased till it embraces 21 mission-fields, mostly in America, but also in Africa, Australia, and India. The income from home contributions is little more than one-third of the income from the mission-fields. The free-will offerings in the mission-field, government grants, and trade profits. The fields of work are largely the most remote and intractable lands, such as Greenland, Labrador, Alaska, the Mississippi Valley, and China, the Mosquito Coast, N. Australia, and Lesser Tibet.

Other German Protestant missionary efforts began with the training of missionaries for societies outside of Germany. Johann Jaenickel from 1800 to 1827 carried on a missionary seminary in Berlin whose alumni were sent out from Holland and England. They included pioneers in Timneville (C. T. E. Rhenus) and China (C. Gutzlaff). In S. Germany Christian life was strongest in Wurttemberg, Baden, and German Switzerland, and here under the influence of the Basel Missionary Institute in 1815, from which 88 candidates were passed on to the C.M.S., many of whose early missions were founded or conducted by them. In 1822 the Basel Evangelical Missionary Society was founded, which, thanks to the efforts of Christian Gottlieb Barth, their first permanent mission was started on the Gold Coast in 1823.

In 1843 work was begun on the south-west coast of India, in 1846 in China (Kwantung), and in 1846 Kamerun, becoming in 1857 through the efforts of Christian Gottlieb Barth, their first permanent mission was started on the Gold Coast in 1823.

In 1843 work was begun on the south-west coast of India, in 1846 in China (Kwantung), and in 1846 Kamerun, becoming in 1857 the Societe des Missions Etrangere. This society was founded in 1857, and its chief mission is the very successful one among the Basutos in S. Africa with which the name of Francois Coillard is connected. It has also taken over work from English and American societies in the territories of Alassia, Bwindi, and the Society Islands, and lastly under French dominion. In French Switzerland the Mission Romande was founded in 1879; it works in N. Transvaal and Delagoa Bay.

VI. SCANDINAVIA.—In Scandinavia, the Danish Missionary Society was founded in 1862, and works in S. India and China. The Norwegian Missionary
Missions (Christian, Protestant)

Society (1852) has missions among the Zulus and in Madagascar. There are minor missions connected with China, Inland, and other societies. Sweden also has had its own Swedish Missionary Society since 1835, working in S. India and S. Africa, and a Swedish Missionary Union, since 1875, with missionaries in Algeria, the Congo, Ural, Finland and China, besides minor associations. Finland has a Lutheran Missionary Society with work in S. Africa and Free Church missions in China and India.

vii. British Colonies.—The British colonial Church, of various denominations, maintains a considerable and increasing amount of missionary work. This is done partly through societies locally formed, partly by assisting the older societies in home lands. Australia and New Zealand, in addition to work among their own aborigines, send men and women principally to Asiatic countries, the S. African churches to the pagans of their own territories, the now independent W. Indian Churches to their own neighbours and to their rice-fellows in Africa. In India and China, though very few churches are self-supporting, various indigenous missionary societies have been formed, such as the Tinnevelly Missionary Society and the National Missionary Society, for work in various parts of India. These have about 2148 adherents, 5 missionaries, and an income of about £4000 in 1912.

2. Preparation of missionaries.—In the beginnings of societies the first step taken was frequently the establishment of a missionary seminary. As a rule, the candidates were forced to request considerable training before entering on their theological course. The fact that many of them had been engaged in trades or handicrafts rendered them all the better suited to the pioneer work to which largely fell to their lot, but not a few distinguished scholars developed among them. The Free Churches in England and America have drawn their missionaries mainly from the theological colleges of their denominations, but the Scottish Churches have usually sent out graduates of the universities. In the Anglican Church, missionary seminaries have a more important position, the most prominent being the C.M.S. College at Islington (217 missionaries, chiefly from the C.M.S. and other Scottish and English colleges); and St. Augustine's College at Canterbury (367 men and 5 women respectively). On the Continent the great majority of missionaries are seminarians, but their training is generally more thorough, and they seem to have placed their many scholars in proportion as the university-trained men. In America and Britain it is difficult to distinguish accurately between university and non-university men. In any case, both there and in Europe the S.V.M.U. has greatly tended to bring men and women of good university attainments into the missionary ranks—a tendency emphasized by the rapidly increasing demands of higher education in the mission-field.

Till recently good theological training with a university degree was considered the best of missionary preparation from the intellectual side. But since the beginning of this century the conviction has been gaining ground that the task of the missionary demands, besides these, a technical training beside the power to it. This opinion was voiced by Commission VI. of the Edinburgh Conference, which recommended the establishment of Boards of Study for the special preparation of missionaries both in Britain and in America. This was carried into effect by the American Board of Missionary Studies, which is working on a somewhat wider basis, taking in theological subjects as well as others, whereas the British Board of Study, by mutual agreement, as an interdenominational body, deals only with general subjects (history and methods of missions, phonetics, linguistics, comparative and special study of religions, ethnography, anthropology, sociology, hygiene, business methods, educational methods). Some colleges and denominations believe more or less to the teaching of these subjects: in America the Kennedy School of Missions at Hartford, Conn., the Missions Department of Yale University, the New York Teachers' Training School, New York, the College of Missions, Indianapolis, the Cincinnati Missionary Training School, in Britain the U.F.C. Women's Missionary College, Edinburgh, and the Kingsmead Training Institution, Birmingham, take up many of these subjects, and it is in connection with the British Board of Study in a Central College of Missionary Study.

3. Missionary conferences.—The lack of unity and co-ordination in Protestant missions has long exercised the minds of their promoters, and the effort has been made to overcome this difficulty by gatherings for common counsel. The general missionary conferences thus far were held in Liverpool in 1860 (126 members); London, Mildmay Park, 1878 (148 delegates); London, Exeter Hall, 1888 (1494 delegates); New York, 1900 (2300 members); and Edinburgh, 1910 (1206 delegates). The bulk of the membership in these has consisted of delegates of missionary societies and boards, supplemented by missionaries from the field and experts of eminence. The composition of these conferences has become increasingly interdenominational and international; and in Edinburgh not only did High Anglicans attend as members, but messages of greeting were sent to the General Council of the Congregationalists, while Assemblies, Africans, Australasians, Americans, and Europeans of many nationalities took part. The conferences have no legislative or executive authority, but the 'findings' which are formulated as the result of their debates exercise great practical influence on missionary work and methods. The reports of these conferences form a valuable record of the progress of missionary life and policy and a storehouse of missionary thought and argument. The report of the Edinburgh Conference especially (in 9 vols., London and New York, 1910) is indispensable to the student of missions. Its investigations and discussions are carried on by a Continuation Committee, which publishes the quarterly International Review of Missional Literature.

The same kind of work has been carried on in the mission-field by periodical conferences of representatives from different missions at such centres as Madras and Shanghai, and in 1922-13 R. Meit convened series of Conference Committees in India, China, and Japan, the findings of which are published in a bulky volume (New York, 1913). By these and other means a large amount of practical union in work has been attained, and the tendency in the mission-field and at the home base towards closer unity has been promoted.

4. The field.—i. America.—The spread of Christianity in this continent has been mainly through immigration. Paganism is now only a fringe of the total population of 170,000,000. The work of Protestant missions has been chiefly in N. America, among Eskimos, Indians, and Negroes. For our purposes we confine the term to the United States and Guiana go together with N. America. S. America has been touched in Patagonia and Paraguay.

(a) Eskimos.—The Norsmen who immigrated to Greenland in the Middle Ages had a bishopric of their own, but both they and their faith died out before the 16th century. In 1721 a Norwegian pastor, Hans Egede, having heard of them, repaired to the west coast of Greenland and began work among the Eskimos under great difficulties owing to their utter indifference. It was continued, how-
ever, by his son, and eventually taken up by the
Danish M. S. The west coast population in this
region is Christianized, and missionary work is
going on among the pagans of the east coast.
Further south on the west coast the Moravians,
beginning in 1735, founded the settlement of New
Herna in, and from that centre Christianized the
tribes, so that in 1899 they were able to hand over
this territory to the care of the Danish Church.
In Labrador since 1771 the scattered Eskimos have
been mainly brought in by the Hudsonians, and they
are cared for with the help of trade carried on by
the mission ship 'Harmony.' On the other side of
the continent the U.S. territory of Alaska contains
a relatively considerable population of Eskimos,
besides Aleutians, Indians, immigrant Chinese, and
white men. Here in 1877 a Presbyterian mission
was founded, followed by Moravians, American
Anglicans, and others, totalling about 6000 Christi-
ans. The race, about 40,000 in number, is intel-
tellectual and very anxious to contact with white traders has been unfavourable to the development of independent Church life, but missionary work has meant their salvation from extinction through strong drink, disease, and ex-
ploitation and is being resisted.

(b) Indians.—These number now in the U.S. and
Canada under 400,000. Over one-half live on res-
ervations; the rest are scattered among their white
fellow-citizens. From the 17th cent. onwards the
relations of the colonists, whether French, English,
or Dutch, with the Indians were those of perennial
warfare and commercial exploitation, till the peace of
the country was fully established and a more sensible
and humane policy was gradually intro-
duced. The present missionary enterprise is
wanting. John Eliot (from 1646), David Brainerd
(from 1743), and David Zeisberger (from 1745)
gathered many thousands of Indians into Christian
congregations of peaceful citizens, but again and
again their work was destroyed by civil war. The
later and more gradual settlement of Canada was
advantageous to the Indian population, as the
missions of all Churches were able to gain a hold,
lethal and grabbling and commercialised; and even
strongly to the fore. The first Protestant mission
was begun in the Hudson's Bay Territory in 1820;
it has been developed largely by the C.M.S., and
much heroic work was done by its pioneers among
the mixed race population. The work of the
missionaries in Great Britain among the mixed race
population of the U. S. in the U. S. has been more and more taken over by the various
Churches, and the still pagan Indians are a small
remnant. Their assimilation as citizens of the
Republic is still an incomplete process. Here
(c) Negroes.—These number (including coloured or
mixed population), in the U. S. 9,827,703 (1910),
and in the W. Indies 1,280,000. Their introduction
into the latter dates from the Spanish conquest, into
the U. S. from Africa 1840. Of the African mission
the U.S. Negroes practically began about 1860, but
during their time of slavery large numbers had been
Christianized, especially by the Methodist and
Baptist Churches. The bulk of these Negroes are now
connected with the various Protestant Churches.
In 1913 they contributed about $20,000 for home
missions and $10,000 for foreign missions, besides
maintenance of churches, ministry, and education.
The Negroes of Cuba and Haiti are but little touched by Protestant work, but in the remaining
islands they are incorporated into self-supporting
churches, the result of previous missionary effort,
and their economic condition is less complicated by
an overweight of white population than in the U. S.
They number about 1,000,000.

(d) South America.—The territory of Guiana is
closely connected with the W. Indies. Anglicans,
Moravians, and Methodists have gathered converts
among the savages. These are partly from among
the E. Indian indented coolies working on the
sugar-plantations (who are also to be found on the
islands). Catechists and clergy of Indian nationality
work among them, and coolies returning home help to播散 the Gospel in India.

Of the 38,000,000 in S. America the aborigines
number about 5,000,000, mostly belonging to the
Roman Catholic Church. Protestant missions have
touched them in Patagonia, where the work set on
foot by the heroic pioneer, Allen Gardiner, changed the
opinion of Charles Darwin as to the susceptibility
of a savage race to higher culture. The
Indians of the Chaco in Paraguay have also begun
in the project, and the mission among them has been
recognized by their government. In S. America the
missionaries are the best mediators between white and coloured peoples.

ii. Africa.—(a) W. Africa.—It is this part of
the continent that, owing to the slave-trade, has
had the earliest and most intensive Christian
proselytism in the Protestant lands, especially with N. America. The
endeavour to influence Africa directly by means of
the liberated slave is chiefly represented by the
little republic of Liberia, founded in 1824 by the
American Colonization Society. The Negroes who
settled there were hardly ripe for administering the Free State proclaimed in 1847,
but from this centre work is being carried on by
sundry societies among the neighbouring non-
Christians. About 88,000 members of the various
Churches have been sent as missionaries to Africa by their
Churches in the U.S.A., but the effective shaping of
their work is a problem that awaits solution.
The north-west coast of Africa has the
Senegal borders on sparsely-inhabited Muham-
madan territory which has scarcely been entered
as yet. From this to the mouth of the Congo is
the region of Protestant mission-work.

At Sierra Leone the settling of liberated slaves
began in 1808, after the abolition of the slave-trade,
and its capital received the name Freetown. Up
to 1846, 50,000 African slaves had been brought
there, chiefly by British cruisers. For years great
loss of life among the colonists came in. Now the
whole dominion is parcelled out in dioceses of the Anglican Church, and
work among the Indians is carried on by other
denominations also, Presbyterians and Methodists
leading the active. Sending the separation from
England the evangelizing of Indians in the U. S.
has been more and more taken over by the various
Churches, and the still pagan Indians are a small
remnant. Their assimilation as citizens of the
Republic is still an incomplete process. Here
east, has considerably developed missionary work from that country, during the last few years, amounting that in Africa; one thousand.

The community numbers some thousands.

The work in the lower basin and delta of the Niger has assumed increased importance since the conclusion of the treaty with Nigeria, the Belgians, and the English in the African possessions, as a Crown Colony, with a population of 18,000,000. The first mission stations (from 1846 onwards) were started to look after natives of the Yoruba country who had returned from Sierra Leone to their own people. Lagos, the great port of the palm-oil trade, and the large interior towns of Abeokuta and Ilodan were occupied, and considerable Christian communities were gathered, amounting (1913) in the Yoruba province to 50,000. Economic development is going on rapidly, and the demand for education, especially in English, is increasing year by year.

After the Niger had been opened up by three voyages of exploration (1841, 1854, 1857), an African priest of the C.M.S., Samuel Crowther, was sent to this region. He planted several stations, and in 1861 was consecrated bishop. The work was carried on by Africans, with some vicissitudes but with substantial progress, till Crowther's death in 1864, when W. Equatorial Africa was placed under an English bishop, assisted by two Africans, the wealthy churches of the Delta being granted self-government. In N. Nigeria the town of Lokoja had been occupied in 1865, but it was not till the end of the century that effective advance was made into this territory, where a predominantly Muslim population alternates with large patches of paganism, while the spread of Islam continues in a southerly direction. The work here is still in its infancy. In Calabar at the south-east corner of Nigeria a Christian community of 11,000 has been gathered in by the U.F.C. mission.

Kamerun, a German colony since 1884, was originally evangelized by English Baptists, but their work was taken over mainly by the Basel Society, who were pushing into the back country before the outbreak of the great European war. The Christians number about 15,000 out of an estimated population of 3,000,000.

The river was first opened up completely by Stanley in 1876-77, and the Congo Free State, under the protection of Belgium, has been the scene of rapid missionary advance along the river. Yakassé, the furthest point, near Stanleyville, is 1,291 miles, and the most remarkable for the first explorers in detail were the English Baptists G. Grenfell and W. H. Bentley from 1875 onwards. Other missionaries of various nationalities followed. Owing to the difficulties of climate and the great multiplicity of tribes and languages, progress has been limited, but some dozen societies are now at work in this area. Indigenous churches are being formed, and elementary education is being pushed.

The characteristic problems of the W. African missions are the century that an effective advance of Islam from the north, the decoralization of commercial intercourse caused by the liquor-trade, and the unsettling effects of a rapid acquisition of wealth formerly unheard of. On the other hand, the removal of the evils connected with the slave-trade, the increase in prosperity and intelligence, and the creation of a Christian standard of conscience and morals, with the opportunity given to the natives of rising to a higher life, are elements in appreciable progress towards the regeneration of the Negro peoples.

(b) S. Africa.—In this we include the regions south of the river Kunene on the east and the Zambezi on the west. It contains three African races: the Bantu (including Zulus and Kaiks), the Nama or Hottentot, and the Baskman, the last two scarcely remaining pure, the first virile and productive, and the latter degenerate. The mischief work has spread by immigration from western nations, and the white population is reckoned at 1,300,000. Hence the racial problem is at its acutest in S. Africa, and it specially affects the work of missions, since the higher level, religions, moral, and social, and at giving them the best education which they are capable of assimilating. The earliest Dutch colonists regarded the natives as an inferior class of beings whom it was both lawful and expedient to keep in subjection, and this attitude has not been confined to one section of the white races. Thus there has been a persistent prejudice against, and often actual antagonism to, the work of missions, sometimes aggravated by lack of prudence on the part of the missionary and by unbalanced policy on the part of the government. The conviction is gaining ground, however, that without the moral influence of Christianity the problems resulting from the contact and blending of two cultures cannot be thoroughly solved. Among some 4,000,000 natives there are now about 750,000 Christians, the result of the work of 30 missionary societies belonging to 8 nationalities. The racial factor is especially in evidence in the missionary work of the 'Ethiopian Order'; the remainder do not appear to be progressive either in internal life or in external expansion.

In what became in 1886 German S.W. Africa the principal work has been done by German missionaries of the Rhenish Society since the forties. The fruits of their persevering and systematic efforts have suffered greatly through colonial wars, Protestant Christians in the colony number, by last figures, 13,000.

The largest indigenous Christian population is in Cape Colony, numbering 1,145,000 out of a total of 2,500,000; it comprises westwards, broadly speaking, bastardized Hottentots, and, eastwards, Kaiks of relatively pure race. The Moravians, who began work in 1737, were followed in 1799 by the L.M.S., whose missions in the Bechuana are remarkable for their great pioneers, R. Moffatt and, above all, Livingstone. The persistence of John Mackenzie and the intervention of the British government, all attempts to block the northward way of the first explorers in detail were the English Baptists G. Grenfell and W. H. Bentley from 1875 onwards. Other missionaries of various nationalities followed. Owing to the difficulties of climate and the great multiplicity of tribes and languages, progress has been limited, but some dozen societies are now at work in this area. Indigenous churches are being formed, and elementary education is being pushed.

Owing to the difficulties of climate and the great multiplicity of tribes and languages, progress has been limited, but some dozen societies are now at work in this area. Indigenous churches are being formed, and elementary education is being pushed.

The characteristic problems of the W. African missions are the century that an effective advance of Islam from the north, the decoralization of commercial intercourse caused by the liquor-trade, and the unsettling effects of a rapid acquisition of wealth formerly unheard of. On the other hand, the removal of the evils connected with the slave-trade, the increase in prosperity and intelligence, and the creation of a Christian standard of conscience and morals, with the opportunity given to the natives of rising to a higher life, are elements in appreciable progress towards the regeneration of the Negro peoples.
it became a Crown Colony in 1884, has been worked principally by the Paris M.S., which now counts about 94,000, adherents, at the head of which stands the Bechuana Protectorate of the Transvaal and Orange River Colony Dutch, Anglican, Wesleyan, and Lutheran missions have gathered a Christian community of considerable importance. The problems of moral and social development are generally solved by the cooperation of labourers, both Christian and non-Christian, in the mine compounds of Johannesburg and the Rand. The thinly-populated Bechuana and Protectorate includes Khama's Country, where a Christian African prince rules his people well, of thinly-populated Bechuanaland. Madagascar has been a land of great vicissitudes in missionary work. The first missionaries of the L.M.S. began work with considerable success among the Hova, the ruling race of the central province, in 1820. In 1850 the accession of a hostile queen brought about the expulsion of the missionaries, and for twenty-five years the Chris-tians were severely persecuted, yet they increased considerably. In 1861 a new ruler recalled the missionaries, and, when another queen was baptized in 1869, conversions began in masses. To cope with the situation other societies, Friends, S.P.G., and Norwegians, entered the island. In 1855 Madagascar was annexed by France, and Protestant work was begun for the first time, and it was considerably hampered that the L.M.S. was fain to give over a large part of its work to the Paris M.S. The total number of Protestant Christians in Madagascar is estimated now at 287,000, while the scholars number 44,577.

(c) E. and C. Africa.—Missionaries helped to open up these lands both from the east coast and from the interior southwards. In 1844 Ludwig Kraff, a German in C.M.S. service, landed on the island of Madagascar, and of Mombasa and of Mozambique, and on the mainland opposite. He planned (1) to carry a chain of mission stations across Africa from Mombasa to Gabun; (2) to establish on the east coast a colony for liberated slaves like that in Sierra Leone on the west; and (3) to work for an African ministry under an African bishop. The second of these objects was accomplished at Freetown in 1874; the first and third are in process of realization now. In 1846 Kraff was joined by John Rebmann, who after nine years Kraff was succeeded; Rebmann held on for twenty-nine years. By their discovery of the snow-peaks of Kilimanjaro and Kilimanjaro the equator, and of the great inland-sea of Nyasa, they revolutionized the geography of C. Africa, and for their linguistic labours prepared the way for later workers in a fruitful field.

The yet greater work of David Livingstone is part of history. From his first station of Kolobeng in S. Africa he incessantly pressed northwards, crossed Africa from east to west, and opened up the lake regions of Nyasa and Tanganyika, exploring ceaselessly till he died at Ilala in 1873. In his opinion the end of the geographical feat was the beginning of the missionary enterprise. He desired to stop the slave-trade, and to open up Africa to legitimate commerce and to Christian culture with faith as its root. The Universities Mission to Central Africa undertaken by members of the Churches of England, and the L.M.S. mission on Lake Tanganyika, and the Scottish Presbyterian missions in Nyasaland are the direct results of his lifework; but it affected the whole missionary enterprise of inland Africa. To Stanley it was given to complete the work of Livingstone by his exploration of the Congo valley, and in the course of it he gave the impulse which has resulted in the formation of a virile Christian State in the centre of Africa, now the kingdom of Uganda. Stanley founded the king, Mutesa, hesitating between the claims of Christianity and Islam. Through a

Sahalish Christian interpreter he put the Christian case before the monarch and straightforwardly appealed to English Christians to enter the open door. The result was the sending of the well-known C.M.S. mission in 1875. The murder of James Hannington and the barbarous persecution of the early converts only served to increase zeal and confidence. There was a great risk of abandonment by the Colonial Office, Uganda became a British Protectorate, under which mission work has gone forward peacefully. The country now contains 86,600 Protestant Christians, with a somewhat larger number of Roman Catholics, and a smaller number of Muhammadians. The schools contain scholars up to a secondary standard. The growing Church now forms an effective breakwater against the rising tide of Islam.

The two provinces of E. Africa, the English and the German, have each brought the country under civilized administration, and the British Government has opened up its territory by a railway, preceded or accompanied by missionaries. The English work in German territory has been partly made over to German missions since the establishment of the colony in 1884, but a large group of C.M.S. missions remains round Mowapa, and another of the U.M.C.A. opposite. The German work is chiefly on the northern frontier and on the north shore of Lake Nyasa and its vicinity. The principal missions of the Nyasaland Protectorate are those of the Scottish churches, with the two industrial centres of Livingstonia in the north and Blantyre in the south—it contains memorials of the great Scottish missionary pioneer. His successors have seen the slave-trade entirely wiped out and fierce animist tribes subdued by the influence of Christian love, exemplified in medical missions, and brought under training in civilized industry and commerce. The Anglo-Egyptian Sudan in its Muslim part is closed to missionary effort by government ruling; among the pagan Dinkas, Azandis, and other tribes missionary work is in its first stages.

iii. OCEANIA.—Mission in Oceania date from 1769, and owe their first impulse to the interests excited by the story of Cook's voyages in the South Seas. The major part of this area is suitable for European colonization, and the aborigines belong to more or less primitive states of culture, in which their physical as well as mental stamina has remained weakly. Owing partly to this and partly to unscrupulous exploitation by white and black traders, the result of contact with the white races has been the rapid diminution, and in some cases, as in Tasmania, the entire extinction, of the native races. The work of missions has therefore largely consisted in the rescue of weaker races from extermination through contact with exponents of higher civilizations not imbued with the Christian spirit. In no part of the world have the results of missions been more rapid and wide-spread, but stability is sometimes lacking. The effects of kidnapping, strong drink, and disease have been appreciably counteracted.

Work in New Zealand was started by Samuel Marsden in 1814, and after a time made rapid progress. In 1840 the islands became a British colony; unfortunately wars broke out, and in 1841 the strong Han Han apostasy, a recrudescence of pagan cults mixed with Christian heresies, drew away great numbers. In spite of this the leading missions of the C.M.S. and Wesleyans were able, before the end of the century, to make over their converts to the local Church organizations. The New Zealand Parliament also has its Maori members. The Maori population of New Zealand is about 30,000, of whom some 30,000 belong to Reformed communions. There appears to be some
hope that, in place of declining, the native population is beginning to increase.

In Australia the aborigines have dwindled to 74,000, living mostly in the northern parts of the continent. After several abortive attempts to settle the continent, a strong industrial element, have been continuously carried on since 1851 by English bodies of various denominations, as well as by Moravians and Lutherans. Despite pessimism, the aborigines have proved susceptible to the elevating influence of the gospel, and decedence has been to some extent arrested, though independence is not yet in sight. The number of Protestant Christians is computed at 6000.

The Islands of the Pacific may be roughly grouped into Polynesia (south of Hawaiian, Melanesia (west of Polynesia), and Micronesia (north of Melanesia). Among the larger islands of Polynesia, Hawaii, now a United States territory with Honolulu as its capital, was first evangelized by the American Board from 1829 onwards and Christianized within fifty years. It has sent out and supported missionaries to several other islands. Tahiti, occupied by missionaries of the L.M.S., had a similar history, but after the annexation of the group by France it became impossible for the work to the Paris M.S. Rainaete, the sphere of the famous John Williams, has remained in British connexion. In the Tonga and Viti, or Fiji, Islands the Wesleyans have been the principal workers, practically the whole population is Christian, and is efficiently ruled by princes of the same faith. Education is wide-spread, and evangelists from Fiji have carried the faith to many other islands.

Melanesia has a population of 475,000, of whom 111,000 are Protestant Christians. The gathering in of these numbers has cost not a few missionary lives, owing to resentment on the part of islanders who had been oppressed by traders. The missionaries are British, German, Dutch, and Norwegian. The martyrdom of Bishop Patteson in 1871 called forth much enthusiasm and service, and during his long life John G. Paton of the United Presbyterian Mission saw 20,000 natives converted in the New Hebrides and contributing £19,000 in one year for Church purposes.

On the Micronesian Islands, now under British, German, and American protection, developments since 1852 have been similar. Missionaries from America have taken a large place, and Protestant Christianity is stronger here than in the other islands; out of 20,000 Christians the Roman Catholics claim 12,000.

New Guinea, or Papua, was first entered in 1871, when Christians from L.M.S. missions in Polynesia volunteered for the work, in which many of them laid down their lives. They had a great leader in James Chalmers (1856-1901). The Christians now number 35,000. Anglican, Wesleyan, German, and Dutch missionaries have taken a large part.

In various parts of Oceania, especially Australia, Hawaii, and Fiji, missionary work is carried on among the Asian immigrants from India, Japan, and China with the help of native preachers from those countries, not without some result. The barriers of caste and social opposition are less rigid at home, but the restraints of conventional morality are also loosened.

The total population of Oceania, excluding Australia, New Zealand reckoned at some 2,000,000, of whom 321,000 are Christians.

iv. India.—The impact of Christianity on India has been conditioned by certain outstanding features of the land and people. The peninsula is in a manner land and island, and culture of the people ranges from the most primitive to a highly developed, though stationary, form. Its religion contains a similar variety of cults, ranging from spiritual adoration to cruel and obscene orgies, all bound together intellectually by a subtle pantheistic philosophy, socially by the unique system of caste (q.v.). Its contact with the outer world during the past three thousand years has been through the immigration of foreign invaders, who have brought with them the monotheistic religion and polity of Islam, so that Indian Mussalmans now constitute by far the largest Muslim nation of the world. Most recently, however, India has come into connexion with a scattering nation of the West more intimately than any other Asiatic land.

Here, as elsewhere, the missionary has employed in the first instance the agencies of preaching and persuasion, but the form which the results of his work have assumed has mainly been determined by the conditions of the classes to whom he has addressed his message. To bring out the chief features of it, we may deal with ‘mass movements,’ education, and philanthropy as main channels of evangelization.

The earliest form of Christianity in India is that of the Syrian Churches of Travancore and Cochin, which probably owe their origin to the Nestorian community of Byzantium, founded by P. Maron, who settled on the Malabar Coast in their early days. From about the 4th cent. a trading and landed community accepted the Christian faith, and has continued as a local caste to the present day. Early in the 7th cent. the New Testament was translated into Kashmiri, and from this translation the popular and liturgical forms of the faith spread, while the canon was accepted as closed.

The work of St. Francis Xavier, Roberto de Nobili, and other great Roman Catholic missionaries of the Portuguese period is principally in evidence now in the masses of fisher folk and other labouring castes in the west and south of India; and in the earlier Protestant missions the same factor of community-movements appears. In the Danish-Halle Mission of the 18th cent. the greatest name is that of C. F. Schwartz (laid 1760, died 1793). The 20,000 Christians whom he gathered in Trangore and elsewhere were mainly from the village labourers. After his death the work dwindled, till it was taken over by the Anglican Church, and during the first half of the 19th cent. the work of the C.M.S. and S.P.G. in Travancore (Catholic work of the Debrogna, together with that of the L.M.S. in S. Travancore, yielded much more than half the entire number of Protestant converts in India, and naturally also the best organized churches. In 1851 these missions had 31,355 adherents, the remainder of the Madras Presidency 23,821, and all the rest of India 16,916. In the succeeding sixty years these missions and others in S. India have greatly developed, largely through the agency and work of American societies. The Protestant Christians now number 870,425 (besides over a million and a half Roman Catholics and Syrians), and they contribute £33,281 to the support of worship and schools. The Indian ministry includes 452 ordained men, an army of 537 foreign missionaries, and the self-administration of the churches is on the increase. Self-extension, too, is shown by the activity of more than one mission of the Indian Churches. The largest is the Travancore Mission, supported by 130 ordained men, and 2000 converts in a mission which they carry on in the Nizam’s territory. Part of their work was made over to the diocese of the first Indian bishop, V. Azariah of Dornakaal, when he was consecrated.

In Travancore a similar movement has made headway in the L.M.S. and C.M.S. missions, which
now number 57,000 and 57,000 Christians respectively. Still more widespread is the movement in the tropical country north of Madras. Here, especially since the great famine of 1877-78, the out-caste village labourers have pressed into the churches in myriads. The Christians belonging to Anglicans, American Baptists, Lutherans, and others are estimated at 75,000.

In Bengal an older movement in the forties of the last century left a considerable church in the Nadia district; more recently the Nāmaśādras of E. Bengal are turning their hopes towards Christianity. At the moment India, admit some hundreds from among them. In the United Provinces of Agra and Oudh the Chānārs (leather-workers) and sweepers have been principally gathered in by the American Methodist Episcopalian, whose recent congregations numbering 102,000 adherents, while other Protestant missions have 22,000. The most rapid movement during the last decade was in the Panjab, where the Christians entered in the government Census returns had increased from 37,000 in 1901 to 163,000 in 1911 chiefly in the American Presbyterian missions.

The movements among the Indian village proletariat which have resulted in a large and growing number of conversions to Christianity all form part of one upward tendency of populations representing the pre-Aryan inhabitants, enslaved by the Aryan conquerors and kept for millenniums in servitude, but now afforded the opportunity of emancipation by rulers whose political and social ideals are bound up with Christianity and whose rule has been accompanied by active Christian efforts of teaching and philanthropy. The effect of these efforts in raising the masses who have responded to them is expressed thus by the Hindu Census superintendent of the Mysore State:

"The enlightening influence of Christianity is patent in the higher standard of comfort of the converts, and their sober, disciplined, and steady lives." (Census of India, 1911, Calcutta, 1915, vol. i. p. 133).

To this we may add that evidences of spiritual regeneration and devotional life are also to be found.

The populations so far referred to are the 'untouchables' who live among the Hindus and Musalmāns of the plains. They may number (accuracy is very difficult to secure) some 30,000,000. But there are some 10,000,000 more of non-Hindu aborigines, living mainly in hilly regions, as among whom the Christian faith has found ready entry. Such are the Kacres of Burata, the Khāsis of Assam, the Kols and Santals in Bengal. The Christian communities among these amount to some 200,000 persons. Both among these and among the out-castes the expansion of the movement appears to be limited only by the capacity of the Christian Church adequately to shepherd and educate the candidates for discipleship. The effect of education and Christian influence in raising the status of the Christian community as compared with its Hindu and Muslim neighbours has been very marked. Some progress has been made in the governmental education, but the influence of the Church in the Panjab the Christians have been recognized by Government as an agricultural tribe, and in the irrigation colonies there are several flourishing villages of Christian cultivators, holding land direct from the State.

Education of a simple kind, including that of girls, was from the first a regular part of missionary activity, but it was brought into prominence by the Scottish missionary, Alexander Duff (1800-57). He set out to evangelize the upper classes of Bengal by means of higher education, given through the medium of the English language, which, through the efforts of Macaulay and others, had already been adopted by Government as the vehicle of learning for India. Duff was assisted in his plans by Hājī Rām Mohan Rāy, the founder of the Bārhām Samaj (q. v.). Duff's converts were counted rather by the score than by the hundred, but they included men who made their mark on the Christian Church as leaders in Bengal.

His school also had a powerful effect on the development of the Brahman Samaj and other liberal movements in Hindūism, and not less did he influence the educational policy of the Government. It was the first Papal mission to have an appreciable amount of public instruction, and in 1857 established universities in Calcutta, Madras, and Bombay, followed later by others in Lahore and Allāhābād, and recently by a Hindu university at Benares in this respect is no longer marks the past, but is developed into a college, and no fewer than 8 other colleges were founded in different parts of India during Duff's lifetime. The most noteworthy contemporary of Duff as an educator was John Wilson of Bombay, who founded the college which bears his name, and added to his English work a profound acquaintance with Hindūism. There are now 38 Protestant missionary colleges in India, containing, in June 1847, 17,566 students, the latter practically all Christians. Of the total, 4,481 students were Hindūs, 530 Muhammadans, and 436 Christians. There is a fully-organized missionary college for women in Lucknow; and a college was opened there in connexion with a girls' high school in Lahore.

The work of elementary and secondary education was powerfully forwarded by the system of grants-in-aid which the Government instituted in 1854. The grants are made to the managers of the high schools; a grant of Rs. 10 to each girl, Rs. 40 to each boy. The result of this policy has been to raise the number of Christian scholars in Hindūia from about 2,000 in 1862 to 57,941 in 1912. Among these are 26,662 boys and 8400 girls; 300 boarding-schools contain 24,153 boys and 17,566 girls, all Christian. In 87 theological schools 1852 students are in training, and 127 training-schools have 1804 male and 173 female students. The boarding-schools are partly secondary and partly primary. The result of secondary education in conversions has been small, but the influence on social ideals and practice in non-religious thoughts, as among the educated class, is of great importance. The care bestowed on the education of the Christian community, especially the women, has made it, with the exception of the Parsis, the most literate in India, far above the average of the Hindūs generally, and little, if any, behind the Brahmins. The number of Christian officials and teachers is large in proportion to the size of the community, and it is not easy to keep pace with their need for a highly educated ministry, while satisfying the educational wants of the large rural populations. The provision for primary education in the Hindūia is the most urgent missionary problem of the day. There is a large body of converts, but the local population of these communities is mainly non-Christian. In missionary colleges and schools of every kind 576,371 persons were being educated in 1912—about one in ten of all pupils.

Christian literature took its first effective start with the work of the great pioneer, William Carey (1793-1834). Together with Marshman and Ward, he worked chiefly at Bible translations into a multitude of different languages, and also founded a missionary college in Serampore. Most of these versions were mere ballons d'essai, but the Bengali became the foundation of all further work in that
tongue. Henry Martyn, at the same time produced his remarkable Urda version of the NT, and a long line of translators and authors followed, several of whom are mentioned above. Krishna Mohan Banerjea among Hindu converts, Taimid-din among Muslims, and John Murdoch among English writers and publishers of Christian literature are outstanding names. Besides Bible versions there is also an incipient Christian literature in all the principal Indian languages, amounting in some of them to several hundred works. These are directed both to the training of the Christian Church and to convincing the people of their errors.

Among the philanthropic auxiliaries to the gospel message, medical work takes a foremost place. The effective prosecution of this in India dates from the middle of last century, when W. Lockhart of the L.M.S. was sent to Travancore, and Henry M. Schindler of the American Board to Ceylon. The chain of medical missions on the N.W. Frontier was begun in Kashmir in 1864, and has since then extended to Peshawar, Bannu, Dera Isanath Khan, and quetta. The attitude of a turpentine, fanatical, and treacherous Muhammadan population has been greatly modified by the work of medical missions, and, while converts have shown their faithfulness in martyrdom, Christian Scriptures such as illustrated by the example of an interested Christian love, have penetrated far into regions otherwise inaccessible to the missionary. Similar effects have been produced on the intolerance of the caste-proof Hindu, and, while suffering in a degree relieved, resulting from a creed or condition, the ministry of healing has brought many to the discipleship of the Healer. The first qualified woman-doctor came to India in 1880, though medical work by women had been carried on long before. Medical missionary work have led the way in relieving the once hopeless suffering of secluded Indian womanhood, given over to treatment by ignorant and clumsy midwives and barber-women. Of the Indian women-doctors now serving under the Dufferin Fund and other public bodies the great majority are Christians, with a sprinkling from the Brahman Samaj.

Closely allied with general medical work is the that of the leper missions. Of the unfortunate leper communities there are care in Christian institutions, and many of them have accepted Christianity. Christian institutions for the blind and the deaf and dumb are the only ones for these classes in India. Famine missions have furnished a minuscule and appreciable fraction of the Christian community, especially in N. India; these have in recent years found imitators among non-Christians, and, owing to the influence and example of mission schools and colleges, the conception and practice of social service are spreading among Indian students, as shown by the society of the ‘Servants of India,’ promoted by G. K. Gokhale.

India affords the largest and most influential sphere of work among the Muslins of the world. Its Mussalmân community numbers 65,000,000, and it is both specifically Indian in type and cosmopolitan by ties of religion—a fact which gives this community a greater political importance than its numerical proportion to the Hindu population would warrant. The largest Muhammadan community of India, that of Bengal, now numbering 24,000,000, came under British rule after the battle of Plassey in 1757, but the first effective Christian work among them was done by the missionary Henry Martyn when he translated the NT and much of the OT into the Muhammadan lingua franca of India—the Urdu, or camp dialect of Hindustân. His one convert, ‘Abd-al-Maâb, was the forerunner of many ex-Muslins who have joined the Christian ministry. It is impossible to estimate accurately the number of converts among the Muslins of the country, but it is not too much to run into several myriads. The circulation of the Scriptures, which the Muslim profoundly recognizes as divine, is especially effective as a means of evangelism.

Among the Buddhists of Burma and S. Ceylon the results of work have been similar to those among the middle classes in India; i.e., conversions have been sporadic, occasionally in families, with here and there outstanding personalities. The Census of 1901 gave the number of Protestant Christians in India as 4,152,759, compared with 950,385 in 1901. The largest proportion is in S. India (626,000), where the work has been established longest and is most systematic. The distribution elsewhere varies chiefly according to the incidence of mass movements. Protestant Christians in other parts number: Bengal, 178,000; United Provinces, 135,000; Panjab, 165,000; Bombay, 51,000; Central Provinces and C. India, 21,000. In the native States they are generally fewer i.e., Haidarabad, 29,000; Mysore, 9,000; Panjab States, 500; Kashmir, 700.

Syncretism, in the shape of reform movements, both religious and social, is much in evidence. The earliest and most famous was the theistic Brahman Samaj, founded in 1828 by Rajâ Ram Mohan Ray—a small sect, but influential owing to the social standing, literary ability, and philanthropic zeal of its members. The teaching of its sects derived from a variety of Hinduism to a kind of Unitarian Christianity with Indian atmosphere. The Arya Samaj (q.v.), founded in 1875 by Dayânand Sarasvâti, represents a crude modification of original Hinduism, professing to hold to the Vedas and Yoga, but supposed to be merely a continuation of traditionalism, and it is strongly forcing their interpretation to fit modern standards. It has a strong political and nationalistic vein, and is bitterly hostile to Christianity; but it has done good work in the cause of education and social reform. It prevails chiefly in the Panjab and United Provinces. In Bombay the Prarthana Samaj (q.v.) does a similar work. These bodies, following missionary example, are beginning to interest themselves in the amelioration of the condition of the Indian, and the Arya Samaj actually admits them and also Muhammadans into the ‘Vedic religion’ by a ceremony of purification (budhî).

Modernist movement among the Muhammadans dates from the efforts of Sir Sayyid Ahmad, who began in 1838 to arouse his fellow-religionists to the imperative need for English education, which resulted in the establishment of the Anglo-Musulman College at Aligarh and the All-Indian Muslim Conference. It has also produced something of a school of liberal theology. A more widespread movement was inaugurated by Ghalam Ahmad of Qadian in the Panjab in the year 1879. He, like Dayânand, harked back to his sacred Scriptures, and treated the Qurân as verbally inspired, interpreting it in a new fashion with an eye to modern thought. This sect, too, is strongly opposed to Christianity, and some members of it have started a mission to England at Woking. Despite their attitude of opposition, these new sects all owe more or less of their originating impulse and of their specific doctrine to the message of Christian missionaries. The Indian national movement has a tendency to bring the reformed religion in the Christian community also in a certain touchiness and impatience of foreign influence. At the same time there are signs of an increased feeling of responsibility for the evangelization of
India, marked by the establishment of the National Missionary Society and other efforts. The Dutch possessions known as Indonesia were previously under Hindu rule, but since the 12th century, they have gradually been overrun by Muslims, chieftains, and out of the total population of 35,000,000 all but 2,000,000 are now Musilam Muslims. The Dutch East India Company, while building up the Dutch Empire, educates the natives after a fashion, but their condition at the beginning of the 19th century, was very low. Since then, it has improved, and the so-called 'spiritual' conquest of Java, Sumatra, and Borneo is being attended by a corresponding development of the native population. Inland and coastal trading stations, purchased outright or leased, are under the care of missionaries appointed and maintained by the European powers.

In the 19th century, China was opened to Western influence by treaties and the Boxer rebellion. The number of foreign missionaries in China increased almost 50 per cent (278,500 to 417,500) during the second decade of the century, and has been carried on mainly by Dutch and German missionaries on the four principal islands of Sumatra, Java, Celebes, and Borneo, as well as on some of the smaller ones. Large numbers of converts have been gathered in Java, in the Retak country on the north coast of Sumatra, and in the Malacca district of Celebes. In the second half of the 19th century, an effective barrier has been erected to the inland advance of Islam. The total number of converts from Islam in these islands is estimated at 400,000.

v. CHINA.—In contrast with India, China has but one standard language and literature, and may therefore be regarded as a unity, despite its size and diversity. Modern missionary work began in China with Robert Morrison, the missionary, and linguist, in 1807. He landed the first convert in 1814, and before his death (1834) he had translated the Bible into Chinese, besides writing many pamphlets. But neither he nor his colleague, Robert Milne, was able to establish the European settlement in China; they only existed in the Portuguese settlement of Macao or in British territory at Malacca. The opening of China to foreign intercourse, including missionary effort, was the result of a series of wars, internal and external, the first of which, while it helped to admit the missionaries, did much to discredit his message. The three 'opium wars' of 1842, 1856, and 1860 resulted in the opening of twenty-four 'treaty ports' to foreign influence. It was during this period that the first missionary, Robert Morrison, worked in Hangchow, Tientsin, and Canton, that Protestant missions first gained a footing. Up to 1856, 3 English societies, 1 German, and 7 American had begun work, and the converts may have amounted to 200,000. A few American workers in China became more marked as time went on, and the same is true of Japan.

The next great convulsion was an internal one, the Taiping rebellion, which lasted from 1850 to 1864, and was eventually suppressed by the 'ever victorious army' of a Western leader, General Charles George Gordon, himself in deep sympathy with Christian missions. The leader of the rebellion had once come under the influence of the Christian missionary, and he claimed to have received a divine revelation to destroy idolatry and to put an end to the Manchu dynasty. The second of these aims was accomplished half a century later by another great convulsion, and we may believe that the Taipings did much towards preparing the way for the first, which is yet to come; but we may also be thankful that their iconoclasts did not prematurely succeed before the constructive forces of Christian charity and practice were ready to step into the breach. Meanwhile, missions on the coast were increasing their work, and the year after interior China had been quieted (1865) Hudson Taylor founded the China Inland Mission, which led the way to the formation of a network of mission stations during the last half century, now extending to the remotest interior of the Republic. This mission alone now numbers 1,076 foreign missionaries, as against 473 of all societies and nationalities in 1877. In that year the number of converts was reckoned at 13,000.

The final break-up of the Manchu dynasty was first marked by the Boxer outbreak of 1900, directed, with the connivance of the Empress, against both foreigners and Christian missionaries, 500 of them, with 33 of their children, were killed, and some 16,000 Chinese Christians were massacred, many of them accepting death willingly rather than dishonor. A strong impression was created by the refusal of missionary societies to accept a money indemnity from the Chinese Government for the missionary lives laid down freely for the gospel. During the succeeding decade the number of foreign missionaries in China increased to almost 50 per cent (278,500 to 417,500) during the second decade of the century, and has been carried on mainly by Dutch and German missionaries on the four principal islands of Sumatra, Java, Celebes, and Borneo, as well as on some of the smaller ones. Large numbers of converts have been gathered in Java, in the Retak country on the north coast of Sumatra, and in the Malacca district of Celebes. In the second half of the 19th century, an effective barrier has been erected to the inland advance of Islam. The total number of converts from Islam in these islands is estimated at 400,000.

The revolution of 1911-12 was the final stage in the opening up of China to Western culture and Christianity. There has, it is true, been a slight reaction from the abolition of Confucianism as the religion of the State, but a stronger power than the iconoclasts is shaking the foundations of the old cults, namely the re-creating of the world-old system of Chinese education in Western and 20th century moulds. Moreover, the official request made by the Chinese Government on 27th April 1856 to the first Protestant mission in China, to destroy all idolatrous subjects, whatever motives of policy may have inspired it, was a recognition of Christianity as a power affecting deeply the interests of the nation; and Sun Yat Sen, the leader of the Cantonese revolution, was a Christian who seeks to model his political policy on the principles of the Bible. Happily, too, the establishment of the Chinese Republic has coincided with the final abolition of the Indian opium traffic on the Chinese coast, and the Chinese, who have always had a strong respect for their literature, but now they are ready to welcome Western language, literature, and science. Great efforts have been made, especially by the American missions, to grapple with the task of providing centres of higher education on a Christian basis throughout China, and in this, as well as in general work, the tendency towards cooperation among all bodies is strong and helpful. No fewer than 62 university colleges are in effective operation, 7 in coast provinces, 1 in the centre, and 1 in the west. In several the medical faculty is strong, and Christian missions at present lead in the training of qualified doctors for China. There are now some 264 mission hospitals (1912) with 220,788 in-patients and 2,120,774 out-patients for the year. Among the agencies which have been particularly active in taking advantage of the present opportunities the T.M.C.A. has been especially in evidence. The evangelistic meetings conducted by J. R. Mott, and still more by George Sherwood Eddy (1912-14), were attended by large audiences of educated Chinese, sometimes up to 4000, in many of the principal towns of China. Among the harrassers were officials of high rank, of whom one was captured, while thousands of men promised to study
the Bible, and hundreds have actually joined the Christian Church.

The creation of a Christian literature for China has been carried on mainly by co-operation between the missionaries represented in the English Literary Society for China, under the guidance of Timothy Richards and others. The rapid opening of the mind of China to appreciation and reception of Western thought has given missionary scholars both the opportunity and the task of providing not only religious but general and scientific literature for readers, whether Christian or non-Christian. Both this and the work of Bible translation in China have been greatly facilitated by the existence of a common writing language, though versions of the Bible are being produced in several local vernaculars, as also in a popular form of the Mandarin. The circulation of the Bible is increasing by leaps and bounds; in 1910 a million and a quarter copies of Bibles, New Testaments, or single books were circulated; in 1914 two million and a quarter.

The first L.M.S. woman missionary to China was appointed in 1868. The work among women has been greatly encouraged by the evolution of foot-binding and by social prejudice, but these have been in great measure overcome, largely as the result of missionary effort, and the desire for the education of women is greatly on the increase; some are using their education not only for the medical and teaching professions, but also for social service. Over 600 members have been enrolled in a Student Volunteer Movement for the Christian ministry, putting aside prospects of heathenism. The tendency is to use work for the formation of an indigenous Chinese Church free from Western control, and some progress is being made in the self-support of native churches. Meanwhile the various cognate bodies which have hitherto been carrying on separate missions, such as Anglicans, Presbyterians, and Methodists, are amalgamating their organizations as a first step towards larger union.

In the outlying provinces of China work is still in its beginnings. It is furthest advanced in Manchuria, where Presbyterians and Lutherans have a community of some 30,000. The devoted work of James Gilmore (1790-91) in Mongolia left little visible result, and the societies which are following it up are gathering a few converts, but are as yet without large units. In Chinese Tibet these are insurmountable, and the only quarter from which the gospel has entered that land is Little (or Western) Tibet, belonging to Bhutan, where Missionary societies have some small congregations, and have done much for the investigation of Tibetan language, literature, and history. Among the Muslims of Chinese Turkestan Swedish and China Inland missions are in the early stage of work.

vi. JAPAN, KOREA, AND FORMOSA.—Here, as in China, we have countries in which, after periods of notable success on the part of Roman Catholic missions, the native rulers have turned upon them as having grown dangerous and have violently per- mitted the Christian Church, almost to extinction, till, through political changes, intercourse with the West has been resumed, but on a different footing, and with this the way has been opened for missions of the Reformed Church. In the case of Japan this re-opening dates from the year 1859, when American missionaries were the first to settle in the country. The first Protestant Christian was baptized in 1861, but meanwhile persecution of Christians continued, sometimes with severity, till the Revolution of 1868, which once more brought the Mikado to power, and inaugurated the modern government of Japan. G. Emsor (C.M.S.), who arrived in 1869, was the first English missionary, but full religious toleration was not granted till 1873, to be speedily followed by the serious suggestion that Christianity should be made the State religion. This was, however, negatived, and subsequently there was a period of foreign influences, among which Christianity was included, especially during the first decade of this century. But a swing back of the pendulum was indicated by the action of the Minister of Education in 1912, when he announced that the government had resolved to recognize Christianity, alongside of Shinto and Buddhism, as a religion deserving of encouragement, expressing, at the same time, the hope that Christianity would conform itself to national aspirations. In this connexion it is noteworthy that the Christian message in Japan has appealed specially to men of culture. A quite disproportionate number of Christians are found among members of Parliament, high military and naval officers, doctors and professors, and Count Okuma has recorded that 'the indirect influence of Christianity has poured into every realm of Japanese life' (Intern. Review of Missions, Oct. 1912, p. 654). The number of Protestant Christian adherents in 1913 was numbered as 19,000. A further increase has been recorded by Horiuchi, in 1918, as 30,000. For particulars see Historical Sketch of the Protestant Missions in Japan. The work of the missions in Japan has been carried on as follows: about 1,000 Christian children have access to well-worked Government schools. The educational work of the Y.M.C.A. has been much appreciated in Japan, and has strongly influenced the student world. The Y.W.C.A. is pursuing its activity. Christian missionary efforts among the aboriginal Ainus of Yezo have been appreciated by the Japanese Government, who bestowed a decoration on John Batchelor of the C.M.S. in recognition of his work for these dying race.

Among the dependencies of Japan, Formosa, first entered in 1885, now has some 30,000 Christians. Korea, after three and a half centuries of absolute seclusion, was not effectively reached till 1882, first by American missionaries and, in 1890, by Anglicans. The growth of the work has been phenomenal, especially in the years following the Russo-Japanese war of 1905-06. Adherents in 1918 numbered 15,000, and Methodist missions under education in mission schools, and 25 hospitals and 25 dispensaries were in operation. This progress has been accompanied by remarkable zeal in the study of Scripture and by reformation of life.

vii. THE Near EAST.—Under this term we include the lands, stretching from Morocco to Persia, in which Islam first arose and spread. Owing to the long dominance of Islam the work of Christian
missions to Muslims in this region is either non-existent or in its infancy. For our present purpose, we are not dealing with missions to the surviving Abyssinian, Coptic, Armenian, Syrian, Nestorian, or Jacobite Churches. We are, however, noting that the educational work carried on among Oriental Christians, principally by American missionaries, in the Turkish empire and Egypt has resulted in the formation of considerable Protestant communities, the progressive organization, morality, and zeal has raised the Christian name in the eyes of the Muslims and reacted favourably on the ancient churches by stimulating a desire for reform and progress. There is among the Protestant population, also, a dawn of a desire to evangelize the Muslim—a feeling that had been eradicated from the Oriental Christian by a thousand years of oppression and misrule, which prevented him from seeing in the Muslim anything but a growing multitude of heathen souls. The work of converting these multitudes, though fairly frequent, but the building up of Christian communities is a slower process, hampered by special obstacles.

In Morocco, Algeria, Tunisia, and Tripoli, among a total population of about 14,000,000 work is carried on mainly by the N. Africa Mission and other un denominational agencies. There are converts here and there. The principal agency, besides that of colportage, is schools, which are being established in Egypt work was begun in 1854 by the American United Presbyterians, principally among the Copts, and resuscitated by the C.M.S. in 1858. Considerable access has been gained among the Garamantes class, and a number have been baptized, while the work has not failed to make inroads, in both town and country. Schools, primary and secondary, contain 17,994 pupils (largely of Coptic faith or origin), and a scheme for the establishment in Cairo of a Christian university is being promoted by a German and English missionaries are pushing out into the Anglo-Egyptian Sudan, and, though Christian propaganda is barred among the Muslims of that region, yet in Omdurman some educational work is being done. Cairo is the chief literary centre of the Muhammadan world, and from the Christian side vigorous efforts are being made by the Nile Mission Press, an Anglo-American undertaking, to produce and circulate evangelical literature in Arabic.

In Asia Minor and Syria Protestant work has been done chiefly by American missions working among the ancient churches. The system of education which they have developed, however, note schools to colleges, especially the Roberts College in Constantinople, has notably affected the Muslim community in thought and attitude towards Christianity. Medical missions, in Palestine especially, have extended in the same direction. Arabia is touched on its outskirts at Bagdad, Bahrain, and Aden by schools, medical work, and colportage. Persia was first entered by Henry Martyn, when he completed his translation of the NT at Shiraz in 1811. In 1829 G. G. Pflander visited Persia, and wrote his celebrated Balance of Truth, laying the foundation of a Persian Christian literature, built upon later by W. St. Clair Tisdall and others. In 1871 American Presbyterian organized work among the Tribes of N. Persia, which in 1875 S. Persia was occupied by R. Bruce of the C.M.S. Medical and educational work has developed largely, and the demand for schools on a Western model far excels the power of the missionaries to supply it. The Mussulman spirit, however, in the reform movement, has borrowed freely from Christianity but does not so far make much return (see ABRABABAB). Throughout these missions work among women, visiting, teaching, and medical, has been initiated or helped on the independent perception of Muslim lands for the elevation of the female sex.

viii. Missions to Jews.—The Jewish population of the world is approximately 12,000,000. Protestant missionary work among them is carried on by 85 societies and individual missionaries. The London Society for Promoting Christianity among the Jews (253 missionaries; income in 1914, £51,000) is the principal one. Statistics are quite imperfect. Some 250 of the Anglican clergy are engaged in evangelizing Jews, and a considerable number of Western converts, J. F. de la Roë obtained baptisms during the 19th cent. in Protestant churches at 72,740; Roman Cathole, 57,300; Greek, 74,500. The theologian of the Arabian Jewish community, the missionary bishops Schereschewsky, Hellmuth, Alexander, and Golub, were Christian Jews.

III. General Aspects. —1. Principles. —As a result of the work of missions by the Reformed Churches since the end of the 19th cent. there is now a growing community of some 6,000,000 native Christians belonging to the most varied races and cultures, from the primitive aborigines of Australia to the progressive people of Japan. Yet in the first and last of these missions the conception of Christianity in every direction the question has been raised whether Jesus of Nazareth ever intended that His disciples should carry the message of His redemption into all the world, though it is fully allowed that the world mission and His faith was the legitimate and necessary consequence of the principles which He enunciated and exemplified. To suppose that the Originator of this life and teaching, which have persisted in spreading their vitalizing influence till it reached all the peoples of the world in all centuries, was Himself without desire for or intention of producing such an effect would be to face the most insoluble enigma of history. The development which we have sketched makes it abundantly clear that the act of mission, the birth of the Church as a result of missions has been the conviction that its promoters and messengers were carrying out the conscious purpose and explicit command of the Saviour of the world. At the same time it would be unnatural to the reconstruction of thought which our age is experiencing in every sphere of life should leave the conception of foreign missions entirely unaffected. Among the Reformed Churches more especially Zinzendorf's 'souls of the Lamb' as the one goal of missionary effort for the Lamb, as the one goal of missionary effort for the Lamb, as the one goal of missionary effort for the Lamb, as the one goal of missionary effort for the Lamb, was the one goal of missionary effort for the Lamb, was the one goal of missionary effort for the Lamb, has expanded with the influence of teachers like G. Warneck in Germany and B. F. Westcott in England, into the wider and deeper conception of a call to regenerate, from the primary, possible, intellectually, and socially, and to build up the universal Church of Christ. Moreover, the results of research into Christian origins have helped us, with a purer historical perspective, to test our contemporary missionary work by the example and spirit of the Apostolic Age. From subsequent early and medi eval history, too, the Church have been learning lessons of the manifold adaptation of the form of missionary work to the conditions and needs of different ages and peoples, and of these lessons the
whole modern development is an amplification. But this larger sweep of outlook and effort has by no means made the first aim of individual conversion a secondary one. On the contrary, this remains the vital centre of the whole, and it is as this is expanded and co-ordinated in the larger aim that the true end of missionary work is attained.

2. Methods, apostolic and contemporary.—The radical question is raised again and again whether the close following of the methods of St. Paul is not the true solvent of our most fundamental difficulties, particularly of the lack of spiritual and economic independence in our mission churches. Was the evangelist to make brief sojourns instead of settling down, to devise authority straightforwardly on native helpers instead of keeping them in long tutelage, to demand instead of giving penurious assistance, Christian congregations might, it is urged, be smaller, but they would be stronger and self-reproducing. Each of these paths has been tried in modern missions, generally with scant success, for the same end under different conditions may demand different means. Where there was a Jewish diaspora standing at the threshold of Christianity, teaching and discipline had been as-illuminated which may now require a generation; where habitat and civilization of evangelist and evangelized were practically identical, the problems now arising from the extension of civilization to the distance of an abode were non-existent. Recognising these and other special difficulties and defects of modern missionary work, we have to seek their solution not in the forms of apostolic, or any other, evangelism, but in the principles of efficiency, whatever these may be. Thus in the adventure of faith undertaken by the C.I.M., which has so remarkably opened up China to the gospel, we have a contemporary adaptation of the Pauline method, rapidly following the main lines of evolution, and the city of an empire which in culture and administration offers much analogy to that of Rome. Or, again, in the revival of community life in the brotherhoods and sisterhoods of Anglican missions we have a useful adaptation of early and medieval monasticism to the conditions of the mission-field of today. But both of these have the defects of their qualities.

The effect of modern thought on the adaptation of the principles to contemporaneous missionary work may be traced in the development of the chief missionary methods. The mission school and college have no precedent in apostolic times, and they differ greatly from the cloister school of mediæval monasticism, the universities, the theological seminaries, being designed to serve as means of conveying the message to the children of the literate, or would-be literate, classes who are otherwise not easily reached, and of bringing them into the Christian Church when they have arrived at years of discretion. The most notable effect of earlier educational work was the conversion of men of mark, who exercised great influence on the development of the Church. Within the last generation this aspect of the work has receded into the background; the conception of educating the mind of a nation and creating an atmosphere permeated by Christian ideals has exercised increasing influence on missionary educators, especially in high schools and colleges, and it is certain that their successes have lain mainly in this direction. The value of such preparation of the community for the eventual reception of Christ as Lord and Master is immense, and it may be hoped that much of the work which commonly fails to produce result will prove eventually accomplished beforehand. But there is need of balanced judgment and steadfast will, lest elaboration of the scaffolding delay or even prevent the erection of the building. Similarly, in the now indispensable work of medical missions the physical benefits conferred were at first entirely subsidiary to the spiritual aim; but the conception of a method to be realized in things temporal as well as spiritual has led to emphasis upon the fact that the work of healing, even apart from any spiritual effects, is a worthy aim of the missionary. This involves the risk that the mission may be merged in the philanthropist. The modern medical missionary would not, if he could, ignore the demand for the greatest possible scientific efficiency, for he will not allow Christian zeal to be the bond of his second-rate professional skill; yet he will lay the decisive emphasis of his calling on the specific aim of the missionary to carry home his message. Again, in the delivery of that message by the general missionary a comparative study of religion and society has modified the method of approach by the Christian messenger to non-Christians. He is less inclined to attack their observances and rites than to elicit the need latent in each human heart of something higher, less prone to controvert their doctrines and duties than to set forth Christ in life and teaching. The conviction is gaining ground among his hearers that he is no ruthless iconoclast of their national religion, but a sympathetic guide who would lead them to satisfactions which it fails them to find. But his aim must still be that they may be ‘redeemed from the vain manner of life handed down from their fathers’ (1111) and come to know the only true God. Without attacking concrete sin and error this cannot be done. The manner of controversy has been rightly modified, and it is well to use points of agreement as a basis for approach; but the reason for adopting one faith in place of another cannot lie in their points of resemblance, but only in those of difference. Hence controversy or polemic, in the right form, can never become obsolete as a missionary weapon. Once more, in the case of missionary work for women its first, and most worthy, aim was simply to deliver sisters whom the Christian woman found in degradation, ignorance, and suffering from these evils into the liberty of Christian womanhood. As, in the course of generations, they laboured for this end, the great task of training new types of Christian motherhood awaited each nation gradually dawning to the thing, and they became aware that they had stimulated a greater awakening than they had dreamed of among the women of China, India, and Africa. But Christian personality remains the keystone of the movement, which is growing in East and West alike, finds its true regulative everywhere in the principles of the gospel.

3. Cognate activities.—A bare mention must suffice of the achievements of missionaries in works ancillary to their main calling. The names of Livingstone, Krapf, and Robbmann among explorers, of James Legge, R. Caldwell, H. A. Jaeschke, and Carl Meinhof among philologists, and of Codrington and John Roscoe among anthropologists are but a few among many. In civil life, too, missionaries have sometimes held a prominent place—e.g., C. F. Schwartz in Tanjore and John MacKenzie in Beehanadli; and in India municipal offices have occasionally been held by them. To outsiders these public services have been a vindication of the missionary’s usefulness; to some among the missionary public it has seemed that they might be a hindrance to it. In the nature of things, these services must be being accomplished beforehand. But there is need of balanced judgment and steadfast will, lest elaboration of the scaffolding delay or even prevent the erection of the building. Similarly, in the now indispensable
4. Results and problems.—The present condition of the world mission-field shows offshoots of the Reformed Churches in every stage of growth. Their members, as always, vary in gynessines and strength, but everywhere they include whole-hearted followers of Christ. Many have advanced greatly in tone and conduct from their former non-Christian manner of life. The animist, the pantheist, the agnostic, and the deist have come to believe in one almighty Father, one sinless Saviour, one indwelling sanctifying Spirit, from this faith grow the fruits, both of higher morality and of societal amelioration, enhanced culture, and intellectual progress. In many directions the desire is shown to hand on the benefits of the gospel to others, and readiness to make sacrifices in so doing is evident. It has been remarked that the churches of the mission-field have produced no first-class heresy, implying thereby a lack of serious intellectual striving. But other causes may more reasonably be assigned for this. The intellectual training and status of the foreign teacher is so far superior, in the great majority of cases, to that of his converts that it would be difficult for them to maintain positions contrary to those which he has laid down. More so, the more so variations in the intellectual formulation have been fully worked out by previous heresies, the weaknesses of which have been pointed out to them. Moreover, no incomparable part of the effect produced by the Christian mission is due to the possible variations in the formulation of intellectual processes, which have been found to be in the change of attitude, the new beliefs and ideals of conduct, individual and social, taken over from them by the still non-Christian world. In this field the analogues of early Christian heresies are to be found in teachings of bodies outside the Christian Church. Thus the Brahmi Sanaj reform of Hinduism represents a kind of Arminianism; the Bani-ohshof of Islam would stand for one variety of Gnosticism, and theosophy (q.r.) for another. Generally speaking, syncretism is largely practised, and in many cases by men of noble character who are striving for a reconciliation of the old and the new, but the religion of the amateur collector is not more likely to stand now than in the early centuries, though it is a pillar of which the abler intellects of the young churches need to beware. Analogous to this is the problem of unity in the Reformed Churches. The majority of the divisions which have sprung up in the West from local sects have naturally no meaning to the Eastern convert; and the same holds good of many dividing lines in doctrine. The resulting tendency to unity in faith and practice, in face of powerful opposing forces, is hungry and hopeful. To hinder this danger that members of the young churches should regard all distinctions in doctrine and discipline indiscriminately as mere Western peculiarities which may be swept aside in order to construct an edifice of truly independent Christianity. A sound attitude of the missionary teacher towards questions of race and nationality will do much to meet this danger.

Next to the essential spiritual element no factor in missionary work is more weighty than the social progress which it has initiated or stimulated. From these successes a difficulty often springs. In the contact of two deeply-separated civilizations the convert naturally assimilates that of his Western Christian, but wishes to be the exercise of wisdom and restraint he may evolve a more careful attitude of Western culture without its balance and restraint, thereby repelling all his own countrymen and his Western fellow Christians; and among higher races he may acquire new and habits which will involve him in economic difficulties. Meanwhile, Western culture and commerce are ceaselessly floating into mission lands, and the change of life connected with them is affecting non-Christians scarcely less than Christians. As a result of this the efforts of the missionary to promote a simple indigenous style of living may be resented as intended to repress the progress of a body; this is one of missionary’s most difficult and delicate tasks to decide and to convince his charges what is justly due to the decrees and progress of Christian life and what is illegitimate as ministering to extravagance and pride. Thus social progress is intimately connected with the great difficulty presented by the economic dependence of the mission churches on their parents at the home base. The amount annually expended by home churches on the maintenance of preachers, teachers, and other members of indigenous races is estimated at £7,000,000. Allowing for a liberal margin of error, the disparity is still immense, even when we consider that a large number of the converts are drawn from impoverished strata of society whose financial weakness must be more for some time to come. Almost every new convert is a forward step for a mission. The indigenous Christians and missionaries who also contribute largely to the maintenance of worship, pastoral care, and teaching. In the last resort the economic dependence of mission churches is part of the larger problem of Christian dependence of the coloured races on the white, and in all probability the one will not be solved without the other.

Everywhere we are brought up against the racial problem. It was there and the successive missions have been in proportion to that of the messenger in understanding: and treating with wise sympathy people of a foreign race. As the races have become conscious of their common ideals, traditions, and interests, and as the enterprise in the mission-field has developed into the national. Everywhere the missionary is met, actively or passively, by insistence on rights of the race in its own sphere and a demand for equal opportunity, as against the old idea of the inherent superiority of the white man. The opposition this engendered reacts against the white man’s religion, and there is on each continent a restiveness and impatience of control on the part of converts and missions which exist in the social world.

To deal with this firmly and sympathetically as a sign of healthy growth, and as a pathway to new and fruitful relations, is the part of the wisdom. Premature independence and unduly delayed emancipation both have their dangers; but social efficiency may be made an ideal; but it is also a temptation to the easy path of lowering the ideals of the gospel, and this leads to deterioration. The problem is to be solved only by patient, tenacious charity on the part of the missionaries who understand the national and racial feeling, and whose watchword is the responsibility of the stronger.

Mission 1(Muhammadan).—The materials for the history of Muhammadan missionary activity are much less abundant than those for the history of the propagation of Christianity. Muhammadan
MISSIONS (Muhammadan)

historians appear to have been singularly inquisitive as to the spread of their own faith, and only scanty information concerning this period is found at rare intervals in the vast historical literature of the Muhammadan world. The absence of a priesthood or semblance of one, the want of any attempt to hasten the acceptance of the doctrines of the faith, has had its counterpart in a lack of ecclesiastical annals; there have been no Muslim missionary societies (except towards the end of the 18th cent.), no specially trained propagandists, and very little continuity of missionary effort; even the religious orders of Islam, which have at times done much for the spread of the faith, have not cared to set on record the story of the success that has attended their preaching. There is, therefore, nothing in Muhammadan literature to correspond to the abundant materials for the history of Christian missions provided in the biographies of Christian saints, the annals of the Christian religious orders, and the innumerable journals and other publications of the various Roman Catholic and Protestant missionary societies. In fact, the fullest details as to Muslim missionary activity are generally to be found in the writings of the Christian clergy who have been called to the reduction of the Mohammedans; yet this poverty of information from Muhammadan sources there is one notable exception, namely, the biography of Muhammad himself. The missionary activity of Islam begins with the life of the Prophet; and as the numerous biographies of the Prophet are full of stories of his efforts to win over unbelievers to the faith.

In the Qur'ān itself, the duty of missionary work is clearly laid down in the following passages (the quotation is given in chronological order according to the date of their revelation):

1. "Summon thou to thy Lord with wisdom and withnice warning: dispute with them in the kindest manner" (xxi. 139).
2. "They have indeed received the Book after thee (i.e. the Jews and Christians) are in perplexity of doubt concerning it. For this cause summon thou (them to the faith), and exalt uprightly therein as thou hast been bidden ... and say, in whatever Book God hath sent down do I believe: I am commanded to decide solely between you; God is our Lord and your Lord: we have our works and you have yours: between us and you there be no strife; God will make us all one: and to Him shall we return" (iii. 14).
3. "Say to them ye have been given the Book and to the ignorant, Do you accept Islam? and if they accept it, then they are indeed Muslims; and if they reject it, then they are of those whom We sent against these, but if they turn away, then thy duty is only preaching" (iii. 10).
4. "Thus God clearly秀示st thou his signs that perchance ye may believe that there may be among you people who invite to the Good, and enjoin the Just, and forbid the Objectionable: and if they dispute with thee, then say: God best knoweth what ye do" (xxxi. 60).
5. "If any one of those who join gods with God ask an action of thee, grant him an asylum in order that he may hear the word of God; then let him reach his place of safety" (xxvi. 6).

Further, the faith of Islam was to be preached to all nations, and all mankind were to be summoned to belief in the One God.

1. "Of a truth (i.e. the Qur'ān) is no other than an admonition to all created beings, and after a time shall ye surely know its message" (xxviii. 87f). This (book) is no other than an admonition and a clear revelation, to warn whosoever liveth" (xxxi. 60).
2. "We have not sent thee save as an mercy to all created beings" (xxi. 107; cf. also xxv. 1 and xxiv. 25)."It is he who hath sent His apostle with guidance and the religion of truth, that He may make it victorious over every other religion, though the polytheists are averse to it" (xxvi. 99).

In the hour of Muhammad's deepest despair, when the people of Mecca turned a deaf ear to his preaching, when he who intended to be the models for converts were his wife, Khadijah, his adopted children, Zaid and 'Ali, and some members of his immediate circle. He did not begin to preach in public until the third year of his mission, but he met with the scolding and conclusion of a task, which in a central position, much frequented by pilgrims and strangers. The conversion of 'Umar b. al-Khattāb about two years later was a source of great strength to the little band of Muslims, who now began publicly to perform their devotions together round the Ka'ba. Though Muhammad continued to teach for ten years, the number of converts remained very small, and an attempt to win adherents outside Mecca, in the town of Taif, ended in complete failure; but some pilgrims from Yathrib (or, as it was afterwards called, Medina) showed themselves to be more receptive, and Muhammad sent one of his early converts, Mus'ab b. 'Umair, to Yathrib to spread the faith in that district; he was successful: that in the following year he was accompanied by more than seventy converts in the pilgrimage to Mecca; they invited Muhammad to take refuge in Yathrib, and he accordingly migrated thither in September 622, the date which was afterwards regarded as the beginning of the Muhammadan era. In Medina the little Muslim community gradually developed into a political organism that spread over the greater part of Arabia before the death of Muhammad in 632, and political expediency tended to replace religious considerations into the background; but the proselytizing character of the new faith was not lost sight of, and the Arab tribes that submitted to the political leadership of Muhammad accepted at the same time the faith that he taught.

But of distastefully missionary activity there are only scattered notices, and for some time after the death of Muhammad there is a similar lack of evidence of distastefully proselytizing effort on the part of the following century. This was a notable exception in the conduct of the Umayyad khalifah, 'Umar b. 'Abd al-Aziz (717-720), who was a zealous propagandist and endeavoured to win converts in all parts of his vast dominions from N. Africa to Transoxiana and Sind.

With the decline of the Arab empire the Muslim world was faced with the task of converting its new rulers. The conversion of the Turks proceeded very slowly; the earliest converts appear to have been the Turkish soldiers who took service under the khilifah at Baghdad; there are a few legends of proselytizing efforts in Turkistan, but the history of the conversion of the Turkish tribes is obscure, and Islam seems to have made little way among them until the 10th century, when the Seljuk Turks migrated into the province of Bukhara, and there adopted Islam. The conversion of the main body of the Afghans probably belongs to the same period or a little earlier, though national tradition would carry it back to the days of the Prophet himself.

A more formidable task was the conversion of the Mongols, and here Islam had to enter into competition with two other missionary faiths, Buddhism and Christianity, both of which at the outset met with greater success. The devastations
of the Mongols had brought ruin to the centres of learning and culture in the Muslim countries which they overran, and it was only by slow degrees that Islam began to emerge out of the ruins of its former ascendency and take its place again as a dominant faith. From the latter part of the 13th cent. converts began to appear among the Mongols, and a new epoch in Muslim missionary history then commenced, in which the religious orders, and the Naqshbandi, in particular, played a prominent part. In the profound discouragement which filled the Muslims after the flight of the Mongol conquest had poured over them their first refuge had been in mysticism, and in the pir, or spiritual guide, who during this period began to exercise an increasing influence, because of special importance among the proselytizing agencies at work. The first Mongol ruling prince to profess Islam was Baraka Khán, who was chief of the Golden Horde from 1236 to 1247; according to the account, he owed his conversion to two merchants whom he met coming in a caravan from Bukhára; but the conversion of their prince gave great offence to many of his followers, and half a century later, when Özbeg Khán (who was chief of the Golden Horde from 1313 to 1356) attempted to convert the Mongols who still stood aloof from Islam, they objected, 'Why should we abandon the religion of Jenghiz Khán for that of the Arabs?' In other parts of the Mongol empire the progress of Islam was very rapid and more or less fluctuating, and it did not become the paramount religion in the kingdom of the Ilkhans of Persia until 1295, or among the Chaghatáy Mongols until three decades later. The first Muslim merchant kingdom of Kashgar (who preached in Kashgar in the Chaghatáy dynasty had erected into a separate kingdom) was Tuqal Timür Khán (1347-83), who is said to have owed his conversion to a holy man from Bukhára, by name Sháhí Jamá'l al-Dín; but so late as the end of the 13th cent. a dervish named Isáq Wáli found scope for his proselytizing activities in Kashgar and the surrounding country, where he spent twelve years in spreading the faith.

The extension of Mongol rule over China gave an impulse to the spread of Islam in that country; though Muslim merchants had been found in the coast towns from a much earlier period, the firm establishment of their faithful in China dates from the 13th cent., and the settlement of the inhabitants from the west, which were founded from that period, developed into the great communities of Chinese Muslims of the present day—through various provinces of which it has been once. The rise of the Mongols was also incidentally the cause of renewed missionary activity in India; Islam had gained a footing in Sind and on the Malabar coast as early as the 8th cent., and in the north after the establishment of Muhammadan rule at the close of the 12th cent., but the terror of the Mongol arms caused a number of learned men and members of religious orders to take refuge in India, where they succeeded in making many converts.

To the period of the Mongol conquests—though in no way connected therewith—is traditionally ascribed the first establishment of Islam in the Malay Archipelago. Sumatra appears to have been the first island into which it was introduced—probably by traders from India and, later, Arabia; but the extension of the new faith was very slow, and even to the present day large sections of the population of this island remain unconverted. The conversion of Java, according to the native annals, began in the 15th cent. and spread from this island into the Moluccas and Borneo. The arrival of the Portuguese and, later, of the Spaniards, in the 16th cent. checked for a time the growing influence of Islam in the Malay Archipelago, and the rival faiths of Christianity and Islam entered into conflict for the adherence of its peoples; but the oppressive behaviour of the Spaniards and their attempts to enforce the acceptance of their religion made it possible for the success of the Muslim propagandists, who adopted more conciliatory methods for the spread of their faith, intermarried with the natives, and conformed to their manners and customs. The missionary activity of Islam has been carried on spasmodically in these islands up to the present day—for the most part by traders. From the very nature of the case, there has been little historical record of their labours, and this little is chiefly found in the reports of Christian missionaries. Legendary accounts of the arrival of the earliest apostles of Islam in several of the islands have been handed down, but they are uncredited and of doubtful historical value.

The history of the spread of Islam in India by missionary effort is not quite so scanty, but it has largely been overshadowed by the absorbing interest of political events; for, though the Indian Muslims of the Mughal empire and of the great and fantastics, there is evidence of the activity of a number of missionaries from the beginning of the Muhammadan period. Among these may be mentioned Sháhí Ismá'il, a Bukhári Sayyid who carried his influence to the city of Kashgar, the patron saint of Trichinopoly (where he died in 1039), and 'Abd Alláh, who landed in Cambay in 1067, and is said to have been the first missionary of the Mustáfíll Ismá'ilí sect (known in India as 'Bóboráh'). Towards the close of the same century another Ismá'ilí missionary, but of the Khójah sect, Núr al-Dín (generally known as Núr Sátá'ír), carried on a successful propaganda in the Hindu kingdom of Gujarát. In 1236 there died in Ajmér one of the greatest of the saints of India, Khwájah Mu'in al-Dín Chishti, who settled in that city while it was still under Hindu rule and made a large number of converts; ten years later died one of the apostles of Islam in Bengal, Sháhí Jalál al-Dín. A long series of missionaries in that province. Of importance in the history of Islam in the Punjab is the settlement in that part of India of saints of the Suhrawardí order; e.g., to the preaching of Bahá al-Din Zakáríyá, and of Sayyid Jálal al-Dín and his descendants, many of the tribes of the Punjab owe their conversion. These are but a few of the long series of preachers of Islam who carried on a distinctive missionary work, side by side with the various influences, social and political, that contributed to the spread of Islam in that country.

Of the vast history of the spread of Islam in Africa it is not possible here to give more than a brief sketch. For the early period of the Arab conquest of Egypt and N. Africa, though conversions took place on a large scale, there is little evidence of active missionary effort. The opposition of the Berbers occurring early that is located in the Nile valley checked for a time the southward movement of Muslim influences. By slow degrees, however, Islam penetrated among the Berbers, but acquired an ascendency over them only when it assumed the form of a national movement with the rise of the native dynasties of the Almoravids in the 11th, and the Almohads in the 12th. The Berbers introduced Islam into the lands
watered by the Senegal and the Niger, and Arabs from Egypt spread their faith in the eastern Sudan during the 12th cent., to which period the conversion of Kordofan and Kano appears to belong. In the 15th and 16th centuries the zealous missionaries of Islam, to be followed by the Hausas, whom they had converted, and the Hausas who have carried their faith with them from one end of the Sudan to the other. Their propagandist efforts were intermittent, however, and many parts of the Sudan remained untouched by Muslim influences until the 19th century.

Except in India and the Malay Archipelago, there are few records of Muslim missionary activity from the 15th to the 19th century. The continuous c.r. /c. the deviate In the say conscious teachers Europe be ha’e great Islam, Egypt the propaganda. similar (W. him as Hausaland far from there the last decades of the 19th cent., and such Muslim missionary societies as are. Nevertheless, many conversions occurred during this period; e.g., the Turkish conquests in Europe in the 14th and 15th centuries were followed by conversions to Islam on a large scale, and in the 17th century, thousands of Christians in Turkey in Europe went over to the religion of their rulers; similarly the conquests of Ahmad Grâh in Abyssinian (1528-43) were signalized by numerous conversions to Islam; but there is little evidence of any direct propagandist movements.

A great revival of the missionary spirit of Islam followed the Wahhabî reformation; this movement stirred the whole of the Muslim world—either to sympathy or to opposition—and thus directly or indirectly contributed to the great missionary movements of the 19th century. In India the Wahhabî preachers aimed primarily at purging out the many Hindu practices that caused the Muslims to deviate from the ways of strict orthodox Islam, and to intercede on a propaganda among unbelievers, and their example was followed by other Muhammadan missionaries, whose preaching attracted to Islam large numbers of converts throughout the country. In Sudan the Wahhabî reformers stirred up a revival and made proselytes. But a more momentous awakening was felt in Africa. 'Uthman Danfodo returned from the pilgrimage to Mecca full of zeal for the Wahhabî reformation, and under his leadership his people, the Fulbe, who had hitherto consisted of small scattered clans living as shepherds, rose to be the dominant power in Hansaland; the methods of the Fulbe were violent and political, and they endeavoured to force the acceptance of Islam by means of their truncheons or swords. On the other hand, a peaceful propaganda was carried on in the Sudan by members of the Amirghaniyyâ and Qâdiriyyâ orders; the former takes its name from Muhammad 'Uthman al-Amir Ghanî, whose preaching won a large number of converts from among the pagan tribes about Kordofan and Sennar; after his death in 1853 the order that he founded carried on his missionary work. The Qâdiriyyâ order had been introduced into Western Africa in the 15th cent., but awakened life and energy in the 19th. Up to the middle of that century most of the schools in the Sudan were established and conducted by teachers trained under the a-pieces of the Qâdiriyyâ, and their organization provided for a regular and continuous system of propaganda among the heathen tribes. Another order, the Samîshyyah (founded in 1837), has also been very active and successful in proselytizing.

A fresh outburst of Muslim missionary zeal in Africa exhibited itself when the greater part of that continent was partitioned among the Powers of Christian Europe—Britain, France, and Germany; by establishing ordered methods of government and administration, and by propagating Islam by means of roads and railways, they have given a great stimulus to trade and have enabled that active propagandist, the Muslim trader, to extend his influence in districts previously closed to him and to traverse familiar ground with greater security.

Throughout the course of Muhammadan history Islam has at times given rise to large movements of converts for various reasons—political and social—wholly unconnected with missionary enterprise; at the same time it has always retained its primitive character as a missionary religion, without, however, having any permanent organization to serve as a medium for its expression. Societies for carrying on a continuous propaganda were unknown in the Muslim world before the last decades of the 19th cent., and such Muslim missionary societies as appear to have owed their origin to a conscious imitation of similar organizations in the Christian world. The most characteristic expression of the missionary spirit of Islam is, however, found in the proselytizing zeal of the individual believer, who is prompted by his personal devotion to his faith to endeavour to win the allegiance to it of others. Though there have been religious teachers who may be looked upon as professional missionaries of Islam, especially on the mainland of Africa, it is the trader who fills the largest place in the annals of Muslim propaganda; but no profession or occupation limits the believer for the office of preacher of the faith, nor is any priestly or ministerial function necessary to the body of the faithful. Some observers, entitled to respect for their knowledge of the Muhammadan world, have gone so far as to say that every Muslim is a missionary:

'A tout moment il se présente à l'homme, qui sait le prosélitisme sauf le marché, un prosélite'; 'Il est mis en une sorte de prison, et il se réagit comme il le peut pour qu'il quitte l'erreur'; 'A tout moment il se présente à l'homme, qui sait le prosélitisme sauf le marché, un prosélite'; 'Every moment there is a missionary available'.

However exaggerated such an opinion may be, stated thus as a universal, it is certainly true that there is no section of Muslim society that stands aloof from active missionary work, and few truly devout Muslims, living in daily contact with unbelievers, neglect the precept of their Prophet:

'Summon thou to the way of thy Lord with wisdom and with kindly warning' (Qurân, xvi. 126).

Even the prisoner will on occasion take the opportunity of preaching his faith to his captors or to his fellow-prisoners, or to any man or creature who can be reached. This spirit of Islam into Eastern Europe was the work of a Muslim jurisconsult who was taken prisoner, probably in one of the wars between the Byzantine empire and its Muhammadan neighbours, and was brought to the country of the Pechenegs (between the lower Danube and the Don) in the beginning of the 11th cent.; before the end of the century the whole nation had become Muhammadan. In India, in the 17th cent., a theologian, named Shiukh Ahmad {Abul Abul}, who had been unjustly imprisoned, is said to have converted several hundred idolaters whom he found in the prison. Women as well as men are found working for the spread of their faith; the influence of Muhammadan wives made itself felt in the slow work of converting the pagan Mongols, and in Abyssinia in the first half of the 19th cent. The Muhammadan women, especially the wives of Christian princes, who had to pretend a conversion to Christianity on the occasion of their marriage, brought up their children in the tenets of Islam and used every means to spread their faith. In the present day the Tatar women of Kazan are said to be zealous propagandists of Islam.

The individual character of Muhammadan missionary effort partly explains the absence of detailed records of conversion; there is a similar lack of the common apparatus of modern Christian
missions—e.g., tracts and other missionary literature for general distribution; but in learned circles a vast controversial literature has been produced, to which some of the ablest of Muslim thinkers have contributed—e.g., al-Kindi (1753), al-Mas'udi (1805), Ibn Khaldun (1811), etc. as well as a number of converts who have written apologies for their change of faith and in defence of their new religion. Several documents making a direct appeal to unbelievers have been prepared; the closest parallel of Muhammad addressed to the great poten tates of his time, the emperor Heraclius, the king of Persia, the governor of Yemen, and the emperor of Egypt, and the king of Abyssinia. To the reign of al-Mansur (813-833) belongs the missionary correspondence and authorship of Ibn Khaldun. It is not unlikely that his zeal has been zealous in his efforts to spread the faith of Islam, belongs the interesting treatise of 'Abd Allah b. Ismail al-Hashimi, in which he makes an impassioned and affectionate appeal to the Christians corresponding to accept Islam. Of a much more formal character are the two letters, one in Arabic and the other in Persian, which the Timurid prince, Shah Rukh Bahadur, addressed in 1412 to the emperor of China, inviting him to '_conversion,' thus to the Prophets, the Apostle of God, and strengthen the religion of Islam, so that he might exchange the transitory sovereignty of this world for the sovereignty of the world to come. A similar royal missive was also written by Mawlānā 'Abd Shihāb al-Morocce, to King James II. in 1629. Coming from such an exalted source, these documents have been preserved, while the humble folk have remained unrecorded. The publication of tracts and periodical reports of missionary societies makes its appearance only in the latter part of the 19th century.

T. W. ARNOLD.

MISSIONS (Zoroastrian).—Zoroastrianism began as a distinctly missionary religion. According to tradition, Yima (on whom see art. BLEST, ABBEY OF THE [PERSIAN]) was the first mortal asked by Ahura Mazda to remember and to cherish the faith (Vend. ii. 3), but he professed himself unequal to the task and—unless the tradition is deviant (i. 1111), etc.—was as well as a number of converts who have written apologies for their change of faith and in defence of their new religion. Several documents making a direct appeal to unbelievers have been prepared; the closest parallel of Muhammad addressed to the great potentates of his time, the emperor Heraclius, the king of Persia, the governor of Yemen, and the emperor of Egypt, and the king of Abyssinia. To the reign of al-Mansur (813-833) belongs the missionary correspondence and authorship of Ibn Khaldun. It is not unlikely that his zeal has been zealous in his efforts to spread the faith of Islam, belongs the interesting treatise of ‘Abd Allah b. Ismail al-Hashimi, in which he makes an impassioned and affectionate appeal to the Christians corresponding to accept Islam. Of a much more formal character are the two letters, one in Arabic and the other in Persian, which the Timurid prince, Shah Rukh Bahadur, addressed in 1412 to the emperor of China, inviting him to ‘conversion,’ thus to the Prophets, the Apostle of God, and strengthen the religion of Islam, so that he might exchange the transitory sovereignty of this world for the sovereignty of the world to come. A similar royal missive was also written by Mawlānā ‘Abd Shihāb al-Morocce, to King James II. in 1629. Coming from such an exalted source, these documents have been preserved, while the humble folk have remained unrecorded. MISSIONS (Zoroastrian)

described as ‘desired after’ (dārūn-drākta) [17, xi. 17]. On the other hand, the missionaries sometimes had to face opposition, as when Kesreghni sought to suppress them, but was driven from his kingdom by Iraana (†. ix. 24), though the present writer is inclined to regard this account as an Iranian reflex of a Vedic myth, the role of the heavenly gods, in disguise, to punish a king for his idolatry. In certain other figures surviving from the period of Indo-Iranian unity.1 When, in like manner, the Pahlavi Sīkand-gāmānī-Vījar states (xv. 67.1) that the sons of Viṣṇuṣpa ‘even wandered to Aram [the Byzantine empire]’ and大厅ard the Hūdūds, outside the realm, in propagating the religion,’ the tradition of missionary activities in these countries (on which see Jackson, pp. 85-90) does not credenre, and equally apocryphal is the statement of the Dinkart (SBE xxxix. p. xxxii) that the Astvā was translated into Greek.2

From the close of the Avestan period to the dynasty of the Sassanids (224-631), there is almost a blank in the history of Zoroastrianism, so far as Sasanids nor Partisans seem to have taken much interest in the religion.3 Nevertheless, there was considerable diffusion, if not of orthodox Zoroastrianism, at least of Iranism during this time. We have already had occasion to note the spread of Iranism in Central Asia in the Middle Ages. It is recorded that the names of that country (art. CALENDAR [Persian], vol. iii. p. 130) and a curious amalgamation of Semitic and Iranian religious ideas is revealed by a Pahlavian Aramaic inscription of the 2nd century B.C. (N. L. Radford, Monuments du Monde Epigraphique, i. [1902] 67-69), which runs as follows:

‘This (ci) Dēn-Mazdayanān (κατὰ τὸν θεόν), the queen (γυναικὶ), the sister and wife (εὐγαμία) of Bel, spake thus: “I am the wife of Bel, and I beseech Bel, the Bel of Bel, the universal Bel, and the Bel of the godheads; and therefore have I made thee wife of Bel (Ω)’.

The prayer to Manẓuqah (on which see MARRIAGE [Iranian], p. 2) is also of interest.4

An inscription of Antiochus i. of Commagene (1st cent. B.C.) at Nimrud Dagh is of much value as the expression of the religious fervor of a prince who traced his lineage, on the paternal side, to the Achaeamenid kings, and also as showing the character of a late Zoroastian cult in a foreign land. The relevant portions of this text (ed. most of them, with translation, by O. W. Butterfield, Inscriptions of Commagene, Oxford, 1892, p. 268-269) may be summarized as follows (cf. also F. Cunow, Textes et monuments figurés relatifs aux cultes de Mithra, Brussels, 1896-99, i, 11, 233, 238, p. 574, n. 754)

1. Considered πιατασ (πειτάσ) not only the strongest expression of all things good, but also the sweetest joy to men, and held it to be the criterion both of fortunate power and of blessed usefulness (πειτασ καὶ ὁμορροφία καὶ ἀραχήσις). Throughout my life I was seen by all to be the most faithful guardian and the inimitable delight of my kingdom (11-19); and to this all his success during a long and hazardous career is due. When he ascended his ancestral throne, he appointed a consistory of priests (for all the gods θεοὶ δικαικοσταὶ . . . δικασταὶ) with divine images, and handed them over to him, who, imitating the Pahlavi god-sages, decreed the Zoroastrian religion, and honoured them with sacrifices and hand-2

2. For the individual inscriptions to all these see Dittenberger, nos. 804-905 (s. 804-905).

3. Cf. art. INDIA AND INDIA (Persian). The term ‘buddhism’ (βουδισμὸς) looks very like a literal translation of Av. vādāna, ‘wisdom,’ as opposed of an individual to Amrita Manda and Amrati, but she is neither her sister nor her wife.

4. It is implied in H. xii. 16 that Dāna (Religion personified) is identified with the mother of Amrita Manda and Amrati, but she is neither her sister nor her wife.
merely academic attitude is amply proved by the records of persecution of the Christians by the Sassanid rulers in Persia. 3 The Pañhāvī portion of the Nirāṅgātā (ed. D. P. Sanjana, Bombay, 1894, fol. 16, 17v) bears witness to the admission of proselytes, and the Pañhāvī Āṭ̣ anātā-bhūtā P. J. Houtum, H. Z. K. M, xxxvi. (1914) 347 ff.) states that a slave belonging to a Christian should be renounced by Zoroastrians from his master if such a slave embraces Parsiism, though he is not to be set free. If such a slave becomes a Zoroastrian together with or after his master.

During the period under consideration there was some extension of Zoroastrianism in China (cf. Jackson, pp. 278-280), though no details are thus far known. We lack laws of our own. Over the discoveries made by M. A. Stein, A. Grünwedel, A. von Le Coq, and P. Pelliot in Turkestan, where Buddhist, Persian, Turki, Greek, and Zoroastrian relics lie intermingled, that Zoroastrianism passed along the great trade routes it may be doubted whether there was any active propaganda. 3

We have just seen that the Sassanids proceeded by force against non-Zoroastrians in Persia; they pursued a similar course in Armenia. Anonymous passages give in this Armenian historians, 3 and much further information is doubtless to be gleaned from the hitherto untranslated Acts of the Armenian Martyrs. 4 As an example it will be sufficient to summarize the data of the 5th cent. with the Church Hist. of Varden, tr. C. F. Neumann, London, 1850:

All non-Zoroastrians were oppressed in Armenia from the reign of Arisak (r. 341-367) till that of Artakēs IV. (425-439). The Persian Yazdegard r. 418-457 followed this example, urged by the Zoroastrian priests to extirpate the sect of the Christians, and to wrest from them their property. Oh that you would but exchange the heresy of your souls for the true and excellent religion! The Magi exhorted him, if he would prove his gratitude for his power and his victories, to make Zoroastrianism dominant everywhere. In the course of his endeavours the Zoroastrians promulgated an interesting Zoroastrian form of converts, to the Christians replied (pp. 12-20). The persecution provoked a revolt, which was not suppressed until the Christian leader, Varden, fell in battle in 453. The whole account of Elias' which the clash of two religions, each of uncompromising character. Cruelty and craft were only too evident, the spirit of sincere conviction must be recognized.

With the overthrow of the Sassanian dynasty by the Byzantine Emperor, the possibility of Zoroastrianism practically came to a close. The plight of those who remained in Persia was—and is—too wretched to allow more than a reluctant and hostile toleration at best from the dominant Muhammadanism. 1 Those who, in the 7th cent., migrated to India and thus gave rise to the communities of Parsī (p.) were received with much too warm a welcome. As Dhalā observs p. 144, it is hard to their attainment from propaganda in India.

'The precarious condition in which they lived for a considerable period made it impossible for them to keep up their former proselytizing zeal. The increasing alienation of the integrating and absorption in the vast multitudes among whom they lived created in them a spirit of exclusiveness and insistence on the preservation of the racial characteristics and distinctive features of their community. Living in an atmosphere unaccustomed with the Hindu caste system, it is only natural that a certain safety lay in circumscribing their fold by rigid caste barriers. 2

Nevertheless, a certain amount of proselytizing continued as late as the 18th cent., especially in the case of slave-relics. The conversions of the festivals or to allow the proselytes to be enshrined after death on the Parsi 'Towers of Silence.' The question was referred more than once to the Zoroastrians in Persia, whose replies were in favour of admitting converts. From the point of view of orthodoxy Zoroastrianism was not more than the slightest question that the ruling of the Irani (Persian) Zoroastrians was right. On the other hand, it was felt by the Parsis of India that an influx of low-caste Hindus would be prejudicial to the purity of their Iranian community.

The only cases in which proselytism has been urged in recent years has been instances in which a Parsi has married a non-Zoroastrian wife, or has desired to have children born by such a wife, or by a non-Zoroastrian. A. Brosset (ed. P. J. Houtum, H. Z. K. M, xxxvi. (1914) 347 ff.) states that the Zoroastrians hold that such proselytes are harmful to the faith, and that, if converts are admitted at all, it must be under conditions which put the sincerity of the neophytes' religious convictions beyond suspicion. The Zoroastrian community has no organization for training new converts; the matrimonial opportunities of Parsi girls is lessened by the possibility of converting prospective wives of other religions; and the admission of illegitimate children of Parsis is felt to be virtually a condoning of impiety.

This attitude—so different from that of Zoroaster and of Zoroastrianism until the migration to India—is fraught with grave evil consequences in the age of marriage is rising, and the birth-rate is falling. There is a steady leakage towards agnosticism (not towards conversion to Christianity, Muhammadanism, or any form of Hinduism). Even among those who regard themselves as Zoroastrians, there is much laxity. Theosophy (p.) is making a form of 'esoterics' Zoroastrianism which can scarcely be reconciled with the Avesta. Some of the radical wing of the 'reforming' party, at the other extreme, rationalize the religion until it becomes a travesty of its real content. Against all this must be reckoned many wisely conservative Parsis, both priests and laity, 2 but whether, so long as all accessions from without are forbidden, they can advance and extend the 'good religion' is a question for the future.

LOUIS H. GRAY.

MISSIO1E, (Zoroastrian) 751

2 On all these movements see J. N. Fairburn, Modern Movements in India, New York, 1914, pp. 84-91, 317-319.
MITHRAISM. — The religion generally known by this name, which enjoyed a wide-spread popularity in the countries immediately preceding and following the Christian era, consisted in the worship of Mithra, a divinity worshipped in the Indo-Iranian period by the two most easterly branches of the Aryan race, as is shown by the fact that his name occurs among the divinities of the Vedic pantheon and in that of Mithra in the early religious poetry of Persia. The name coincides in form with a common noun which in Sanskrit means 'friend' or 'friendship' and in Aryan 'concert,' and it would seem to follow that from the earlier times the conception of Mithra was an ethical one.

1. Mithra in Vedic Religion. — In the only hymn addressed exclusively to him in the Rigveda (iii. 59) Mithra is said to 'bring men together, uttering his voice' and to watch the fillers of the soil with unwinking eye' — phrases which suggest a solar divinity; and from the numerous hymns in which Mithra and Varuna are conjointly addressed it is abundantly clear that both divinities are manifested in the celestial light. In the Brhadaranyaka, indeed, the view prevails that Mithra represents the light of day, especially that of the sun, while to Varuna belong the 'thousand eyes' of night. This seems to be the early form of the development, the beginnings of which may be traced in the Atharvaveda, especially ix. 18, where Mithra unceases in the morning what Varuna has concealed. The theory of Oldenberg, 2 that the group of divinities known as Adityas, who are said in Rigveda ix. 18 to have a home in Varuna, is one of the sun (Mithra), moon (Varuna), and five planets, and was borrowed from a Semitic race, has little to commend it. It is more probable that Varuna was the origin of the sun-god existing in numberless forms in later Vedic literature and a name borrowed by the Rigveda, which is applied to gods, more especially to Varuna and Mithra, and is plausibly suggested to have connoted the possession of occult power.

2. Mithra in Iran. — Among the Iranian peoples the worship of Mithra attained an importance which it never possessed in India. The early history of this worship is very obscure, owing to the uncertainties which beset the interpretation of the Avestan texts. From the inscriptions found by H. Winckler at Boghaz-keui in 1895, especially the treaty between the Hittite king Suphabihuana and Mattianuza, the son of Tushratta, king of Mitanni, it appears that Mithra, Varuna, India, and Mitra (or 'Mitra') were worshipped in the district of Mitanni in the 18th cent. B.C. Eduard Meyer (Das erste Auftreten der Arier in die Geschichte, SE.IV, 1898, p. 14) regards this fact as a proof that an Aryan community existed in Mitanni. In E.B. xxi. 210 he suggests that the Aryan texts in question were a caste-ruling over a non-Aryan people. It is, however, uncertain whether we should regard them as the ancestors of the Iranians, and even possible (as J. H. Moulton has suggested, Early Zoroastr. Poetry, London, 1915, pp. 7, 26) that we have here the relics of a historic migration backward from India to the North-West. It is to be observed that the name Varuna is otherwise unknown in Iranian texts, while the name Ahura is among the divinities of the Zoroastrian list of divinities of about 650 B.C. (published by F. X. Moulton, Early Zoroastr. Poetry, Cambridge, 1911, and further details in the same author's Early Zoroastr. Poetry, ypp. 129, 357).

1 Cf. the name Mithra (Mithra, Mithraea, Zoroastrians). — The name Mithra is found in the Zend Avesta and in the later Zoroastrian literature. It is generally regarded as a name of the太阳神, and is derived from the Sanskrit word भगवान् (Bhagavan), meaning 'the Lord', or 'the God'.

(but not Anahita) and the six Amesha Spentas (or Anumihspandas), which are among the most characteristic features of Zoroastrism properly so called. For our knowledge of Mithra-worship among the Persians we naturally turn to the Mithir Yasht (Vt. x. Eng. tr. in SBE xxiii. [1889], by J. Darmesteter, more accurate in general, than the older translation of F. Wolf, Avesta, ii. vebcr, Strassburg, 1910, pp. 198–221). The opening lines of the poem show clearly the high position enjoyed by Mithra, although, as a yazata ('adored one') he stood technically on a lower level than the six Amesha Spentas of Zarathushtra's creed.

"Thus spake Ahura Mazda to the holy Zarathushtra: When I created Mithra, lord of wide pastures, then, O Spandita, I created him as worker of sacrifice, as worthy of prayer at myself, Ahura Mazda' (Vt. x. 1)."

The Yasht speaks with no uncertain voice either of the physical or of the ethical character of the god:

"The first of the spiritual yazatas, who rises over the mountain before the immortal sun, driver of swift horses; who foremost attains the gold-decked, fair summit, whence he surveys the whole dwelling-place of the Aryans, he, the mightiest' (Vt. x. 15).

This is clearly neither the sun himself nor any individual object, but the heavenly light in general, and it suits well with the recurring formula of the hymn:

"To Mithra, the lord of wide pastures, we sacrifice, the truth-spreading, eloquent assembly, eloquent, thousand-careed, the shapely, the myriad-eyed, the exalted, (lord of) the broad look-out, the strong, the sleepless, the vigilant, the sharp (of speech)...

This is a guardianship of truth and good faith that gives Mithra his special character; but he is also invoked, like other divinities, as the protector of the needy, whom the poor man, who follows the teaching of righteousness, when wounded and deprived of his rights, with upturned hands invokes for help' (Vt. x. 84), and his aid is sought 'in both worlds, in this world of the body, and in the world of the spirit' (Vt. x. 95).

The last trait may remind us that among the functions of Mithra was that of assisting the souls of those departed in the faith on their journey to Paradise. He is implored to 'be present at our sacrifice, come to our libations... bear them for atonement, lay them down in the House of Prayer' (Vt. x. 73).

It is natural, therefore, to find as his companions Varsha ("obedience") and Rashnu ("justice"), who, in later Zoroastrism, are found beside Ahura Mazda in the Final Judgment. In the Yasht, however, they figure as his henchmen in the great struggle between the powers of light and darkness.

"Mithra strikes terror into them, Rashnu strikes a counter-terror into them, Varsha drives them together from every side toward the protecting angels' (Vt. x. 41).

Throughout the poem Mithra appears as preeminently a god of battles; he was, therefore, esteemed to be a dark-rider, as he did in later times, the favourite deity of the Roman soldier. Of the ritual of Mithra-worship the Yasht tells us little; the formulae (pr. v. r.) and milk were offered to him in libation; and the Mazdayasniyan is hidden to sacrifice 'beasts small and great, and birds that fly,' and to prepare himself for the sacrifice by abstinence and penance (Vt. x. 112–122).

4. External influence on Mithraism.—(a) In Babylonian.—The picture thus sketched—and nothing essential would be added by drawing on the later portions of the Avesta or the Palavi texts—is in many ways very different from that of Mithraism as known to us from the inscriptions and monuments of the Roman period, and the problem of accounting for the difference is one which the evidence at present available does not enable us to solve. It is, however, clear that the transformation took place partly to Babylonian influence, partly to contamination with beliefs current in Asia Minor. The former influence, no doubt, began to exert itself at an early date, since the confusion of which Herodotus was guilty, in identifying Mithra (as a supposed female divinity) with Ishtar, and the coupling of Mithra with Anahita (q.v.), who, in spite of her associations with the Oxs, was a goddess of an easily recognized Semitic type, point to a close relation between Persian and Babylonian cults. The most important feature of later Mithraism, due to Chaldean influence, was the prominence of astrology. There is nothing to show that this was a feature of early Iranian religion; thus, it seems probable that the observation of the heavenly bodies and the belief in their influence on the affairs of men were of great antiquity in Babylonia. When, therefore, we find the busts of sun and moon and the circle of the zodiacal figure used as the Mithraic monuments, we can have no doubt as to the ultimate source of this element; nor can it be questioned that the elaboration of a body of doctrine, expressed in and through myth and symbols, also took place in the Farther East, although the details of the process escape us. We can say no more than that the dualism of Iranian religion furnished a clue both to the cosmic process and to the destiny of the individual soul, and that the results which flowed from the doctrine were worked out in detail on the banks of the Euphrates. The brief account of Zoroastrism given by Plutarch in the de Iside et Osiride shows how far the Maqians had already carried the transformation of the simple Persian creed into a system which meets us in the Bundishkiran and other Palavi texts of the Sasanian era, and enables us to rely on these to some extent for the interpretation of doubtful details in the evidence. Essential features are: (1) the separation in the universe of the province of Ahura Mazda, "withdrawn beyond the sun as far as the sun is from the earth," from that of Angra Mainyu, the prince of darkness, and the intermediate position of Mithra, the mediator; and (2) the doctrine that the soul is a divine spark of light descending from the highest heaven and acquiring a gross and earthly envelope which taints it with corruption and makes its existence on earth a continual struggle with the power of evil. The moral consequences of this doctrine, particularly the inspiring conception of Mithra, the Mediator, as at once the commander under whom the individual shares in the fight against the infernal darkness and the savior who grants to his faithful servants final deliverance from the body of death, followed by the return of

1 At the close of the Yasht (x. 145; cf. 113) Mithra and Anahita are jointly invoked, just as Mithra and Varuna are in the Vedic hymns.

VOL. VIII.—48
the purifying spirit to the sphere from which it came, we may believe to be characteristically Iranian; to Chaldea we shall attribute the clear line of the act of mithraism connected with the influence exercised by the planets upon the soul in its passage through their spheres, and the prominence given to the conception of Destiny as revealed in the unchanging order of the heavenly process, carried on throughout unending time (zravr akbarav in later Zoroastrianism). Fatalism was the necessary corollary of these doctrines; but its acceptance in theory did not prevent Mithraism from becoming an intensely practical creed. Both of stimulus for the activity of the individual.1

(b) In Asia Minor.—It is much more difficult to say what was the effect upon Mithraism of its diffusion throughout Asia Minor.2 We have no contemporary evidence for the stages by which this took place, but it is at least probable that the later Achemenian kings, who were, as we have seen, ardent votaries of Mithra and Anahita—Artaxerxes Ochus is said3 to have erected statues of the goddess in many places—established the worship of these divinities in the outlying portions of their dominions. It was not long before they became assimilated to those which were indigenous to the land; Anahita was readily identified with the Greek Artemis whose worship, as Anaitis or Anatolin (see art. MOTHER OF THE GODS), and thus the way was paved for an alliance between Mithra and Cybele (p.v.). Mithra himself took the shape of Men in Pontus (see below), and was assimilated in art with Attis (p.v.). In the profound differences of nature and function between the two, more than this we can hardly say, for the primitive features of Mithraic ritual, to be considered later, were not necessarily borrowed, but may go back to the period when the religion of Mithras was part of the Avestan legend, and of the theo- drus or horemnas.4 This was conceived as a kind of mystical effulgence or aureole derived from the heavenly light, and possibly borrowed some of its features from the Greek divine nimbus.5 In the story of the Fall, embodied for the Iranians in the myth of Yima, sin entailed the loss of this precious talisman; and in the Mith. Yasht the dath-horemenas, 'he of evil glory,' is the man who 'thrusts Mithra into his molar and lying' (Y. x. 195). But the horemenas was more especially the talisman of the royal house of Iran, and as such is the main subject of an entire Yasht (Y. xix.), which deals with those who have or will possess it, beginning with Ahura Mazda himself and ending with Sasanian, the future deliverer of the world from evil, but giving in the main, as Darmesteter points out (SBE xxiii. 286), 'a short history of the Iranian monarchy, an abridged Shah Nama.' Historically, therefore, the horemenas is the 'token of Iranian kingship and the talisman which gives victory over the Turanian. Naturally enough, the Near Eastern dynasties which sprang from the wreck of Alexander's empire were anxious to secure the devotion and loyalty of the fervent worshippers of Mithra, 'the spiritual Yazata who rides through all the Kartshavas, bestowing the horemenas' (Y. x. 16). The prevalence of this conception is but thinly veiled by the disguise which the horemenas attained among half-Hellenized Asians as the Τάγα Μαδέα. It was doubtless at the courts of these mushroom monarchs that the Hellenization of Mithraism, which was the indispensable condition of its further diffusion, was brought about. In this respect the earliest instructive monument is the enormous cairn set up by Antiochus I. of Commagene (69-38 B.C.) on the tumulus of Nimrud Dagh, on either side of which was a terrace with identical series of five statues.6 These, as the king tells us in his inscription, represented (1) Zeus-Oromasdes (= Ahura Mazda), (2) Apollo-Mithras-Helios-Hermes, (3) Artagnes-Herakles-Ares (= Verethragna, *victory*), (4) Commagene, (5) Antiochus himself: of the last the king says that by setting up the fashion of his own form he has 'caused the honour of ancient deities to become coeval with a new Τάγα.' The identification of Mithras with three Greek divinities illustrates the elastic methods of syncretism; that the Hellenistic 'world' is passed through with the world beyond the grave,7 and, at the same time, it may be, with allusion to the planet assigned to him (in common with Apollo) by the Greeks, since Antiochus was a confirmed astrologer and has left us a list of the planets, in the retaining-wait of the terrace; yet Mithras is also, as so often later, identified with the sun himself, Antiochus's father, it may be added, was one of the numerous bearers of the name Mithradates; and another of these shows Antiochus clasping in the right hand of Mithras, represented in Persian costume with the radiate nimbus. This grouping of the god with the ruler whom he protects is a motive which recurs in various quarters, especially, as M. I. Rostowzew 8 has shown, in Scythia. On the coinage of Trapezus (Cumont, ii. 189-191) Mithras, in Persian costume, appears on horseback—in one instance flanked by the figures of Cautes and Cautopates (see below)—hence we are able to recognize him as the external source of the trampling on a prostrate foe) represented on various works of art found in the tomuli of the Scythian princes in the Caucasus and southern Russia. A notable example is the silver rhyton from Karagodarai, his evil cheek, evil eye, trampling and drinking-horn, is faced by a Scythian prince, also mounted, who uplifts his right hand in the gesture of adoration.

5. Contact with Greece and Rome.—It was in Asia Minor that Greek art was enlisted in the service of Mithraism and created the sculptural types which were diffused throughout the West and form the chief source of our knowledge of the cult. The group of Mithras the bull-slayer, to be described presently, though ultimately inspired by the bull-slaying Nike of the Athenian acropolis, is manifestly the creation of a Pergamene artist, and adorned every sanctuary of Mithras. In spite of this fact, however, it is to be noted that Mithraism never became popular in Greek lands; it is not found, c.g., at Delos, where so many foreign cults flourished in the later Hellenistic age, and its

---

1 Astral theology, as a system foreign to the Avesta; the worship of Tishtrya (Zoroastrian) to whom Y. viii. is addressed, forms no real exception to this rule. Of the conceptions only the great Bear is mentioned in this hymn (Y. viii. 132).

2 This Mithraism came to Asia Minor from Scythic sources is proved by the Greek-Aramaic bilingual inscriptions of Cappadocia, in which from Bithynia (the Persian records of Monts de Bithynie, ed. P. P. J. de Courbet, Comptes rendus de l'Acad. des inscriptions, 1851, p. 430), and also (as Cumont points out) by the fact that the form Maithraeus is a transliteration from the Aramaic.

3 Hellen. Alex. Propest. 6.

4 It is, however, probable that the compound names which the Greeks wrote Μιθραζής, Μιθραζής, etc., cf. for other examples Μιθραζής (ibid., p. 431), and also (as Cumont points out) by the fact that the form Maithraeus is a transliteration from the Aramaic.

6 Th. pl. i. 1.
traces are rare (and generally of Imperial date) throughout the Roman province of Britain, in Gaul, Dacia, and even in the far-off Helvetia and Egypt. Even in the 2nd cent. A.D. Lucian writes of Mithras as a barbarian god, ὁδὲ Μίθρας τῇ γῇ γῇ (Deorum Conc. 9).

The cult of Mithras is said by Plutarch (Pomp. 24) to have, in the course of time, passed from Rome; and by Cicero, De B. Nat. 1, 5, to have spread all over Italy. The earliest Mithraic inscription as yet found in Rome was set up by a freedman of the Flavian dynasty (CIL vi. 782 = Cumont, ii. 165 f.), and, although the British Museum contains a statuary group of Mithras and the bull dedicated by a slave of T. Claudians (Livianus, prefectus praetorio in A.D. 102 (Cumont, ii. 228; cf. 106), Mithraic monuments and inscriptions do not become common in the West until the Antonine period.

Mithraism in the Roman world.—(a) By the army.—The diffusion of Mithraism was largely the work of the army. Pontus, Cappadocia, Commagene, and Lesser Armenia—precisely those regions in which the specialized form of the cult had been developed by the 1st cent. B.C. or the 1st cent. A.D. have been the headquarters of the army in the Roman east for centuries. During the Parthian wars under Claudius and Nero a considerable number of Parthian captives were taken by the Roman army. The Parthian wars of Nero were transferred by Vespasian to the Danube, bringing the cult of Mithras to its camp at Carnuntum in A.D. 71. Another important centre of the cult was Aquincum, the headquarters of Legio II. Adjutrix, founded by Vespasian from the sailors of the Ravenna fleet, who, as freedmen, were doubtless in many instances of Oriental birth. But the spread of Mithraism on the frontiers was largely due to the auxiliary corps—alae and cohortes—raised in the East under the Flavian and succeeding dynasties and used to garrison the line of the Danube and the Rhine or the Vallum in the Northern British Provinces. In the Flavian and the 1st cent. A.D. for a century or more, the Rhine and the Danube were frontier provinces; and under Trajan the Rhine became the front line of the Empire. The Mithraic monuments and inscriptions found in Britain belong either to the legionary camps at Isca (Caerleon-on-Usk [CIL vii. 99 = Cumont, ii. 160]) and Eboracum (York [CIL vii. 37 = Cumont, ii. 162]) or to the forts on the eastern wall, such as Boroviciæ (Housesteads [CIL vii. 645-650 = Cumont, ii. 161, 393-396]), Ambogbanna (Birdoswald [CIL vii. 531 = Cumont, ii. 162]), Brewnich (High Rochester [CIL vii. 163 = Cumont, ii. 162]), Vindolanda (Rutchester [Cumont, ii. 392 f.]), and others. So, too, in the two Germanies the sanctuaries of Mithras (with some few exceptions) are found either in legionary camps, such as Vetera Castra, Bonna, and Mogontiacum (Cumont, ii. 359, 523-525), or in the forts along the limes Germanicus, where they are lacking in none of the principal posts—Baltzach, Friesberg, Saulburg, Hedderheim, Grosskrotzenburg, Osterburken, Böckingen, Murrhardt (ib. ii. 351-400, 472 f., 362-381, 383-384, 385-386, 387-388), Vindonissa (Rutchester [Cumont, ii. 392 f.]), and others. We have already mentioned the military settlements of Carnuntum and Aquincum, on the Upper Danube, as centres of Mithraism; the same might be said of practically every important post on that river down to its mouth;—e.g., Vindobona, Brigetio, Viminacium, Oescus, Durostorum, and Troesmis (ib. i. 365, ii. 329-335, 489 f.), again at the same time as the principal centres.

In Africa also the camp of the Third Legion at Lambesis, and several military posts, such as Muscula and Stiftis (ib. ii. 165, 170, 405 f.), have furnished Mithraic monuments; and in the country of the Danubian tribe of the Gepids some traces of the cult are found. But, relatively rare as they are often found in the colonies of veterans—e.g., Emerita (Merida) in Spain (ib. ii. 166) and Patrai in Greece.

(b) By slaves.—Next in importance to the army, in the diffusion of Mithraism, were the slave population employed by the State, the municipalities, or private individuals. The first class comprises especially the employees of the custom-houses and the State-proprietors, such as mines and quarries. These, as in the Danubian provinces, especially Dalmatia and the Pannonias, the stations of the custom-house-barrier at which the vectorial Illyrici was levied have furnished a number of Mithraic dedications, due to slaves working in the Eastern provinces, and to the sources of whom bear Greek names and were, therefore, doubtless natives of the Eastern provinces. Again, the presence of numerous Mithraic monuments in Noricum (ib. ii. 170-172, 355-359, 475 f.) is accounted for, not so much largely the number of Mithraic monuments, but through the station of Commagene, which clearly takes its name from an auxiliary regiment, forms a natural exception—as by the mines owned by the State in that province. In Italy the sacri publici of the municipium of the source of the station was served by a colonnate. At Neronia a slave employed as arcaurus restored a Mithraeum (CIL iv. 4109 f. = Cumont, ii. 129). It goes without saying that private slaves—especially in the households of the wealthy in the East—played a large part in the spreading of Mithraism.

(c) By trade-routes.—We may in part trace to imported slaves the spread of Mithraism along the trade-routes which were in communication by sea with the Eastern Mediterranean and, although the merchants themselves were often worshippers of Mithras. Thus in the African provinces, apart from the military stations mentioned above, the only traces of Mithraism are to be found in such coast towns as Carthage and Cirta (ib. ii. 171, 168, 170, 406 f.), and in Southern Gaul we can trace by the presence of Mithraic monuments the spread of the cult on the trade-route which followed the valley of the Rhone and in the towns of Narbonensis, which, owing to its great influence from its nearness to Massilia, and Aquileia, whence the trade of the Mediterranean found its way into Central Europe, was itself both a centre of Mithraic worship and a stage in its further diffusion. It is thus, e.g., that we may explain the remarkable prevalence of Mithraic monuments in the upper valley of the Adige and on the Brenner route to the Upper Danube, as well as on the North-Eastern route from Bonn and Ptolemais. No colony of the Empire is richer in remains of Mithraism than Dacia, where all the principal sites—Sarmizegetusa, Apulum, Napoca, Potaissa, etc. (Cumont, ii. 131-139, 280-306, 308-319)—have furnished material of this kind. We can hardly explain this entirely by the influence of the army which occupied Dacia and the neighbouring Danube provinces, and are forced to conclude that among the settlers planted by Trajan in the

1 It may be noted that an officer of the Seventh Legion dedicated an altar in this sanctuary (De Amicitia Epigraphica, 1904, no. 25). The finds have recently been published fully by Père Paris (Rel ii. [1914] 15 f.).
province and drawn 'ex tota orbis Romana' (Eutrop. vii. 8) were many Orientals who brought with them their native faiths, among which the worship of Mithras was found in a notable position.

7. Geographical and social distribution.—The geographical distribution of the monuments of Mithraism may most easily be grasped by an examination of the map which accompanies Cumont's volumes, upon which the sites, when they have been found, are marked in red. It will be seen at a glance that, except in the plains and districts of which mention has already been made, traces of the cult are few and far between. In Greek lands, in Western Gaul, and in Spain, taken together, the sites that have been found may almost be counted on the fingers. Hence Toutain has argued that the cult of Mithras never became widely diffused in the West, outside the area and certain regions in direct communication with the East, and that the notion that it was at one time not far from achieving the triumph which was reserved for Christianity is much exaggerated. Toutain leaves out of account Rome and Italy—which makes his presentation of the evidence one-sided. He endeavors to reinforce his argument by a consideration of the social condition of the adherents of Mithraism. He points out with justice that the dedicators of votive sculptures and the like Mithraic remains of Mithraic sanctuaries are very largely drawn from the ranks of provincial governors, military commanders, or procuratores etc., employed in the civil administration. As early as the age of the Antonines we find legion and tritci militares among the votaries of Mithras in the reign of Commodus, C. Valerius Maximianus, governor of Dacia, dedicates an offering to 'Sol invictus Mithras' (CIL iii. 1122 = Cumont, ii. 133; under Septimius Severus, C. Julius Cassius, governor of Panonia, consecrates an altar to Mithras (CIL iii. 3490 = Cumont, i. 141), and in the number of similar instances is multiplied in the 3rd cent., after Christ, while imperial procuratores in Noricum and Dacia follow their example. It would be natural to infer that Mithraism was at least favourably regarded by the government; and, in fact, we learn from the Historia Augusta (cap. 9) that Commodus was initiated into the mysteries, while an inscription at Antioch in Pisidia, in the reign of Caracalla (CIL ii. 2327 = Cumont, ii. 100) mentions a 'Sequestor ex Mithraeis Augustanaceis, and the largest Mithraeum at present known was discovered in 1912 in the Thermes of Caracalla; in this was found an inscription in Greek (CIL ii. 2327), which shows that the identification is explained by Caracalla's special devotion to the Egyptian divinity. This imperial patronage goes far to explain the popularity of Mithraism in the 3rd cent.; it also accounts for the fact that, though by no means confined to the public services, military and civil, it was mainly found among their members and took no general hold on the population of the western provinces, so that the withdrawal of imperial favor was a fatal blow.

8. Grades of initiation.—Our knowledge of the doctrines and ritual of Mithraism is largely drawn from the inscriptions and monuments found in the Mithraeum, to the interpretation of which something is contributed by ancient texts, especially those of Christian apologists. The most important of these is a passage of St. Jerome (Ep. ci., vii.), who describes the destruction of a 'cave of Mithras' and the 'monstrous images' used in the initiation of the votaries, who are enumerated as follows: Corax, Grypheus (MSS manuspy or nymphes), cicadas, leao, Perseus, heliodromus, pater. These names are naturally taken to indicate seven grades through which the neophyte passed in succession; and this is confirmed by other texts. The inscriptions found in a Mithraeum at Rome (CIL vii. 7494 = Cumont, ii. 93.) mention similar ceremonies; for instance, the words 'tradidit heredom Mithrae, leontica, persica, heliacen, patricia'; the epigraphs closely correspond with five of the grades mentioned by St. Jerome. We find also a Mithraeum in Egypt (Pap. Lond. 2782, xiv) which resembles, in its use of the words 'tradidit heredom Mithrae, leontica, persica, heliacen, patricia'; the adjectives closely correspond with five of the grades mentioned by St. Jerome. The title pater ('pater patrum') for the highest grade is common in inscriptions; and a passage of Porphyry refers to the others, in this way:... to aliter metropitos taw avtow orixwv mosta lahtos kalov, ou d' ev gnwvavolwv xamwv, ou d' ev avantopwv xamwv ev. to te tov tptwv'... autov xwv kai eva xamwv kai evopwv xamwv... 'to the lekentoy parakolymmenoiv metwtoiv xwv omop tnoxrovo (of Aslin, iv. 16).

We infer that the xamka was a low grade, and that initiation into the mysteries proper began with that of koi (cf. tois taw lektwv xamowv (Porph. de Antro Nymphe, 13)). The mention of women called xamwv stands alone; it has been proposed to read leao (cf. leao, Porph. de Antro Nymphe, 13), though there is no evidence of female initiation in the discovery of a tomb at Oa in Tripoli in which a husband and wife were buried and described as leao and ko (Comptes rendus de l'acad. des inscriptions, 1908, p. 587 ff.). For the 'eagles' and 'hawks' independently classified as grades I and II, unless two inscriptions from Lycaonia which mention xamwv are Mithraic (cf. Bonner Jahrbücher, 1902, p. 12). Porphyry, it will be noticed, speaks of the animal disguises worn by the boans. In the Questions whether the Mithraic inscriptions falsely attributed to St. Augustine (PL xxx. 2348) we read how 'some flapped their wings like birds and imitated the voice of the crow; others roared after the manner of lions'; and the passages quoted are strikingly illustrated by a relief found at Konjica, in Bosnia, carved on the reverse of a slab which shows the usual subject of Mithra the bull-slayer (see below).

In the centre of the scene are two figures reclining on a couch, in front of which is a table with four leaves marked with a cross; beside the table are two lions and a bearded man. On either side are two figures; on the left a sepulchre, i.e. a man wearing the mask of a crow, and a 'Persian,' distinguished by his dress; to the right a leao, wearing a lion's mask, and a figure the upper portion of which is unfortunately lost. It will be noticed that the name of St. Jerome in this passage is replaced by other sources—though the use of the term in Mithraism is confirmed by a passage of Justinian de l'orsu, des sanctuaires (cf. L. G. M. T., p. 14, where the title miles plus in two inscriptions from Wiesbaden (CIL xiii. 757, 765), in Greek σπάστας, spasta (inscription of Julian, ρήμαν τοις ερμηνιοι, du Pont, 1910), it is possible, therefore, that the mutilated figure of the Konjica relief represents the xamwv, and that the xamwv was believed to the rank and file of Mithra's soldiers, was not admitted to partake in the mysteries. He was, however, initiated by a ceremony described by Tertullian (de Corona, 10): 'to the leao, xamwv, kai eva xamwv kai evopwv xamwv... to the leos toh patrothei smwv, kai th tim paratptote, gka kai th xamwv kai th xamwv kai th xamwv kai th xamwv.'

In the passage previously quoted Tertullian speaks of a soldier of Mithras as 'branded in the forehead'; and we shall see that some vestiges of which Gregory of Nazianza speaks (Orat. iv. 70 (PG xxx. 592)) may refer to this. Tertullian (de Bapt. 5) also mentions a Mithraic purification 'per lavacrum' resembling the rite of baptism; and it is to be noted that the Mithraeum which have been excavated either contain natural springs or are moistened daily by the water from the rivers. Of the ceremonies which accompanied the higher degrees of initiation we know little; Porphyry (loc. cit.) tells us that the leao had both hands and tongue purged with honey, which was also used in the instruction of the Fereon. In the passage quoted above Gregory of Nazianza mentions the λέαον to which the initiates were submitted.

1 A relief from Acre, now at Sofia (AEW v. 1912 pl. i. 4), shows a kneeling figure wearing the leao, held by a veil held by two other figures. Kostowsew (p. 59) explains this with reference to the phrase quoted in the text.

2 Notice degli Stati, 1912, p. 325.
MITHRAISM

jected; and his commentator Nomius (PG xxvi. 980, 1058, 1042) enlarges on this topic and speaks of 'eighty punishments' by water and fire, food, hunger, thirst, and journeys, in an ascending scale of severity. These may to some extent be imaginary; but it must be remembered that the Mithraeum (§ 122) speaks of ablations and stripes. Teren. Fast. (xv. 1) for which, in (iv. 40) uses the phrase 'imago resurrectionem,' which suggests a simulated death; and the biographer of Commodus tells us that the emperor 'sacra Mithriaca vero hominidio poletus.' Thus the little that we know of the Mithraic rites of initiation shows that they were of a type well known in primitive religion, and carry us back to a stage far earlier than the developed theology of later Iranian times. Nor can we say more of the rites in which the initiates partook: Christian writers found an analogy to the eucharist in the Mithraic communion of bread and water (σαρον καὶ πορφυρό βάρος [Justin, Apol. i. 66], τετρις ὀλίβου [Tert. loc. cit.]), which seems to be represented on the Kompane relief.

9. Sanctuaries, ritual, and monuments.—The central act of worship in Mithraism, however, appears to have been the sacrifice of the bull, the prototype of which was the slaying of the bull by Mithra himself, represented on the supposed too late in every Mithraic sanctuary. These places of worship were described by the term speleum (CIL iii. 4420 = Cumont, ii. 146), for which we also find crypto (CIL iii. 1066 = Cumont, ii. 132) and enthrus (CIL vi. 131 = Cumont, ii. 94), and were often established in natural caves or grottoes, as, e.g., on the north slope of the Capitol at Rome, beneath the church of Arazell. As a rule, however, the place of the grotto was taken by a subterranean crypt, appropriately named the chapel attached to private houses were naturally placed in cellars, e.g., the Mithraeum below the church of San Clemente in Rome. It should be noted that the Mithraeum are never of great size, and, where the adherents of the worship were numerous, the number of speleum was multiplied. Thus Ostia possessed live, Aquincum at least four, and Carnuntum three sanctuaries. The more elaborate examples show a fore-court, or praemus (the term is used in CIL xiv. 61), leading to a small chamber, whence the staircase descended to the crypt in which the mysteries were celebrated. This was traversed by a central passage, on either side of which were speleia about six feet broad with inclined surfaces. While Cumont, who has visited these places, knelt upon these, or reclined upon them while partaking of the ceremonial banquet, it is hard to say. At the extremity of the crypt, which often took the form of an aper (called exeptra in CIL iii. 1066), was placed the relief of Mithras and the bull, often accompanied by other sculptures, such as figures of Cautes and Cautopates or the lion-headed Kronos.

The symbolism of these monuments is not easy of interpretation, and ancient texts help us little. In the central scene, the type of which (as was mentioned above) was certainly fixed by a Pergamean artist, probably in the 2nd cent. B.C., Mithras, clothed in the conventional costume which in Greek art signified the Oriental, placed his left knee on the back of a bull, and, seizing its horn (or muzzle) with the left hand, plunges a knife into its throat.2 The scene of the action is a cave, the prototype of the speleum, which sometimes contains plants or trees. The earliest use of these trees seems to be the idea that human sacrifices were offered in Mithraism is unworthy of credence.

2. The best examples Mithras wears an expression of pathos, as though he were the unwilling instrument of heaven; A. Lehdy (Jd. xir. 1902) 530 suggests that this is because god and victim are, in a sense, one; but this seems fanciful. The 'Android' type used by the artist was a 'romantic' creation.

187 Scorpions fastens on the testicles of the dying bull, while a dog, and usually a serpent also, drink the blood which flows from the death wound. A crow is almost always present, perched either on Mithras's mantle or on the edge of the cave. Finally, we have a significant detail in the ears of corn in which the tail of the bull terminates (Tract. ii. 14, etc.) Here Mithras stands beside the hoop of the slain bull, holding a drinking horn in his left hand and receiving from the hands of the sun-god a bunch of grapes. On either side are the figures of children holding baskets of fruit; in the background a radiate cap is planted on the head, and in an upper register we have a scene in which a central figure, unfortunately defaced, is surrounded by animals (dogs, wild boar, sheep, ox, possibly horse). The explanation of these scenes can hardly be doubtful. We read in the Bundahish (esp. xix. 46), that was the first creation of Ahura Mazda, and was slain by Ahriman, but through its death gave birth to vegetable life on the earth; from its spinal marrow grew fifty-five species, and twelve represented the species of medicinal herb. The scene, which was 'carried up to the moon, where it was purified and produced the manifold species of animals' (ib. 3). From its blood, again, sprung 'the grape-vine from which they make the wine' (ib. 2). Though we cannot definitely trace this concept from the Mithraic to later Avestan sources, it is indubitably of great antiquity; and the Mithraic monuments offer a remarkable modification of it. Here the central structure by which the death of the bull was the source of life, both animal and vegetable, remains the same; but the killing of the animal is not the act of the evil spirit, but a sacrifice performed by Mithras himself, probably acting as the minister of Ahura Mazda, whose messenger we may see in the crow.3 The function of the creatures of Ahriman (scorpion and serpent) is limited to that of endeavoring to nullify the miracle in process. But the significance of the scene was not only cosmological; it was also eschatological, for the new creation to which the Zoroastrian looked forward at the end of time was to be heralded by the sacrifice of a second bull, this time by the 'redeemer' (Saeshyanta) (Bundahish, xxx. 25). Nor can we doubt that the worship as the ornaments were interpretations of a rite older than mythology, and that the sacrifice of the bull was in origin intended to promote fertility and ensure the annual renewal of life on the earth, the bull being chosen as the victim on account of his great generative power.

10. Myth.—The myth of which Mithras was the hero and the slaying of the bull the culminating episode can no longer be reconstructed in its details, but many of its episodes are represented on the monuments. The reliefs of the bull-sacrifice are often enclosed in a framework broken up into small panels, on each of which an episode of the myth is shown. The chief of these are the following:

(1) Birth of Mithras from the rock.—One of the most important of all the Mithraic monuments is the figure of the god is seen emerging from a rock, the 'petra genetrix' of several inscriptions (CIL iii. 8675 = Cumont, ii. 139, etc.); cf. the expression θεὰν τε εἰρήνα (Piramida, de Ecc. prof. relig. 209, πτεροειδὴς Μιθρᾶς (Lyd. de Ment. iii. 26), etc. The scene is sometimes completed by the addition of a shepherd or shepherdess (or heathen) who witness the miraculous birth.

(2) Mithras and the tree.—On some monuments the figure of Mithras is seen being hailed by a tree from which it seems to be emerging, or, again, which he is stripping of its foliage. The first might be considered as a variant of the birth-scheme, and if it did not occur on the same monument it seems to show that Mithras was on one side a vegetation spirit.

(3) The archer and the rock.—Mithras, in Oriental costume,

1 For the crow in Zoroastrian literature cf. Bundahish, xiv. 52.
MITHRAISM

discharge an arrow at a rock, from which a stream gushes out; a kneeling figure washes the water in his hands or refreshes his throat. Sometimes a single knell before Mithras and
imparts the same performance.

(1) Mithras and the Sun. Here there is a series of scenes, of which one is not unimportant in wit: (a) invocations from the sun by Mithras; (b) the anguished knees before Mithras, who
places the radiate crown on his head with the left hand, while
in his right an individual object, probably a drinking-horn; (c) alliance of Mithras and the sun; the figure of
this is represented clasping the right hand in token of friendship;
(d) Mithras conveyed in the sun's chariot across the
ocean, represented as a redening figure in the style of Greek art; (e) animals and Mithras and the sun (sometimes with doors and guests); they recline on a couch, generally holding drinking-
horns, and before them is a small table with cups.

(2) Mithras and the Bull. — Though the slaying of the bull is never found except as the principal scene, other episodes of the legend will be described by the word (Ch. II. in
1432, 27 and 28).

(3) Scenes in which Mithras takes no part. — These are either simple representations of other divinities in the form given to them by Greek art, such as the unexplained head of the Oster-
lord (pseudo-Dionys. Cronos), the figures of the Egyptian gods, Atlas, of Oceanus, and the three Fates, or scenes in which Zeus is shown, either receiving the thunder-bolt as the symbol of power at the hands of Kronos or in combat with the giants.

No successful attempt has been made to explain the series of representations just described; the last class, no doubt, cloths in Greek form conceptions derived from Persian sources, the identi-
fication of which can at best be a matter of guess-work. 1 We can, however, be certain that whatever the original content of the Mithraic legend, it has been profoundly modified by the astral
religion of Babylonia. Mithras, as we saw, was born by origin a god of the heavenly light; and it is possible that his birth from the rock may symbolize either the appearance of the dawn on the mountain-
top or the influence of light from the vault of heaven conceived as a solid dome. At any rate, there can be no doubt as to the meaning of the two torch-bearers, dressed in the same Oriental costume as Mithras himself, who regularly appear on either side of the bull-slaying, and are also found at the birth of Mithras. One holds his torch aloft, the other lowers it, and these actions clearly symbolize the rising and setting of the sun, 2 so that Mithras and the torch-bearers form a triad hinted at, in the phrase Mithra 

The zodiac is also commonly found either as a framework encircling the scene of the bull-slaying or, as in most of the reliefs from the times
Hermonimit, as a border to the upper edge of the scene. With this, the more elaborate reliefs are almost always decorated with busts of sun and moon, while many also exhibit the planets, or symbols which repre-
sent them. We also find the seasons and the winds; and it is beyond doubt that the Sun, the 
father, 3 and the serpent must be combined with these last as emblems of the elements. It may be added that the sea (oceans) and heaven (etery) are both mentioned on a stele from Hesderheim (Cumont, ii. 321). It is clear, therefore, that in the Mithraic mysteries a complete system of cosmography was taught; nor can there be any doubt of its application to the soul and its destiny.

The doctrine of the mecos, which pervades all the speculations of later antiquity, was popularized by the Stoics, especially by Posidonius, and, together with the astrological doctrines which accompanied it, was derived from Oriental sources. It formed part of the common stock of teaching imparted to the votaries of the *other worldly* religions of which Mithraism was one which became diffused throughout the West from the beginning of the Christian era onwards. We should be able to give a more definite account of Mithraic eschatology if we could.

Mithracauitj was published by Dieterich from the Paris magical papyrus (Bibl. Nat. Suppl. Grec. 574) deserved that name. This document, com-
mitted to writing about A.D. 300, is in its present form part of the stock-in-trade of any Egyptian
magician, and is interspersed with necus magic and supplemented by directions for its use in the
advances of this practitioner. The question is whether the compiler made use of a genuine Mithraic document; this is supported by the
words, which may be translated as follows:

1 Be gracious unto me, Providence and Fortune, to me, who am writing down the first of all the divine mysteries that are of the immortal

2 But the monuments show that the heavenly pheno-
mena played a still more important part in Mithris-
Mention. Has been made of the lion-headed figure of human form, wrapped in the coils of a
serpent, of which a large number have been found in Mithraea. The figure often has four wings and
holds in its hands a pair of keys, or a sceptre and thunderbolt. The symbolism of the figure would be
hardly comprehensible, except even apart from the fact
that we find the signs of the zodiac engraved on its
body in certain instances. It represents eternal
time, the zeno diophrse which became the chief
divinity in one of the theological systems that
sprang up in the bosom of later Zoroastrism, and
dedoan to have been described in Greek as
Kprrx, though we have no direct proof of this.

1 Explanations differing in some respects from those of Cumont are given by Tontain, Kern iv. 390. 145 ff.
2 See above, note 1.
3 No explanation can be given of the names (a) Mithra and (b) the sun, (d) the left hand of Mithras himself. These symbols represent the elements, and their repetition indicates that each planet contained all four.
4 *Ardenio naturae sacramenta bene Mithrae philosophantium* (Tert. adv. Marc. 1. 18).
5 *Dekos* in Mithraic is more often a term for a tree or wood (Porphy. de Anto. Nymph. 18).
nothing more than a syncretistic product. It is likely enough, however, that the ascent of the soul through the seven spheres was taught in the Mithraic mysteries: Celsus (up. Origen, c. Cel., vi. 22) explicitly tells us of a 'ladder with seven rungs on which the seven metals assigned to the planets which was shown to the initiates; Porphry, quoting a certain Enublus, who attributes to Zoroaster the doctrine that the 'cave' was a symbol of the universe, of which Mithras was the creator, speaks of it as containing seven ascending stages of the sphaerae cosmicae and the seven planets, which are represented on the dossis and the signs of the zodiac on their upper surface (Cumont, ii. 243-245). Beyond this all is speculation; and Porphry himself probably knew little more than we do, for he mentions (de Mith., ii.) more easily than the mysteries a certain Pallas, who explained the animal disguises worn by the initiates either as symbols of the zodiacal constellations or as shadowing forth the doctrine of metempsychosis of the pantheistic school of Mithraists. It is not necessary to repeat the astrological speculations, confined in themselves, by means of which Porphry endeavours to interpret the symbols of Mithraism; but there can be no doubt that the alchemical and theosophical influence of the Mithraic doctrines. Thus we sometimes find that the figures of Cautes and Cautopates hold the symbols of the bull and the scorpion, the signs which mark the beginning of spring and winter.

In its final phase, Mithraism was absorbed into the 'solar pantheism' which supplied Roman society in the 3rd and 4th centuries with a theology reconciled with contemporary philosophy and science, and, under Aurelian, the official religion of the Roman State. 'Sol invictus,' as the ruler of the universe was called in a phrase of Oriental associations, was represented on earth by the emperor, and his identification with Mithras, together with that of many others which syncretism was able to effect, made Mithras, 'demi-invincus Mithras,' or, in full, 'demi-Sol invictus Mithras,' the commonest title of the god. It was this modification of Mithraism which gave rise to the last quarter of the 3rd cent. A.D. to become a world-religion. The State-cult of Sol was no more fitting than the worship of the emperor to satisfy the religious instinct; but Mithraism could supply the block through its mysteries of brotherhood; and it was, besides, per excellence the religion of the army and the official classes. In A.D. 307 Diocletian, Galerius, and Licinius, meeting in conference at Carnuntum, dedicated an altar to Mithras, 'fatori imperii salvi,' in one of the oldest centres of his worship in the empire; but the victory of Constantine dispossessed him in favour of a rival creed, which had struck its roots more deeply in those populations of the empire which were least immediately in touch with the legions and the official hierarchy. It became clear that the vogue of Mithraism was in large measure an artificial one, created by the powerful machinery of the imperial government. When Mithraism sank from a position of privilege to one of toleration, and before long became an object of persecution, its days were numbered. It lingered on, on the peripheries of empire and in the Alpine valleys, while, on the other, it became the symbol of a lost cause to the group of cultivated pagans which maintained the defence of paganism in the Senate-house. The cult of the emperor, whose influence, e.g. see below, was a characteristic exposition of 'solar theology,' was a votary of Mithraism; but his attempt to revive the defunct creed of the pagan emperors and to give it an organization resembling that of Christianity was Mithraic. As in his death persecution began in earnest, and, as far as the evidence enables us to judge, the destruction of Mithraism was widespread during the reign of Gratian. The letter of St. Jerome quoted above, which describes such an act performed in Rome by Gracecus, perfectus urbi in A.D. 377. The latest inscriptions in which Mithras is named are those of the group of senators belonging to the society of which Macrob. Sat. 1. 19. 9 gives a picture.

Vettiius Agorius Pretextatus (+ A.D. 385) is called 'pater sacrorum' (CIL vi. 1779 = Cumont, ii. 95) and 'pater patrum' (CIL vi. 1778 = Cumont, ii. 85), and these inscriptions are the last traces of the cult of Mithras in the Roman world. The measures of Theodosius gave the death-blow to the practice of pagan worship; and the Mithraea at Saarburg in Lorraine was destroyed in his reign.

12. Relations with other cults. Mithraism lent itself readily to alliances with other worship, especially those of female divinities, which it seems to have been specially associated with the cult of the Magna Mater; and women were admitted as members of the Mithraic order. Thus in an inscription from A.D. 180, one of the names of the deities worshipped in the Mithraeum at Strassburg, a 'patria' or mother-goddess, is Mithra. In the Danube region a curious by-form of Mithraism is known, which is revealed particularly clear in the two inscriptions of a female deity with the name Elara, which were found at a notices of the inscriptions, which we must recognize as a duplication of the horseman Mithra found on the coasts of the Black Sea.

LITERATURE.—The great work of Franz Cumont, Textes et monuments figurés relatifs aux mystères de Mithra, 2 vols., Brussels, 1886-92, superseded all previous treatises, a fact of which he gives in vol. i. p. xiv.; he also published an abridgment of his larger work under the title Les Mystères de Mithra, Paris, 1913, in which the bibliography of the subject is brought up to date; the earlier editions of this work have been translated into English and German. Among recent works the most important are A. Dietrich, Eine Mithraigruppe aus Paris, Paris, 1910; and J. Tousan, Les Cultes puniques dans l'Empire romain, Paris, 1908-11, vol. ii. ch. iv., 'Le Culte de Mithra.' Other works and articles dealing with special points are referred to in the course of the article. For the Vedic Mitra see A. A. Macdonell, Vedic Mythology, Strassburg, 1887, 3rd ed. 1914, and authorities, esp. G. F. A. Hillebrandt, Yaruna and Mitra, Brussels, 1877; H. Oldenberg, Die Religion des Veda, Berlin, 1894; A. Eggers, Der arische Gott Mitra, Darmstadt, 1911. For the Avesta Mitra see especially M. N. Dhalla, Zoroastrian Theology, New York, 1914, pp. 185-111. H. STUART JONES.

MOAB.—The name 'Moab,' like that of the neighbouring peoples, Israel, Edom, Ammon, Aram, etc., appears to have been the name of a race rather than of a district, but for A. Smith has pointed out (EBI, art. 'Moab,' § 4).
the river. For a time, indeed, Moabite aggression was checked by Ehud, but we find Israel and Moab again at war during the reign of David, and perhaps also during that of Saul. But, although David’s treatment of Moab is said to have been drastic enough, Moab was not incorporated in Israel. The Song of Moses (Deut. 33:8) says, ‘as my father,’ given in Gn 31:22 (LXX), which doubtless gave rise to the malicious story of Moab’s origin, is merely popular. Since Moab and Ammon are represented as related to Israel through Lot, Abraham’s nephew, whereas Esau is Jacob’s twin brother, we may conclude that at the time when these stories took shape the Israelites considered that the Moabites and Ammonites, though of kindred stock, were by no means so closely related to them as Edom. Moab is said to be descended from Lot’s elder daughter (Gn 19:38); therefore it was probably supposed that the settlement of Moab preceded that of Ammon. Whether the Moabites themselves possessed any tradition of emigration from Mesopotamia may well be doubted, the statements of Gn 11:13-16, being perhaps mere inferences from the belief that the Israelites were connected with Mesopotamia. Since, however, the expression ‘children of Lot’ (Dt 21:21; Ps 89) soberly rests directly on the OT, and with all probability also the late antiquarian note in Dt 21:21 implies that the population of Moab was not altogether homogeneal, while the place-names clearly show Canaanite influence.

The constant boundary of Moab on the west was the Dead Sea and the Jordan; the north, east, and south frontiers varied from time to time. Probably the Wady el-Hasy represents the farthest extent of Moabite territory to the south and the Hazz road to the east. The Wady Nimrin, some 8 miles north of the Dead Sea, may be taken as the extreme northern limit (see G. A. Smith, op. cit. § 2).

Beyond the mere mention of Moab as included in the conquests of Moses nothing is known of its history before the period of the Israelite invasion of Palestine. According to Nu 21:19-32, shortly before the arrival of Israel, an Amorite king, Sihon, seized the Moabite territory north of the Tigris and circumscribed the area. The invasion of Palestine from the east is not certainly known, but it is not unlikely that the Israelites attacked Sihon in response to an appeal from the Moabites (as Wellhausen, EBS, art. ‘Israel,’ has suggested), and that it was only after the defeat of Sihon that the Moabites discovered that their allies had no intention of giving up the fruits of their victory. There is certainly no valid reason for disputing the general historicity of the treaty. The first covenant of Hebron was the first-born son of Israel naturally implies that Reuben was the first tribe to obtain a settlement, while the assignment of Moabite territory to Reuben, and the belief that Moses died and was buried there, as well as the tradition that the Israelites crossed the Jordan near Jericho, all point to a belief that N. Moab was occupied at least for a time by Israel. After the invasion of S. Palestine, however, the Israelites were displaced and the area occupied first by the Edomites, and then by the Ammonites, and finally by the Moabites, with the result that the Moabites were able to recover their own. The tribe of Reuben, in spite of its reputation for bravery, was nearly exterminated (Gn 49:7; Dt 24:9), and Moabite rule was established over the Jordan valley west of

1 The summary of Saul’s war (1 S 14:5) bears such a strong resemblance to that of David’s (2 S 8) that it may be doubted whether there was any definite tradition of war against Moab. Hostilities between Saul and Moab would not indeed be inconsistent with 1 S 25, and David, when he succeeded to the throne, engaged in a short conflict with the Canaanites, Philistines, etc. (see art. ‘Israel’), with the result that the Moabites were able to recover their own. The tribe of Reuben, in spite of its reputation for bravery, was nearly exterminated (Gn 49:7, Dt 24:9), and Moabite rule was extended even over the Jordan valley west of

2 A discussion of the way in which this statement is to be harmonized with the Biblical chronology lies outside the scope of this article. It is to be noted that, although by the son of Omri’ Moabite probably means Amah, the expression would not preclude a later successor (see W. H. Bennett, The Moabite Stone, pp. 20-22).
of Moab coincided with that of the king of Ammon, who apparently intended by the murder of Gedorash to compel Judah to join a confederacy against the Chaldeans. Further, the invasion was un succeded, however, by a danger even more formidable than that from Assyria or Babylonia; east and south the country was exposed to invaders from the desert, and Ezekiel (25:11) already perceived the coming disaster. The criticism of Jeremiah (34:6) which describes the devastation of Moab, is extremely difficult; the chapter, however, appears to be to a great extent a compendium of various earlier passages, and this in itself implies a late date. Is 15-16, which is used by the author of Jer 48, notwithstanding the corrupt condition of the text and later modifications, gives a clearer picture of Moab's disaster.

Here it is evident, if we argue from the names of places which may be identified with tolerable certainty, that the invaders advanced from the south-east to north or north-west, and therefore cannot be the Assyrian, Chaldean, or Persian, but must be a foe from the desert. With this invasion the national existence of Moab came to an end, though Jewish writers long continued to mention the country by the old name (Is 25:1, Is 66:29 108). It is remarkable that the name Moab does not occur in 1 Maccabees. It is found, however, in Dn 11, and Josephus (Ant. 1, x, 8) uses the term "Moabites" to denote the Nabataean Arabs.

The language of Moab, as we know from Meshia's inscription, was Hebrew, differing only dialectically from the language of the OT. It is, indeed, not improbable that what we regard as peculiarities of Moabite speech once belonged also to the spoken Hebrew of W. Palestine. Although portions of the OT are earlier than the 9th cent. B.C., they were probably long preserved in an oral form, in which case peculiarities of dialect may well have been modified.

The land of Moab affords many proofs even in these days of its former fertility and prosperity. The OT has several references to the cities of Moab, many of which are named, and mentions its vineyards as well as its sheep. Being situated off the direct line of communication between Egypt and the great Asiatic empires, it was less likely to be involved in a battle, but though doubtless there was constant need of warning off the attacks of dwellers in the wilderness. On the whole, however, Moab seems to have had a far more peaceful history than Israel. Is 15. 2 gives the name Jer 49, which mentions the name Mesha, and settled on his less, and had not been emptied from vessel to vessel, neither had he gone into captivity. 1

The religion of Moab presents many parallels to the popular religion of Israel in pre-Hellenic times. There is no evidence, however, that any great Moabite prophets, if such existed, could point, as did the Israelite prophets, to a tradition of pure religion in the past. Like Israel, Moab had taken possession of a land containing stone circles (in OT language, gizeh) and other primitive monuments, and it is probable that in the land of Moab, as in W. Palestine, some of these were adapted to the worship of the later strata of population. From the existence of such names as Baal-Meon and Baal-Por it may be inferred that the pre-Moabite religion of the land resembled the pre-Israelite religion of W. Palestine, and was in fact Canaanite. This inference is confirmed by the occurrence of the curious compounds 'Ashtar-Chemosh' (Moabite Stone, line 17); for Ashtar is probably a masculine form of the name familiar to us as Ashtoth, and the combination of it with Chemosh suggests that some ancient sanctuary of Ashtor or Ashthoreth had been appropriated by Chemosh, just as the ancient sanctuaries of Canaan in W. Palestine came to be considered sanctuaries of Yahweh. We know both from the OT and from the Moabite Stone that Chemosh was the national god of Moab exactly as Jahweh was the national God of Israel. Indeed, the Moabite conception of Chemosh appears to have coincided with the ordinary Israelite conception of Chemosh. The name Chemosh appears compounded in proper names precisely as the name Jahweh. Thus Meshia's father's name was Chemosh in combination with some word which can be vaguely rendered as 'blesser' and god; a Chemosh-nadab (cf. the Israelite name Jonadab) paid tribute to Sennacherib; and the name Chemosh-yahb (cf. the Israelite Yahweh) is inscribed on a gem found near Beira1 (EBi, art. 'Chemosh'). Meshia speaks of Chemosh with similar terms as an Israelite of his day might have used in speaking of Jahweh, and in Nu 21:2 the Moabites are called 'the people of Chemosh' and also his 'sons' and 'daughters.' Evidence of the existence of other cults in pre-Moabite times may be found in the occurrence of such a name as Nebu, but there is no reason for supposing that such worship continued among the Moabites. The name Dawdah, or Dawdah, occurs on the Moabite Stone (24) apparently as a divine name; last, since Atothoth, where the altar-hearth of Dawdah was seized, was Gadite, the name throws no light on Moabite religion. Whatever the worship of Chemosh may have been before the permanent settlement of Moab, it is extremely probable that it was then replaced largely with Canaanite elements. The OT makes it abundantly clear that the worship of Jahweh was tainted in precisely the same way, and Nu 25 affords an example how the Moab was worse than Israel in this respect; only, whereas, by the 6th cent. B.C., Israelite religion had to a considerable extent been purged of the grosser Canaanite elements, that of Moab remained unaltered. Besides religions profane the indications of the prevalence of drunkenness in Moab have been found in Gn 19:27, Jer 48:8; and, having regard to the references to vine-culture, this is not improbable, though the Israelites were scarcely in a position to take a lead in this. Jer 49:12 says that Meshia, when hard pressed by Israel, sacrificed his son, and we may therefore assume that human sacrifice was a definite feature of Moabite religion. Human sacrifice, not only of the infant first-born, but on occasion even of his son, was current in Israel down to the 7th cent. B.C. Meshia's sacrifice of his son should probably be compared, not with 2 K 16, Mic 6, for in the case of Ahaz probably only the ordinary offering of the infant first-born is meant, but rather with Dg 11:21. Cf. also Gn 42, 2 S 21:1, 1 K 16:1. Further evidence of the general agreement of Moabite religion with that of Israel is to be found in Meshia's boast (Moabite Stone, line 17) that he has banished or made tabu that population of Nebi.

The danger to Israel of intimate intercourse with a people closely akin in race, speaking the same language, and holding religious ideas similar to those of which the prophets had so earnestly laboured to rid Israel, was clearly perceived by the Israelite reformers, and will partly account for the stringent law in De 23, though political considerations may also have dictated this.

LITERATURE.—See the excellent articles on Moab in Heb and Eji; also W. H. Bennett, The Moabite Stone, Edinburgh, 1911, with the bibliography there given (p. 64).

R. H. KENNEDY.

MOAB.—See CHAMANS.
MODERATION. — Cicero in an interesting passage expresses some hesitation as to the proper Lat. equivalent for the Gr. μετριότης: "Virtus etiam sinit illud est, qui sit temperatus, quem Graeci μετριότης appellant, canique virtutem μετριότητα vocant, quam subiectum est ad virtutem de rebus moderatiis et proportionibus et nonnullam utam moderationem; red hand soli an recte e.a. virtus frigida alta appellari possit."

He proceeds to describe the virtue in question as follows: "Eius virtutis proprium, motus animi appetitum sedare, semperque adversamentum ibidem, moderatam in omni re." 1

Moderation, according to this view, is a part of temperance. If temperance consists in self-control in regard to the pleasures of sense, moderation is self-control in regard to the difficulties of life. Limitation (modus, moderation) is, of course, a feature in all virtue; this idea has a long history in the philosophy of Greece, and takes formal shape in Aristotle's doctrine of 'the mean' which gives expression to the peculiarly Greek idea that virtue is a mean between extremes of passion and vice.

Following the guidance of Aquinas, we find that moderation is chiefly concerned with these matters: (1) the desire of excellence or superiority; (2) the desire of knowledge; (3) the outward actions concerned with the conduct of life, business, and recreation, work and rest, etc.; (4) apparel, furniture, and the external apparatus of life.

Each of these points is fully discussed by Aquinas in III. ii. 161-169.

(1) As regards the desire of superioritv, the virtue which moderates it and regulates it is humility (q.v.).

(2) The virtuous control of the desire of knowledge is called by Aquinas 'moderatio in intellectum' as opposed to a form of excess which he calls curiositas (cf. Aug. Conf. x. xxxv. 54). Little need be added to the discussion in Summa (II. ii. 166, 167). We may, however, call attention to a fine passage in Bernard of Clairvaux (cfr. Summa, cxxxvii, 5), who points the way in II. I Co 8: St. Paul 'non proibit multa scientem, si scienti modum nesciat.' Christian moderation, he says in effect, will prescribe the limitations under which knowledge should be pursued, with the consent of the rest of the community, of degree, of zeal, and the purpose of the student. He lays great stress on the question of motive. Those who wish to know merely for the sake of knowing give way to 'turpis curiositas.'

Those who pursue knowledge 'ut auditur' are guided by charity; those who seek it 'ut audientur, by prudence (cf. T. Wilson, 'Maxims of Piety and Morality,' no. 429 [Works, Oxford, 1847-53, v. 423].

(3) Moderation in the matter of work and recreation and other corporal actions and movements is discussed in Summa, II. ii. 168. What Aquinas says practically amounts to this—that man's external behaviour is always consistent with his inner dispositions. He goes on to say, "It is the part of a reasonable being and with the claims made upon him as a member of a community. What St. Paul means to imply in the words σπανίτις and κατανόησις is here in point" (I Thes. 3:9). 2

1 Cf. Panhelenon, I.R.E. viii. 25: 'Ego fratres nostrorum, id est, moderatum in temperantia, virtutem eum maximum habuimus.' (quoted by Aug. de Beata Vita, 31). 2 Cf. Augustin, De Civ. Domi. 3; Aquinas, Summa, II. ii. 147. 2

(4) The virtue of moderation finally finds scope in the mistitute of external apparel, furniture, and other conveniences of life (cf. Cic. De Off. i. 39: 'eadem mediocritas ad omnem nusum cultumque vitae transferenda est'; see also i. 35, and cf. Basil, Homo. de Humilitate, vi., and Ambrose. 3

1 Theodore of Canterbury (on i Thess. 3:9) remarks that the words σπανίτις implies a good behaviour in voice, appearance, and gait, δώρα κατ' αὐτόν εἶναι ρήματα διαίτητας, λόγος νοοποιείται νόμον. 2 The virtue concerned with the matter of dress, according to Aristotle, is ἐραυνία, for which urbanitas or clementia might be a fair Latin equivalent. As to the peculiarly Greek grace of ἐραυνία see Eth. Nic. vi. 7, 8, 41.

MODERNISM

Off. Min. i. 18). We may note that the word *moderation* is applied to the dress of women (I Ti. 2.), and a similar expression, *sive magnum sive minus*, is found in Tit. 2. The principle implied seems to be that a person's dress is to be proportioned to his station or office in life, or to the occupation in which he may chance to be engaged (work, or religious vocation). In the country the matter of which he represents *Paternum* as advising his son on these points:

Let your dress be sober, clean, and modest, not to set out the beauty of your person, but to conduct the sobriety of your mind; that your outward dress may resemble the inward plainness and modesty of your heart. For it is highly reasonable, that you should be one man, all of a piece, and appear outwardly just such as you are inwardly ( *Sacrae Script. ch. xviii., 5* ). As to the matter of women see what is said of *Mirinda* (ch. x.).

It may be objected that this entire account of "moderation" is somewhat arbitrary. The fact is that moralists have evidently found difficulty in distinguishing between the different spheres of action in which they are regulated by moderation, sobriety, and temperance respectively. There is, however, practical convenience in following the line suggested by Aquinas. He may be criticized as over-systematic, but we need not suppose that his classification is intended to be exhaustive. The virtue which "in minimis modum potius" will be differently estimated according to the various circumstances in which men find themselves placed: some may use one sort of language, others another: the sovereign, persons, and modest, and temporal. This is essentially the spirit enjoined by St. Paul (1 Co. 6:18). Cf. Ambrose, *de Off. Min. i. 18; (20)*

Magna sicut modestia, quae cum sitia sunt juris remissio, nihil sit usurpa, nihil vindiciar, et quod mandato intra viros suis contrassura, dives est apud Deum.

R. L. OTTLEY.

MODERATISM.—See EVANGELICALISM.

MODERNISM.—Modernism is the name given by the papal encyclical which condemned it to a complex of movements within the Roman Church, all alike inspired by a desire to bring the tradition of Christian belief and practice into closer relation with the intellectual habits and social aspirations of our own time. These movements arose spontaneously and, for the most part, in entire independence of one another during the last decade of the 19th century. Since they had thus a common inspiration and a common purpose, it was neither unnatural nor unfair that the authority which condemned them should unite them under a common designation in a common censure. Yet it is necessary to insist that, in the earlier stages of their development, the various movements grouped together and logically correlated by the author of the encyclical *Pascendi* had little or no conscious connexion, and that it was only the external pressure of adversity that gradually forced them at a later period into mutual relations of a more intimate kind.

It may be well in the first place to sketch briefly the history of this complex movement as a whole, and then to give some account of the various forms which it has assumed. These may perhaps best be treated most conveniently under the heads of (a) apologetic, (b) historical criticism, and (c) ecclesiastical and social reform.

1. History.—It must not be forgotten that the Vatican Decrees were the result of a liberal movement in the Church. For its founders, or at any rate for most of them, Ultramontanism was the vision of a Roman Catholic freed from the entanglements of ancient dynastic contentions and in its new independence pledged to the spiritual leadership of the rising democracies. It was natural that the movement should find its fruitful seed-bed in the countries which had yielded most recently to the spell of the Revolution, Lamen-

1849, and Montalembert, *Les Chiffres des noms in France; in Italy, Ghiberti and Rosmini.*

But the hopes of the earlier Ultramontanism, open to all the winds of the century, perished in 1848. The consolidation of the spiritual empire of the Church was achieved by means of collaboration and in another spirit. The Council of the Vatican seemed, both to the victors and to the vanquished, to be the definite repudiation of the generous dreams which had made it possible. Its reactionary character was accentuated by controversies—

—the consolidation of the Italian kingdom at the expense of the temporal power, and the establishment of the Third Republic in France. Yet, in fact, a new era had dawned. Both in the intellectual and in the political spheres new and strange problems urgently demanded the attention of Roman Catholic scholars and thinkers. Many among them felt that the Church was in danger of being paralyzed by the Syllabus and the Vatican decrees, and were resolved that this danger must at all costs be averted. The accession of Leo XIII. in 1878 seemed to give them their opportunity. His numerous encyclicals, while conservative and traditional in tone and perhaps still more so in intention, were nevertheless no less capable of being turned to account by the progressives. Of these encyclicals, three may be specially recalled: *Eterni Patris* (4th Aug. 1879), which enjoined a return to the traditional metaphysics of St. Thomas Aquinas as the necessary foundation for the demonstration of the chief points of Christian belief: *Rerum Novarum* (15th May 1891), which dealt with the condition of the working classes; and *Protestantismissrin Don* (18th Nov. 1899), which expressly condemned "disquieting tendencies" in Biblical interpretation "which, if they prevailed, could not fail to destroy the inspired and supernatural character of the Bible."

The warnings and counsels contained in these documents were resumed and reinforced in a further encyclical, dated 8th September 1899, and addressed to the archbishops, bishops, and clergy of France. It may be said that the whole history of Loth's initiative and its subsequent movements, is to be found in a comparison of the last of these documents with its three predecessors. Such a comparison reveals a growing alarm on the part of authority at the development both of those new tendencies in apologetics and excuses which it had attempted to repress and of the social action of the clergy which it had encouraged.
That alarm was not without justification. It is in France, intellectually and politically the most highly organized country on the Roman Catholic scene, that the reason for it can be most clearly traced. In 1875 the French episcopate secured from the government of the Third Republic the right to establish what were practically Roman Catholic universities directly under State control. Of the foundations thus authorized the most important was the Catholic Institute of Paris, which came into existence in 1878. Among its first professors was Louis Duchesne, a scholar who, though only thirty-five years of age, had already achieved considerable reputation as an ecclesiastical historian of wide knowledge and independent judgment. Three years afterwards one of Duchesne’s pupils, Alfred Loisy, a young priest belonging to the diocese of Châlons, was appointed to the chair of Hebrew at the Institute. Both scholars claimed the right to apply a rigorously scientific method to their respective spheres of research, the one to ecclesiastical history, the other to Biblical exegesis. Their contention was that it was not only possible, but necessary to distinguish between the requirements of history and of faith. Duchesne’s critical boldness in the treatment of ecclesiastical legend specially aroused the hostility of the traditionalists, and in 1883 his name was compelled to suspend his chair at the Institute. It was not till 1893 that Loisy was forced to resign his chair—a resignation which was followed by the condemnation, in the encyclical Providentissimus, of the principles of Biblical interpretation which he had upheld during a decade of connexion with the Institute, however, a group of scholars had been formed who, having become teachers in their turn, carried an enthusiasm for the critical method into the other Catholic Institutions of the country.

The new movement towards a positive theology, as it was called, had its effect also upon the lay world. The beginning of the nineties was marked in intellectual France by what Brunetière described as “the bankruptcy of science.” This meant that science had proved unequal to the needs of life, that man could not live by science alone, and that religion was coming into its own again. But, if it meant a revolt against scientific dogmatism, it meant also a revolt against dogmatic dogmatism. New tendencies in philosophy were beginning to appear which assigned to the will or to the total activity of the human spirit the principal role in determining truth. A young Roman Catholic philosopher, recently having founded these new tendencies to account in the interests of Christian apologetic in a thesis entitled L’Action, sustained before the Sorbonne for his doctor’s degree on 7th June 1898. A year or two earlier, a group of young members of the new Union, and its president, Paul Desjardins, sought an interview with the pope; and obtained from him the assurance of his entire sympathy with its aims. Meanwhile many of the younger clergy had found in the encyclical Rerum Novarum and in Leo XIII.’s advice to French Roman Catholics to rally to the Republic the long-awaited opportunity of a great crusade against modernism. Numerous Roman Catholic democratic journals were started, the democratic clergy were invited by many bishops to explain their views to the students of the diocesan seminaries, and public conferences were organized in which men of all shades of democratic opinion were welcomed.

Thus throughout the French Church a new era of intellectual and social activity seemed suddenly to have dawned under the immediate sanction of authority. Leo XIII.’s letter to the French bishops, which had been slowly, but persistently working throughout the Roman Church during twenty years. In Italy, Germany, England, America, and even in Spain, Loisy was suddenly hailed as an interpreter of ideas which had long been more or less clearly present to many minds.

His treatment of religion on its side of human growth had welded together the philosophical and the more strictly theological elements of the new apologetic method. His treatment of the nature of ecclesiastical dogmatism is illustrated in a book called in Francais: L’Action (chef to L’Évangile et l’Église) served to demonstrate to the social reformers within the Church a close kinship between their own aims and methods and those of the theological reformers.

Loisy had all unexampled, trenchant knowledge and skill in the centre of a movement which knit together all the various elements of reform and extended its ramifications throughout large sections of the Roman Catholic world.

The election of Pius X., to the papal chair was an opportunity for stern dealing with this new threat to the fixity of Roman Catholic tradition. For some years before the death of his predecessor the peril of the new doctrines had been vehemently proclaimed by the traditional theologians, notably by C. F. Turiniez, the bishop of Nancy, and J. Fontaine of the Society of Jesus. Leo XIII. had probably no sympathy whatever with the attempted reconciliation between the Church and modern life, but he had himself aimed at some reconciliation, and he therefore shrank from direct condemnation. Pius X. had no such difficulty. Reconciliation implied that tradition was perfectible, which he could not admit. He hastened, within a few months of his election, to strike at the theological and the social activities of the reformers. On 16th December 1903 five of Loisy’s books were placed on the Index, and two days afterwards a motu proprio was issued which aimed at regulating
ʻpopular Christian action.' The war, which was to be waged during the next four years, had been declared. A varied and continued literary activity, on the part of the supporters of the Modernists, was observable in the press. But Blondel's 'philosophy of action' was developed in his books. Heraldism, a principle of the Oratory, in a series of articles published for the most part in the Annales de philosophie chretienne, and afterwards issued in two small volumes—Essais de philosophie religieuse and Le Religion christen et l'idéologie positive. In the Quarterly, a review edited by Georges Foncegrive, a professor of the university, another university professor, Edmond Le Roy, inaugurated a discussion of the nature of religious dogmas which provoked a considerable controversy. Le Roy afterwards published, in the form of a volume entitled Dogme et critique, a collection of replies to his critics, together with the original articles. In Italy Antonio Fogazzaro, the novelist, launched a programme of ecclesiastical reform, which he defined as an object a general renewal of Christian life, in his novel Il Santo (Milan, 1906). In the same country Giovanni Serenari, a Barnabite, did much by his lectures on both the historical and the philosophical aspects of the dogmas for new ideas, while Romolo Murri, a secular priest of the diocese of Fermo, continued his crusade on behalf of Christian democratic action, undisguised by numerous manifestations of hostility on the part of the Pope. Among the more notable of his crusade was Salvatore Minocchi, a professor of Hebrew at Florence, who had also become known as a Biblical critic through his studies of the Psalms and of Isaiah. In England the movement was represented principally by the writings of George Tyrrell, a member of the Society of Jesus, and Friedrich von Hügel. The latter had read a paper on the progress of OT criticism as it concerned the Heptateuch at a Roman Catholic Congress held at Fribourg-in-Switzerland in 1897, which afforded ample evidence of his accurate scholarship and of the freedom of his critical method and conclusions. Since then he had been engaged on an important work, The Life of Moses, as well as on the second edition of his book, The Mosaic Religion (it was not published till 1908), which revealed his originality and depth as a thinker on all the problems connected with religion, while it gave further proof of his competence as a critical historian. Meanwhile, in France, another, to the Quarterly, Il Rinnovamento, and other Modernist reviews, notably a reply to an article by Blondel which had impugned the right of criticism to a complete autonomy in the religious domain, and a defence of critical conclusions with regard to the Pontifical against a judgment of the papal Biblical Commission affirming its Mosaic authorship (27th June 1906). Tyrrell was already widely known for his frank and bold handling of religious difficulties, but it was his acknowledgment of the authorship of A Letter to a University Professor, which had been privately circulated, and his consequent expulsion from the Society of Jesus (Feb. 1906), that brought him to the forefront of the movement, and so did make him the universally acknowledged leader till his death in July 1906. In Germany the movement was for the most part confined to an agitation for ecclesiastical reform. Franz Xavier Kraus, a professor at Freiburg-in-Breisgau, was the determined opponent of Ultramontanism. An Ultramontane he defined as 'one who places the Church before religion, who identifies the pope with the Church, who is ready to sacrifice a clear decision of his own conscience to the sentence of an external authority' ('Kirchenpolitische Briefe,' ii., in Allgemeine Zeitung, Supplement, 1895, no. 211: the letters were signed 'Spektator,' one of the pseudonyms adopted by himself and others). Kraus's book has been described as an essay in the series Die Klasseiker der Religion, p. 39, where the letter is given in full as the work of Kraus). Kraus, however, died in 1902, too early to be involved in the distinctively Modernist controversy. His pupil, Thoma Labertthonniere, a professor of the Theological Faculty at Wurzburg, had as early as 1896 published a book entitled Katholizismus als Prinzip des Fortschritts, which provoked long and bitter controversy. As a result certain bishops of the Church of Germany forbade their priests to read his lectures. Two years afterwards controversy was renewed over Schell's views on eternal punishment, and four of his books were placed on the Index. Schell made a formal submission after receiving an assurance from the bishop and the Theological Faculty of Wurzburg that such submission did not imply any sacrifice of conviction on his part. But he withdrew none of the condemned books from circulation, and continued till his death in 1906 to be the leader of the Modernist movement in German Roman Catholicism. Among his most influential disciples were Albert Ehrhard of Strassburg; Joseph Schnitzer of Munich, and Hugo Koch of Brannsberg. 

Fio. x. illustrates the reply to the growing menace of this movement. During the years 1905-06 he issued a series of encyclicals in condemnation of the Christian Democratic movement in Italy. Another series of decisions by the Biblical Commission were pronounced in 1906. In 1902 the Seculars and the Congregation of the Index. But it was not till the beginning of 1907 that the storm burst in its full fury. Murri was suspended a 'divinis' on 15th April. Two days later the pope delivered an allocution in which he denounced the new movement as 'the compendium and poisonous essence of all heresies,' and called upon the Cardinals to aid him in eradicating these evils from the Church. At the end of the same year the Congregation of the Index wrote to Cardinal Ferrari, archbishop of Milan, enjoining him to procure the suppression of Il Rinnovamento, a Modernist review which had been launched at the beginning of the year. The Cardinal had contributed to Il Rinnovamento after the strong terms in which it denounced the review as 'notoriously opposed to Catholic spirit and teaching,' but also because it took the unusual course of expressly naming certain writers—Fogazzaro, Tyrrell, von Hügel, and Murri. In May the archbishop of Paris, inspired, no doubt, by similar action on the part of the Cardinal Vicar, prohibited the reading of Le Roy's Dogme et critique, and at the same time forbade any priest in his diocese to collaborate in Le Roy's Revue d'histoire et de litterature religieuses. The professors of the Catholic Institute of Paris were at the same time forbidden by the bishops who controlled that seat of learning to contribute to Denkmal, a small Modernist weekly which had been founded at Lyons in 1905. In June Pius X., in a letter of felicitation to Ernst Commer, a professor at Vienna, who had written an attack upon the theology of Hermann Schell, described those who had projected a monument to Schell's memory as 'either ignorant of Catholicism or rebels against the authority of the Holy See,' though among them were the archbishop of Bamberg and the bishop of Passau.
preparing for a more stringent and inclusive condemnation of all the various heresies, exegetical, apologetic, philosophical, and social, that were troubling the Roman Catholic world. That condemnation was pronounced in the decree of the Inquisition, late in the year 1907, and the encyclical Pascendi Dominici gregis, of 8th September in the same year. The decree Lamentabili was a mere collection of sixty-five propositions which were to be condemned. No indication was given of the sources from which they had been derived, and no writer was condemned by name, but thirty-eight of the propositions were directly concerned with Biblical criticism, and Loisy, in some notes on the decree which he published at the beginning of the following year, accepted its condemnation as directed in large measure against himself. The encyclical Pascendi was a document of much greater importance, and was recognized as such by the leading Modernists. Tyrrell met it with vigorous criticism and open defiance in two articles which appeared in the Times on 30th September and 1st October, in the full knowledge that he was exposing himself to the severest censures of the Church. On 28th October the Pope decreed his excommunication by the decree of Rome under the title H Programma d(ol modernist). The encyclical had deduced from an unsound philosophical principle all the various errors which it grouped together under the name of Modernism, and it maintained that the Modernists as the adherents of the Church and the Bible were all the necessary result of an erroneous philosophy. To this the Programma replied that it was, on the contrary, the undeniable results of historical criticism that had made necessary the new apologetic of some kind.

The attitude of Tyrrell and of the authors of the Programma revealed a determination to resist the action of authority. The watchword of this resistance was to cite the anti-Modernists. Even if excommunicated, the Modernist leaders were resolved to claim their inalienable right of spiritual domicile within the Church. Authority might cut them off from its outward communion, but could not affect their inward communion with it. Tyrrell expounded the new policy in an article contributed to the Grande Luce, and remained till his death its most consistent adherent. But the difficulty of giving effect to the policy soon became apparent. The chief difficulty lay in the economic dependence of the Modernist editors on the anti-Modernist press which prevented their action in the open. On the narrow of the publication of the Programma, e.g., the reading of the book was forbidden to the faithful and its authors were excommunicated. But, as they still remained anonymous, the effect of their protest upon the wider world was largely discounted. Yet it was in Italy that resistance to the encyclical was most obstinate and prolonged. In spite of the assiduous suppression of Modernist journals, both scientific and popular, actively appeared in the country. Among these the most influential was Nova et Vetera, founded in January 1908, in which for the first time theological views of a decidedly negative character, such as found expression in the lettere di un peste modernista, published at Rome in the same year, began to appear. Meanwhile condemnations were launched against the leaders who had appeared in the open. Loisy was formally excommunicated on 7th March 1908. The same fate befell Schnitzer at the beginning of May. It was suspended in divinis in January of the same year, and in the following October voluntarily withdrew into secular life. This series of personal condemnations was followed up and completed by a blow aimed at the Christian Social movement in France. The Silton, the organ of the movement, was formally condemned on 29th July 1907, and the encyclical Rerum novarum was ordered to work benevolently for social reform under the direction of their respective bishops. Marc Sangnier, the lay leader of the movement, made his submission, but Pierre Dabry, its most prominent clerical representative, withdrew into secular life.

The various measures of repression set forth in the encyclical Pascendi having failed, after a lengthened trial, to produce the desired effect, Pius X, issued, on 1st September 1910, the motu proprio Sacerdor Antidoting, in which he enjoined the imposition of a special oath of adhesion to all the condemnations, declarations, and prescriptions contained in the encyclical Pascendi and the decree Lamentabili upon all professors of seminaries and Roman Catholic universities and institutes on admission to their office and upon all ordinands. It fell, however, not to a priest or even to a layman, but to a woman, to make a protest to the Congregation of the Sacred Congregation of Christian liberty. Maude Petre, the biographer of Tyrrell, having been called upon by the bishop of the diocese in which she resided to subscribe to the condemnations contained in the encyclical Pascendi and the decree Lamentabili, and in addition of her admission to the sacraments, refused to do so on the ground that such subscription would imply a readiness to defend, it necessary with her life, every word of those documents as being equally important for faith with the Apostles' Creed itself. About the same time an anonymous document, purporting to represent the views of a numerous group of ecclesiastics belonging to all the French dioceses, appeared in a Parisian newspaper, the Siècle. It contained a declaration that its authors desired, before taking the oath under constraint, to protest before God and the Church that they did not regard their act of submission as in any way binding upon their consciences or as implying any modification of their opinions. Whether with this reservation or not, the anti-Modernist oath was generally taken by most of those subjected of being Modernists, and the history of Modernism as an open movement in the Roman Catholic Church had come to an end.

2. Forms. — (a) Apologetic of immanence. — It was the aim of the philosophic Modernists, notably of Labertouville, to establish the cardinal points of Christian belief by the aid of the modern evolutionary or dynamic view of the universe. That involved a departure from the traditional scholastic method of apologetic. But they did not abandon scholasticism arbitrarily, simply because it was old. On the contrary, it was their sincere belief that the Aristotelian metaphysic and logic utilized by the scholastic theologians provided a less perfect instrument for the illustration and defence of specifically Christian belief than the more modern conceptions of life. It is, e.g., an essential part of Christian belief that God is personal and that He is creator. But it is only in the light of a dynamic conception of the universe that the full significance of these affirmations is disclosed. The God of Aristotle was a logical abstraction, the ultimate idea. Creation was but the logical derivation of the divine idea in specific forms towards a passively receptive matter. It was in no sense a productive effort realizing new life. But that is just what the Christians demand. For it God is the sovereign source of power, and that power goes forth, must by its very
nature go forth, in a real creative effort issuing in new life independent of and yet closely united with its source. And the very essence of that new life is again real creative action. For action is always creative, an extension of life beyond itself, through the agency of which the power by which God has created it is exercised. Each past experience engenders a new present life, and the present life is itself the nature of which it remains the constitutive principle. Thus creation is God's transcendent reality introducing itself into the world and becoming immanent in it. And this act of creation is the act of the divine love by which God is eternally pledged to His world, by which His world, becoming self-conscious in man, needs and can receive His grace. Again, as Laberthonnère points out, it is just because God is not the 'pure act' of Aristotle, but the power which by His own nature acts continually, that we can conceive of a plurality, a society encircled within the unity of His own Being. The doctrine of the Trinity assumes a vital and not a merely formal character. Thus the reality which we assign to life, because we already feel it there, is itself the motive of our belief in the personality of God. That personality is not a mere idea to which we attain by logical inference. It is a vital inference from our actual experience of life as creative action. This experience implies a more or less conscious communion of each separate creative unit with an original infinite source of creative life, and of all the units with one another in and through that life. With the terms which essentially religious experience has formulated to express itself—communion, inspiration, revelation, faith, judgment—imply a concretely personal character in God. On the other hand, these terms, when interpreted to us and by us through the logical abstractions of the Aristotelian metaphysic, lose much of their distinctively religious significance. The conception of faith, e.g., as an assent of the intelligence to the truth acquired extrinsically, by the teaching of a divinely deputed authority, fails to do justice to its concrete reality. That concrete reality of faith is an immediate response of the whole personal nature to the personal divine action upon it, a response in virtue of which it recognizes authority and the measure in which authority mediates the divine action to it. The intellectual element in faith exists, but it exists as a derivative from some profounder and more vital action of faith. So, again, revelation, when conceived as the final and immanent deposit of truth statements to be imposed upon the intellect from without, is shorn of much of its religious character. Assent to such a revelation need not be religious at all. The real concrete revelation of God is to the whole personal nature as imposing His action upon it. And the perfect instruments of that revelation are Christ, the Incarnate Word, and the life of His Church in so far as it is a real extension of His life. The thought of the Church, its dogmas, its truth-statements, are but the partial and ever-perfectible translation in terms of one aspect of man's activity, his power of intellectually apprehending reality, of its living apprehension of God in Christ. Thus even if the Gospels themselves are not a completed revelation. They indeed enshrine the perfect revelation of the Christ-life. But that revelation can be apprehended only in proportion as it is lived, and by those by whom it is lived. The Gospels can be but the initial attempt of those who had lived it to read and interpret its mysteries. Thus history is not of merely accidental importance to Christianity, but is, on the contrary, of its essence. As Laberthonnère frequently puts it, Christianity has ever Laurel to conceive of God sub specie humanae. God condescends to weave the texture of His vast designs with human hands. The divine inspiration of each individual life is a free product of the total inspiration of all humanity and a contribution towards all future inspiration. So tradition acquires a vital, and not a merely formal, value.

(b) Historical criticism.—It was the aim of the philosophical Modernist to vindicate the Church as the supreme organ of the vital religious tradition of mankind. The historical Modernist sought to do the same thing in his own special field of study. The orthodox apologist, grasping himself self on the closed character of revelation as imperfect truth-statement, had to prove the practically formal identity of the dogmatic statements of the Church to day with the Scriptural revelation. For the historian, however, the admission of such a formal identity was impossible. The development of dogma from the most general to the most exact forms of statement, from the simplest to the most complex and detailed forms, was a fact of history. As a historian, the Modernist had merely to trace the development and expose its character. But, as a Christian apologist (the rôle which alone constituted him a Modernist), he had to undertake the much more difficult task of reconciling this development of dogma with its permanent truth. This he attempted to do by distinguishing between the spirit and the form of each dogmatic statement, ascribing to the former an absolute and permanent, to the latter a merely relative, instrumental, and mutable value. The dogmas such apologists meant its witness to some aspect of religious experience which was necessary to the reality of the religious life, and therefore universal or capable of becoming universal. But that witness could pass current only by the aid of some intellectual symbol capable of suggesting the actually experienced reality. Such symbols, necessarily shaped by the intellectual methods and habits of their period of growth, were clearly imperceptible. But the growth of dogma was something more, and more truly organic, than the adaptation, as it were consciously and from without, of more perfect thought-forms to a constant experience. For thought reactivates upon life, the clear perception of an experience upon the experience itself, enlarging and deepening its import. And so many of the Modernist apologists were ready to find in the more developed forms of dogma a fuller expression of its spirit, the experienced reality by the ideal and adequate form of the witness to it. A similar method of treatment was applied by the Modernist historian to the growth of ecclesiastical government and institutions and all the formal aspects of the Church's life. In this they anticipated the orthodox contention that the actual fabric of Church order had been instituted by Christ Himself. But he claimed that the Church as a society had grown out of the spirit of Christ, and that each stage in the evolution of its order could be shown to have been the necessary means, under the circumstances of its particular historical moment, of preserving or extending the operation of that spirit.

(c) Ecclesiastical and social reform.—Yet the movement did not propose simply to divinize the existing Church. Her actual institutions came into existence in a distant past in response to the needs of the spirit then operating within her. But to-day those institutions may be suffocating her true life. They may even, as Fogazzaro's saint suggests, be introducing false and destructive spirits into her system—the spirit of falsehood, the spirit of clerical domination, the spirit of aristocracy, the spirit of private property. Yet none of the chief Modernist writers can be said to have put forward any definite programme of ecclesiastical reform. They urge rather
that Church authority should remember of what spirit it is, what spirit it exists to serve and carry out.

The Church is the hierarchy with its traditional concepts, and it is the world with its continuous hidden reality, with its special own truth, the unique theology, and the inexhaustible treasure of Divine truth which reacts upon official theology; the Church does not die, the Church does not grow old. It constantly creates new life on its lips the living Christ, the Church is a laboratory of truth in continuous action (46). p. 253).

Only when possessed by such a conception of her character and mission will the Church discover what reforms she needs to make her equal to both in the profoundly changed circumstances of contemporary history. It which has inspired the Modernist social reformer also. He has aimed at making Christianity the keaven of national, political, social, and economic life, and therefore the principle of a larger and humann".

Murri, La Vita religiosa del Libero, della Religione, della scienza, e dello stato, Milan, 1910; U. Fracassini, L'ore di Bibbia, Rome, 1919; Il Programma modernista, Turin, 1914. The author has added an excellent anthology, representative of the chief Modernists, writers of Germany, France, Italy, and England, selected by J. Schnitzer, and published more recently under the title Der Katholische Modernismus in the series Die Klassiker der Religion, Berlin, 1912. Unfortunately this anthology bears the same title as the same author's critical study of Modernism mentioned above. The chief pontifical condemnations are conveniently given in the following:

MOGGALLANA.

MOGGALLANA.—Moggallana was one of the two chief disciples of the Buddha. He was a Brahman by birth, and his mother's name is given in the Dharmabhikshu (p. 52) as Bhikshu-kanya. Nothing is known of his youth, but, from a long time to tell the story of his conversion.

There was a Wanderer (or Sophist) at Rajagahamana called Satyajata. Moggallana and a friend of his, another young Brahman, went to a nearby village called Sati. There he has rendered his service, and to his compliments had been exchanged, asked him who was his master, and what was the doctrine of the master. Then his men was so serene, his comeliness so bright and clear. There is a great man of religion, one of the sons of the Sākyas, who has gone forth from the Sākiya clan, and he as the doctrine of his master, was the reply. 'Well, what is the doctrine?' asked Sariputta. 'I am but a novice, only lately gone forth. In detail I can not explain, but I can not explain the meaning of it in brief.' Sariputta told him that was just what he wanted, the spirit, not the letter, of the doctrine. Then Asaji quoted a verse:

'Regarding a cause.

And he tells, too, how each shall come to its end,

For such is the word of the Sage.'

On hearing this verse Sariputta obtained the true eye for the truth; that is, the knowledge that whatsoever is subject to the condition of having an origin is subject also to the condition of passing away. (This is the stock phrase in the early Buddhist books for conversion.) He became once acknowledged that this was the doctrine that he had sought to discover in vain. He went immediately to Moggallana, and told him that he had found the ambrosia, and, when he explained how this was, Moggallana agreed with him in the view that he had taken, and they both went to the Buddha and were admitted into his order.

The story here summarized is repeated, in almost identical terms, in various commentaries. It is curious in two ways. In the first place, who, on being asked to give the spirit of the Buddhist doctrine in a few words, would choose the words of Asaji's verse? One by one the mainlanders of Buddha to find any mention of the point raised in the verse; and yet the verse has been so frequently found on tablets and monuments in India that Anglo-Indians are wont to call it, somewhat extravagantly, 'the Buddhist creed.' The Buddhists, of course, have no creed in the European sense of that word, but any one who should draw up one for them ought to include in it a clause on this matter of causation. The quotation may very well have made a special impresion upon Sariputta and Moggallana. They had already renounced the sacrifice as a satisfactory solution of the problems of life, and were seeking for something more satisfactory than the vague hints now to be found only in other passages, such as Jot 14, where the ambrosia is brought into a mystical connexion with cause and with passing.

1 Finana, ed. H. Oldenberg, i, 30-44; translated in Riys Davils and H. Oldenberg, Vineya Texta, i, 139-151. The title was the same as the Satyajata of Boga, i. 58, the famous wed-ngezget.

2 Dhammapadita Cuduna, ed. F. Perning. Samyaj Samaj Com. on verse 1017: Agutara Com. on. 88, et al.

away. Here, in this new theory of causation, was a quite different view of things, which seemed to them to meet the demand.

It is also, at first sight, curious that they should have called this particular doctrine 'ambrosia' (αμμοσία). Though this expression was no doubt first used of the drink that preserved the gods from death, it must before the rise of Buddhism have acquired, among the Wanderers, the secondary meaning of salvation as being the ineffably sweet. It is true that the other idea of salvation, as being atonement (from evil, or from the eternal round of birth and death), is also found in Buddhist works (see Mokṣa). But it was natural, in the beginnings of speculation, to have varying attempts at the expression in words of so complex and deceptively simple an idea. Thus it is probable that the early Buddhists invented such a phrase as ambrosia, connoting, as it does, so much of the earlier polytheism.

Moggalāna is frequently mentioned in the canon, and usually with the epithet Mahā (the Great). A number of verses ascribed to him, including one long poem and several shorter ones, are preserved in the anthology called Theragāthā (Psalms of the Brethren). The Dīgha is curious about him. A whole book is assigned to him in the Saṅyutta; and about two score passages in the Majjhima and the Aṭṭhakūṭa, and elsewhere in the Saṅyutta, record acts done or words spoken by him. We need not give the details of all of these passages. The general result of them is that he was considered by the men who composed them to have been a master of the philosophy and of the psychological ethics, and especially of the deeper and more mystical sides, of the teaching. There is, e.g., an interesting passage where the Buddha compares Sāriputta with Moggalāna:

1 Like a woman who gives birth to a son, brethren, is Sāriputta, like a master who trains a boy. Moggalāna leads him on to conversion, Moggalāna to the highest truth. But Sāriputta can set forth the four Aryan Truths and teach them, and make others understand them and stand firm in them, he can expand and elucidate them.

In one characteristic Moggalāna is stated to have been supreme over all the other disciples. This is in the power of iddhi (potency). Both word and idea are older than the rise of Buddhism; and the meaning is vague. The early Buddhists, who had first to do with them, often did to pour new wine in old bottles, distinguished two kinds of iddhi—the one lower, intoxicating, ignoble; the other higher, temperate, religious. The former has preserved for us the belief common among the people, that the latter the modification which the Buddha sought to make in it. The former reminds us of the mena of the South Seas, or the orvanda of some American tribes, or sometimes of the strange accomplishments of a spiritualistic medium. Birds have iddhi, with especial reference to their mysterious power of flight. Kings have iddhi of four kinds (differently explained at Dīgha, i. 177 and Āvadāna, li. 454). It is by the iddhi of a hunter that he succeeds in the chase.1 Iddhi is the explanation of the luxury and prosperity of a young chief. By iddhi one may have the faculty of levitation, or of projecting an image of oneself to a distant spot, or of becoming invisible, or of walking on water, or of passing through walls, or of visiting the gods in their various heavens. All these are worldly iddhi, the iddhi of an unconquered man. That of the converted, awakened man is self-mastery, equanimity.2

Both these kinds of potency when regarded as innate, are, neither of them, was, according to Indian thought, what we should call supernatural. And neither of them, in Buddhist thought, was animistic, that is, either dependent upon or involving the belief in a soul as existing within the human body.

In both these respects of iddhi, the worldly and the spiritual, Moggalāna, in the oldest records, is regarded as pre-eminent. An amusing and edifying story is preserved of the way in which, like an ancient St. Dunstan, he outwits the Evil One.3 We are also told how, in order to attract the attention of the gods to the very elementary exposition of ethics that he thought suitable to their intelligence, he shook with his great toe the pinnacles of the palaces of heaven.4 Other instances of Moggalāna’s instructing the gods are given in the Moggalāna Saṅyutta referred to above, and in both, while two anthologies, probably the latest and certainly the most dreary books in the canon, the Vināna Vatthu and the Peta Vatthu, consist entirely of short poems describing interviews which Moggalāna is supposed, on his return, to have had with spirits in the various heavens and purgatories.

Most of the episodes in which Moggalāna figures are localized, that is, the place where the incident or conversation took place is mentioned by name. The names are very varied, and it is clear that no one place could be regarded as his permanent residence.

Tradition has preserved no further account of his life, but the manner of his death is explained in two commentaries, the two accounts being nearly identical.5 Both Sāriputta and Moggalāna died in the November of the year before the Buddha’s death, just before the Buddha started on his last journey.6 Sāriputta died a natural death; Moggalāna, it is said, was murdered, at the instigation of certain jealous Jain monks, by a bandit named Samana-guttaka, at the Black Rock cave on the Isigili Hill near Rājagaha.

When Cunningham opened the topes (memorial mounds) at Sāんā, he found in two of them cartons containing fragments of bone and inscribed respectively ‘Of Sāriputta’ and ‘Of Moggalāna the Great’ in Pāli letters of Asoka’s time.7 A similar discovery was made in the neighbouring group of topes at Satdhāra.8 It is evident that more than two centuries after their death the memory of the two chief disciples had not yet died out in the community, and that the Buddhist bāty who erected these monuments considered it suitable that their supposed relics should be entombed in the same tomb.

The name Moggalāna was occasionally adopted as their name in religion by candidates for the order till the 12th cent. of our era. The belief that the power of iddhi had been actually exercised by Moggalāna the Great and others in the ancient days is still held by those of the orthodox who adhere to the ancient tradition, though, except as practised long ago, the belief in iddhi has long died out. There is no evidence later than the canon of

calm, consciousness, in general considered from worldly
of the Chaudogna Upamit, v. 1, 6, the words rendered 'freedom in all the worlds' are, literally rendered, 'facing as a
to be a positive concept of moksa or vimutti chiefly through an austere elimination viewed as the
doctrine of the Buddha (Yamagita, Pali). But the state of
being free in opposing things' (Pugandha-Pahattia Comm.). But the state of
and social or personal self-congratulation. The freedom in
in freedom from three crooked things...
and all that dragged me back is buried away (Psalm of the Sibers, 11).

MOKSA (Skr., also muktii) and VIMUTTI (Pali, also (m)anittii).—These terms, other phrases being sometimes substituted, are all derivatives from much, to let go, discharge, release, and, with varying import, are identical in primary meaning with our 'deliverance', emancipation, 'freedom', 'liberty', 'release'. Whichever equivalent is selected, the inquirer may start with two general worth-works. In the first place, the concept in questions has a negative side, viz. a having got loose from, or rid of, and a positive side, viz. the emancipation, or general sense of expanded outwardness, calm, security, attainment, power to be and do, will the 'getting the the 'giving from' were done in some cases too costly a gain. If these two aspects be held together in the mind, then the common terms for them, stated above, may—and this is the second way-mark—be considered as, more perhaps than anything else, the path and kernel of the religious faiths of India and as coming nearer to the Christian 'salvation' than any other. It should, however, be added that the concept grew within those faiths, and that it was by no means always, indeed very rarely, the less paramount element in the phasis and importance. Awareness of emancipation as such, or of its absence and desirability, is not patent in the earliest recorded expressions of the Indian mind. The vital importance of solidarity, either with tribal custom and convention or with the deities and the very life of his gods, is far more pressing on the man of primitive culture than is any revolt or self-exclusion from, or independence of, any order or destiny, socially or divinely given on earth. Furthermore, the particular deliverances or riddances that came in time to be generalized under a common notion varied in kind.

Before making good these general considerations by analysis, it may be well to guard the reader of this translation of Indian literature against gaining an inaccurate idea of the frequency of allusions to 'freedom', etc. Perhaps no language is as rich in private or negative inferences as is that of the Indian classics, whether it be Vedic, Pali, or Sanskrit. We have ourselves a few cases where the negative form exceds, in inspiring emphasis, the positive form—e.g., independence, infinite, immortality, etc. Such terms are very numerous in Indian literature, and it often happens, notably in translations by Max Muller and Fausdji, that, to give the force or elegance of the originals, words with a negative prefix—*a, ni, vi* —are rendered by 'free from', and even 'freedom from.'

Thus we find such renderings as 'free from evil, a:piga; free from fear, a:kha; free from grief, vi:ksika; free from desire, vi:ksina; free from the body, a:kara; free from desire, vi:ksina; a:kara, a:kara; and many other notables, being free from good and free from evil, vi:ksina, vi:ksina, vi:ksina, vi:ksina, vi:ksina, etc., laden with the well-done and the done well, rid of the bad actions or evil actions, etc. (Kastriyaki, Pali, 4).

Moksa have been called 'liberty' taken by the banish use of 'free from' go to reveal this misconception. The phrase just quoted occurs in an ariastic context of sa:mera, or transmutation. Now, it is to be observed that, or rather, contrary to the idea of the soul or self, not only from this body, but also from all future bodies. But the only term expressive of release here is in the translation. All who depart from this world go to the home of a man make reply (Voy Aimfl, iv. 132, 143), that deposes him on (atapo,) i.e. he does not return to be born on earth. This is Berg's SBE, I am free. Further on, in r. 7, in an ancient sun-hymn occurs the unique appellation raja, 'twister' or 'turner': 'Thou art the twister! Twisting the sun, thou art the sun's raja, thou art the sun's king!' This is translated (if): 'Thou art the deliverer, deliver me from sin.' in the Pattigama Upamit, r. 9: 'he frees himself' is literally, euphoro, 'he saves himself.' in the Dharmapala Upamit, iv. 23, Regnum renders upavartas (Muller: 'it pleases,') 'it pleases, it is satisfied,' Denseness translates as 'the mind is relieved from the' (ib., Pali). The Chaudogna Upamit, v. 1, 6, the words rendered 'freedom in all the worlds' are, literally rendered, 'facing as a box, or a box.' (Muller's Pali, Pali). "got had obtained freedom from all desires' (Muller) is, in the original, 'had turned to renunciation' (Denseness).

It is very possible that the Vedic seers were encouraged in this habit by consulting the medieval commentaries of Sankara, in whose philosophy moksa was a well-evolved concept, and who used it liberally in his paraphrases.

For instance indeed: 'A perfectly free soul is one...

In freedom from three crooked things...

But all that dragged me back is buried away (Psalm of the Sibers, 11).

1 Herefore in the real or true Brahman be becomes perfected and another name is that of boundless desires he attains to bliss imperishable, inaccessible, and therein abides (lta: Maitrayana Upamit, 1, 2, 11, 613). And Ketha-vratthi, r. 1, is to bring out the fact that, whereas one enters on the 'Path' to salvation, full of a sense of dangers to be got rid of, the gradual putting off of 'letters' converts this consciousness into an abiding bliss of perfected deliverance, i.e. of Nibbana.

For vimutti is comparable to 'Nibbana, and the holy life is planted on, and leads to and culminates in Nibbana' (Mahakabhi, 7, 10; Samudya, Pali).

There is but the faintest anticipation of this in the Vedas. The only 'setting free' in those pages is the resting-place (vimocha) where horses are cased for a while from harness. Gods are called upon to deliver Ariapas and Rishis. Again, in the 'Bricks of saving' (supta), that is, from evil

1 Muktii is said in O. Bohlinius and R. Roth (Skandits-Wybert- bach, Petropag, 1865-70, v. 801) to occur once in the Sarnath's Brahminus, and it is a foreign reference, and the present writer cannot trace it.
and from death (Satapatha Brahmana, VIII. iv. 2), but elsewhere (X. iii. 3) it is said that none but a Brahman, or Deva, is exempted by Brahman from death, and only on the condition that he daily tends the sacred fire. Not here any more than in the Vedas does the grasp and realization of an emancipated consciousness appear. It is still apparent but premature and immature, a mere hint, a shadow, overshadowed by the incident, the freedom, on the one hand, is made more explicit, and, on the other, the liberation is described as 'from evil.' But, whether emancipation be from the power of the body during life or from the body itself and from all bodily leading, it is always but the main positive consciousness, realized in this early stage of Vedanta moksha, is, intellectually, discernment of the identity between the Absolute, Brahman or Atman, and the soul located in and, emotionally, sense of security and assurance resulting therefrom. For the individual becomes invested with the powers, negatively expressed, of the Absolute Being: undecaying, imperishable, unattached, unbound, unlimited, unsuffering, etc. (Bhadraragya Upanisad, iv. 4).

If a man clearly beholds this self as lord of all that is and will be, who has entered into this patched-together hiding-place, he is creator, maker of all, he is the world . . . then is he no more afraid (ib. iv. 15, 16).

Proceeding to the less ancient Upanisads, such as may have been influenced by Buddhism and other developments, we find in the 'Upanisad of the Shavelings' (Mayyaka) the compound paramahanta (III. ii. 0), 'completely freed':

'They who have grasped the secret of Vedas, who have become a Brahman, who have entered the Vedas, who know the Vedas, all anitches, their innermost being purged in earnest realization, at the final death in Brahman-heaven become immortal, wholly freed.'

But in the Svetasatra Upanisad, and the allied but perhaps still later Maiitraya Upanisad, the reader finds himself among new ideas jesting against the older ones. These are yet present—soul and Brahman, release from life and death, and knowledge as giving release—but the current has widened, if not deepened. The theism of Yoga, the theory of separate souls and their self-emancipation from conditioned, suitable concomitants of the Sankhya system, the critical, scientific attitude of Buddhism, and the tragic earnestness of the two former and of Jainism—all these have caused a revolution in outlook that strikes a new note at the very first words:

'Ou! The Brahman teachers say: What is the primal cause, what Brahman? Whence are we? (Svetasatra Upanisad, I. v. 3.)

Through it all the moksha-idea appears as the work of a creator:

'The Deva' or Svarga ('Lord'), 'himself self-caused, is the condition the (cause) of the maintenance and the movement (chitt, sattvam), the bondage and the liberation (bandha, moksha) of the world' (ib. iv. 16). To know him, to 'see, making his own being a lamp, the being of the lamp, whom to have all fetters fall away, all suffering destroyed, and the ceasing of birth and death to come' (ib. ii. 11, 15). 'I, seeking for freedom, take in him my refuge, my shroud, my stay, to the which is not dead (maniavya paran artha), Fire that burneth where no fuel is' (ib. vi. 181).

As soon a man might wrap the atmosphere About himself like any cloak, as rest.

Yet both here and in the Maiitraya Upanisad the Adamantine monism is none the less maintained, and all personal deities are recognized as names of the self (IV. v., VI. v. 8).

Yet this concept no longer satisfies:

'Having seen his own self as the Self (or soul), he becomes selfless (nirvishista) and, in virtue of that, he is to be conceived as immeasurable, unconditioned. This is the highest mystery, betokening emancipation . . . through selflessness he has no part in pleasure or pain, but attains abstractions (sakshatkarā) (VI. xx. 1.)—a wondrous blend of Buddhist and Sankhya concepts.

Yet another new term reveals a fresh and not-

able development of the moksha-consciuosness, that
is not, of course, absent from the earlier Vedantic literature, but it attains emphasis only in that which must have felt the impress of Buddhism, to yield nothing of Mahayana and Brahmanism.

Now, in the doctrine of Aralarnship, or the release from continued deaths and rebirths by the perfected character, vimutti is not only dominant to the same extent as is mokâ (mokâ) in Vedânta, but the treatment of it is more consistent with the Buddhist principles.

Hence the terms 'freed by understanding,' 'freed-both-ways,' meaning emancipated by the work of understanding only, or emancipated both thus and by the eight vimokhas or similar exercise in samâdhi (cf. Majjhima Nikâya, i. 477).

Moreover, vimutti, as expressing final achievement, with the rapturous assurance of it, was at the heart of the Buddhist Dhamma from the first.

In that which is recorded as his second sermon—the Anâtha-dakkhkhana Sutta (Vinnayaka Texts, i. 101; cf. 107)—Gotama Buddha stated how emancipation grew out of the rejection of the cosmic soul as immanent in and identical with the sense of individual personality ('self' being only an abstract idea inseparable from bodily and mental factors).

Of the aforesaid factors, in its modern form, that of permanence, omniscience, bliss, in these demurred them of factitious attraction. Craving to renew them in future lives fell away. The freed individual knew that he was free, and henceforth needed only to await the final hour in quieted but blissful well-being and righteous living. Again, in sending forth his first missionaries, the Buddha named as his and their supreme adequately qualification:

1. 'I am freed from all sophsman and divine...'; ye are freed from all sorrow human and divine... Go ye now... for the welfare of the many... '(Vinnayaka Texts, i. 1226.)

The subjective awareness of the freed state, held to be also valid objectively, is further enhanced by the use of such terms as 'realizing,' 'touching,' 'tasting' (Dîgha Nikâya, iii. 230; Majjhima Nikâya, i. 477; Aṅguttara Nikâya, ii. 244, i. 30, iv. 205, etc.).

Wherefore thus must ye study: "more and ever more striving our very best shall we realize supreme emancipation" (Aṅguttara Nikâya, iii. 218).

'Having liberated himself with respect to things that should be let go he touches perfect liberty' (ib. ii. 196; cf. 234).

'The eight deliverances (vimokhas) are to be realized by personal contact' (Dîgha Nikâya, iii. 230).

'Few are they who obtain the taste of liberty' (Aṅguttara Nikâya, i. 30).

As the ocean has but one taste, that of salt, so has Nibbâna but one taste, that of emancipation' (ib. iv. 202; Vinnayaka Texts, i. 204).

Awareness of full attainment was realized as a momentaneous phase of ecstatic consciousness (Kôthâ-rattthu, i. 4), but the reverberations formed an abiding joy:

'Gladness springs up within him, and rapture thereeto; the thoughts of his enraptured consciousness become tranquilized; thus tranquilized he knows bliss; and his consciousness is stayed' (Dîgha Nikâya, iii. 241, 'The five occasions of emancipation'; cf. i. 79).

Imagination plays about the term:

'He with fair flowers of Liberty enwreathed, Sane and immune, shall reach the perfect peace' (Passages of the Brothers, 109).

Above the rolling chariot of this earthly life spreads the silken canopy of emancipation' (Sutta Pitaka, i. 266).

And in the later Questions of King Mîla:

'As the ocean is all in blossom with the immaterial... ripples of its waves, so is Nibbâna all in blossom, as it were, with...
the immovable, diverse, delicate flowers of purity, knowledge, enlightenment, etc. (ib.).

Arahantship, again (ib. v. 17), is called 'the Exalted One's jewel of emancipation (vimutti-ratana), chief diadem of all.'

The three terms here brought together—Nibbana, Arahantship, emancipation—are largely, though not wholly, coincident in range, presenting different aspects of the ideal, Nibbana: the having eliminated 'the fires' of evil and of craving for continued life. Arahant: or divining the contemplation of an Atman-less Absolute; Arahantship: supreme positive attainment in life on earth; Vimutti: the subjective aspect of both, the negative force in it never far off:

'Let this knowledge, which has been, let go what will be, Let go what thou art midst of, that thou dost, Transcend Becoming! On every side freed-minded Thou'll't again come toward birth and dying.'

(Dhammapada, 34). But the self-knowledge that he is free is a clause in the formula confessing Arahantship:

'Emancipated by right (or perfect) goodness (sunnad hubsa-vimutti): 'in him thus set free there arises the knowledge freed'! ' (Nikaya, passim; Dhammap., i. 90).

And the unity connecting the negative and positive aspects may be discerned in the Sutta Nipata verses:

'In whom no sense-desires do dwell, For whom no craving doth exist, Who hath crossed o'er [the sea of] doubt:— What sort of freedom [is this]? No other freedom [waits] for him' (1890)."

In the Nikayas vimutti and Nibbana are declared to be 'comparable' one with another (in the same thought-category, Majjhima Nikaya, i. 304). But in the Dhamma-suttas, the vimutti is distinguished from higher mental freedom and Nibbana (p. 234; cf. Digha Nikaya, i. 174).

As the subject of a distinct group (khuddal) of religious experience, vimutti is ranked in the Sutta Nikaya fourth with the group 'ethics' (sila), concentric studies (sanaññhi), and insight (paññata, Majjhima, i. 214; Ajjuttara Nikaya, i. 125, passim), while for the Arhat a fifth was reckoned: knowledge and intuition of vimutti (vimutti-anuvadana, ib. i. 102, etc.). Closely associated with the fourfold path to Arahantship, and called, later, modes of progress, avenues, or channels to vimutti, are the studies in 'Emptiness, 'the Signless,' the Not-hankering-Are-'toller!' (Digha Nikaya, ii. 219; Sutta-

A very frequent allusion to emancipation in the Nikayas is that of chetavannitam paññavimuttim, corresponding fairly well to emancipation in the systematization of ethical emotion was not peculiar to Buddhism (see LOVE [Buddhistic]). But the founder of Buddhism is represented (Sutta-patta, v. 118) as claiming that he alone inculcated in such exercises emancipation of the heart.

In this way, in suffusing the idea of more and more beings with (1) love—let all beings be void of ennui and malevolence, (2) pity—let all be set free from sufferings, (3) sympathy—let all be happy and fortunate, (4) equanimity—all are the owners, the possessors, the masters of these mental exercises, if fully practised, result in a thorough mastery through complete emancipation from the respectively opposed modes of (1) ennui, (2) bitterness, (3) antipathy, (4) passion (Ledi Sadoke, Mahittha, in a letter to the writer).

Taken alone, apart from that supreme enfran-
chisement from all the conditions for rebirth, they constituted the best way to Brahma-heven.

'Sariputta: This, I told Dhamanadhaj, is the way to share existence with the Brahma gods.

'The Buddha: Why do you establish Dhamanadhaj in that inferior Brahma-world, when there was more to be done?

'Sariputta: I judged, lord, that these Brahmans preferred that heaven' (Majjhima, i. 195).

All other bases of meritorious acts which are stuff for rebirth (pātissapattika) be compared to the emanation of the heart by love. That takes all those up into itself, as the moon withdraws the stars, the sun the night, the morning star the night, shining in radiance and in splendor' (Hevavatika, 12-31).

But to be emancipated by intuition or insight is to have broken all the four 'severe' or 'consecrating' stages of the Arhat-path—Stream-winning, Once-returning, Never-returning, Arahantship—and to have reached the going-out of all revered desires as to lives on earth or in the heavens (Digha Nikaya, i. 108).

'For not by the wished nor by the un-wished, is that Nibbana to be reached which is the union of all knots' (Hevavatika, 102).

The mountain ranges of vimutti were the haunts of those who, with the world well lost, had developed the symptoms of life's culminating in its final end. Hence it is in the two works containing the legacies of such matured creatures—the Sutta-
Pattas and the anthologies of Thera—and Thera—
that the theme of emancipation is maintained most steadily:

'Come now, let us see Gotama, who love-like Both room alone . . . and let us ask of him How can we be set free from share of death? Declare to us who ask as to the way How may a man from sorrow be set free?'

(Sutta-Nipata, 104).)

'Passed he away fraught with the seed of rebirth, Or as one wholly free? That would we know' (Patisota of the Erechtheum, 1274).

'And as the sun rose up out of the dawn Lot: then my heart was set at liberty (ib. 477).

'Whose range were the Void and the Unknown And Liberty—as flight of birds in air So far is it tru to the track of him' (ib. 92).

'And see, O Master! Sambhara who comes To tell thee of Emancipation won And of the night no more to reborn; Who hath herself from passion freed (chakrapa).

Unyoked from bondage' (Patisota of the Sixin, 334).

'The I the suffering and weak and all My youthful spring be gone, yet have I come, Leaning upon the staff, and clad aloof The mountain peak. My cloak thrown off, My little boat deserted: so there Upon the rock. And over my spirit sweeps The breath of liberty!' (ib. 29, 30).

'Passion abandoned, hatreds done away, Shattered the bonds, nor is there any trembling In that the springs of life are wholly withered:— Like the rhinoceros let him wander lonely.'

(Sutta-Patthi, 74).

'Even as a fish that breaks its net in ocean, Even as a fire that turns not back to heat stuff— Like the rhinoceros, let him wander lonely' (ib. 65).

'Dwelling in love, in pity, and in freedom, In friendly joy, in balance, each in season, Nought in the world disturbs my character:— Like the rhinoceros let him wander lonely' (ib. 73).

The evolution of mokti, or mokhya, in Jainism cannot be adequately dealt with till its early literature is more fully accessible. As evolved, the idea is clearly presented above (art. JAINISM, vol. vii. pp. 448, 470). Similarly the (et)mokya, or apacarya, concept of Sākhyan thought, which survives in medieval commentaries, and which, even in the aphorisms on which these are based, show a later and a more halve metaphysical than such as the foregoing discussions reveal, will be dealt with in art. SĀKHYA.

In those aphorisms (Sūtras) the individual soul, called puruṣa, is conceived as 'neither bound, nor liberated, nor weighting,' (4) (lixii), as is the rest of man's nature, physical and mental. Emancipation consists in having discerned the subtle difference between this [dual nature) (pradhana) and the soul' (xxxi.). By knowledge is liberation (jñānam cha-pacaryaka), by the eradication of bondage (lixiv.). With this knowledge the work of good and evil is done; the union of soul and organism may 'go on like the potter's wheel revolving from the effect of [his impact] (lixiv.) after the finished pot is removed but, when nature therewith ceases to act, the soul obtains absolution (kaivalyam apnoti) (lixvii.).
MOLINISM.—There is no problem in theology more difficult than that which has reference to the knowledge and causality of God, on the one hand, and the liberty and eternal destiny of human beings, on the other. The problem includes three difficulties: How is it possible to reconcile God's foreknowledge with the freedom of the human will? (2) If the entire physical reality of our free acts proceeds from God as the First Cause, how is it possible for our will to be a free cause, or for evil actions to be imputed to us? (3) Given the sincere will of God to save all men, how account for the terrible fact that many die without the light of faith and never attain to eternal salvation?

The endeavours of theologians to throw light on these difficulties have brought forth two systems: Thomism and Molinism. The doctrine of the Thomists, which is the old traditional doctrine of St. Thomas Aquinas (n. g.), was attacked by Molina at the close of the 16th cent.; since then an unending controversy has raged in Roman Catholic schools of theology.

I. HISTORY OF THE CONTROVERSY.—In the 13th cent. St. Thomas Aquinas, a Dominican, synthesized the sum of human knowledge with regard to God as the First Cause and Final End of all things in a work called the Summa Theologiae. Herein is contained all that the human mind, aided by faith, can know concerning God's providence, universal causality, grace, etc. So great became the renown of St. Thomas for the solidity and subtlety of his doctrine that at the Council of Trent the Summa Theologica, alone of all the treatises on the faith, was thought fit to be used in consultation with the sacred Scriptures. The Order of St. Dominie is sworn to love and defend the doctrines of St. Thomas as by hereditary right; and it is their loyalty to these doctrines that has earned them the well-merited name of Thomists.

At the close of the 16th cent. the Jesuit Luis de Molina (1535-1600) published a new doctrine on predestination, grace, free will, etc. The basis of the whole system is the so-called scientia media, a theory borrowed by Molina from his master, Pedro de Fonseca, who, knowing it to be entirely new and against the traditional doctrine, had not dared to publish it. Molina's book was published at Lisbon in 1583 and was condemned by the Holy Office in 1587, and by the Council of Trent in 1672. In 1641 the Roman Congregation of the Index declared it a heresy.

Mohammedanism was, as has been observed, the cause of an unending and bitter controversy which has lasted for centuries between Thomists and Molinists. The above assertions of Molina aroused the ire of Aquinas, whose teachings, or those which he conceived as such, were taught by the Jesuit, Dominie Valencia, Bishop of Guadalajara, in 1588, and also by his colleague, St. Augustin and St. Thomas. Dominie Valencias vigorously attacked the new theory, and so great was the dissension caused by the ensuing controversy that in 1584 the matter came before Pope Clement VIII. who, in 1588, instituted a special board of inquiry, known as the Congregatio de Auxiliis. There were, in all, 181 assemblies of this congregation, which debated the doctrines under discussion. Three condemnations in succession were drawn up by the consultors against Molina. On 13th March 1598 they declared that the Concordia and the doctrine of Molina must be unreservedly condemned. On 19th Dec. 1601 they condemned 20 propositions taken from the Concordia. At the Council of Trent (16th March 1606) it was decided to give orders to the consultors to draw up a bull for the condemnation of 42 propositions taken from the Concordia. The bull was actually prepared for publication, but on 18th Aug. 1607 Pope V. held a congregatio of cardinals in which it was decided to postpone the condemnation. The result of the Congregatio de Auxiliis was, then, a moral defeat for Molinism. So far as was this brought home to Aquaviva (the General of the Jesuits) and his colleagues that the Congregation of S. Suarez was substituted for Molinism and imposed upon the Society by Aquaviva by his decree of 14th Dec. 1613. For more than 200 years Congruius (see below, p. 776) was taught by the Jesuits in obedience to the decree of Aquaviva, but pure Molinism has now been revived by some Jesuit theologians.

In this matter an important point to be noted is the declaration of Paul V. that both Molinism and Thomism agree in substance with Catholic truth, but differ only as regards the mode of explaining the efficacy of grace, of which opinions may be held. Innocent XII., in reply to the University of Louvain (7th Feb. 1604), and Benedict XIII., in a papal bull (Decimation passa, 6th Feb. 1678), declared that the Thomistic doctrine of the efficacy of grace ob intrinsec and the gratuity of predestination. Lest, however, the words uttered by Benedict XIII. should be understood to minimize the doctrines of Molinism, Clement XIII. said (30th Oct. 1758) that:

"We do not wish the enigmas (which we iterate, approve and confirm) of our predecessors (Clement XI. and Benedict XIII.) in praise of the Thomistic school to be any way ascribed to the authority of other Catholic schools" (Bullarium Oris, Proc. viii. 230).

Since the encyclical Aeterni Patris of Leo XIII. (4th Aug. 1879), Roman Catholic schools of theology have done their utmost to claim as their own not only the doctrine, but the very name of St. Thomas Aquinas. Insipid of the renunciation of Thomists, Molinists have endeavoured to drag St. Thomas to their side, and even to impose on St. Thomas the theory of scientia media, which, before Molina, was not even dreamed of ("ne per somnium quidem"), as C. Tiphans, himself a Jesuit, declares. The first crossing of swords took place between R. P. Beza, and C. Tiphans, a long after, G. Schneemann published a work in 1881, in refutation of which A. M. Demmermuth published a work at Paris in 1886, which contains a complete demonstration of the misnamed St. Thomas. In 1860 V. Prins essayed a reply in addition of this Demmermuth published another work in

De ordinis que priori et posteriori, 34.
MOLINISM

1895. Since then there have been many minor publications, chiefly in theological and philosophical Reviews.

ESSENCE OF MOLINISM.—1. Natural order.

(1) God's foreknowledge and free will.—The knowledge of God, considered in itself, is one and indivisible; considered with reference to objects which are the term of His knowledge, it is divided according to the diversity into speculative and practical, into necessary and free, etc. The division which concerns us now is that into the knowledge of vision (scientia visionis) and the knowledge of simple understanding (scientia simplicis intelligititonis). The former has reference to things which have existed, or will exist; the latter has reference to the purely possible, i.e., to objects which have not existed, do not, and will not exist (cf. Summa Theol. I. q. 14, art. 9).

Not at this time do we know a future free act by the 'knowledge of vision.' But, according to St. Thomas (1. q. 14, art. 8, and art. 9 ad tertium), this knowledge necessarily implies an act of God's will or a divine decree. Hence a future free act, on the sole hypothesis of the scientia media, a knowledge which is midway, as it were, between that of vision and that of simple understanding.

Although a future conditional event is one that will never come to pass, because the condition on which it depends will never be fulfilled, the scientia media, such as it is, is incapable of realizing or non-realizing of such a condition: hence, by the scientia media, God explores and knows, with infallible certainty, what this will do, as he will always do by its own innate liberty (consent or dissent), do this act or that, etc., if it be placed in such or such circumstances.

God, if He wishes, e.g., Peter to consent, to do this act, etc., decrees to put Peter in these or those circumstances, and decrees conditionally to grant His help or concurrence for the particular action determined upon by Peter's free will (see below, 'simultaneous concourse'). In this decree, which follows the foreknowledge of the future free act, God knows God the act, and the act, if the action does not, through the scientia media, which sees the consent before the decree.

The unanimity among Molinists is mainly negative, namely, that God does not know future free acts in any absolute, actual decree of His will; but, as regards the medium in which God sees a future act, qua futura, qua hanc, and not scientia, God's knowledge penetrates into the innermost recesses of the will and sees there what it will infallibly do in such and such circumstances. This is the direct denial of free will, for the certain knowledge of an effect in its cause is the very glory of the free will. Suarez taught that God knows the future free act in His decree foreseen as future. But it is impossible even to conceive of a future decree in God: the divine decrees are eternal, and are therefore neither subject to acts into speculative and practical, into necessary and free, etc. The division which concerns us now is that into the knowledge of vision (scientia visionis) and the knowledge of simple understanding (scientia simplicis intelligititonis). The former has reference to things which have existed, or will exist; the latter has reference to the purely possible, i.e., to objects which have not existed, do not, and will not exist (cf. Summa Theol. I. q. 14, art. 9).

Not at this time do we know a future free act by the 'knowledge of vision.' But, according to St. Thomas (1. q. 14, art. 8, and art. 9 ad tertium), this knowledge necessarily implies an act of God's will or a divine decree. Hence a future free act, on the sole hypothesis of the scientia media, a knowledge which is midway, as it were, between that of vision and that of simple understanding.

Although a future conditional event is one that will never come to pass, because the condition on which it depends will never be fulfilled, the scientia media, such as it is, is incapable of realizing or non-realizing of such a condition: hence, by the scientia media, God explores and knows, with infallible certainty, what this will do, as he will always do by its own innate liberty (consent or dissent), do this act or that, etc., if it be placed in such or such circumstances. God, if He wishes, e.g., Peter to consent, to do this act, etc., decrees to put Peter in these or those circumstances, and decrees conditionally to grant His help or concurrence for the particular action determined upon by Peter's free will (see below, 'simultaneous concourse'). In this decree, which follows the foreknowledge of the future free act, God knows God the act, and the act, if the action does not, through the scientia media, which sees the consent before the decree.

The unanimity among Molinists is mainly negative, namely, that God does not know future free acts in any absolute, actual decree of His will; but, as regards the medium in which God sees a future act, qua futura, qua hanc, and not scientia, God's knowledge penetrates into the innermost recesses of the will and sees there what
but of itself the influx is indifferent and ineffica-
cious for this or that particular good: without any
further influx from God, the will determines itself
to act, not to act, to do this, or to do that.
Thomists are accused of making God the cause of
everything which is efficacious, but the difficulty of sin has to be solved by
Molinists also. Physical premotion effects, it is
true, that the will cannot but infallibly do that to
which it is premoved, but no Thomist allows that
God predestines to sin gin sin (see THOMISM): the
simultaneous conourse of the Molinists is a
cooperation of God with the will, not indeed to
produce the sinful action as sinful, but to produce
the physical reality of the action. It is a lesser
evil to co-operate than to make another commit a
sin: Molinists have chosen a lesser evil, but have
not solved the difficulty.

Against the two theories of Molinism with
regard to the divine influx Thomists object that
nothing safeguards the universal causality of God.
The self-determination of the will is not nothing;
it is a reality, which, therefore, cannot escape
God's causality. To argue, as does a recent
Molinist (Labousse, Théol. Nat., Louvain, 1888,
chap. 509), that the inefficacy of the will is due to
why this quality (i.e., the determination of the
will whereby it makes itself pass from the state of
not willing to the state of willing) cannot be
efficiently produced by a created being is not only
to the limit of human character and to the circumstances
to deny, in very words, God's universal causality.

2. Supernatural order.—(1) Grace and free will.
—Against Pelagians both Thomists and Molinists
defend the necessity for grace for the production of
a salutary act: grace (gratia). Against Molinists both
Thomists and Jansenists also defend the necessity for the very beginnings
of faith, and for the desire to do a salutary work.
Both teach the absolute gratuity of actual grace,
even for the very beginnings (prima gracia secundum
justificatione). Against Calvin, Luther, and
Jansen both teach that sufficient grace is given to
all without exception, and that, under the influence
of efficacious grace, the freedom of the will
remains intact. The first point of difference
between Thomism and Molinism concerns the nature of sufficient and efficacious grace, which
both agree to be a division of actual grace. For
the Thomist efficacious grace is gratuitously, i.e.,
intrinsically (ab intrinsecis), different from sufficient
grace, which is merely a probability or a proximate possibility of producing a salutary act; it raises the will to a
supernatural level, and constitutes it in actu primo
capable of performing a salutary act; but in order to
produce that act de facto an efficacious grace (gratia efficax ab externae, not in the supernatural order) is necessary. Hence sufficient grace in
Thomism gives the poss., efficacious grace the
agere (see THOMISM). For the Molinist the same
grace can be sufficient or efficacious; it remains
sufficient if the will resists; it becomes efficacious
if the will consents. Grace therefore is efficacious,
not intrinsically or of its very nature, but
extrinsically, by the consent of the will (gratia
externa ab extrinsecis). In the natural order, as
said above, the divine influx of concourse is not the
action of the will, but in the supernatural order it
precedes (owing to which it is called gratia pro-
venientes) the action of the will, and is received
into it, thus elevating the will to the principle in
actu primo of the salutary act (this saves Molinism from Semi-Pelagianism). Pre-
venient grace is a physical reality produced by
God in the soul moving it (owing to which it is
called gratiae agens) (not physically, i.e.,
efficiently) to consent; it co-operates (owing to
which it is called gratiae co-operans) with the will
to elicit a salutary act; but the consent does not
follow infallibly, because this grace is not of its
very nature, or intrinsically, efficacious (cf. Molina,
Concordia, qu. 14, art. 13, disp. 41). According
to this doctrine, one and the same grace can be
more efficacious for one, and eflicacious for another; further, a lesser grace can be eflicacious for one person, while a greater grace can
remain merely sufficient for another. Neverthe-
less, an efficacious grace is a greater boon than
a grace merely sufficient. Thus, God from all
eternity foresaw (by the scientia media) that, if
He gave grace A to Peter, He would consent, but,
if He gave grace B, Peter would not consent.
When, therefore, God gives to Peter grace A,
which He foresees will be efficacious, that grace is
a greater gift than grace B, which He foresees
would be merely sufficient (Molina, L. Lessins,
Mazzella, H. Hurter, Palmieri, P. Tepe, etc.).

Bellarmine, Sirez, Vasquez, etc., modified this
doctrine, and held what is called Contraus. In
this form of Molinism sufficient grace is not
indeed intrinsically different from efficacious grace,
but differs only as regards the manner in which it
affects the will. Efficacious grace (gratia efficax)
is that which is not perfectly adapted to a man's
current dispositions, temperament and to the circumstances of time and
place, that the will infallibly, but freely, consents;
sufficient grace (gratia incongruas) is that
which is not so perfectly adapted to a man's
current dispositions, temperament, time,
place, etc., and hence the will de facto resists. If,
therefore, God wishes Peter to consent to grace,
He decrees to give him congruous grace—i.e., a
grace perfectly adapted to Peter's character—to
his in the least possible merit.

(2) Predestination.—According to the two
theories of grace in the Molinist system, there are
two theories of predestination: predestination
due to foreseen merits (post praevisa merita) and gratui-
tuous predestination (ante praevisa merita).

(a) Predestination due to foreseen merits.—God
truly and sincerely wishes all to be saved (the
salutif will of God); to all He gives sufficient
grace. Foreseeing, by the scientia media, who
will consent to grace and persevere in it, God pre-
destines them to glory. In this opinion predesti-
nation to glory presupposes the good use of grace
and is therefore not gratuitous (Lessins, Vasquez,
Becanus, Franzelin, H. Tournel, etc.). As is
well known, all the moral problems of the scientia media.
Moreover, even a man has he receives from God, according to St.
'though, he would be reckoned unto him again! For of Paul (Ro 11:24). Who hath first given to him, and to
him, and unto him are all things? i.e.; 1 Co 4:7 What hast thou that thou didst not receive? but if thou didst receive it,
why dost thou glory, as if thou hadst not received it?').
Now Pelagians, Semi-Pelagians, and Molinists
deny the gratuity of predestination, for no
other reason that because they presuppose some-
thing on man's part which is the reason why God
predestines some to glory and not others. The
Pelagians presuppose good works, the Semi-Pela-
gians the beginning of good works, and Molinists
the good use of grace. But, if all these things are
from God, He cannot look for or await them in
order to predestine some and not others; on
the contrary, He gives even the good use of grace to
some because he he gave them the principle in
actu primo of the salutary act. In accordance, then, with the teaching of St.
Paul, with the doctrine of St. Augustine and St. Thomas,
Thomists, and some Molinists of high reputa,
tion, assess the absolute gratuity of predestination, i.e.,
regardless of foreseen merit.

(b) Gratutious predestination.—God wishes all
to be saved; to all He gives sufficient grace. By a
very fact that God gratuitously elects some and not others, those not chosen will infallibly not be saved; hence a reprobation of some sort is consequent on the predestination of some to glory; but this is called *Opus. de Prado, comp. 1875, pp. 19, 22.  

\[ \text{II. THE DOCTRINE.} \]

- De concursa, motione, et auxilio Dei," in "De scientia Dei futurorum contingentium," i.  
- De gratia et libero arbitrio, Freiburg, 1867.  

MOMENTARY GODS. — 'Momentary gods' (Angewandtkapitler) is an expression coined by Christian Wolff (Göttingen, Born, 1806, p. 279), and one of whose credentials are open to question. It must certainly be admitted that the phenomena which Usener brings under this and other names are of kinds. It is true, of course, that human beings whose minds are dominated by selfish and amistocratic ideas may, under the influence of a momentary impression, ascribe to objects or occurrences a divine or demonic character; but the question is whether it is worth while to differentiate such procedure from the general mass of selfish and amistocratic phenomena by the use of a special term. Thus we frequently meet with the practice of worshiping the lance of St. Longinus (L. Droulmer, *Ar'ii*, viii. (1965), Beihaf, p. 71), such being often invoked to witness an oath (Esqu. Sept. 529; schol. Apoll. Rhod. i. 37); but these facts in reality furnish reasons for doubting whether the weapon was only symbolic of the lance of the flagellation, rather than that it was thought of as permanently possessed of divine qualities. Thus, too, while Vergil makes Messentius say: 'dextra mihi deus et tulam quod missile librum,' and is initiated in this artifice by later epic authors (Silius, *Flavii Statii, Thrb. iii. 615, 458); such poetic fancies throw no light whatever upon pristine religious feeling. The lightning flash striking down upon J. Man. x. 773.
MOMENTARY GODS

deity who at length became a mere epithet of Ge, Artemis, Demeter, etc., and Zeus Erebuthos, Athene Hygeia, etc., are to be interpreted in the same way. We may even venture to say that the displacement of these special deities by the Olympians was one of the most important processes in the development of Greek religion in historic times. Among the Romans such special deities are found more especially in the Indigitationa (q.v.), in which every particular operation—e.g., in agriculture—was assigned a distinct tutelary Spirit—Vercactor, Invocator, Lustrator, Oculator, Occator, Surrator, Subruminator, Messenger, Condutor, Promotor. It is said, indeed, that even the Imaginaria, culturae, and exercicerae had each their special deity (Tertull. see Not. i. 15).

From this, however, we derive but scanty information as to the earlier state of things which had been disturbed by the incursion of the Greek religion; even in Varro's lists of these gods we already find many names of extraneous origin, and we are quite unable to say what degree of importance attached to the individual deities.

Very valuable data are furnished by the accounts of the Lithuanian special gods, as critically discussed by Usener (cf. ABIV ix. [1900] 284); O. Schrader, ERE ii. 31 f.; here we find Aushin, the goddess of bees, Rabibis, the honey-god, Budintia, the goddess who aroses from sleep, Klaunliukripe and Kremata, the swine-gods, Melotele, the god of the colourful Rangupatis, who, at the elevation of beer, and Weyjopatis, the lord of the wind. Kindred figures are found among the Letts.

As regards the existence of such special deities in other religions—with the exception, of the heathens of Rome, we need only mention the two names mentioned by the Roman Catholic Church (see below)—our knowledge is at fault, partly from lack of materials and partly from lack of research. We may hesitatingly take for granted, however, that, e.g., the pantheons of the Vedas and the Avesta correspond with that of Homer in presenting various types of deities, and that the place of the great gods who hold sway in these literary monuments was, among the people, i.e. in the living religion, taken by a multitude of less imposing beings, of whom, it is true, our knowledge is most imperfect. The Phoenician religion provides an instructive example: here it was not, strictly speaking, a single self-identical Baal to whom divine honours were paid, but a group of deities for whom the city had its own special Baal, and worshipped him as a tribal or tutelary deity. The data which lie most readily to hand are found in countries where residual elements of heathen views still coexist with or underlie the Roman Catholic religion in the practice of saint-worship, and have to some extent been connotated by the Church (D. H. Kerler, Die Patronate der Heiligen, Ums, 1905). Thus, e.g., among the Zambites of Prussia, St. Agatha took the place of the Greek Hestia in the home which the god of the hearth had once had, and Nicholas was the guardian of buttens. St. Apollonia cured toothache and St. Laurentius rheumatic pains. St. Crispin was the patron of shoemakers and St. Coar of potters.

MONARCHISM.—See Leibniz.

MONARCHISM. — Monarchism is a term generally used to designate the views of those heretics who, to safeguard the Divine unity (monarchia), so refined away the distinction of the Divine Persons as to destroy the Trinity. Hippolytus has left us a summary account of their origin. A certain Noetus, so he tells us, was the protagonist of these ideas; they were upheld by his disciple, Epigenus, and further promulgated by the latter's disciple, Cleomenes. 1 From Epigenus we gather that Noetus had not died short: he lived till A.D. 250. 2 But Hippolytus, who appears to have been martvred about A.D. 240, and who composed his Philosophumena between the years 230 and 235, 3 says in his Tractate against Noetus, 1, that he did not very long survive. 4 And this seems more probable: for Cleomenes, the disciple of Noetus's disciple Epigenus, according to the Philosophumena, 5 caused much trouble during the pontificate of Zephyrinus and Callistus, ivii. 198-225. 6

Hippolytus endeavours to show that Noetus's views were in reality only those of the philosopher Heracleit the Obscurus, who held that 'the Father is an unbegotten creature who is creator.' Noetus and his disciples hold, says Hippolytus, these Heraclitean tenets, for they say 'that one and the same God is the Creator and Father of all things; and that when it pleased Him, He appeared. 8 And again: 'When the Father had not been born, He [yet] was justly styled Father; and when it pleased Him to undergo generation, having been begotten, He Himself became His own Son, not another. 9 In this manner,' adds Hippolytus, 'he thinks to establish the sovereignty of God, alleging that Father and Son, [so called, are one and the same, not on individual produced from a different one, but Himself from Himself; and that He is styled by name Father and Son, according to the violation of times.' 10 Hippolytus, as we have seen, says that Noetus set forth his views as a means of upholding the Divine sovereignty, but, as a fact, the term monarchia (meaning) was ambiguous and held to be used as the word of both parties. Thus Eusebius tells us 12 that St. Irenæus wrote a work, de Monarchia, against those who held that God was the author of evil. Similarly Justin Martyr has left a treatise, de Monarchia, to prove that God is the sole governor against paganism; 13 see also Athanasius, Lactatius, viii. 28. 14 But, as was only natural, the Apologists previous to the Council of Nicea were faced with the grave difficulty that, while combating polytheism, they had to manifest the divinity of Christ without impairing the Divine unity.

1 Phil. ix. 2. 2 Euseb. li. 1 (PG xvi. 941c). 3 See A. C. McNeill's 'Eusebius' (Xicene and Post-Nicene Fathers, First Series, note on HE vi. 7). 4 Phil. iv. 1. 5 Eusebius, Fragments (from A. Gallandus), in Ante-Nicene Fathers, i. [1883] p. 1, p. 51. 6 Zephyrinus was pope, a. d. 186-217; Callistus reigned only five years, 217-222; cf. H. V. xxviii. 3 and vi. xx. 1, with McClintock and Strong. 7 Phil. ix. 4. 8 Ib. ix. 5. 9 Ib. 10 H. V. xxvii. 11 Hl. Heracleon, in Ante-Nicene Fathers, ii. [1883] 259 ff. (PG vi. 311), but probably not the work referred to by Eusebius, H. V. xxvii. 11, Eusebius, in Ep. ad Titum (PG xiv. 1304): 'philosopho nono horrentes doctores statim.' 12 Athanasius, Ispahan (PG vi. 903; Ante-Nicene Fathers, ii. 575 E.). 13 It must be acknowledged that, in insisting upon the divinity of Christ, they often, though lacking in precision in their choice of terms, laid themselves open to the charge of ditheism. Thus Hippolytus says that Callistus reproached the opponents of the Noeticans with 'avidity of intestine, and that Eusebius felt himself compelled to point out that in opposing Sabellians many 'divide and cut to pieces and destroy that most sacred doctrine of the Church of God, the Divine monarchy, making it as it were three powers and partitive subjects of the Godhead.' 14 An example of this unintentional vagueness may be found in Justin, Dial. exx., and, what is even more remarkable, in those who most strenuously resisted the Noetics and their successors, the Sabellians. Thus the Church must insist on the divinity of Christ and argue the precision with which Christ Himself says 'I and the Father are one' ('ē, 'ōn') that, in the neuter, and consequently not in person, but in substance (or nature), yet others no explanation of how this can be. The retort was obvious: Then you hold that there are two Gods. 15 Even Tertullian, in spite of his lawyer-like precision of terms and his undoubted orthodoxy on this point—even in his montanist days—has some most muddled expressions which the post-Nicene writers would have avoided at all costs. 16 Yet these things are inevitable, and it is by such discussions, with occasional slip of tongue since, from exactitude on either side, that the Church can come to a full knowledge of the deposit of the faith. 17 A remarkable exception to this prevailing vagueness is furnished by Athanasius, who, in his Logia, says: 18 The Son of God is the Logos of the Father, in idea and in operation; for after the pattern of Him and by Him were all things made, the Father and the Son being one. And, the Son being in the Father and the Father in the Son, one and the same substance, and power of spirit, the understanding and reason (pνεῦμα καὶ λόγος) of the Father is the Son of God. But if, in your surmising, it occurs to you to inquire what is meant by the Son, I will state briefly that He is the first product of the Father, not as having been brought into existence for in the beginning, God, who is the eternal mind (νοῦς), had the Logos in Himself, being from eternity indistinct with Logos (Logos), but manifesting as He came forth to be the idea and energizing power of all material things. 19

Nor is it surprising that these so-called Monarchians should have found a strong following. God is One. For this monothelitism the prophets had fought and prevailed. But, if God is One, then, though there may be diversity of actions ad extra, 1 Phil. ix. 7. Much capital has been made out of Hippolytus's violent attacks on the orthodox, and, by some, as having been the seed of thesel and of the later ditheism. Perhaps the best commentary on Hippolytus's charges is furnished by the absolute silence of all other writers of the period.

2 Quoted by Athanasius, Epistle in Defence of the Nicene Definition, 26 (PG xxv. 462); J. H. Newman, Athanasius, Oxford Library of the Fathers, 143; i. 45; also Ante-Nicene Fathers, xviii. [1885], 'Tertullian, iii. 383-387, a fragment of an epistle or treatise of Dionysius, bishop of Rome, against the Sabellians; cf. also Dionysius of Alexandria, ad. Sublimem, given in de Elia, Prop. Evangel. viii. 9 (PG x. 1270; Mans, Concilia, i. col. 1011. 3 Novatian, de Trin. xi. xvii., xxv. 4 Thus in ad. Praec. i. (PL ii. 125) he speaks of the angels as being 'members of the Father's own substance,' and in iv. (PL i. 169) of the monarchia as 'committed' by the Father to the Son.

5 Cf. St. Augustine's remark apropos of the re-baptism controversy: 'Quonammodo mituus in illa specie, si non nobis invicta ad plebem concilii bidentantium illustrationem confirmationemque puncto percisset, nisi primum ductus per oris terrarum regiones multa hinc atque haec disputacionis aequi belli episcoporum perfrecta constaret? Hoc antec tantum sanctae docet, ut, cum dicimus omnes obscuri quoniam et, propter inveniendi difficultatem, diversam variis in fraterna dissociatione sententiae, donec ad verum liquet aperire, vobis, quod prior seminaris, in manibus nostris constituenter omnes, et propter voluit errores (de Baptismo c. Donatian. u. iv. (PL xiii. 129); the whole passage is worth reading in this connection).

MONARCHIANISM

there can be no such diversity of notion ad intra as shall imply distinction of Persons. But Christ is One, and He suffered upon the Cross. Therefore the Father suffered! 1 The conclusion seemed compelling; but the Noetians and Sabellians shrank from it and endeavoured to explain that this suffering of the Father was in some sense not really His. 2

The controversy is a rather striking instance to be noted of the advocates of orthodoxy against the orthodox themselves. It was in vain that the latter rejoined: Then, according to your argument, it is the Father who sits at His own right hand! For, while the Noetians and Sabellians insist upon the divinity of the Son and the distinction of Persons, yet there were certain texts which, while maintaining the former, seemed expressly to deny the latter. Thus Praxexis insisted on 'I and the Father are one' (John 10); this it was easy to explain in a monistic sense, as Tertullian does. 3 But it was not so easy to explain 'He that hath seen me hath seen the Father:' and I am in the Father, and the Father in me' (John 14). Tertullian treats this passage at considerable length, 4 and it can be truly said that his answer prejudices the retort: Then there are two Gods! 5

It is only when we turn to such an analysis of these passages as is furnished by Athanasius (c.g., or. 30, viii. 15; also Or. 64, lii. 14; Tertullian's treatment: Tertullian, de Præx., viii. 13, xii. 3, xiv. 14) that we realize the distinction between ante- and post-Nicene clearness of expression when handling the questions ventilated by the Noetians and their successors. St. Hilary of Poitiers (c A.D. 396) puts the dilemma clearly:

"If we speak of one God in the singular, excluding the word "Second Person," we thereby approve that mad heresy which says that the Father Himself suffered. If, on the other hand, we admit of number combined with division, then we join hands with the truth, and hold that the God from God, and who says that He fashioned a new substance out of nothing. We must, then, hold to the rule which confesses that the Father is in the Son and the Son in the Father; and in the rule which preserves the oneness of substance acknowledges an economy (the Divinity) in the Person."

Both sides, then, claimed to be the sole upholders of a true conception of the Divine monarchy:

"Marcellus and Phoebadius," says Athanasius, "negative Christ's existence before ages, and His Godhead and undying Kingdom upon the distinction of the divine monarchy."

Tertullian states the case in his usual pithy manner:

"We, say they, maintain the monarchy. . . . Yes, but while the world was in darkness they pronounced monothelites, the Greeks refuse to understand economy. . . . for, extolling the monarchy of the One God, they contend for the identity of Father, Son, and Spirit."

And then he puts his finger on the real difficulty that the Noetians had to face:

"Praxexis put to flight the Pamphlete, and he crucified the Father! 5"

Hence the opprobrious nickname for the so-called Monarchians—Patrasians, 6 i.e. those who made 7

Tert., ad Prax., xxxix. (PL ii. 190).

Philo, ix. 5; c. x. 29.

Adv. Prax. xxiii. (PL i. 185).

Athanasius, De Synodo, 26 (PL viii. 781); Newman, Athanasius, i. 114.

Adv. Prax., iii. (PL i. 185), and (ib. 190). Tertullian's use of the term "monothelites" is unique. In the ST it generally refers to the ministry of the Word of God (c.g., i. 1 Co. 970), also to the divine council of the Incarnation of the Individual (ib. 190). And thus it is used by the Greek Fathers of the mystery of the Incarnation (cf. J. C. Snell, Theo. eccl. Amsterdam, 1728, e.c.). But it is essential to the monothelites' view of the relationship of the Three Persons of the Trinity, a measure of which Tertullian takes no notice.

ib. i. (PL i. 100).

Theodore, who himself very little is known. However, St. Athanasius's most prominent, though, if we are to argue from his silence, we could equally well argue from Tertullian's views. He was the leader of the movement, and Noetian, Clemens, and Sabellius. For some of the views of the Sabellian are those which have been held regarding the identity of the deity see Dei, in Praxexis.

Praxexis, Tert., xxxv. 8 (in Joan.); cf. xxxvi. 6, lxv. 2; xlv. 2 (PL iv. 1667, 1672, 1690, 1730); and Origen, Comp. en Ep. de Titum (PL iv. 1504).

the Father suffer in the person of the Son. Mlothasius (c. 312), commenting on Rev 12:8, likes those who gave effect with regard to one of the Three Persons in the Trinity to the third part of the stars that fell:

"As when they say, like Sabellian, that the Almighty Person of the Father Himself suffered! It is of interest to note how these heresies shaded off into another. Thus Sabellians apparently denied that he was a Patrjjassian; but, in order to do so, he seems to have held that our Lord came into being only on His human birth. The Arius, on the contrary, said 'the Son, being aged in His decree, so it would seem, with the Patrjjassians. Again we note that, whereas Sabellians claimed to rank as a Monarchian, yet the Arius bishops, writing to Alexander, say:

"We do not do as did Sabellians who, dividing the One, speaks of a Son-Father. 9 Thus their ground of complaint against Sabellius was precisely that on which he planned himself on not doing, viz. separating the Divine monarchy. Similarly Athanasius says:

"Sabellians suppose the Son to have no real subsistence, and the Holy Spirit to be non-existent; he charged his opponents with dividing the Godhead. 4 And once more: 'Sabellius, dreading the division invented by Arius, fell into the error which destroys the Personal distinctions."

It must, however, be remembered that no one can at this date say what precisely were Sabellians' opinions, partly because of the inevitable fluctuations through which he passed, partly, and chiefly, because history is apt to confuse him with his disciples, as in the passage last quoted from Athanasius. 8

How grievous were the ravages were worked by these Monarchian views can be seen by the frequent condemnations of these in the shape of Sabellianism. Thus Pope Innocent I, writing to the council held at Rome in 389 (or 393) 326:

"We anathematize those also who follow the error of Sabellius by saying that the Father is the same as the Son."

Similarly, in the ecumenical Council of Constantinople (A.D. 381) the first canon is directed against various shades of Arianism, and finally against the Sabellians, Marcellians, Phoebadius, and Apollinarians. 8 By the time of the provincial Council of Braga (361) we see these Monarchian principles have verged into Priscillianism and are tainted with Manichaeism. 9 The same comprehensive condemnation was repeated in the Lateran Council of 649 (can. xvii.). 10 Lastly, Eugenius IV. found it necessary to condemn the same article of the canons: 4th Feb. 1414, that the Church condemns Sabellius for confusing the Persons and for thus altogether doing away with the real distinction between them. 11

The subsequent ramifications of the Monarchian tenets do not concern us here. Suffice it to say that they spread very widely, though in forms which varied considerably from those originally set forth. Thus Eusebius mentions that Beryllus, bishop of Bostra, "deserted the orthodox standard," 12 i.e. the Rule of Faith, and asserted that Christ did not pre-exist in a distinct form of His own, neither did He possess a divinity of His own, but only that of the Father dwelling in Him. 13 This is clearly a derived form of Monarchianism. The most prominent, perhaps, among the later

Monarchians were the Priscillianists. They are of interest by reason of the strange influence which they had on the Latin text of the Gospels—e.g., indirectly on 1 Jn 5.7. To them are due the Monarchian Prologues which have attracted so much attention in later years.

It cannot be denied that the leading Monarchianism is the so-called Adoptianist heresy. But, while it is true that the Adoptianists may be regarded as the legitimate outcome of the Monarchians, yet they approach the question from an entirely different standpoint. Adoptianism is a Christological heresy, whereas Monarchianism, at least to its original form as a Patripassianism, concerns the Father rather than the Son. To embrace the two heresies under one heading is to obscure the issue. See art. ADOPTIANISM.

HUGO POPE.

MONASTICISM.—I. ETYMOLOGY; DEFINITION.—The word 'monasticism' is derived from the Gr. word μοναχός, 'alone,' 'solitary,' from which a whole family of words has been formed: μοναχός and μοναχόςω, 'monasticity'; μοναχία, 'monk' or 'sorority'; μοναχοτάτη, 'the solitary life'; μοναχότος, 'solitary'; μοναχότηρα, 'solitary cell'; μοναχοπαθής, 'ascetic;' μοναχόσωμος, 'monastic;'; μοναχώσμος, 'monasticism'; μοναχισμός, 'monastically'; μοναχιστής, 'monastic.'

In Latin this word has given monachus and its derivatives, monacha, monachetatus, monachar, monachizare, monachismus, monachato, monastitarum, and a few other words.1

1 Interpreting vocabulum monachus, hoc est noenam tonum: quid facies in turbis qui solus est? (Jerome, Ep. xiv. (PL, xvii. 596).) 'Sic est animo cupae, quod diversa, monachos, it est solus, quid facies in urbibus, quae uteque sunt solitaria habitacula sed multorum?' (Ep. lix. (PL, xvi. 533)).

All these words, derived as they are from the same root, indicate the idea of solitude, of isolation. This solitude must not, however, be interpreted as implying absolute isolation—such as that of the hermit in the desert. As we shall see, the term 'monk' has come to be applied to men living the same kind of life, but in a world in which they are indeed separated from the world, but not from one another.

In common usage the word 'monasticism' is often incorrectly extended to embrace the idea of the religious state in general, comprising even those religious orders which cannot be regarded as belonging to this category—such, e.g., as the Dominicans and Franciscans, the Jesuits and other clerical regulars. Strictly speaking, the term should be confined to those religious life led by those who, having separated themselves entirely from the world, live in solitude—as, in fact, the etymology of the words 'monk,' 'monastery,' etc., clearly indicates. We shall see below (§ 111) in what the second character of the monk properly so called consists, the special conditions of the monastic life, and its various types. The monks, in fact, form a class apart among those known as the 'religious orders;' they must be distinguished from those that are commonly termed the ' mendicant orders' or 'friars'—e.g., Dominicans, Franciscans, or Carmelites—from the clerks regular, such as the Jesuits, and from other forms of the religious life and religious congregations, e.g., the Redemptorists, Oratorians, Sulpicians, etc. (See art. RELIGIOUS ORDERS.)

At the present day monks are represented in the Catholic Church by the Basilians and other monks of the Byzantine, Cistercian, Camaldolese, Olivetan, Carthusian, and other religious families of less importance. They must be distinguished from the ascetics who existed in the early ages of the Church, and who were simply Christians living an ascetic life; they must, however, after the monastic life properly so called had been instituted, many of these ascetics of both sexes entered the monasteries; hence we find the name 'ascetic' applied sometimes to the monks also (see art. ASCETICISM). The canons regular and the military orders should also be distinguished from the monks, although there were many points of contact between them. We are not, however, concerned with these religious orders as well, and we shall see in what relation these stand to Christian monasticism.

I. Worship of Sarapis.—In recent years it has become the fashion to see in the νομαχοσ—sorcerers who lived in the temples of Sarapis and its dependences—the authentic ancestors of the Christian monks. Weingarten, to whom this theory owes its origin, has even maintained that St. Pachomius, the founder of Christian monasticism, not only drew a large part of his Rule from the usages of these νομαχοσ, but that he himself was a νομαχοσ of Sarapis, before his conversion to Christianity, at the Sarapenum of Chenoboscin. This theory, however, rests on a series of anachronistic hypotheses. Pachomius was never a νομαχοσ. All that can be gathered from the most ancient life of this saint is that he withdrew to an abandoned temple of Sarapis, and that, while there, he had a vision of God—theatific divinity, but of the God of the Christians. Moreover, the analogies that have been drawn between these hieronomoi and the cenobites of Christianity are only apparent.

II. Neo-Platonism.—The Alexandrian school of philosophy in the 2nd and 3rd centuries taught a kind of mysticism, more philosophical than religious, in which moral ideas and ascetic practices occupied an important place. The attempt has been made to find in this mystic philosophy the source of Christian asceticism. The latter, however, was in existence before this date, and under a very different form. Moreover, it seems difficult to avoid the conclusion that the Alexandrian philo-

sophy, far from influencing Christianity, was itself deeply imbued with Christian ideas (cf. ASCETISM, vol. ii. p. 373)."

2. Orphic communities.—It will be enough to mention the theory of Alexandre Bertrand, who saw in the druids the ancestors of the Christian cnemobites. This theory, which regards the monks not only as the initiates, but as even the legitimate descendants of the communities and brotherhoods of the old Celtic religion, has no solid foundation, and has been unanimously rejected by specialists: hence we need not discuss it in detail. 3

4. Orphic communities.—Orphism, which had so much in common with Pythagoreanism and Platonism, had some of the characteristics of asceticism, some of which resemble those of Christianity. It imposed on the 'pure' and the 'saint' a rigorous system of penances and privations, among which were the practice of vegetarianism and numerous purifications. Although our information regarding these thiasoi, or Orphic societies, is not very extensive, we know that they were not only spread throughout Greece, but were also found in Italy, Africa, Gaul, and the whole of the Western world. Lactantius alludes to these confraternities (de Die. Inst. i. 22 [PL vi. 2214]). There were rites of initiation, mysteries, prayers, hymns, and unbloody sacrifices, which were carried out in the night. But the doctrines and mysteries of Orphism have a very special character of their own and very little in common with those of the Christian religion. 3

5. Buddhist asceticism.—Both Buddhism and Hinduism possess a form of the monastic life: the monastic capital of Tibet (q. v.) is Lhasa, and of the 30,000 inhabitants of this city 10,000 are monks, who are divided among 2,000 monasteries. In the provinces of China there are also monasteries of this kind, which cannot be reckoned. They have the head shaved, and spend their time reciting prayers and performing ceremonies before the statue of Buddha. Many of them condemn themselves to a life of absolute silence, others to complete inactivity. The clergy offer another variety of the life of mortification and renunciation. A. Hildengard and other writers have tried to establish the influence of these institutions on Christian monasticism. But it is easy to show, with the advance of scholarship, that it is the contrary that is true, and that certain practices of Buddhist monasticism owe their inspiration to Christian influence. 4

6. Monasticism among Jews and Muhammadans. (a) Essenes.—The Essenes (q. v.) may be regarded as one of the most striking examples of the monastic life outside of Christianity. Whether they be looked on as a sect, as a tribe, or as a religious community, the Essenes (150 B.C.) offer all the principal characteristics of the monastic life—community of goods, practice of poverty and mortification, prayer, and work, meals and religious exercises in common, silence, celibacy, etc. Although there is no direct relationship between them, it is nevertheless true that both Essenean and Christian asceticism derived much of their practice from the same source, viz. the Jewish religion.

(b) Therapeutae.—The Therapeutae (q. v.), whose very existence has been disputed, are described by Philo (de Vita Contemplativa) as cenobites, leading a life almost identical with that of the Christian cenobites. This description bears so striking a resemblance to the life led by Christian monks that more than one writer has been led to deny its authenticity as a work of Philo and to uphold the opinion that it is a Christian compilation undertaken with the view of providing a venerable ancestry for the Christian cenobites. Renunciation of the world is in their monasteries, vigils, chants carried out by alternate choirs, the practice of fasting and other mortifications—such are the chief characteristics of the life of the Therapeutae. Nevertheless, they do not seem to have exercised any direct influence on Christian monasticism. 5

(c) Nazirites.—The Nazirites (q. v.) were men who lived an austere life, abstained from wine and all fermented liquors, never cut their hair, avoided touching impure things, and were scrupulously careful to consecrate their lives to God. They had certain practices in common with the monks, although their ideal was not the same. Regarding such resemblances we may point out that, in the case of the Essenes, since Christianity itself had its ancestor in Judaism, it is not astonishing that there should be certain resemblances between their respective institutions on many points. 6

(d) Rabbinites.—Some (cf. T. K. Cheyne, EBD iv. 1908, 4019) hold 'a sort of religious order, analogous to the Nazarite' (q. v.) and St. Jerome himself saw in them the precursors of the monks (Ep. 144, ad Publim., 5 [PL xxvi. 589]). But such analogies should not be pressed too far. The Rabbinites were distinguished by certain special observances, such as abstention from wine, the prohibition against building houses, and the obligation to live in tents, but it is difficult to see in them anything more than a tribe of Essenes such as still exist in these days and observe the customs of their ancestors with such zeal. 7

(e) Muhammadans.—Muhammadanism has given birth to several 'religious orders,' the chief of which are the Qadiri, the Manavi, the Baqtiari, the Rifa'i, etc. The monks are called Derivishes ('poor'); they live together, 20, 30, or 40 at a time, and are taught amongst other things to be neither ascetic nor regular. 8

2. On the Therapeutae and the question of the authenticity of the famous treatise of Philo, cf. Leclercq, in PACL 8 (1863). Since the works of H. Sausselein and F. C. Converse are on the subject, the authenticity of the treatise would seem to be solidly established.

in a monastery under a head (shohkh). The Der-
vishes wear a long robe of coarse stuff. Recep-
tion into their order is preceded by a time of proto-
lact, which lasts sometimes 100 days. As regards their
religious practices, these Muhammadan monks
have prayers, sacred dances, and sometimes pen-
ances, such as the privation of sleep, immobility
(especially after the prayers on the christening of
the Qur'an). Even during the lifetime of Muham-
mad, however, the Sufis gave themselves up to
certain practices of monasticism and lived together
in community (see art. SUFF). Abu Bakr and
Ali, companions of the Prophet, formed, with his
approval, communities of the same kind. Other
orders were founded on the same model in Egypt,
Arabia, Persia, and Turkey. There were no fewer
than 27 monasteries in the island of Crete alone.
One of the most celebrated of Muhammadan
monasteries, that of Konia in Asia Minor, possessed
500 monks.1

III. CHRISTIAN MONASTICISM.—Is Christian
monasticism derived from an order of the
Apostles, or is it an original institution? This is
a question that has often been discussed. On ac-
count of certain undeniable resemblances between
Christian monasticism and the various forms just
described, some writers have been ready to regard
these as the child of the other. But in this
case, as in that of the history of all institutions,
however striking such resemblances may appear
at first sight, they are not sufficient of themselves
to establish a relation of the one to the other. They
are accepted by all serious students of history.
To prove relationship between the institutions
of Christianity and those of other religions, it is
necessary to produce facts clearly demonstrating
the historical precedence of one over the other.
This, however, still remains to be done. We shall
therefore regard Christian monasticism as a plant
that has grown up on Christian soil, nourished
exclusively on the principles of Christianity. This
seems to be the only theory that can safely be main-
tained.2

1. PRINCIPAL CHARACTERISTICS.—Christian
monasticism possesses certain characteristics all
of which are not equally essential, but which, never-
theless, when taken together, are necessary to
constitute a monk.

2. Poverty, chastity, humility, and obedience.—
The first monks, after the example of the Christian
ascetics, practised poverty, chastity, and humility—
virtues which, along with obedience, soon came
to be regarded as essential to the monastic life.
In order to carry out the evangelical counsels and
to imitate the life led by Christ Himself and, after
Him, by the apostles and first disciples, it was
necessary to give oneself up to these virtues:

- Beati pauperes spiritu! (Mt 5:7): ‘for perfect us, you, vende quae habes, et da pauperibus’ (Mt 19:2); ‘non potestis Deum servire, et attemperatis ad mundanum usum, nee solliciti sint animae vestrae quid manducetis, neque corpori vestro quid infundantis,’ etc. (Mt 16:24).
- ‘Saum cumqui qui sciscam, castravertam poplerum coenobium, qui poterit capit, capit’ (Mt 16:19). Cfr. St. Paul (Co 75, 235). ‘Si quis vult post me venire, abneget secatem-
ism, et tollat crucem sua, et secatan rem’ (Co 16:14, 19).8

3. The first monks, like the ascetics before them,
took these words of the gospel literally and aban-
doned all that they had in order to live in poverty
and by the labour of their hands. They practised
chastity under the form of complete celibacy and
perfect continence. The practice of obedience
consisted in following in the footsteps of Jesus
Christ, recognizing Him as their Master, and in
submission to those who represent Him here below.
In the case of existing, and so-called ‘authentic’
monastics, the result of their very life itself.

4. Poverty, however, was not the only virtue
accepted by the early monks; and, as soon
as monastic customs began to be drawn up and
codified, we find severe laws laid down to ensure
their practice.

2. Mortification (fasting, etc.)—Along with
these virtues which either exist in reality flow
from them or complete them, and which were
always practised by the monks and prescribed
by the different Rules. Mortification is essential
to the practice of asceticism; it takes the form of
the renunciation of pleasures of sense (chastity,
celibacy, fasting, etc.); work, silence, prayer even,
may all be considered forms of mortification. As
in all schools of asceticism (Neo-Platonic, Buddhist,
etc.), fasting is considered one of the essential
practices of all, to make the monks, as one of the
most efficacious of all the offications of mortification.
The history of the early solitaries tells of intrepid
faster who passed two, three, and even five days
without touching food. The custom of taking
food only once during the week from Monday to
Saturday which was observed by those known as
‘Hebdomadarii’ was common.9 There is, in fact,
no monastic Rule in which restraint in matters
of food and drink is not arranged for.

It is chiefly in the monasteries of the East
(Syria, Palestine, Asia Minor) that one comes
across extraordinary forms of mortification; though
these must be regarded as such, and cannot be passed over in silence. There were,
first of all, the Stylistes and the Dendraite, who
condemned themselves to perpetual immobility,
the former on their columns, the latter on the
branch of a tree. Then there were the sequestered,
or ‘Browsers,’ mentioned by Sozomen. These
were solitary of Mesopotamia, and were so called
because they lived on grass like cattle. Others,
again, chained themselves to a rock, or bound on
their shoulders a species of camel, or yoke.
Sozomen also speaks of a Syrian monk who ab-
stained from eating bread during eighty years.2
All these are exceptional cases, and are even
regarded by some as mere errors or vices incorpo-
ration in the practices of the frigas of India. It
should be noted carefully that the monastic Rules not only
never prescribe such feats of strength, but even
condemn them.4

1827.
9. It should be remarked that this is the conclusion now
reached by writers of very different opinions, such as Jérôme, L’Ordre
monastique, Lecerco, loc. cit., Guizmarcher, loc. cit., and
Worms, The Evolution of the Monastic Ideal, p. 80. An
exception must be made, as we have already pointed out, for
certain Jewish institutions, since between Jews and Christians
many principles and religious ideas are held in common.
MONASTICISM

3. Work.—Certain fanatics, such as the Mes- sianists or Eleuchites (q.v.), maintained that the life of a monk should be entirely given up to prayer and to that condition of life which they called the monastic state. This tendency was early re-

proved by the Church: all monastic founders or legislators realized the danger of such exaggerations; and one and all signalized the vice of idleness as the one most to be dreaded in the monastic life. St. Augustine, in his treatise de Labore Mon-

achorum, condemns this error, and shows the real necessity of work for those who follow the monastic vocation. Already in the East, during the 4th century, it was an established principle that the monk should live by the labour of his hands. The work of the monk was of two kinds: (a) manual, and

(b) intellectual.

(a) Manual.—The manual labour of the early monks consisted chiefly in the weaving of mats or the cultivation of the soil. These occupations had as their principal motive not so much interest or gain as mortification in addition to all the mortifications already forming part of their existence, and especially the avoidance of idleness. The precedent of their work were usually handed over by the monks of the poor or to the prisoners, or else they served to sustain the community itself (Cassian, de Conventualibus institutis, x. 22 [PL. xliii. 388 f.]). In the case of the monks of the monastery, the work was carried out in such an orderly and methodical a manner that it resulted in the clearing of a large part of the waste-land of Europe.1

The various arts and crafts had also their place in monastic activity, but in the West rather than in the East. A monastery came, in course of time, to form a little city in itself. Founded, as most monasteries were, far from the towns and centres of worldly activity, they were obliged to provide for themselves, and, besides cultivating the soil, the monks had to give themselves to the exercise of the various trades necessary for their wants—e.g., baking, carpentry, weaving, etc. In addition to the arts of drawing and miniature painting, architecture, sculpture, and the fine arts were cultivated with great success.

(b) Intellectual.—The intellectual work of the monks consisted chiefly in the lectio divina, i.e., the reading and study of the sacred Scripture and of the writings of the Church Fathers. In the West the monastic curriculum underwent a great development. More and more time was given to intellectual work. The copying of ancient MSS in the scriptorium of the monastery became one of the principal occupations of the monks. This was due to the fact that we owe the preservation of the greater part of the works of classical antiquity. The arts of calligraphy, drawing, painting, and the illumination of MSS soon followed as a natural consequence, and some monasteries had attached to them studies, from which came works of art of which we are now among the most precious possessions of the libraries of Europe.2

(c) External work; the secular ministry.—The monks, especially in the East, retired from the world into solitude, there to lead lives of prayer and labour apart from all intercourse with it. They took part in the external ministry of the Church only on rare occasions and by force of special circumstances. A number of monasteries, however, received 'oblates,' i.e. children conse-

2 Cf. art. 'Bibliographie,' in DBCL.

created from an early age by their parents to the monastic state. These it was necessary to instruct; hence schools were established in the monasteries, some of which were probably taught and attended by secular students as well.3

In the West the monks were led in time to take up in certain countries—e.g., England and Germany—the work of evangelizing the people. They thus became missionaries, and had, in fact, a large part in bringing about the conversion of Europe.

4. Prayer.—But it was always clearly understood that neither work nor any other occupation should absorb the whole of the monk’s activity. A considerable part of his time was always devoted to prayer. In substance this prayer consisted in meditation on, or recitation of, the Psalter, which was distributed according to the days of the week or the hours of each day. It was organized more methodically when regular monasteries began to be established: greater numbers; and from it has evolved the divine office as we now have it, with its different 'hours' for the night and the day—Matins, Lauds, Prime, Tierce, Sext, None, Vespers, and Compline.4

5. Silence.—Silence, recommended by philo-

sophers as a necessary condition for meditation or intellectual research, was one of the practices most rigorously enforced in the monastic life. In the case of the hermit this monastic silence was practically absolute, and rare was the occasion on which they could indulge in conversation. They did, however, occasionally visit one another, and sometimes returned to their monas-

teries for a certain length of time.

The monks’ silent contemplation was naturally of more frequent occurrence, but severe regulations were established on this point in the greater number of monasteries.

6. Solitude.—Solitude, as in the case of silence, was interpreted a narrow or less wide sense. For the anchorites, hermits, and Styliites, living in their caves, in their tombs, or on their pillars, solitude was absolute and complete. For the cenobi-

tes it consisted rather in their separation from the world, in the practice of silence, and in certain restraints. It is this need of solitude that may be said to have given to monastic architecture its principal characteristics and the disposition of its various parts. The monastery was enclosed by walls; one gate was part of the monastic cur-

riculum; and communication with the outside world was subject to strict control, and, to render the necessity less frequent, the monastery, like a little city, was to be self-contained. There were excised all the different trades and crafts demanded by the needs of the community.

7. Stability.—Stability, i.e. the engagement undertaken by a monk to remain all his life in the same monastery, was only an accidental condition of the monastic state, and was not established everywhere. In certain regions a monk could, without any breach of his vows, pass from one monastery to another. The abuse of this custom, as seen in the wandering monks, or 'Gyrovagi' (see below, iii. 6), and other considerations as well, led to the establishment of stability as a law of the monastic state, which little by little became general. St. Cassarius of Arles imposes it in his Rule, and also St. Benedict.5

3 A. Malroy, Saint Cassien, évêque d’Arles, Paris, 1891, pp. 10-12; Regina Sancti Benedicti, cap. viii.

For the temporal W., central at 'Opot 141). The hermits and anchorites lived separate and alone in the desert; hence they were their own masters. It often happened, however, that the hermit, sensible of the dangers resulting from this independence, would submit himself to the direction of his superiors or of the bishop or father. Sometimes colonies of hermits were formed under the direction of a head, to whom the others rendered obedience. Again, we find hermits living near a monastery of cenobites, to which the hermit owed obedience, but who adapted himself to his spiritual father. Sometimes colonies of hermits were formed generally on Saturday and Sunday and on feast-days. With regard to the monastic hierarchy and the organization of authority among the cenobites, great variation is to be observed in primitive ages. Generally, there was a third as well (prior and subprior).

The monasteries thus constituted usually enjoyed complete autonomy. There was nothing resembling the modern order or congregation, in which the different religious houses are united under a superior-in-chief or 'general,' and depend upon one house, which is the mother-house of the whole congregation. In the West it was not till the time of St. Benedict that the idea of grouping monasteries under a central authority was actually realized. For example, St. Basil in his Rule, which was the law everywhere in the East, contented himself with giving a few general principles as to the choice of the superior and the exercise of authority. In certain monastic colonies, too, the organization was very rudimentary in character. St. Anthony and St. Hilairion, e.g., were the spiritual and temporal heads of the communities founded them, and unity a rule, very generally maintained by visiting the various houses subject to them (Vita S. Hilairionis, ch. iii.).

Nevertheless, even in the early age of monasticism, we have instances of the attempt to group certain communities together under a central authority. Pachomius, e.g., formed his monasteries into a real 'congregation.' He visited each house in turn; he assembled the superiors together four times a year in what closely resembled the general chapters of later days. In these assem-
MONASTICISM

St. Columban, his Penitentiary, and that of St. Columba, are the only ones the authentic character of which is really established. At an early date collections were made of all these monastic rules for monks. The only rule on this point seems to have been that the monk in his character of ascetic should, like certain ancient philosophers, show in his costume the outward sign of the practice of a life of mortification. The habit of St. Benedict was no special costume for monks. The monastic life may be divided into various classes.

1. Hermits.—The hermits (ermittes, from ἐρμίτης, 'desert') lived in solitude in the desert; St. John the Baptist, and later St. Paul the Hermit and St. Anthony, were the first of these.

2. Anachorites or anchorites (ἀνακόρητος, from ἀνακόρησις, 'retreat').—This title is synonymous with the first, and indicates those monks who were most puritanical, and who practised the strictest discipline of life and mortification of the flesh. The anchorite was the most ancient form of the monastic life; it spread, first of all, in Egypt, then in Palestine and Syria, through the whole of the Eastern world, and, finally, in the West. In course of time the Camaldolese, Carthusians, Norbertines of St. Augustine, and certain other institutions of like character arose. These may be grouped under the class of anchorites or hermits, since they have preserved, along with the cenobitic element in their life, many of the characteristics of the eremitical state.

3. Recluses and Styliites. — With the hermits and anchorites must be classed the recluse and Styliites, who, on account of their relatively small number, may be regarded as exceptional cases. The former lived enclosed in cells, sometimes completely walled up and communicating with the exterior only by means of a small window. The latter, who are found almost exclusively in the East, lived on a pillar, more or less elevated from the ground.

4. Dendrites. — The Dendrites (from δέντρον, 'tree') lived in trees.

5. Cenobites (from κοινὸς, 'one who lives in common with others').—This was the general term for all monks living together in community. During the primitive period the comparative advantages and excellency of the solitary and cenobitic forms of monastic life formed the subject of frequent discussions. St. Basil stoutly maintains his preference for the cenobitic life over the eremitical, and his preference is shared by St. Benedict. It is undeniable that in early days the eremitical life had the greater number of adherents; but in course of time it declined, even in the East, while in the West, it cannot be said ever to have existed except as an exceptional state of things. After the 16th cent. it almost completely died out.

6. Sarabaite and Gyrovagi, or Circumlocitions.—Among the other monastic types, ancient authors draw attention to the Sarabaite and the Gyrovagi, who were regarded as an evil kind of monk. The first, mentioned by St. Jerome under their Syriac name of 'Remoloth' (Ep. xxii. 34 (PL xxxii. 419)), lived together in twos and threes in a monastery, in order to live a life without

"pedules et collapse," which seem to have been a kind of stocking, or sock, and sandals. Archaeologists have disputed at length as to the exact meaning of these terms and also regarding the number of the monastic rule.

The most celebrated of all collections is that made by St. Benedict of Aniane (521), entitled Concordia Ecclesiastica Regulorum Monasticarum, which is often printed with other prelates. It is edited by F. Bernèche, in迅速的 Illustratio, xxivii. (1901) 757 f. For other attempts of this kind see J. Thellius, Abend Lire, xiii. 85 (1889); and W. Knoblocher, in D.L.C.L. iv. 418. For recent dates see: Holtz, Codex Regularum Monasticorum et Canonistarum, ii. (1920). For a general survey, see: H. Faber, "Habitus clero-regularis, etc. suas uxorii, simpliciorum et obru, credits historici illustratae," Augsburg, 1754 (PL ciij. 390-760).

2 Cf. Holthausen, i. 43.

4 Cf. Synod of Vannes, 445; canon 7; Synod of Aggle, 506, canon 8; ii. 4; see, Vézelay, 1753-59, vii. 404, viii. 831.
either rule or law, following no other rule than that of their own will or caprice. The Gwyragas of Circene (Egadonnis, lagaedonnis) went from monast-
ery to monastery, demanding a lodging for a few days, and scandalizing all true Christians by their excesses.1

7. Catenati.—As the name indicates, these monks loaded themselves with chains. They took no care of the chains, allowed their hair and beards to grow neglected and untrimmed, went bare-toed, and wore a black cloak (Leclercq, in DACL ii. 3218).

2. Apoapses (from ἀποσαέτης, to 'renounce'; cf. Lk 15)—These formed a class intermediately between the earlier ascetics and the monks properly so called. They were found in Jerusalem, in the East, and in Asia Minor. Some of them followed the example of the Gwyragas, and spent their time wandering about, and some fell into the heresy of the Encratites.2

IV. HISTORY OF MONASTICISM.—I. ORIGIN OF THE MONASTIC LIFE; THE ASCETICS. The ascetics of early Christianity may be regarded as the ancestors of the monks. The greater number of the characteristics of which we have already spoken as belonging to the essence of the monastic life are found among the ascetics—poverty, renunciation of the world, fasting, silence, prayer, etc. The ascetics were, in fact, simply monks living in the world.

Asceticism and cenobitism are inseparable. Asceticism is an individual phenomenon, cenobitism a social institution.3 It was but natural that, as Christians gradually became more worldly, the ascetics should retire from their midst and betake themselves to the desert; and here we have the origin of true monasticism—the first monks were ascetics living retired from the world in the desert.

This is not the place to enter upon a detailed history of these Christian ascetics (sec art. ASCETICISM). But it may be remarked, in passing, that Christian asceticism, while recognizing among some of the prophets and just men of the Old Law (such as Isaiah, Jeremiah, and John the Baptist) its ancestors or forerunners, claims, above all, as its source and foundation the doctrine of Jesus Christ, as brought to light by the union of all its consorts. Not to mention texts occurring in the writings of the Apostolic Fathers—in those, e.g., of Tertullian, Origen, and Clement of Alexandria, whose 'true Gnosticism' offers many characteristics of asceticism (a latter document that will give assistance in arriving at a knowledge of this movement precursor of monasticism, especially the Eustathes of pseudo-Clement. 'To Virginis' and the work of pseudo-Cyprian, de Singulare Uxoriorum).4

II. MONASTICISM IN THE EAST.—I. SOURCES. The question of the authenticity and truthfulness of the documents on which the history of the early years of Eastern monasticism is founded has given rise, in recent years, to lengthy and impassioned disputes.

1 For these different kinds of monks cf. Cassian, Collationes, xvii. ib. i. (PL lxxix, 1601), and Institutiones, iv. 30, with the art. A. Goyau (L. S. Encycl.) Regula Magistri, 1.; St. Jerome, Ep. xxiii. 2; Enostochios (PL xliv, 1941); St. Augustine, de Operne Monach. 29 (PL xxxi, 2321).

2 Cf. art. 'Apopatikes, Apotaxamines,' in DACL ii. 1904; Cullm., Etudes sur la Pecrrixoria Silica, p. 130 ff.

Lover Egypt, and was the father of monasticism in Nitria. His disciples lived in huts and met together in the monastic church on Saturdays and Sundays. There were 8 priests in the colony to carry out the liturgical functions for the community. According to the Liturgical History, there were 800 monks in the district of Nitria. These figures were carefully excluded, each monk being obliged to provide for himself by his own labour. In the evening psalms and hymns were chanted. The discipline of the life was very strict. Ammonius died before 336. His disciples continued his traditions in Nitria. The theological works of Origen were studied there, and the 'tall brothers,' Ammonius, Dioscorus, Eusachus, and Euthymius, who made such a disturbance in the religious world later on, belonged to this monastic family.  

About six miles to the south of the mountain of Nitria was the Desert of Scete, where another colony of hermits was established. The brethren observed perpetual silence; as at Nitria, they assembled in church for the offices only on Saturdays and Sundays. Their cells were either mere caverns in the rocks or else wattled cabins. Macarius the Greater (383 or 387) was the first of these hermits. He has left behind him among the Apophthegmata a series of remarkable maxims.  

B. He was through the influence of Apophthegmata a series of remarkable maxims. The Desert of Scete still preserves the ruins of these ancient monasteries, one of which, known as the monastery of St. Macarius, is inhabited by a few Coptic monks.  

Besides Nitria and Scete, the whole of Egypt was strewn with monasteries—the Thebaid, Lyco-polis, Kopres, Oxyrhynchu (where there were to be found, it is said, 10,000 monks and 20,000 nuns), and Arsinoe, where there were also 10,000 monks (Hist. Lau. 5. 18).  

In Upper Egypt the name of Pachomius attracted special attention. He was instructed in the monastic life by a venerable hermit named Paumen and, established himself at Tabenna (Tabennisi)—a name that was to remain famous in monastic history.  

The Desert of Scete still preserves the ruins of the ancient monasteries, one of which, known as the monastery of St. Macarius, is inhabited by a few Coptic monks.

The Desert of Scete still preserves the ruins of the ancient monasteries, one of which, known as the monastery of St. Macarius, is inhabited by a few Coptic monks.  

While speaking of Pachomius, we must not omit to mention one of his disciples named Schenodi of Atrire, whose history has been revealed recently through Coptic MSS, and who, although he did not outlive the period of the Desert of Scete, played an important part in the history of the monastic life. The profession of obedience which he imposed on his monks is the oldest document of this kind that we possess, and it marks a stage in the history of monastic rules. Schenodi made the attempt to combine the eremitic with the cenobitic life, and he succeeded to a certain extent.  

(b) Sinai. From Egypt the monastic life spread as far as the Sinaitic peninsula, on which there were later several flourishing monasteries. St. Nilus the Sinaitic (+ 430) and St. John Chrysostom were its shining lights, and may be regarded as the great doctors of the ascetic life. The Apocalypse of Peter, dating from the third century, contains long disquisition regarding the monasteries of Sinai (see below, 3. i. (d)).  

(c) Palestine. The monastic foundations of Palestine were less illustrious. It will suffice to quote the names of Hilary of Gaza, a disciple of St. Anthony of Egypt, and especially those of Melania the Elder at the Mount of Olives, Paula, and St. Jerome. This region of monasticism made considerable headway. The number of monasteries and lauras rose to 100, and many of these religious houses in the quarrels between Origenism, Entychianism, Monotheletism, and Iconoclasm was very important. It would be impossible to give here even a resume of this history; we must content ourselves with calling attention to a few points below, and also to the attempt at a classification of some of the Palestinian monasteries in Leclercq, Dict. ill. 3165-3175. It was only with the Arab invasion of Palestine that the progress of these monasteries was cut off for the time being.

(d) Syria. Syria became at an early period a land of monasteries. It has even been questioned whether the monastic life there was not indigenous, i.e., whether it did not, as in Egypt, spring directly from the native practice of asceticism. It seems, however, to be regarded as an early phase of monasticism—or whether, on the other hand, it was an importation from without. The latter opinion seems to be the more likely. The Syrian life of Mark-Arios has, however, become a generally recognized standard, and, especially under the Syrian patriarch John of Jerusalem, it rose to the highest pitch of asceticism.

At Edessa, where we have Julian regarded as the founder of monastic life in that country, and especially Ephraim the Syrian, a contemporary of St. Basil. He lived many years as a hermit, then went to study monastic tradition.

With regard to Schenodi see Aramian, Monastikus palaios par la mission arabe, au Caire, iv. (1855-57), i.; L. Leopold, Schenoni von Atiree und die Entstehung des national-syrischen Christentums (TU), Leipzig, 1903; Lastein, Erinnerungen, ed. by, Dr. Galland, Eichstätt, 1904; W. Renard, Schenoni, Paris, 1903; Leclercq, in Dict. ill. 3164 ff.

2. We refer to J. H. Connolly, Anaphrases and Monasticism, in JTSAm, vii. (1904-5) 522-539; F. E. Burdett, Anaphrases and Monasticism, in Tr. Soc. Ant. 1925, iv. (1926-7) passim.

tions under the guidance of St. Basil, and perhaps visited Egypt also, II. He was connected with the principal scholars of the Syrian Church, and his numerous works contain much information regarding the monastic life. There were colonies of hermits in Cilicia, round about the end of the 3rd cent. and in the 4th, and in the 5th the Desert of Chalcis was known as the Thebaid of Syria, and there St. Jerome lived as a hermit from 373 to 380. In the 5th cent. the first of the Stylites, St. Simeon, makes his appearance in the north of Syria. Simon, Hist. Eccl., 2d (PG Lxxxiv. 1440 f.). This strange form of monastic life survived as late as the 15th century.

(3) Asia Minor.—In Asia Minor in the 2nd cent. Montanism (q.v.) had appeared—a movement in the direction of spirituality and asceticism. The Cappadocians and Pseudo-Syrians, who were the principal bearers of this movement, were finally condemned, but revived during the Middle Ages in the sects of the Paulicians and Bogomils.

It was chiefly in Cappadocia and under the inspiration of St. Gregory of Nazianzus, St. Gregory of Nyssa, and St. Basil, the real legislator of the monks of the East, that monasticism started its true development. Basil had been acquainted with the monastic life in Syria and in Palestine. He declared himself distinctly in favour of the cenobitic type, and it was for cenobites that he wrote his Rule, or rather his Rules (see above, p. 785). The Rule of St. Basil has been used in the East to the present day. It does not enter into details, but lays down in general the virtues and duties of the monastic state. The monk is the perfect Christian; the ascetic life does not consist merely in carrying out ascetic acts, but in forming one's whole being and in the love of one's neighbour. One must raise up and perfect nature and not destroy it. Christian perfection completes, elevates, and purifies the wisdom of the ancients. In the ascetics lies the education of the children under the ascetic teaching, and was recommended and encouraged. The public prayer of the community was already organized, and we find the various Hours of Matins, Prime, Terce, Sext, None, Vespers, and the Liturgy of the Hours (monasteries) established, and it is still used in the monasteries. Under the various governments and dynasties that succeeded one another in the East—the Comneni, the Palaeologian, and the Turks themselves, and the hospitallers of Wallachia—the liberty of the monks of Mt. Athos was respected. Painting, architecture, and calligraphy were cultivated with success, and their libraries contain MSS of the highest value.

(4) Cyprus.—According to St. Jerome, monasticism was brought to the island of Cyprus by Hilarion, St. Epiphanius, who had himself been a monk in Palestine, defended the monks with ardour.

(5) Constantinople.—When Palestine and Egypt had ceased to be the chief centres of monastic life in the East, it was Constantinople, and, later, Mt. Athos, that succeeded to that position. The foundations attributed to Constantine or to the time of his immediate successors, however, were admitted only with reserve. It was not till the end of the 4th and especially during the course of the 5th cent. that monasticism began its development at Constantinople. In the reign of Pulcheria there were fewer hermit monasteries at Constantinople, and the emperor legislated for the monastic life as for other institutions of the empire. The Accedentes and the Studites deserve a long study to themselves; they have already formed the subject of monographs, to which we can here only draw attention in passing. The names of St. John Damascene and Theodore the Studite recall the long strife maintained by the monks on the question of the iconoclasts.

(i) Mount Athos.—From the 9th, but especially during the 10th cent., the peninsula of Mt. Athos, in the Egean Sea, became a monastic centre of the highest importance, and formed a kind of monastic republic. Salt being the most part on steep cliffs, defended by the sea and by the thickness of their walls, the monks of this peninsula, which is connected with the mainland only by a narrow isthmus, were able to resist attacks, and the cenobitic life has been maintained there up to the present day. The history of this monastic colony may be given in a few words. The origin of monasticism on Mt. Athos is obscure. The first testimony in which we can depend is found in the 9th cent., but it is probable that long before that there were hermits living among the rocks and in the forests of this peninsula, so well fitted for the solitary life. The year 963 is the date of the foundation of the first great monastery by St. Athanasius, one of the most celebrated of the Athos monks. From this date onwards foundations followed one another in rapid succession. The great monasteries of Iviron, Vatopedi, Karyopateis, Ephpharmon, Doxidarein, Agia Paulos, etc., rose up in different parts of the holy mountain from the 10th to the 14th century. The latest in date is the monastery of Stavronikita, founded in 1842. A number of smaller houses and simple hermit cells are still maintained upon these foundations. The Rule followed is that of St. Basil. The monasteries form a kind of confederation or little republic, which is represented by 29 members, constituting at once a parliament and a tribunal under the foundation. A chapter of whom the title of ηγεμόνας. In each monastery the ηγεμόνας enjoys supreme authority. In the 14th cent. the idiomorphism of form of life (ιδιομορφία) was introduced, in accordance with which, in certain of the monasteries, the monks possess their money of their own and enjoy a number of dispensations. Autonomous during a certain period, the governing council of Mt. Athos was finally subjected to the jurisdiction of the patriarch of Constantinople. Under the various governments and dynasties that succeeded one another in the East—the Comneni, the Palaeologian, and the Turks themselves, and the hospitallers of Wallachia—the liberty of the monks of Mt. Athos was respected. Painting, architecture, and calligraphy were cultivated with success, and their libraries contain MSS of the highest value.

iii. MONASTICISM IN THE WEST.—I. Before St. Benedict.—(1) Rome and Italy.—It has been remarked, and with justice, that while, in the ingenuity of the Fathers, a certain made of all the various degrees of the ecclesiastical hierarchy—even down to that of foresor—no allusion has ever been found to ascetic, anchorite, cenobite, monk, or nun. The existence at Rome of monks, of the sort of virgins, and of monasteries at this period cannot, however, be denied. We leave on one side the legend of Boniface and Aglae, which is, moreover, of Eastern origin.2 Constantia, daughter of Constantine, gathered together a company of St. Anthony's virgins. It was in a Roman monastery also that St. Marcellina, sister of St. Ambrose, consecrated herself to God (352-366).2 Pammachius, another Roman patrician, along with Fabiola, lived the ascetic life in a monastery. He was made proselyte even from among the highest society of Rome, and Marcella, daughter of the woman, also, with Melanchus the Eleutherian, devoted herself to the life. A community of ascetics and cenobites was founded on the Aventine, from which that of Sophronia, Asella, Paulina, and Fabiola. The favour shown towards these monastic establishments by Pope Damascus, and, in particular, the arrival in Rome of St. Jerome, who became the spiritual father of the community on the Aventine, greatly accentuated the movement.3 The attempt made by Vigilantius, Bishop of Aquileia, to found a monastery had no other result than that of starting a controversy with St. Jerome, from which Vigilantius came forth utterly crushed and humiliated (c. 355).4

In the rest of Italy the progress of monasticism was scarcely less rapid than in the metropolis of the middle of the 4th cent. Eusebius of Vercelli, t.i. then exiled in Egypt, returned to his church (in 363) and obliged the clergy of his cathedral to submit to the monastic rule of life. His example was soon followed in Milan by St. Ambrose, and at Aquileia, whileermen, under the bishop, Vincent (407-422), Novara, under the bishop Gandentius (397-417), Bologna, Ravena, under St. Peter Chrysologus, the Avia, under the bishop Eulogius, and Turin, under the bishop Victor, all, in the interest of the monastic movement.

In S. Italy, besides Nola with its illustrious bishop, St. Paulinus, we find monasteries at Naples, at Capua, and in Etruria, Sabinia, Umbria, Picenum, at Tusculum, Monte Calvo, Funici, on the banks of Lake Fusine, on the islands off the Mediterranean coast of Italy, Gorgona, Capraja, Sardinia, and the Isle of CabiU (near Torrechim.).6 It would be difficult to draw up even a simple catalogue of these monasteries, so numerous were they.

Cassiodorus (c. 570) was contemporary with St. Benedict. It has even been conjectured that his Rule was borrowed from the latter, but this is no longer possible, as拱old rule 6 it is now 6 at all is of the minister of Theodore, on his property of Vivarium, gave the example of a monastery where the ascetic practices of the monastic life were allied with a high degree of intellectual culture. While, on the abbot of Montecassino, the monks gave themselves up to their solitary vocation, in the monastery built at the foot of the mountain the cenobites spent their time in the diligent copying of MSS.

(2) Gaul.—Monasticism, which was to play so considerable a part in Gaul, was established there at an early date (2nd half of the 4th cent.) and with great éclat by St. Martin of Tours. At first it took the eremitical form. The disciples of St. Martin lived as hermits, meeting for exercises in common only on certain occasions. The first monastery founded in Gaul was that of Ligugé, in 590. There were, besides, Marmoutier (Martin-Monasterium, near Mantes), a cell of the Eleutherian. For other houses, we read that 2000 monks were present at the obsequies of St. Martin.2 St. Martin wrote no Rule for his monks, and the latter seem simply to have followed the general practices of his predecessors. The disciples applied themselves in company with their master to the work of the apostolate. This would explain why this first attempt at monasticism in Gaul did not leave any lasting traces behind it.

We find, about the same date, by which there were monks at Romen, in the Morinie (Boulognais, Artois, W. Flanders), in the forests, along the seacoast, and even in the islands of the coasts.4

St. Sulphicus Severus, the historian of St. Martin, established a community of ascetics in his villa of l'imliniacum.5 Gregory of Tours († 594) gives in his work most valuable information regarding the monastic movement in Gaul in the 5th and 6th centuries. The greater number of the monks whose lives he wrote St. Martin and their Charismatic spirit, are still largely under the influence of the teaching of St. Martin.

The most interesting of all these experiments in the monastic life at this period is the foundation of the celebrated Monte Cassino, on a spot that name the coast of the Mediterranean near Campania. Monastic life, inaugurated there towards the year 410 by St. Honoratus, is to continue through many long centuries, almost without interruption, to our own day. It was at the beginning a mingling of the eremitic and cenobitic elements. Both manual and intellectual work were held in honour, and great was the influence exerted by the monks of Lérins throughout the Middle Ages.6 It will be seen, however, that this earlier

5. Maloney, op. cit.
period, to cite the names of Vincent of Lérins and Salvianus.

Another important influence exercised over the development of monasticism in Gaul during this period was that of Cassian. His works were in reality the first monastic code in Gaul (see above p. 736), and, it may be said, in the whole of the West. He founded the monastery of St. Victor at Marseilles, which became renowned, and other monasteries also.

St. Cassian, bishop of Arles, must also be regarded as one of the principal monastic legislators at this date. We can only mention the monasteries founded by Leonian in the diocese of Vienne, by St. Theodulph in Isère, in the Isle Bara (St. Claudius), and at St. Maurice of Aganae, and by SS. Romanus and Lupicius in the Jur. (c) Britain, Ireland, the Celts.—The monastic life was established fairly early among the Celts and Anglo-Saxons, and underwent an extraordinary development among them. Its introduction into Great Britain was due to St. Germanus, bishop of Auxerre, who came to the island c. 429 to restore ecclesiastical discipline. In Wales Llan Llydaw, Llanecavan, Ti-Gwen, and Bangor soon became renowned. Some of the monks from these monasteries—St. Gildas, St. Lunain, St. Paul Aurelian, and St. Samson—established the monastic the Rule of Cassian, in which it made a great advance. Monasticism in Ireland has much in common with that of Brittany, to which it seems, in fact, to owe its origin. The name of St. Columba and that of his foundation at Iona stand out conspicuously in its history. Another saint whose name we must not forget to mention among the Celtic monks, although his chief foundation, Luxeuil, belonged to Gaul, is St. Columban, the rival and namesake of Columba. His Rule was worked entirely by the principles and traditions of Irish monasticism, spread rapidly in Gaul and disputed for a time the predominance of that of St. Benedict.

(d) Spain.—In Spain the beginnings of the monastic life are somewhat obscure. The Council of Elvira (c. 300) makes no allusion whatever to ascetics or virgins. The Peregrinatio Eutherie belongs to the last quarter of the 4th century. It is the account of her journeying in the East and her return to the Holy Places, sent to her nuns in Spain by a Spanish virgin named Euthynia, or Egeria, who was, in all probability, abbess of the community to which she writes. We find further traces of the ascetic and monastic life among the Priscillians and the Fructuosians. The Priscillian gave himself as an example of asceticism (see art. PRISCILLIANISM). It has recently been shown that the Regula Conscasia Monachorum, attributed at first to St. Augustine, then to a contemporary of St. Fructuosus, probably comes from a Priscillian source, in the 4th century. It is a Rule for cenobites, original in character.

The Rule of St. Isidore (+ 636) and that of St. Fructuosus of Braga (c. 600) also deserve mention. They enjoyed considerable success until the advent of the Rule of St. Benedict in Spain, which became there, as in almost the whole of the Western world, the only Rule for monks.

Vigilantius, who represents the element hostile to the monks and ascetics, was a priest at Barcelona in 296. During the year 409 the invasions in Spain, as everywhere else, resulted in the destruction of the monasteries. Mention of this is to be found in the chronicles of the period.

The Council of Tarragona, in 316, turned its attention to the monks. St. Martin, abbot of Dunio near Braga, who is known as St. Martin of Braga, and who had been a monk in Palestine and played so important a part in the history of the conversion of the Visigoths (587) and of that of the Arab invasion (711), took certain monks and hermits—the African Donatus, who, along with 70 monks, also from Africa, took refuge in the monastery of Servatianum, in the province of Valencia; St. Emilian, who enjoyed a wide-spread cultus in Spain; the hermit, Valerian, in the neighbourhood of Astorga, etc. (e) Africa.—In Africa the first monastic centre seems to have been formed around the person of St. Augustine. This saint had studied the monastic life both in Rome and in Milan, and, on his return to Tagaste, and installed himself with some of his friends in a house, where they gave themselves to the practices of asceticism. Ordained priest, he founded a second monastery at Hippo, where he lived himself till he died in 430. He then transformed his episcopal dwelling into a monastery like those of the bishop of Milan, Vercelli, and others at this time, and so founded what we may call a 'cathedral monastery,' or, as he himself called it, monasterium clericorum.

Others of the African episcopate soon followed this
example, and Hadrumetum, Uzala, Calahue, Cirta, Milev, and Carthage became real centres of monastic life. The *Regula pro monachis attributed to St. Benedict* (c. 520) was revised by him in 525, as we have already said, but it is drawn from his letter (excli.) to religious bodies of both sexes living in poverty and chastity, passing their time in prayer and ascetic practices, and in certain works of charity. The counsels of the great bishop are characterized by the charity, discretion, breadth of mind, and high spirituality to which all his works bear witness.1 We have already spoken of his famous treatise, *De Opere Monachorum*, composed in the year 497.

The Vandals persecution was unable to destroy all these monasteries, but it arrested for the time the progress of monasticism in Africa. Byzantine rule (523-799) restored peace and liberty, and a true enthusiasm of religion took place, in which monasticism naturally benefited. Several new monasteries were founded, notably at Raspe and at Tebessa. The raids of the latter still exist.2 But the Muhammadan invasion was to destroy monastic life in Roman Africa as well as Christian life in general. (f) On the Danube, in the region of Noricum, we have to mention the wonderful work among those people of St. Severinus (481-520), called the *apostle of Noricum.*

2. From St. Benedict to the 13th Century.—St. Benedict, born at Nursia (c. 480), died at Monte Cassino (c. 540), deserves a place apart in the history of Western monasticism. The influence exercised by his Rule may be compared to that of St. Basil in the East. Having dwelt, at first, as a hermit among the Sabine mountains, he later gathered disciples round him, founded monasteries at Subiaco and Monte Cassino, and wrote a Rule which, after the lapse of two centuries, was to become the one monastic Rule of the West. It may, in fact, be said that the history of Western monasticism is practically identical, for the greater part of the Middle Ages, with that of the Benedictines.4 The Rule of St. Benedict, which is divided into 73 chapters, is written for cenobites, and addresses itself exclusively to those who follow that form of monastic life. It teaches the virtues of humility, obedience, and poverty, and that of practice of the Rule is the principal function of the monks. It regulates the hours for prayer and lays down the order of the psalmody. The monastery forms, as it were, a little city or, better, a complete society provided with all its necessary organs. The abbot, elected for life by his provost, or prior, and his seniors, while at the head of every 10 monks is the dean. Then there are the cellarer, who is charged with the temporal affairs of the monastery, and the various other officials that divide between them the different functions necessary to the well-being of the house. The monastery should, as far as possible, provide for itself and possess a garden, a mill, and all the necessary offices and work-shops. The sick, too, are to be specially taken care of, and the monks and the *obediens* receive necessary instruction. Those who offend against the Rule must receive punishment according to their deserts.5 Such is, in summary, the Rule of St. Benedict—a Rule characterized by great simplicity, but in which is clearly reflected that spirit of wise discretion and justice which was the genius of the Roman character, while at the same time it is penetrated through and through by the purest spirit of Christian asceticism, and rivals in its discretion and its sublimity of view the Rule of St. Basil itself.

St. Gregory († 604), the greatest of all the popes of the early Middle Ages, in giving to this Rule the support of his authority and in recounting, in his *Dialogues*, the life and miracles of its author, assured its pre-eminence over all other monastic Rules. He himself founded a monastery in his own house (the Monastery of St. Andrew, on the Cellean), in which the Rule of St. Benedict was observed, and sent to England one of its monks, his disciple St. Augustine, who, while commencing the work of converting the Anglo-Saxons, at the same time implanted in their midst that Rule which was destined to take such firm root there and to spread far and wide over the West.

(a) England.—The Christianity established by St. Augustine among the Anglo-Saxons was thoroughly monastic in character. In the greater number of towns—e.g., at Canterbury, York, London, Ripon—may be compared to that of St. Basil in the East. Having dwelt, at first, as a hermit among the Sabine mountains, he later gathered disciples round him, founded monasteries at Subiaco and Monte Cassino, and wrote a Rule which, after the lapse of two centuries, was to become the one monastic Rule of the West. It may, in fact, be said that the history of Western monasticism is practically identical, for the greater part of the Middle Ages, with that of the Benedictines.4 The Rule of St. Benedict, which is divided into 73 chapters, is written for cenobites, and addresses itself exclusively to those who follow that form of monastic life. It teaches the virtues of humility, obedience, and poverty, and that of practice of the Rule is the principal function of the monks. It regulates the hours for prayer and lays down the order of the psalmody. The monastery forms, as it were, a little city or, better, a complete society provided with all its necessary organs. The abbot, elected for life by his provost, or prior, and his seniors, while at the head of every 10 monks is the dean. Then there are the cellarer, who is charged with the temporal affairs of the monastery, and the various other officials that divide between them the different functions necessary to the well-being of the house. The monastery should, as far as possible, provide for itself and possess a garden, a mill, and...
of Savigny, which also had numerous foundations in England, was absorbed by that of Citeaux. But with the 14th and 15th centuries English monasticism began to decline.1

(b) France.—However great the success of the Benedictines in England, St. Benedict, be it said with truth, if its history be regarded as a whole, that France was the land of its predilection. The story of the Rule of St. Benedict being brought to Merovingian Gaul by his disciple, St. Maurus, and of the latter’s foundation of the abbey of Glas on the banks of the Loire as the first Benedictine monastery in that country, has been contested.2 Whatever the truth of this question may be, it is certain that the Rule was introduced into France at an early date—from the beginning of the 7th cent.—and it spread there with such rapidity that it soon succeeded in supplanting the Rule of St. Columban and in imposing its authority on all the monasteries. A synod held at Autun, in 679, speaks of it as though it were the only monastic Rule in existence, and that of Châlons, in 813, declares formally that it is followed in almost all the monasteries of the country.3 The movement attained its apex under Charlemagne, the great protector of Benedictine Rule in France, and under his son, Louis le Débonnaire. The reform of St. Benedict of Aniane witnesses at once to the unity and to the vitality of Benedictine life.

It is again in France that we must seek the original and important mission of which Cluny was the cradle, and which, little by little, spread beyond the limits of France into Italy, Spain, England, Germany, and Poland. The abbey of Cluny, near Macon, was founded by William, Duke of Burgundy, in 910, and the 7 monks were brought from the abbey of Baune, where the Constitutions of St. Benedict of Aniane were followed; hence the Cluniac reform sprang from that of the 9th century. Its first abbeys, B经开区, Odo, Mayeul, Hugh, Odilo, and Peter the Venerable, raised Cluny to the highest degree of prosperity and extended its influence to every country in Christian Europe. The work of Cluny, in the religious, social, and political order, was considerable; during the 11th and 12th, and a part of the 13th centuries it exercised an unrivaled influence on Christian morals and institutions. From the political and religious points of view, it offered to the popes valuable and indispensable assistance in their struggle against the emperors, and the latter, as well as the kings of France, were obliged, more than once, to reckon with the powerful abbey.

Among the monasteries that accepted the Cluniac reform and flourished under it must be cited especially the great abbeys of Moissac, St. Martial, Uzercues, St. Jean d’Angely, St. Bertin, St. Germain d’Auxerre, and Vézelay in France, and Cava, Paris, and St. Paolo inafi le mura in Italy.4 At the very moment when the influence of Cluny began to decline, a new star arose on the monastic horizon. On 21st March 1008, Robert, abbot of Molesmes, founded in the diocese of Dijon the abbey of Citeaux, which was to become the centre of a new reform of Benedictine life. While Cluny, although careful to retain faithful to the spirit of Benedict, was largely devoted to the liberal arts, and of letters, and had exercised considerable influence on the external world, Citeaux, under the inspiration especially of St. Bernard, returned to an anarerer conception of the monastic life. All monotiousness and solemnity, even in the liturgical offices, were proscribed, monastic architecture was reduced to its simplest expression, and intellectual and artistic culture was set on one side, manual labour and the exercise of every kind of hard work taking its place.5

The Cistercian reform, whose influence, while not to be compared with that of Cluny, was nevertheless of considerable importance, especially during the 12th cent., spread beyond France and took in a large number of monasteries in other countries. It continued to exercise its influence till the end of the Middle Ages, and was revived on a new basis in the 17th cent., in the celebrated reform of La Trappe. The Cistercians, however, even in their most famous monasteries, did not follow the rules of Cluny, where the members were subject to the abbot, and only to him.

(c) Germany.—Before the introduction of the Benedictine Rule into Germany, monastic life was but feebly represented in that country. The Anglo-Saxon monks, SS. Firmian and Boniface, with their disciples, brought to Germany, along with their missionary zeal, the traditions of Benedictine life, which scarcely existed there at that period, the only known trace during the 6th cent., being found in the life of St. Eugenius, bishop of Cologne. During the 8th and 9th centuries the Celtic monks of St. Columban came into Germany and founded a number of monasteries. Among these we may mention St. Gall, Ebersmünster, Moyen-Montier, St. Odile, Honan (Onogia), and Aschaffenburg, not to speak of those at Strasbourg, Mainz, Cologne, Ratisbon, Würzburg, Erfurt, and Heggbach.6

In 1185 all the Scottish monasteries of Germany were united to form a congregation, under the jurisdiction of the abbot of St. James of Rathbon, by Innocent III. Gradually the numbers of Scotch-Irish monks that were at first continually coming into Germany began to diminish, and by the 15th cent., they were replaced, in most of the monasteries, by Germans of German and French extraction. The monastery of Bursfeld and becoming one with it. Mention, however, is made in the 17th cent. of a Scottish abbot, Ogilvie by name (1746).

Reichenau on Lake Constance began, in the 8th and 9th centuries, to form a great monastic community, under the direction of St. Gall, and called the Benedictine Rule. The story of the monastery led by entering the 11th cent., and the result of Bursfeld and becoming one with it. Mention, however, is made in the 9th cent. of a Scottish abbot, Ogilvie by name (1046).

2 La Trappe is the most important of the foundations of the 13th cent. in Germany, and succeeded in being established in the 17th cent. of a Scottish abbot, Ogilvie by name (1746).

5 Haneck, B. 727; Heinbrecher, l. 526.

mention in this connexion is the Synod of Aix-la-Chapelle in 922, famous for the legislation which it issued concerning monks. In 924, at Tassilo, no fewer than 29 cloisters were founded, some of which have left a name behind them in history—e.g., Tegernsee, Benedictkloster, Polling, Wessobrunn, Kremsmünster, Scharnitz, and Medingen.

Charlemagne and Louis the Pious were the great protectors of the Benedictine monks. At their courts were to be seen Alcuin, Adalhard, Wala, Angilram, Arn, Ansegis, Paul de Deacon, and, above all, Abbot of Aniane, the greatest monastic reformer. The Cluniac reform found its way also to Germany, where it commenced a new era of activity and prosperity for the monastic life. The monasteries of Reichenau, St. Maximin of Trèves, Echternach, St. Emmeran of Ratisbon, Tegernsee, St. Maurice of Magdeburg, and Weißenburg flourished anew under its protection. Einsiedeln, whose patron was St. Meinrad, a hermit who died in 861, became likewise the centre of an important monastic reform, which extended to the abbeys of Petershausen, Disentis, Pfäfers, St. Blaise and Muri, Hohenwiel, Kempfen, Ebersberg, and Rheinau (near Schaffhausen). The monastery of St. Emmeran of Ratisbon in its turn introduced into the neighboring monasteries the observance of St. Peter of Salzburg. Tegernsee, Prüll, Weltenburg, and several others. Ulrich of Ratisbon (or of Cluny, + 1093) was one of the most active agents in the Cluniac movement in Germany and Switzerland.

Hirsau, or Hirschenstein, founded about 980, was also of great importance from the monastic point of view. The constitutions of this monastery were adopted by 130 other monasteries. Hirsau, as well as Cluny, offered valuable assistance to St. Cuthbert of Durham by his strenuous activity in defence and against the abuses among the clergy. Like the Burgundian abbey, it also had much influence on art, architecture, and culture in general. The reform of Hirsau, while keeping its own spirit intact, was, to a large extent, inspired by that of Cluny. The annals of the abbey were written by Trithemius and Basilius.

Another reform, which, like that of Hirsau, drew much of its inspiration from Cluny, while keeping a strong special character of its own, made itself felt not only in Italy, the land of its birth, but in Germany also. This was the reform inaugurated by the monastery of Fruttarum (Frudelée), near Turin, founded in 934. Its canonical regulations, as well as the regulations of other monasteries and in Germany, notably by the monasteries of Gorze, St. Maximin of Trèves, St. Blaise, in the Black Forest, and Murri, Garsten, Gottweig, Lambach, etc. Besides these reforms issued from within the monastic order itself, mention must be made of the efforts made by ecclesiastical councils to bring back the monasteries to the practice and observance of the Rule. In particular may be cited the Synods of Reichenau (854), and of Pöltersdorf (1058), Rome (1068), London (1112), and Paris (1292–1315). The decrees of the last council, which received the approbation of Innocent III., exercised a great influence on the monastic life as a whole.

3. From the 13th to the 20th century.—In the 13th cent., whilst monasticism, in spite of all these attempts at reform, continued to decline, new forms of the religious life arose, which, however, better perhaps to the spirit of the age, but which none of the less drew numerous souls athirst for perfection and formed a current which, although not actually inimical to the ancient monastic institutions, was nevertheless very distinct from it. Such were the great Dominican and Franciscan orders and a few other religious families inspired with the same principles. No other attempt at monasticism that was really original and powerful to be considered, with the possible exception of the congregation of St. Maur. Hence it will be sufficient to give a brief outline of the principal characteristics of monastic life during the last centuries of the Middle Ages.

The great schism of the West and the Hundred Years' War dealt another terrible blow to the monastic orders, but the attempts at reformation were not less numerous than in the preceding centuries. The Council of Constance (1414–15) decreed to cast the 20th century out of the Benedictine order, and was the factor that inspired a great meeting, comprising 131 abbeys of various monasteries, which was held at Petershausen in 1417. In 1418 Pope Martin V. sent the abbots of Subiaco, Roth, and Suytringer, to Melk, the great Austrian abbey, to lay the foundation of that restoration of monastic life. The enterprise was successful, and a great number of the monasteries of Austria, Bavaria, and Swabia rallied to the movement. In the course of the following centuries, Austria, Munich, and Stetten, St. Peter of Salzburg, Kremsmünster, St. Emmeran of Ratisbon, Bramanet, Tegernsee. The great Italian abbeys of Subiaco and Farfa also accepted this reformation, in other respects all these monasteries remained independent and did not form a real congregation.

The Council of Trent dealt with the question of monasteries as it did with all other Christian institutions. The 26th Session (3rd Dec. 1563) treats of regulars and their observance of the Rule. The decree of Innocent III. and of the 4th Lateran Council, unites the exempt monasteries to form congregations, institutes, general chapters, and cloisters, and legislates concerning visitors, presidents of congregations and of regulars, the admission of religious to the orders of superiors and nuns; in a word, it establishes a collection of rules and laws concerning the monastic life.

Congregations were immediately after founded on those principles.

Even more important than the Melk reformation, so far at least as Germany is concerned, was that of Bursfeld. Founded in 1003 on the banks of the Weser and colonized by Corby, this abbey was destined to play an important part in the 15th century. John I. of Saxony, the founder, endowed the new house with the estate of Bursfeld and its right to hold a fair; the community then amounted to 300 monks. The abbey flourished from the beginning, and even the original monastery was raised to the rank of a college. The monastery was divided into two abbacies, one for the east and another for the west, and the foundation was made by King Henry VIII., who granted to the community all the lands and rights of the Benedictine abbey.

1 We have already seen, that, even as far back as the time of St. Pachomius, the endeavour was made to unite monasteries in a species of federation; another and more complete example of this was again in the 9th cent., under the authority of St. Benedict of Aniane. But it is not, in reality, till the 11th cent. that we find among the Westerners the usage of monastic federates properly so called. From the Cistercians the practice passed to the Benedictines, and from them to other orders (cf. Berlière, 'Les Chartreux généraux,' in Mélanges d'Init. etc., iii, 1889; p. 399 f.; Helmichauer, p. 217 f.).

4 See the list in Helmichauer, p. 300 f.
Dederoth († 1439), who had already reformed the abbey of Clus, took Bursfeld in hand in 1433 and also Heimbuch. The three monasteries remained closely united. In 1446 the abbots of Bursfeld became the president of the congregation. The community was occasionally visited by the general chapters, visitors, and every means of safeguarding the observance of piety and regularity. The success of this reformation grew from day to day. The cardinal of Cusa, Nicholas V., and Pius II. became its important promoters. At the death of Abbot Johann von Hagen (1469) the congregation numbered 36 monasteries, which later increased to 250. In 1579 the abbey of Bursfeld, which had been the head-house of the congregation, went over to Protestantism under the influence of Julius of Brunswick, and the congregation was itself secularized in 1803.2

We have already spoken of the monastic origins in Spain. For a long time the Rule of St. Isidore was observed in that country, side by side with that of St. Benedict. The Synod of Coxyca (1050) prescribed that either the Rule of St. Isidore or that of St. Benedict should be observed in all monasteries in Spain. Not many years later, however, the influence of Cluny began to be felt and to spread throughout Spain; gradually it predominated, until it finally eliminated the observance instituted by St. Isidore. In the 14th and 15th centuries two important congregations rose up, those of Valladolid (1390) and Monserrat (1492). The latter made foundations in Portugal, Peru, and Mexico.3 The movement of the clausatrices at Saragossa and at Tarragona were less important.4

The Low Countries were a monastic land for centuries. Wilfrid of York, on the occasion of a journey to Rome in 678, having been thrown on the shores of Friesland, was there welcomed with great warmth. After his return to his monastery at Ripon, he sent over Willibrord, one of his monks, who established himself at Utrecht, and became the great apostle of Friesland, having St. Boniface as a fellow-labourer for some time. Other missionaries soon came from Iona, and, like England, the country became Christian and monastic at the same time. The most celebrated of these foundations was the monastery of Echternach.5

The Reformation in Germany in the 16th cent. led to the secularization of the monasteries, the closing of monastic buildings, and the handing over of their revenues to laymen, especially to Protestant princes. A great number were suppressed. It has been calculated that in the Protestant War more than 1000 monasteries and castles were destroyed. A few monasteries were, however, saved from the general ruin. (cf. Heimbucher, i. 289.) In England, the effects of the Protestant Reformation were still more terrible for the monasteries. In 1524 the Holy See had caused Cardinal Wolsey to make a visitation of the monasteries, and one of the consequences of this general visit was their secularization and almost complete secularization by Henry viii. and his minister Thomas Cromwell (1534). Elizabeth finished the work of destruction in 1560. Scotland’s turn came later on (1539-1560). In all it has been estimated that 578 monasteries, of which 63 were Benedictine, were confiscated. Besides the falls and lamentable defections there were not wanting monks who became martyrs, and who paid with their lives their fidelity to their vows.1 The life of one of these monks was examined throughout all these centuries of persecution, and the Anglo-Benedictine congregation has preserved the inheritance of its ancestors to the present day.

The Reformation which destroyed the monasteries in England and Germany did not succeed in establishing itself in France. There the monasteries held out. The 17th cent. was marked by an important movement, the conventual life was maintained in the monastic congregation of SS. Vannes and Hydulphe in Lorraine and that of St. Maurit in France. These two congregations, with an end and a constitution that were similar, had for their common object to re-establish a stricter mode of observance in Benedictine monasteries and to bring back the monks to the rigorous practices of the Benedictine Rule. The very large part played by the congregation of St. Maurit in intellectual work bore splendid fruits and helped to found a school of erudition that has given to France a Mabillon and a Montauscon, a Denys de Sainte-Marthe, a d’Achery, a Constant, a Kinnart, etc.—a school that has never been equalled.2

A certain number of new orders which practised the monastic life and accepted the Rule of St. Benedict as their fundamental guide may be regarded as branches of the Benedictine order. We can give only a very brief outline of their history here.

(a) Sylvestrines.—The first of these orders sprang from the Benedictine trunk is the Sylvestrines, so called from the name of its founder, Sylvester Gonzelin, of the family of Gozzoloni († 1267). In 1227 he retired to Osimo and followed the Rule of St. Benedict, adding new monasteries, until in a short time a few ancient monasteries took their place under the new discipline. At the time of its greatest prosperity it comprised 36 monasteries, the greatest part of which were in Italy and a few in Portugal and Brazil. At the present day this number is greatly diminished. The church of St. Stephen del Cavo in Rome now belongs to them.

(b) Celestines.—The Celestines are a more important branch of the Sylvestrines, the latter having their foundation to the pope of that name, St. Celestine v., who at first was a hermit on Monte Morone in the Abruzzi, and then at Mt. Majella. He lived favoured to combine under one anachoritic monastic order of the Benedictines and the practices of the anchorite life. When he became pope, he protected and favoured the order which he had founded, approved of its constitutions, and accorded it many privileges. His congregation, having made numerous foundations in Italy, spread into France, Saxony, Bohemia, and the Low Countries. It possessed 150 monasteries, of which 96 were in Italy and 21 in France.3

(c) Olivetans.—Bernard Tolomei (+ 1438), a professor of Law at Siena, who, in company with a few companions, retired to Mount Oliveto, some leagues from Siena, 1. A. Savio, English Monasticism in the Eve of the Dissolution, Oxford, 1905; James, Henry viii. and the Monasteries, London, 1858; Tantum, op. cit.
whence its congregation takes its name. They lived as hermits, while following the Rule of St. Benedict in so far as its main principles are concerned. John Xystus established it with some of the faithful who had retired to the Pyrenees. They were then styled the Montesi, and were known as the Camaldolese or the Desert Fathers.

During the 12th century, the Monastery of Monte Cassino was the chief center of Benedictine life in Italy. Many other monasteries were founded in the Apennines, and the Benedictine order spread throughout Europe. The Rule of St. Benedict was the guiding principle for these monasteries, and it remained a source of inspiration for monks and nuns alike.

(4) **Monasticism.** The study of the monastic life has always been an important aspect of religious history. Monasteries played a vital role in preserving and transmitting the ancient texts and sacred traditions of the Church. They were also centers of education and scholarship, with many of the greatest scholars of the Middle Ages being associated with monasteries.

The monastic movement was not limited to the Benedictines. Other orders, such as the Cistercians and the Carthusians, also developed in the Middle Ages. Each order had its own rules and customs, but all were committed to the principles of the Rule of St. Benedict. The monastic life was a complete and self-sufficient way of living, with the monks and nuns devoting themselves to prayer, study, and manual labor.

The monastic orders were instrumental in the cultural and intellectual development of the Middle Ages. They were responsible for the production of many of the greatest works of art and literature of the period. The monasteries were also important centers of political and social life, with many of the leaders of the Church being monks or nuns.

Despite the many challenges faced by the monastic orders, they remained a powerful and influential force throughout the Middle Ages. They continued to play a vital role in the spiritual and cultural life of the Church, and their legacy is still felt today.
and among them there have been a few ascetic writers of high merit. Some of their chapter-houses are celebrated for their architectural beauty and for the art treasures which they contain.

The 19th cent. was one of restoration for monasticism in France, Germany, Austria, and Italy; the ancient monastic congregations and the great abbeys were maintained in spite of all difficulties, some attempts at monastic restoration were made in France, Italy, Switzerland, Germany, and Austria; and the reader will find in the article 'Benedictine Order,' in CE ii. 445-453, for a fuller account of these attempts (cf. Heimbocher, i. 600).

V. CONCLUSION. — In an article that must necessarily be brief, we have been able to give only a very short summary or historical outline. To give it any degree of completeness one should study in detail the influence exercised by the monks on the Church and on society in general: consider what has been their work of sanctification, of charity, of apostleship; enumerate the services which they have rendered to civilization as savants, litterateurs, artists, agriculturists, and, at times, as politicians. It would then be seen that, although vocation, renunciation, their monastic profession to a life of retreat and renunciation, which is the kernel of their vocation, the monks have accomplished a work that has been equalled by no other society of the ages.

If this résumé of monastic history had any pretensions to completeness, some mention should here be made of the nuns, in whose ranks are found characters as remarkable as those of Loba, Mechtil, Charlotte, Hildegarde, Roswitha, and others.

From the historical point of view, however, this is unnecessary. The nuns brought no new element into the monastic life, but were content to follow in the footsteps of the monks under the influence of the great reformers of the monastic order.

For a complete bibliography see Heimbocher, i. 461; s.v. 'Monasticism,' in CE v. 463, 464, 465, 472; s.v. 'Monasterium' in PEPS xvii. 214 ff.; Berlière, op. cit. F. CARBOL.

MONASTICISM (Buddhist).—I. The monastic order.—The monastic order in Buddhism, as instituted by Gautama Buddha himself, was not essentially a new creation in India, but was derived from ancient Hindu usage and practice. Separation from the world, in the solitary existence of a hermit or ascetic or in regulated communities, had been almost from time immemorial a characteristic feature of Indian life. Interwoven with monastic rule and self-discipline as the basis of his religious system, and defining this as the sole way of religious attainment, the Buddha presented to his hearers no new doctrine or ideal, but urged and enforced a duty familiar to them from the teaching of their own sacred books. The distinctive feature of the Buddhist order, in which it was differentiated from its predecessors, and to which, in large part at least, it owes its worth, was attention and care, was the removal of all restrictions of caste. Membership of the order was open to all from the lowest to the lowest, without distinction of race or birth. All alike were bound by the vow of poverty, relinquishing all personal or indeed possession of worldly goods, and sought in meditation and spiritual endeavours that deliverance from the bonds of existence and misery which, the Buddha taught, could never be achieved in the turmoil and distraction of a life of ideal, the latter term being given to the novices or junior monks, and atharvī, 'elders,' to those who were the senior or ruling members in the monasteries. The community of monks as a whole was known as the Sāṅgha, or order, and with the Buddha himself and the Dārāma, the sacred rule or law, formed a Buddhist triad, each member of which was idealized and invested with a sacred character, and ultimately became the object of a definite worship, the Deity. A Sāṅghikas, dwellings of five kinds, viharas, adhāravas, storied dwellings, atties, caves. The more elaborate and permanent dwellings were, in the first instance, apparently always the gifts of wealthy laymen, who desired to do honour to Gautama himself or to the order which he had founded. A usual name for the larger monasteries was saṅghārama, the abode or delight of the Sāṅgha; and the term vihāra was employed also to denote the temple where the images were enshrined, in a building which, in the great monasteries at least, was usually distinct from the main hall.

It became necessary, moreover, at an early date to place restrictions upon the absolute freedom of entrance into the order. Such restrictions took the form of the prohibition of admission to those suffering from any mental or bodily defect, as the blind or lame, and to the vicious in habit or life, or in the 'three-refuge formula' which every candidate for admission into the order was required to repeat the Sāṅgha is personified, and to each in succession the suppliant applies for protection and aid; 'Buddha, Sāṅgha, friend of the poor, servant of the poor. I seek refuge in the Buddha, the Religion, and the Order' (Mahāvīra, i. 12. 15).

10 Quotations vi. 1. 21. SE BXX vi. 158; cf. Mahāvīra, p. 30. 4, where these are termed 'extra allowance' or 'sustenance' or 'sunsiferous-Monasticism.

11 The three-refuge formula is explained by the commentator to mean a gold-coloured Benegal house.
MONASTICISM (Buddhist)

379

The consent of parents also was required in the case of a minor. No distinction of priority of casts, however, was ever made in the Buddhist population. Then it seems to have been true that the earliest converts were for the most part Brahmans. Inasmuch as in and through the order alone was final deliverance to be attained, it was an essential feature of the Buddha's gospel that no accident of birth should hinder a man from entering upon and prosecuting the path that led to salvation, to nirvāṇa. It was impossible for the layman to work out his own salvation while in the world, fettered by its ordinances and under the obligations of the world. He must renounce the world and become a monk, that, undistracted and at leisure, he might pursue the highest ends and win for himself final deliverance.

The earliest ceremony of admission to the monastic order appears to have been as simple as possible, and confined to a recital of the 'three-refuge formula,' together with a declaration on the part of the applicant of his desire to become a monk. At first Gautama himself received and admitted all candidates. Later he entrusted this right to the monks themselves, each monk being permitted to ordain one novice. This rule again was found to be too strict, and ultimately the only limit to the number that a monk might himself ordain was the condition of efficient oversight.2

On admission the candidate provided himself with the usual almsbowl and the appropriate three-vestments (trikrama) which constituted almost his sole apparel. The robe seems to have been originally dull red or reddish-yellow, as worn by most of the Hindu ascetics, but varies at the present time in different countries; in the south it is usually yellow. They were to be made of wool or of cotton, and were usually made of Magadhian.4 Besides the almsbowl the ordained monk carried also with him a staff, a razor and tooth-pick, and a water-strainer, the last in order to ensure that no living creature should inadvertently be destroyed by him when drinking. The use of the rovy in addition was a practice of later origin. Frequently the robes were the gift to the Buddha or his disciples of wealthy laymen, who sought to secure merit for themselves by generosity to the holy.

Upon converts from other sects who came desiring to receive upasampada a probation (parinirvana, 'sojourn,' 'delay') of four months was imposed. Fire-worshippers and Jāthikas (wearing many roves or torn pieces, like the rice-field of Magadha). Besides the almsbowl the ordained monk carried also with him a staff, a razor and tooth-pick, and a water-strainer, the last in order to ensure that no living creature should inadvertently be destroyed by him when drinking. The use of the rovy in addition was a practice of later origin. Frequently the robes were the gift to the Buddha or his disciples of wealthy laymen, who sought to secure merit for themselves by generosity to the holy.

The daily routine of monastic life admitted of little variation. The day began early with recitation and prayers, followed by the regular round for alms. Silently and with downcast eyes the monks moved in procession and presented themselves before the householders' doors, to receive whatever food might be placed in their bowls. For this they were not allowed to make request, as the Brahman students and ascetics were accustomed to do. Whatever was bestowed they were to accept with gratitude; if no gift were offered, they were to pass on to another house without showing resentment. On their return a simple noon-day meal was followed by rest and meditation, and the day closing with service and recitations in the temple or hall of the monastery. In most of the

5 Pali parinikka, 'release,' 'liberation.' That the term ordinarily conveyed this meaning there can be no doubt. Its original significance is in dispute (see Kern, pp. 74 and note, 85 f.).
6 Kern, p. 391.

379
would be theirs as a certain reward. In respect, however, of their wealth and resources the monasteries of Buddhist countries differ to a considerable extent. In Ceylon, with the exception of a few that are more influential and renowned, the buildings which are held and shelled in Monal, Bulgaria and Tibet they are large and elaborately furnished and decorated, and frequently occupy imposing positions of great natural beauty. Burma and Siam possess buildings of much architectural merit, and the monasteries and temples of Japan are not excelled for stateliness and charm by any in the whole Buddhist world. The Chinese monasteries have suffered much from neglect and decay, and in many instances have within recent years been altogether abandoned, or diverted to secular purposes.

2. Nuns.—Apparently only with much reluctance did the Buddha consent to the establishment of an order of nuns (bhikṣunis, Pali bhikkhunis). The tradition is that at the third and repeated request of Mahāprajñāpati, Gautama's aunt and nurse, strongly supported by Ananda, the Buddha gave his permission for women to go out from the household life and enter the homeless state under the discipline and discipline professed by the Tathāgata. The concession, however, would prove disastrous, so Gautama prophesied, to the prosperity and duration of the faith which he taught; the pure religion and the good works would endure only for five hundred years instead of a thousand. On the same occasion he prescribed the obligations and duties of the bhikṣunis contained in 'Eight Chief Rules,' to which they were bound in strict obedience. The regulations involved subjection to and dependence upon the order of monks in all respects. A nun even of a hundred years' standing was to rise and respectfully salute even the youngest monk, nor was a nun to venture to admonish a monk, though she must submit to receive admonition from him. Further a nun may not keep Vassa in a district in which no monk is resident. It is probable that the ordination of women as bhikṣunis and the establishment of nunneries are in reality due to a later date than that of the founder of Buddhism. The institution has never become popular or gained a strong hold in any Buddhist country; and the number of the nuns has always been small relatively to the number of monks.

3. The Chinese pilgrims, Fa-Hian, Hiuen-Tsang, and others, in the 5th and following centuries of the Christian era, found monasticism flourishing in N. India, and the great monasteries with their thousands of learned and studious monks exercised a powerful influence over Indian life. They belonged in almost equal proportion to the two great schools of Buddhist doctrine, the Hinayāna and the Mahāyāna (g.v.). In the time, however, of the visit of Hiuen-Tsang, the most renowned of the Chinese monks (A.D. 629-45), they seem to have been losing ground everywhere to the rival sects of the Brāhmans. The most famous Buddhist monastery was that at Nālandā, the modern Dārāgūr near Gayā (g.v.), a description of which is given by the latter pilgrim. See, further, art. NāLANDA.

4. Ceylon.—In Ceylon the power and influence of the community during the early centuries of the Christian era, under the rule of the famous Ceylonese kings, who were enthusiastic Buddhists, attained a high level, and were exercised not only ecclesiastically but also in political affairs. The rulers themselves received abhikṣa (g.v.) at the hands of the monks, who not only offered advice and exercised authority in matters of State, but as judges decreed penalties for breaches of the law. On the other hand, the kings interfered in the maintenance of ecclesiastical discipline, and are themselves said to have taught publicly and expounded the principles of the religion. The most flourishing period of monastic life, when the communities of the monks were most numerous and wealthy, appears to have been from the 2nd cent. B.C. to the 10th cent. after Christ, when the Tamil invaders from S. India began to overrun the northern half of the island, which was then the chief home of religious faith and prosperity, and introducing the beliefs and practices of Hinduism. Towards the close of the 12th cent. a brief revival of national religion took place with the re-establishment of national independence under Parakrama the Great (*c. A.D. 1187*). After the death of the king, however, a decline of national and religious life again set in, during which the monasteries and schools of Buddhism manifested little vigour or initiative, and, although the religious life of the community maintained itself outwardly, it gradually fell to a low level of intelligence and spirituality. Only within the last few years have there been signs of a renewed vitality and interest in the purer doctrines and principles of the faith, and of energy or zeal on behalf of its preservation and extension.

The chief authority for the history of the order in Ceylon is the Mahāvaṃsa, or 'Great Chronicle,' a native record in Pali of the island from the introduction of Buddhism by Mahinda (Mahendrā), the son, or, according to Huen-Tsang, the younger brother, of Aśoka, at the close of the 3rd or the beginning of the 2nd cent. B.C. to the reign of King Mahāsaṃgha in the earlier part of the 4th cent. A.D. There is also a collection of devotional 'songs' or 'psalms' of the monks (Therīgāthā) contained in the Sutta-Piṭaka of the Pali Scriptures, which throws much light on the thoughts and aspirations of the inmates of the monasteries, and gives on the whole a high conception of their piety and self-denying spirit. A similar collection of Therīgāthā, 'Songs of the Nuns,' forms part of the same Piṭaka. The defect of the Mahāvaṃsa regarded as an authority, and above all its obvious exaggeration of details and naive acceptance of miraculous traditions intended to glorify the course of Buddhist history, is its partisan character. Written in the interest and from the point of view of the monks of the Mahāvaṃsa at Anuradhapura, the capital city of N. Ceylon and for many centuries the centre of Buddhist monastic life and enterprise, it takes no account of the development of doctrine or teaching on the two great monotheistic denominations of the world—Buddhism and Christianity. The sacred edifices of the great Brahmā, or prisoner, and Jetavanā monasteries, each with an independent life of its own. For a period of more than ten or twelve centuries, to the close of the 12th cent. A.D., when the leading sects were reunited, no record is available of the activities or influence of these two important monastic institutions. Apparently they were protestant in their beliefs and practices as regarded the leading and established church of the Mahāvaṃsa. To what extent, however, their teaching diverged from the orthodox standard, or their manner of life was nonconformist, we have no means of ascertaining. See Mahāvaṃsa, tr. into Eng. by W. Geiger and M. H. Rode, Oxford, 1891; J. R. P. Davids, tr. the Sinhalese and other literature. The text of the Mahāvaṃsa was edited and published by Geiger for the PTS in 1896, and an earlier tr. by G. Turnour and L. C. Wijesinha was reprinted at Colombo in 1889.

The Pali text of both collections was edited by H. Oldenberg and R. Pielch, London, 1888. Translations of the Therīgāthā and Therōgāthā by C. A. Rhys Davids under the title Psalms of the Early Buddhists, the Therīgāthā and the Early Buddhists, the Therōgāthā, were published at Oxford in 1900 and 1918.

3 See Cave, Ruined Cities of Ceylon; Copleston, Buddhism in Magapaya and Ceylon, ch. xxiv.
More recently there has been a recrudescence of sectarian differences in the island. These, however, concern monastic usage and habit rather than any missionary enterprise. There is little if any variation throughout Ceylon. There are three chief sects, the origin of which appears to have been due in all instances to external initiative and influence; and one of these at least seems to owe its existence to a distinct protest against laxity of demeanour and rule. The earliest and most numerous sect is known as the Siamese, established about the middle of the 19th cent. by a number of monks from Siam, who came to Ceylon to restore, if it be said, the true Siamese monastic discipline which had been lost. About fifty years later a separation took place, apparently on disciplinary, not doctrinal, grounds, and the Amarapura sect was founded, its leaders being monks who owed their rank and ordination to the Burmese city. The third and protestant sect, the most recent and numerically the least important, is the Ramanya or Rangoon. The Siamese is the most wealthy and numerous, including among its followers about half of the monks of the island. Most of that important and popular temples and shrines are in their hands. From ten to fifteen per cent belong to the Ramanya. These last pledge themselves to a stricter observance of the vow of poverty, and neither individually nor collectively do they own any property. As do the others, landed property. They follow a simpler mode of life, and avoid with the greatest scrupulosity all contact with worship and customs of Hinduism. Outwardly the sect differs but little from the other two in whose ranks the Robe is worn; the Siamese leave the right shoulder uncovered, but the Ramanya and the Amarapura draw the robe over both shoulders. The Ramanya is most influential in the southern part of the island, the Siamese in the central province; but the latter is said to be losing ground to its younger rival.

The monasteries of Ceylon are for the most part small, rarely containing more than from ten to twenty monks. The few larger and more important institutions alone, as at Kandy, will accommodate up to forty inmates. In the country districts frequently only two or three monks live together. Recitation, confession, and preaching by the monk take place at the full moon, and on the mid-days intervening; thus four times in the lunar month. More formal services last for ten days or a fortnight without intermission. Any resident of wealth, who by charity to the monk secure merit for themselves. During the three months of Vassa (Wassen) the monks leave the monasteries and live in the villages, either in specially constructed sheds or huts or by invitation in the houses of rich laymen, who entertain them generously at their own expense. The rule that in the season of the rains, corresponding in Ceylon to our late summer and autumn, no journeying may be undertaken is interpreted in the sense that no monk may be absent from his village or temporary home for more than six or seven days.\

5 Siam.—Perhaps the most distinctive feature of Siamese monastic rule is the control exercised by the king. The Burmese, being a minor king, and himself nominates the sanghabhat, or archbishop, supreme ecclesiastical dignity of the country. He selects for the office one of the four chief abbots, who are entrusted several with the control of the northern and southern provinces of the kingdom, the general oversight of morals and ritual, and the management of the interests of the wandering ascetics. He may, in the last respect, give his consent to any movement not connected with any of the sects, or monasteries. These hermits, who make their home in the jungle, are now few in number, but are said to have been very numerous in former times. The inmates of the monasteries themselves frequently spend a considerable part of the year in journeying from one shrine or sacred place to another. Parties of these pilgrims are known as phra tokling, and as they file in procession along the roads they form a picturesque element in the country side. Each monk is accompanied by a sisyu, or attendant, who carries his almsbowel and other utensils, and a portable shelter or tent consisting of a large Chinese umbrella, which is set up in the ground at halting places and a white cloth thrown over it. There are also a few nuns, known as chi-bong, who live for the most part in huts in the neighbourhood of the monasteries. They are usually women advanced in years who are without relatives to provide for their well-being or maintenance. There are no regular nunneries.

The four chief abbots, together with four coadjutors or assessors, form a sort of Court of Final Appeal in all matters of religious or ecclesiastical administration or discipline. The position is in the hands of provincial ministers of the Church, who exercise jurisdiction within districts that correspond usually with the civil divisions of the country. The ecclesiastical organization, therefore, is parallel to the civil; and the ruler of the State is supreme over all.

In Siam, as in Burmah, the rule obtained that every male member of the nation should at some time in his life take upon himself the monastic vows, and become resident in a monastery. The accepted minimum period of residence was three months; after this the monk was free to return to the life of a layman. Most of the boys also passed through the monastery schools, receiving an elementary education in reading and writing and the fundamental doctrines of Buddhism. The layman retained an attachment to the monastery of which he had been an inmate, and once at least in the twelve months, at the religious celebrations in the autumn of the day at the shrine of the Buddha, monks wear their rich presents and costly robes for the use of the monks during the coming year. At the more important monasteries in Bangkok the king himself, as head of the Church, goes in procession with the other monks bearing rich presents and costly robes for the monks. In all the festivals and numerous public holidays the monks take a considerable part, and are the recipients of much attention and many generous gifts. In Siam the obligation of individual and personal poverty is less strictly observed than in most Buddhist countries. In some instances the monastic cells are adorned with books and pictures and furnished with ornaments and other objects of luxury, and the monks may be seen driving about the streets in carriages. The majority, however, live a simple life, and are regular in their duties and apparently sincere in their devotion. The monasteries also frequently derive considerable incomes from land or other endowments granted to them by Government, or from the gifts of private donors.

The routine of life within the monasteries is practically the same as in Burmah and elsewhere in the south. The day begins and ends at an early hour. Morning prayers in the bod, the principal hall or temple of the monastery, before the great gilded image of the Buddha, are followed by the usual early begging round. The food placed in the bowl is received in silence, and eaten.

1 See Copleston, ch. xxvii., 'Modern Monastic Life,' where other and minor differences between the sects will be found recorded. 2 a. see Helen, Studies in the Religious of the East, London, 1913, p. 556 f. 3 Mahar. ii. 117; Copleston, pp. 1291, 1291.
MONASTICISM (Buddhist) immediately on the return to the monastery. No solid food is taken after mid-day. The intervals in the morning and afternoon are occupied with study and meditation and in giving instruction, in recitation from the sacred books, or in preaching. The usual title of the monk is phra, 'saint,' or telepoin. The latter name is said to be of Môn origin, signifying 'our Master.' The Japanese term for monk is Bô. 6. Burmah.—The monastic life of Burmah is in its essential features similar to that of Ceylon. The monastic buildings themselves, however, are on a larger scale and more elaborate, and the lives of the monks are more strictly ordered and more monastic.

The monasteries also have been more closely in touch with the laity, both because the monks have mingled freely with the people in their festivals and religious ceremonials, and more especially, on account of the influential position which they have occupied as centres of learning and education. Previous to the establishment of European missionary and Government institutions, which to an increasing extent have supplanted them, every Burmese lad passed through the monastery schools, owed whatever book knowledge he possessed to the teaching of the senior monks, and for a longer or shorter period himself participated as a recognized member of the community in a generally monastic life at the monastery. 1 Thus, although the majority returned to a secular life and to the pursuit of agriculture or trade, the entire male population of Burmah has had practical acquaintance with the life of a monk and the monastic requirements and aspirations. The system contributed effective- ly to national unity and strength, and for many centuries made of the Burman a literate people, even if the standard of attainment was not very high. The monks and nuns were also leaders in the habits of regularity and obedience which served them well in their after careers. See art. BURMA AND ASSAM (Buddhist).

7. Tibet.—The distinctive feature of the monasticism of Tibet is its elaborate and gorgeous ritual, recalling in many respects the ceremonial of the Roman Catholic Church. The similarity is due for the most part to the influence of the early Nestorian missionaries, who, while leaving little trace of their cruder ritual, have had a pressing influence on the monasticism of the country. Large parts of the old Buddhist monasteries were placed in remote districts, either in sheer mountain-fastness or in the middle of the desert, surrounded by an inner circle of devotional halls. The dwellings of the monks and nuns were also more remote, and in the winter were thickly wooded, and sometimes even on a barren plateau. The religious ceremonial extended to the whole day, and the monks and nuns devoted themselves to the study of the sacred books, either in their cells or in the great monasteries. The influence of the monasteries was very great, and many of the religious ceremonies of the country were founded on the monastic system.

8. Central Asia.—That for a considerable period Central Asia was the home of a broad and vigorous Buddhist life has long been known. That life naturally centred in the monastic communities established in the several cities on the important roads of pilgrimage and traffic that skirted the central desert of sand on the north and south. In the countries, however, that were subjected to Muhammadan invasion and conquest little trace of the faith remains. The Chinese pilgrims repeatedly make mention of monasteries with large numbers of inmates whose wealth was enormous, and pictures of this monastic life; 2 these for the most part if not entirely were adherents of the Mahâyâna school. Their narrative, nevertheless, conveys the impression that the real influence of the faith upon the character of their habits of the people beyond the monasteries was but slight. Recent exploration and excavations have entirely confirmed the record of the Chinese, and suggest a fairly strong and prolonged Buddhist hold upon the country. Ruined stupas are numerous and for the most part desolate in conditions and the presence of Buddhist monks. The monastic buildings themselves would be of less solid construction, and either have perished or are unrecognizable. 3

9. China.—Of the monastic life of other Buddhist lands which follow the Mahâyâna with more or less concession to native modes of thought and superstition there is little further that requires notice in a generally monastic life at the monastery. It will be sufficient to refer to the articles on the several countries. The main character and type have been everywhere preserved, but the details of mode of life and procession have varied greatly with environment and genius of the people. In China the monks have occupied generally a degraded position, with a few honourable exceptions, holding a creed and practising a ritual in which there was more of sorcery and magic than of Buddhist faith. The exceptions were those monks far removed from the centres of population, where the monks, though ignorant, were simple, kindly, and pious, seeking salvation through self-denial and right living. The nuns were no less degraded and for the most part despoiled of most events in China, however, with the division of numerous temples and monasteries to educational purposes, the desertion or destruction of others, and the spread of Western influence and science, have entirely changed the character of the Chinese monastic life and thought of the people concerned.

It is not easy to forecast what the ultimate effect upon Buddhist life will be, or how far it will modify or even destroy so essential and characteristic a feature of the Buddhist life as has ever been. That the effect will be profound and far-reaching there can be no doubt. 4

10. Korea.—The monastic institutions of Korea resemble those of China, whence both doctrine and practice have been derived. Religious as in other respects the country has always been dependent on its greater neighbour to the south, and neither in belief nor in rule of life does Korean Buddhism present much that is novel or of interest. Overshadowed by Confucianism and ancestor-worship, it has developed few distinctive features, and has for some centuries exercised a decreasing influence on the thought and habits of the people.

1 e.g. Kasuga, Deal, ii. 207 ff.; Kotkan, bk. 208 ff., Fa-Hian, ch. iv. (Geige, p. 181 ff.); Vartholome, Deal, ii. 207 ff.; Sakeio, 6, 238 ff.

2 Of. M. A. Stein, Ancient Khotan, 2 vols., Oxford, 1907, p. 309, and Notes and reviews of Desert Catalogue, 2 vols., London, 1912, cited by L. Giles, J. Pollitt, and others, in J.D.A.S., 1911, etc. Stein found that the memory of the Chinese Buddhist pilgrim, Hiuen Tsiang, is still retained at the 'Halls of the Thousand Buddha,' in the west of the province of Kansu, and elsewhere in Central Asia to the present day. The tradition of his learning and devotion, and of the miraculous power which he was credited, proved to be a real power in the minds of the priesthood.

VOL. VIII. — 5
The monasteries are usually small, the number of inmates rarely exceeding twenty-five or thirty, and sometimes, as in Ceylon, no more than three or four monks are found living together. The more important institutions are grouped around the temple, but none are isolated within its walls. Their numbers also are decreasing. The monks themselves command little respect, and are drawn, for the most part, as in China, from the lower classes. The example and influence of Japan also may perhaps be traced in the character of some of the buildings, which are fortified and built on high ground to dominate the country at their base. In the neighbourhood of Seoul a few nunneries exist.

The most distinctive feature of Korean monasteries is the presence of pictures on the walls. These are drawn and coloured on paper and mounted on silk, and usually represent scenes from the lives of the Buddha. Often the entire surface of the interior walls is thus hung with pictures, presenting a remarkable contrast to the monasteries of other lands. Externally the walls are covered with paintings in bright colours of bodhisattvas or other supernatural beings. The sanctuaries often contain only a single image, rarely more than two or three, and these are small, often quite small, or of clay or wood. Metal images are almost if not entirely unknown.

In their dress the monks have preserved the national costume in the form of a long cloak with long sleeves, and generally a peaked cap. The head is shaved, in conformity with Buddhist practice, but not the beard. The shaven head, however, is not branded after the Chinese custom, although branding may be effected on other parts of the body. Monasteries are usually recruited mainly from boys received by dedication or adoption in early childhood. Endowments are not numerous. Most of the monasteries are dependent for their maintenance upon the gifts of the laity, or, where opportunity serves, upon the personal labour of the monks in the cultivation of the temple lands.

11. Japan.—The temples and monasteries of Japan are large and well-appointed, and give the impression of a reality of creed and life which is almost altogether wanting to those on the continent. The numerous Buddhist sects of Japan have their home and distinctive life in the monastic communities, and the monasteries themselves in the details of their present variety of construction according to the sect to which they belong. In creed and belief the sects differ greatly among themselves, and have few features in common with the Buddhism of the south. In the past the activity and strengthness of the national life found their almost complete counterpart in the monasteries, which formed associations of fighting monks at war with one another, oppressing and plundering the common people. In more settled times, speculative thought, mystical, devotional, and idealistic, has been highly developed, perhaps most conspicuously in the ' Sect of the Pure Land,' who hold a theistic creed, and expound and practise a moral code which has much in common with that of the N. accompanying a revived religious life also, at different periods of the nation's history, missionary effort and preaching have been prosecuted with zeal and success. Both at home and in China a similar work of propaganda is being carried on at the present time with much devotion and energy.

12. Conclusion.—It is natural to compare and contrast the monastic principles and life of Buddhism with those of the Christian orders of the Middle Ages. In the

The general features of discipline and government there is obviously similarity. All communities vowed to poverty and a celibate life, whether Hindu, Muhammadan, Buddhist, or Christian, almost of necessity organize themselves on some lines that are similar within their walls. The features of Buddhist monasticism would seem to be two: (1) the practice of literal mendicancy, which takes the form of a daily round, equipped with staff and begging-bowl, to receive whatever charity is given, for the support of the holy life, may be mort. In the countries where the Mahayana type of Buddhism has prevailed this custom is not and probably never has been obligatory or usual. It forms a distinct and characteristic element, however, of early Buddhist rule and observance. (2) According to Buddhist teaching, salvation is to be found only within the limits of the order. The layman can achieve his own deliverance only if and when he does the work of the monk, and takes upon himself the monastic vows. He must seek release from the world in a life of retirement, meditation, and self-denial, for otherwise can the letters of karma be broken and nirvana gained.

In Buddhist practice and doctrine, therefore, the monastic order holds a nor the most part of the national life, and above that which it occupies in any other great religious system.

LITERATURE.—A selection only from a great and ever-growing literature can here be given. Many important works have been referred to in the text, others are available in the publications of SBE and elsewhere; SBE xiii. (1891), xviii. (1896), xx. (1898), 'Vinaya Texts,' xi. (1900) 'Buddhist Suttas,' xi. (1894) 'Buddhist Mahayana Sutras'; H. C. Warren, Buddhism in Translations, Cambridge, Mass., 1896; T. W. Rhys Davids, Flowers of the Buddha, p. 1 and ii. The order is revivied foreign countries. These are a few of: c, 1907; H. W. Cancer, Radiated Cities of Ceylon, new ed., do. 1900; Shway Yoe, The Burmese, His Life and Nationalities, do. 1910; A. C. Barman, Study of the Burmese and Others, do. 1908; C. H. Chamberlain, Handbook for Travellers in Japan, do. 1909; A. S. Geden, Buddhism (Buddhist), Encyclopaedia (Buddhist) Histories and Greece (Buddhist), and on the several Buddhist countries.

A. S. GEDEN.
the Indian view of life as a whole. By the Indian life has ever been regarded as essentially evil, the relief from the burden and sorrow of existence as the chief and final goal. In many forms of Indian doctrine, especially the Buddhist, but also in that of Hindu leaders and teachers before Gautama, this belief in the necessity of escaping from monastic dedication and life. It was impossible for the layman, distracted by the cares and encumbered by the possessions of the world, to secure salvation. Emancipated from these, he was free to devote himself to the highest end, and to win his way to deliverance (moksa) (g.v.).

A second respect in which historically Indian monasticism in general has been distinguished from Buddhist or Christian is the deficiency of co-operational or of a central control. The various orders have been for the most part loosely organized, and that from want not of organizing power but of inclination and will. The ideal of the Indian monk or ascetic is not and never has been a fixed residence and asceticism forever, but wandering for pleasure, to visit the various sacred places and shrines, and to dispose his manner of life and his time independently in all respects as seemed best to himself. Apparently the habits and methods of the monastic life have altered since the earliest ages. The mendicant, or wandering ascetic, rather than the resident community of monks, has been the characteristic feature of Indian religious life; and the monasteries have served in the larger degrees as monasteries for fixed and permanent habitation. The earliest delineations of Indian social and religious life present the same features as are seen in modern times—a large drifting population of mendicants and ascetics, who find a shapeless and timeless home in the monasteries, and after a longer or shorter stay move on entirely as their own inclination prompts.

The ideal practice of a life thus ordered and determined is of extreme antiquity in India. It would seem to be based ultimately upon the Hindu regulation of the four śramaṇas (q.v.), according to which every Brahman towards the close of his life must become a wanderer, the world must take the hindmost place, and the ascetic gives himself to the ascetic life and the ascetic garb. In intention, therefore, no low-caste or out-caste man could become a monk, but only the "twice-born." In practice, of course, the wandering population is recruited from all quarters, and the less pretentious of any class may follow the same easy and convenient mode of gaining a subsistence without trouble to themselves. The ancient Indian custom, familiar to Indian thought and in closest harmony with Indian ideals, formed the model for the great Buddhist and Jaina monasteries, and gave to them precept and habit and rule. Only in organization did the daughter communities go far beyond anything that was developed in Hinduism. Here the preference for an independent and self-regularized monastic life, as the only easy and convenient mode of gaining a subsistence without trouble to themselves, is said to be regarded with disfavour. The saṅghikas is the religious student, who engages himself to remain with the guru as pupil and disciple after the close of the regular period of service as a brahmanda, and the titles "beggar" and saṅghikas are more appropriate and more usually applied to the wandering ascetic, without home or stated means of livelihood. The former denotes the Hindu mystic and saint, who endeavours to attain to union with God by the way of self-control and asceticism. The saṅghikas has "eats off" all worldly fetters and attachments, and is separated from all earthly wants or ties. "Bhikṣa, "beggar," describes rather the common characteristic of the class. In the Pali form of bhikkhu it has become the usual term for the Buddhist monk; Hindũ n-šage ordinarily gives the preference to other names. All monks depend for their livelihood solely upon the charitable gifts of the laity. The daily round with the begging-bowl for dānas is fed at the door of the Hindu householder is never made in vain, and the flow of Indian charity and

order to which the monastery belongs. Attached to it are a temple or shrine for the services of the gods, and in the larger monasteries at least a separate dharamsalā, or rest-house, for the accommodation of travellers. The term matha appears to have been originally applied to the solitary hut of the religious recluse, though a monastery was the community of hermits living together in the forest in the practice of austerities. Of such a woodland hermitage an attractive description is given in Kālidāsa's Sakuntala. The name was ultimately extended to include all more or less permanent homes or residences for the monks. The mathas exist in considerable numbers all over India, but the inmates for the most part live a retired life, keeping to themselves, and both they and their houses to lie hidden from the sight of Europeans. Each sect or monastic order has its own mathas, that of the founder of the order being regarded as the chief. There is, however, no central control, nor any interference in the management or affairs of the monastery by any great body of British Government. When the latter fact died out in Bengal, some of its monasteries passed into Hindu keeping and were appropriated for the use of Hindu monks.

To erect a monastery for the service of the monks and wandering ascetics has always been regarded as an act of religious merit. The matha is the gift of a generous and pious layman; and of such donors there has never been any lack in India. In most instances an endowment for the upkeep of the monastery is a temporary act: or the establishment of or by subsequent grant, and this is increased from time to time by the gifts of patrons who endeavour thus to secure merit for themselves. The individual monk is bound to reside in one of these, but the monasteries often become exceedingly wealthy in revenue and lands. Since the monks themselves do no manual labour, nor indeed work of any kind, the lands are usually farmed out to Hindu lay-proprietors. The management, however, by the temple authorities of their large revenues has sometimes been so defective that the British Government has been compelled to interfere, and take over temporarily the control of the monastic estate.

The Hindu monk is known as yātini, one who curls his passions and has renounced the world, or vratā, the devotee who has taken upon himself the vows of renunciation and consecration. The former term is technical and is used of the layman who has given himself to a life of asceticism. The titles yāti and saṅghikas are more appropriate and more usually applied to the wandering ascetic, without home or stated means of livelihood. The former denotes the Hindu mystic and saint, who endeavours to attain to union with God by the way of self-control and asceticism. The saṅghikas has "eats off" all worldly fetters and attachments, and is separated from all earthly wants or ties. "Bhikṣa, "beggar," describes rather the common characteristic of the class. In the Pali form of bhikkhu it has become the usual term for the Buddhist monk; Hindũ n-šage ordinarily gives the preference to other names. All monks depend for their livelihood solely upon the charitable gifts of the laity. The daily round with the begging-bowl for dānas is fed at the door of the Hindu householder is never made in vain, and the flow of Indian charity and

1 The abb toment of a monastery in the Pandhāra made complaint to J. C. O'Connor of the crowd of idle and worthless saṅghikas who encumbered themselves upon him and took advantage of his hospitality (Myths, Aesopics, and Saints of India, p. 201).
hospitability to ascetics is unstinted. The red- or yellow-coloured robe of the monk is an unfailing passport to generosity and benevolence all over India. Such generosity accrues to the merit of the monk, but it gives no reflection of the motive of those who receive the alms. Among the latter there are not a few whose robes cover avarice and greed, or perhaps more often mere indolence and a desire to save themselves the trouble of providing for their own wants. But there are also among them sincere men, often of considerable learning, earnest and devoted in their pursuit of the truth.

The Sanskrit law-books contain rules and regulations for the guidance of the ascetic life. The sixth book of Manu is entirely devoted to this subject. Hermits and ascetics are to beg for their food once a day, to be indifferent to their reception, neither vexed at a refusal nor exultant when their bowl is well filled, to restrain their senses and appetites, eating little, and always to be on their guard lest they accidentally destroy life, watching the ground before them as they move, that their feet may not crush any living thing. The same precept is given to the layman and to a monk, but the latter is not to change his residence during Vassa, the season of the rains. Elsewhere it is provided that students, ascetics, and others shall be free from tolls and taxes. They are not to be allowed to belong to the law courts or to the body of the responsible person, being separated from the world, their testimony with regard to its doings would necessarily be unreliable; nor do they inherit property. Penances also are prescribed for those who for successive days go on foot to perform their daily duties. The oversight of the monastery and the responsibility for entertaining itinerant monks or strangers are in the hands of a presiding elder or abbot (maha-bandha). Around him usually is gathered a band of young disciples, who are instructed by him in the Hindu scriptures and render him personal service in accordance with ancient immemorial custom. There is, however, no definite or fixed hierarchy or gradation of office. The inmates of the monastery are free to come or go at their own will, and neither their movements nor their actions are in any way controlled. They must wear the monastic garb, observe the vow of poverty, and depend entirely upon the bounty of others for their daily sustenance. Beyond these simple conditions they do as they please. The actual possessions which the monk of any sect carries with him vary to a slight degree with the sect to which he belongs. The essentials are a staff, a water-pot, and a bed or mat. There are usually added a staff, water-pot, and rosary, a strainer, a pair of sandals, the materials for smoking and betel-chewing, and perhaps one or more vessels for carrying or cooking food.

The vows (soto) which the ascetic or monk undertakes to observe are fixed in number: avoiding harm to any living creature, truthfulness, abstemiousness from theft, self-restraint, and liberality (Skr. aksita, asteya, astaga, brahmacharya, tyaga). These have been altered, with the exception of the last, in the Jain and Buddhist systems. There are also five lesser vows: equanimity of mind, obedience to the guru, gentleness, cleanliness, and purity in eating. The third is explained as having reference to the danger to living beings involved.

The Siksasasutra, the Alahaviraj, and the Khad. C.'s law-books provide for the several classes of monks, and for ascetics. As a rule, monks have split their hair, or worn it in a topknot, and have adhered to one of the four branches of the Buddhist sect. But the Vaisnavites allow themselves greater liberty and seldom, if ever, inflict upon themselves the prolonged bodily torments by which the ascetics seek to gain notoriety or accumulate merit. In all the monasteries the chief Hindu festivals are observed with religious rites and free entertainment for visitors, and the introduction or appointment of a new abbot is attended with much ceremony. Of the routine details of the ordinary monastic life, however, little is considered interesting.

The Siksas also have monasteries of their own and religious orders. The three principal are those of the Akalins, Nirmalins, and Udains (q.v.). They vary in both their dress and manner of wearing the hair, some being shaven and others displaying the loose dishevelled locks of the typical sadhu. In one instance at least in a monastery visited by J. C. Oman the mahant wore robes differing from those of the ordinary monk—white long-sleeved shift without any bodice or breast colours. The chief and largest monastery is at Amritsar (q.v.) near the Golden Temple, built of brick in two storeys and with two open courts, belonging to the Udains sect. The other sects also possess monasteries of considerable size. In all a large part of the religious worship consists in the reading of the Gaukas (q.v.), and sometimes of other Hindu sacred books.

Except at the seasons of the great festivals the monks are assiduous in their monastic round of duties: they carry on their secular occupations, on these occasions they are thronged with monks and others who have come to join in the feasting and religious ceremonies.

The monastic institutions of the Jains in some respects hold an intermediate position between those of the Hindus and the Buddhists. Their rules and order are more definitely framed than the former, but are less exacting than the Buddhist and allow more freedom to the individual. As in Buddhism also, the existing system or practice of the Brâhman monks or ascetics formed the model on which the founder of the Jain faith ordered his own community. Mahâvira himself is said to have had a following of fourteen or fifteen thousand monks, and nearly as many nuns. Beyond these simple conditions they do as they please. The actual possessions which the monk of any sect carries with him vary to a slight degree with the sect to which he belongs. The essentials are a staff, a water-pot, and a bed or mat. There are usually added a staff, water-pot, and rosary, a strainer, a pair of sandals, the materials for smoking and betel-chewing, and perhaps one or more vessels for carrying or cooking food.

The vows (soto) which the ascetic or monk undertakes to observe are fixed in number: avoiding harm to any living creature, truthfulness, abstemiousness from theft, self-restraint, and liberality (Skr. aksita, asteya, astaga, brahmacharya, tyaga). These have been altered, with the exception of the last, in the Jain and Buddhist systems. There are also five lesser vows: equanimity of mind, obedience to the guru, gentleness, cleanliness, and purity in eating. The third is explained as having reference to the danger to living beings involved.

In rough or hasty conduct. There is considerable difference between the sects in respect of the degree of ascetic self-denial or actual discomfort and pain which they voluntarily endure. Salvite monks are, as a rule, much more given to their character of austerities. The Vaisnavites allow themselves greater liberty and seldom, if ever, inflict upon themselves the prolonged bodily torments by which the others seek to gain notoriety or accumulate merit. In all the monasteries the chief Hindu festivals are observed with religious rites and free entertainment for visitors, and the introduction or appointment of a new abbot is attended with much ceremony. Of the routine details of the ordinary monastic life, however, little is considered interesting.

The Vaisnavites also have monasteries of their own and religious orders. The three principal are those of the Akalins, Nirmalins, and Udains (q.v.). They vary in both their dress and manner of wearing the hair, some being shaven and others displaying the loose dishevelled locks of the typical sadhu. In one instance at least in a monastery visited by J. C. Oman the mahant wore robes differing from those of the ordinary monk—white long-sleeved shift without any bodice or breast colours. The chief and largest monastery is at Amritsar (q.v.) near the Golden Temple, built of brick in two storeys and with two open courts, belonging to the Udains sect. The other sects also possess monasteries of considerable size. In all a large part of the religious worship consists in the reading of the Gaumukh (q.v.), and sometimes of other Hindu sacred books.

Except at the seasons of the great festivals the monks are assiduous in their monastic round of duties: they carry on their secular occupations, on these occasions they are thronged with monks and others who have come to join in the feasting and religious ceremonies.

The monastic institutions of the Jains in some respects hold an intermediate position between those of the Hindus and the Buddhists. Their rules and order are more definitely framed than the former, but are less exacting than the Buddhist and allow more freedom to the individual. As in Buddhism also, the existing system or practice of the Brâhman monks or ascetics formed the model on which the founder of the Jain faith ordered his own community. Mahâvira himself is said to have had a following of fourteen or fifteen thousand monks, and nearly as many nuns. Beyond these simple conditions they do as they please. The actual possessions which the monk of any sect carries with him vary to a slight degree with the sect to which he belongs. The essentials are a staff, a water-pot, and a bed or mat. There are usually added a staff, water-pot, and rosary, a strainer, a pair of sandals, the materials for smoking and betel-chewing, and perhaps one or more vessels for carrying or cooking food.
Initiation (diksha) into the monastic order takes place at the hands of a priest after a year's novitiate. The novice lays aside his lay garments and ornaments, and adopts the robes of a monk. Within the monastery itself three grades or orders are recognized, based upon seniority or the choice of the community, one of an ascetic, of not less than a year's standing, may be elected upadhyaya, and it then becomes part of his duty to give instruction to the younger monks. Further powers of administration and discipline, including the right of concurrent action, are in the hands of the acharya, who is appointed on the ground of seniority, or for recognized knowledge and ability. Confession is usually made to the acharya. For the greater part of the year most of the monks retire from the monastery, which is only during the rainy season and at the principal festival seasons that the monasteries are fully occupied.

MONEY.—Money is the name applied to the instrument devised by man which enables him conveniently to effect exchanges of goods and services. It was a great advance upon barter when an intermediary was adopted by the trafficking parties that provided at the same time a measure of values and a generally acceptable medium of exchange. As man advanced from simple barbarism, he acquired some elementary forms of personal wealth, and the practice of exchanging with others to satisfy his growing diversity of wants would naturally arise; in course of time the advantage of possessing an intermediary which formed a unit of comparison of worth and represented a standard of values would come to be recognized. For this purpose objects of common utility or ornament were early adopted—oxen, cattle, sheep, furs, slaves, shells, nuts, precious stones, and bits of metal are examples of the various substances used as money in different circumstances and stages of civilization. These selected substances illustrate the kinds of wealth that were accumulated as stores of value and used as means of paying tribute and debt. They thus became also a form of what is called 'capital' in modern economies.

Gradually the defects of some of the various substances employed by the monasteries and became apparent in their inconvenient bulk and lack of divisibility for small payments, their perishableness and absence of equality and stability. Thus by degrees the essential attributes of good money emerged; it was found that the precious metals (gold and silver) possessed in an exceptional degree the qualities desirable in a good medium of exchange and as a measure of value. Money should have stability in value; it should be durable, portable, divisible; it should be easily recognizable and capable of being coined. No substances possess and retain all these attributes absolutely, but gold and silver display them in the highest degree; consequently they have been generally adopted for money by civilized nations. The products, variations in their supply create some fluctuations in value, as do also changes in demand which follow on the growth of population and the irregularities of trade. But, on the whole, gold has responded to the specific conditions of a basis for its complex and ever increasing trade and commerce. Standard money has the attribute...
of universal acceptability; it commands confidence that it will be promptly received by others without loss of value. It measures the value of the services of labour; and wages as well as goods are expressed in terms of money, and, when expressed in money, is called their price.

The business of money-changing, of banking and finance, consists largely in the manipulation of money in its various forms and of obligations—debts, credits, loans, etc.—expressed in terms of money. These things are dischargeable either by gold and silver or by documents (notes, cheques, bills, etc.), i.e., by paper money, representative of sums of metallic money and ultimately redeemable in standard currency for present purposes.

The introduction of credit-instruments, as the paper substitutes for gold are called, is an extension of the function of money and a refinement upon the employment of metallic money. It is virtually a kind of return to barter; for, while it diminishes the use of coin, it simplifies exchanges and substitutes for payment in metal a promise on paper; this representative money becomes a valuable commodity and multiplies business by its convenience. Debts are exchanged for credit instruments, substitutes for money that circulate quickly; they become a peculiar currency of promises or claims that do temporary duty, and they are easily transmitted by post; thus they easily facilitate the exchange of metallic money. They imply that these instruments are promises, and they rest in the long run on the recognized metallic basis—gold; therefore an adequate amount of gold must be accumulated and safely stored in order to give stability, confidence, and uniformity, and inspires confidence; the stamped coin carries with it a promise of the amount and value of the gold that it represents, where gold is the accepted standard of value.

The subsidiary coins of silver and bronze are legal tender only within moderate limits, viz., two pounds in silver, and twelve pence in bronze in Great Britain; they are only token coinage, and do not correspond to their intrinsic value in metal, which is large. The value of that other commodities depends ultimately upon the law of supply and demand; the value varies with the amount available for money purposes, for large quantities of the precious metals are absorbed in the arts and as personal ornament.

The quantity theory of money—i.e., that the value varies inversely as the quantity—assumes that all exchanges are made in the standard coin, but the use of paper substitutes, while it does not vitiate the abstract theory, introduces modifications too technical for detailed explanation in an article which is mainly descriptive. The system of substituting paper currency for the standard coin requires for security that such paper shall be convertible into gold on demand. To provide this most essential requisite an adequate cash reserve of gold must be maintained. This is one of the responsible functions of the Bank of England.

The management and control of the reserve are matters too intricate for present discussion. The excessive issue of inconvertible paper—i.e., of notes which cannot be met by gold on demand—has led many countries into great difficulties, and has frequently caused much loss and suffering. Paper money, debased by gold, destroys confidence, raises prices, and produces financial disaster; business is checked, and the injury falls with peculiar severity upon the wage-receiving classes, who find that their wages paid in paper at such times fall greatly in buying power. There is no remedy but the re-statement of the currency on a sound basis. A large number of interesting cases of money reform with the use of money; they are, however, too technical for present consideration, which is restricted to a general account of the nature and services of this useful instrument of civilization.

Mongols

**Literature**

**Mongols. **—1. Ethnology and habitat.—Lake the Amur and the Dravidians (q.v.), the Mongols are a race distinctively Asiatic. They fall into three great divisions—Buriats (q.v.), Western Mongols (Kalmucks), and Eastern Mongols. The habitat of the Kalmucks extends it the Hoang-ho to the Manich (attributed to the Don), and their special centres are Astrakhan and the Caucasus, Zangaria, N.W. Mongolin, Alashan, N. Tibet, and the Chinese province of Koko-nor. The Eastern Mongols inhabit chiefly Mongolia, the northern portion being divided into a number of tribes, such as the Tumets and Chakhars, while the northern section consists of the more homogeneous Khalkas.

The Mongolian type is best represented by the Kalmucks and the Khalkas: 

- **Nearby average stature (in. 63-64); head, sub-brahmcephaline (epiph. ind. on the face, hair, hair, which is black, flexible, and fine in texture; skin of the face and arms is smooth, thin, well developed; skin a pale-yellow or brownish; bones prominent check; black hair, thin straight; nose, Mongoloid; ears, thin, moderately large; mouth, Mongoloid.**

Another peculiar characteristic of this race is the **Mongolian spot**, small dark patches of pigmentation, especially in the periorbital region, frequently observable in infants, but disappearing in early childhood. The **Mongolian spot** is not, however, restricted to the Mongols; it occurs sporadically elsewhere, instances having been noted, e.g., among the modern Indians of Mexico (cf. also Deniker, p. 51).

As a result of migrations, the Mongolian race has spread far beyond its original habitat. It has profoundly affected the Chinese (particularly in the south) and Japanese; in Bengal and Orissa the crossing of Mongolians with Dravidians has given rise to the Meetei tribes of Assam. **Mongoloid** types appear in the Himalaya region and in the Far East.

The chief Asiatic area occupied by non-Buriats
Mongols (Kalmuks, Khalkas, etc.) is bounded on the north by Siberia, on the south by China, on the west by Russian Turkestan, and Chinese Turkistan, and on the east by Manchuria. It forms a high but depressed undulating plateau, roughly 2,500 feet in altitude, hemmed in by an immense double or triple chain of forest-covered mountains, known together as the Mongol and Black Hills and Yenisei. To the north side, and by the Altai range and its offshoots on the other. Although the greater portion is Goldi (a Turkic word), or 'Great (Desert) Expanse,' and is described of rivers sufficiently broad and deep to impede seriously the onward movements of horsemen, there are plenty of salt lakes (only one of which escapes into Russia by a river), innumerable oxes and pasture lands, suitably located sweet-water wells, and even cultivable or forest lands dotted about and available in turn at different seasons of the year to the nomads who know the peculiarities of the country so well. This fact explains how armies of millions can easily move on the simple condition that they possess sufficient cattle, horses, sheep, and camels to drive before or with themselves as food and clothing; nothing else matters, for wood and iron can be picked up by the way at various well-known places, and women will often be carried as knapsacks in loaded carts. This vast rim of mountain range nearly all round constitutes a huge watershed, and on the outer side rivers run into Manchuria, Russia, and Turkestan; but the gravely expanse of Gobi with its parched surface atmosphere the sorrows flowing into the depressed desert portions of Mongolia to dry up or disappear into the sands, so that in many places recourse must be had to rude cisterns or reservoirs, automatically collecting fresh water after showers and heavy snows on the adjoining rivers, the valleys of which have during the past 2,000 years witnessed the successive rise to political prominence of several obscure tribes, bringing the north centre of Mongolia proper into direct water communication with Siberia (i.e. Russia) and N. Manchuria (i.e. China).

2. Civilization and Religion.—Mongol family life has been admirably described in a series of articles written (anonymously) by a Protestant missionary for the Chinese Recorder (a Shanghai publication) in 1875. Immutable property is scarcely conceived of, and the idea of personal property and individual rights is almost equally lacking, except in reference to one's horse and saddle, clothing, and weapons. Every woman—so far as is known—seems to be the absolute equal of her husband—is only a life interest, for all wives (except one's own actual mother) pass over on the death of their temporary possessor, with the felt tent and the stock-pot, to his son, or, failing sons, to brothers, cousins, or uncles. In case of great warlike expeditions, of course, there are temporary aggregations of men, and the modern Mongols, like the Turks and Huns, always have an annual tryst; but as a rule tribes scatter, families scatter, and individuals scatter, so that the yurt, or the felt tent (or ming-ge bo, as the Chinese call it in E. Mongolia), is the sole economical unit. In 1790 the entire Kalmuck nation, four subdivisions, consisted of only 200,000 tents all told, i.e. before they were conquered. In the distance, on the prairie or grassy plain north of the Great Wall, one sees one or more black spots like dung-heaps. These turn out on closer inspection to be long strings of tattered felt tents, arranged to withstand the wind and snow. According to wealth or poverty the interior is hung with hand-some or shabby stuffs, and the exterior is sometimes additionally protected with Chinese oil-paper or reed. Whether such simplicity is the general rule; all luxury is make-shift. If a man has horses and dogs, or even only one horse and one dog, and maybe works for someone else as a herd, he is a poor man; a rich man may have as many as may be, in the old fried and modern times. Camels (all of the two-humped or Bactrian kind), not to mention sheep and goats (never pigs); but, rich or poor, the mode of life is always the same—rough, strong, home-made clothes, harness, and equipment; one place has been brought to contain two kinds of tents, one for the summer and the other for winter. A hospital reception for any traveller, poor or rich; no tables or chairs; and a fixed etiquette as to privacy, precedence, or the right to squat in certain honoured or tabooed places. No one who carefully reads the recently written about the eastern and western nomads from the Shilka to the Volga can doubt that in physique, mode of life, and even in basic language, they are and always in historical times have been practically the same. The religiosity of tribes whose national designations have no deeper significance than that from time to time an eponymous hero or a brilliant family, clan, or branch has succeeded in bringing most other tribes under his or its own name or banner.

With regard to the modern Mongols—especially the Khalkas—who had (some time before the Manchus seized their opportunity of uniting them) divided into four subdivisions, through Lagisians the sorrows of the Mongol nomads passed on to the early 13th century. Even Jenghiz himself, though a mere shamanist, or casual 'idolater,' and, so far as is known, destitute of any religious training, seems to have been by nature a good character incapable of ecclesiastical influences, when not put upon him; and this quite spontaneously, for he sent for and respectfully consulted a humble Chinese Taoist philosopher who travelled all the way from Shan Tung to Samarkand to advise him as to the humanity of his own warlike proceedings.

The religion of the Kalmuks and of the Eastern Mongols is Lamasian (q.v.); the older Mongol religion, however, was shamanism, which is retained by the Burials (q.v.).

3. Present-day Distribution.—When the Chinese Ming dynasty in 1639 sent the Mongol tyrants in Peking back to their steppes, the old division into the Western or right 'wing' and the Eastern or left 'wing'—practically Kalmuk and Khalka—was reverted to, and the habit of the two wings was subdivided into the Djirghon Tunen, or 'Six Myriads.' When the Manchus conquered or conciliated the Chakhars and other inner (Eastern) Mongols in 1628-35 (i.e. before they became emperors of China in 1644 as well as Manchu emperors), they organized all of them except the Chakhars into six chogolgan, or 'leagues,' (translated by the Chinese word mung, 'sworn alliance'). These six leagues, four east (Chih Li) and two west (Shan Si), are again subdivided into 24 aimuks, or 'tribes' (translated by the Chinese word pu; this word aimuk occasionally appears in Chinese jenghizide history as aimuk, and in Chinese Manchu history occasionally as aimuk). 1

1 See E. Breuschneider, Travels of the Taedz Ching Chum, Chinese Recorder, v. (1874) 175-199, vi. (1875) 1-22; also Traces of Christianity in Mongolia in the 12th century, by the archbishopric Pothloung, ib. vi. (1875) 104-114.

2 W. F. Mays, The Chinese Government, Shanghai, 1878, suggests that, in so doing, the Manchus were continuing the principle of the Six Myriads, and (pending the conquest at a later date of the Khalkas and Kalmuks) were applying it to the Inner Mongols along the Great Wall.
This is not the place to introduce a discussion on language or a long list of native Mongol tribal names; but it may be mentioned as specially significant that the Khartsein tribe of the Chosotu league are the absolutely direct descendants of Jenghiz. The Talen, or their partisans, are the ancestors of the Inner Mongols. The governing centre is popularly known as Chakhar, a word derived from the leading tribe, called during the Ming dynasty Chakhar, or Chakhan-t. There are also the Mongols of Kokonor, descendants of a collateral branch of Jenghiz's family, with whom have been associated a number of Kalmuck tribes from the west; they also inter-married with the Manchus, but were not entitled, like the Inner Mongols, to style themselves 'monists;' these two main divisions, there being the Tumet tribes of N. Shan Shi, the Barga, the Urianghai, the Mingad, the Jakkhan, and other old remnants mostly of Kalmuck type, which for convenience are ranked among the herdsman, and with them the administration of one of the other of the Manchus (now Chinese) tutsung, or military governors, from Uliassutai in the west to Jehol in the east.1

The Outer Mongols mainly consist of two races—the Kalmyk and the Tung, among whom there were prolonged and bloody wars until the Manchus (after having subdued the Inner Mongols and China itself) reduced both to complete subjection. Even after the ejection of the Jenghizide dynasty from China, when both classes of Mongols were thrust back upon their deserts, they frequently crossed the desert and fought incessantly between themselves, besides, separately or in union, making raids upon the Ming empire. The Khalkha area is easily recognizable on any map because the four (originally three) tribes or khanates into which they are divided are usually plainly marked as the Tushet, Teset, Jassakt, and Snowmen khanates; the last-named was carved out of the first, during the Ming dynasty, by the Dalai Lama of Tibet as a reward for services rendered to the Yellow-lords at the expense of the Red. These four Khalkha tribes, or khanates, were again subdivided into over 49 flags, or banners, and this array was complicated by some of the banners having been incorporated with the Inner Mongols, whilst, on the other hand, three Kalmyk banners were incorporated with the Khalkhas. The other two of the four Khalkha khanates used to fall under the high political influence of the Mongol khutuktu, or saint, at Urga, who had a Manchus resident to keep things right. A certain proportion of the Kalmyk race was moved to the neighbourhood of Lake Kokonor after the Manchus conquest of 1723-54, and it there falls under the control of the Chinese military governor at Sining. These Mongol tribes are divided among themselves; the Kalmyks have their own local saints both in the west and at Kokonor, but the Khalkhas, though Kalmuk, are almost heretical enemies. Nor can the Khalkhas easily coalesce with the 49 flags or 24 tribes of Inner Mongols. The latter represent the true historical Tata, as

3 See Parker, 'Manchu Relations with Mongola,' 'Campaigns against the Khalkhas and Oelien,' and other papers on this subject, in the 'Journal of the Asiatic Society,' v. [1856-57], xvi. [1858-59]; also a paper on 'Kalmuck organization,' ob. xixii. [1859-60].

1 The immediate descendants of the Jenghizides were officially styled by the Ming dynasty; after nearly 200 years of warfare with China they joined the Manchus honourably and nearly as equals, for they were never conquered, as the Khalkhas and Kalmyks were. They have always been kindly treated by and have inter-married with the Manchus, some of whose emperors have married pure Mongol women, recognizing them as legitimate empresses of China. When the Republie was first declared in 1912, there was some talk of the Inner Mongols from a racial point of view joining their countrymen, the Khalkhas, under the united rule of the rebellious khutuktu at Urga, but this uprising was averted by the moral delinquencies of the khutuktu, the political acumen of President Yuan, and the lack of sympathy between the pure outer nomads and their own hereditary brethren, who are now by long habit more or less impregnated with Chinese civilization, political privilege, and economic luxury.

MONISM.—I. The term.—The term 'monism' was coined by Christian Wolff (1670-1754), and was used by him to denote the philosophical theories which recognized only a single kind of reality, whether physical or psychical, so that he could apply the name 'monists' equally well to the materialists and to the so-called idealists of his age. It is easy to understand why the word in this artificial sense should never come into general use, and in fact it is only used technically by a limited coterie of individual thinkers of the 18th century. In the 19th cent. the term 'monism' came to be used by the disciples of Hegel as designating their own peculiar mode of thought; thus, e.g., K. F. Goeschel, 'In Partem Alteram, De Monismos,' 'Der Monismus der Gegenwart' ('The Monism of Thought'). In this sense too, however, the term had but a limited usage. In point of fact, it first found a place in current speech as the designation of a philosophical movement closely related to the modern theory of biological evolution, and it was, in particular, the biologist Haeckel and the philo-
logist Schleicher who brought the word into general currency. In Germany the philosophical movement referred to has found concrete expression in a 'monistic society' (Monistenbund), which has drawn to itself a considerable number of adherents. Nevertheless, certain other applications of the term still maintain their ground. In especial, the name 'monism' is given to the philosophical theory which, instead of subordinating the soul to the body, and the body to the spirit, is assumed to be the equivalent aspects of a single fundamental process, and on this ground constantly refers each to the other. Of monism in this sense Spinoza is generally regarded as the leading exponent. Finally, however, the term 'monism' may have meaning. In its attempt to apply it to every mode of thought which seeks to transcend the distinction between the physical and the psychical, and to reach an ultimate unity. The fact that these various significations are often mingled together in common usage has led to great confusion and much unfortunate controversy.

2. Monism as expressing an inherent need of the mind.—In its widest sense monism is the expression of a demand which no philosophy and no religion can ever in the last resort refuse to the human mind at length refuses to allow the real to fall apart into the irreconcilable opposites of body and soul, of nature and spirit; and every system of thought must ultimately arrive at some kind of and in the sense Christianity itself is a realism—a spiritual monism—since it traces all reality to the divine Spirit. In the philosophical realm, however, monism usually stands for the Spinozistic view, which recognizes an exact correspondence between extension and thought, the visible and the invisible, finds the same laws and forces to work in each, and interprets the order and connexion of thought as identical with the order and connexion of things (Spinoza, Eth. ii. prop. 7: 'omnia et conexio idearum idem est ac ordo et connexion rerum'). This view has the advantage of providing a solution of the simplest kind for a problem which cost Spinoza's predecessors much trouble—the problem, namely, of the interaction of soul and body; for, on this theory, according to which the two series of facts proceed side by side quite independently, and yet remain ever in mutual harmony, there is no interaction at all, the specific data of each and every thing are the relations of that series alone. Modern psychology, in following up this theory, has propounded the doctrine of 'psychophysical parallelism,' and strives to apply the doctrine to mental and bodily processes in detail. Its whole undertaking permits each aspect to develop its own distinctive character, without severing it or keeping it apart from the other, it has proved remarkably attractive to the human mind.

3. Its tendency to one-sidedness.—Its power of attraction, however, lasts only as long as we keep to the general outlines of the problem, and every attempt to give the idea a more precise application encounters great difficulties, and results in giving the predominance to one side or the other, either the physical becomes predominant, and the psychical a mere reflexion or concomitant of it, or else the psychical is assigned the superior position and the physical becomes simply its outward expression or a means to its ends. Thus monism inevitably breaks up into two forms—an idealistic and a naturalistic—and there never has been, nor can there ever be, a pure monism, i.e., a monism maintaining a perfect equilbause between body and spirit, the body to the soul and spirit, and vice versa, as found in Spinoza himself; a closer scrutiny of his thought shows that he is never purely monistic, but always leans more either to naturalism or to idealism—the former in the groundwork, the latter in the consummation, of his system, as appears more especially in his Ethics. In the beginning of that work the supreme factor, the core of the real, is nature, whi; psychical life is a mere representation of theunity of adherence of the soul to the body; at the close, however, this naturalism is transmuted into an idealism, for Spinoza's doctrine that all reality is supported and integrated by a divine life, and that nature only moulis that life into visible forms, as well as the doctrine that man is capable of assimilating the whole universe, and of attaining infinity and eternity by the intellectual love of God ('amor dei intellectualis'), cannot be called anything but idealism. Whatever Spinoza once was and may have meaning, we might apply to it every mode of thought which seeks to transcend the distinction between the physical and the psychical, and to reach an ultimate unity. The fact that these various significations are often mingled together in common usage has led to great confusion and much unfortunate controversy.

(a) Idealistic monism.—The classical period of German literature was dominated by an idealistic monism, and, in particular, Goethe gave his full adherence to the view. In the philosophy of the period, this type of idealism found powerful support in Schelling's philosophy of identity. Yet, while in art and philosophical thought the outer and inner worlds were made closely dependent upon each other and were firmly interlinked, they were not regarded as of co-ordinate authority; on the contrary, the universe a real man was pervaded by an inner life, and the union of the visible and the invisible world is brought about upon the basis of the spirit. It was, however, strongly insisted upon that the inward life cannot come to its own, or realize itself in any way embodying and taking perceptible form in the external. Here we have the genesis of an aesthetic and philosophical monism of the idealistic type, and it has often suggested that the latter is a direct outcome of the former.

(b) Naturalistic monism.—On the other hand, the monism frequently associated with the modern theory of evolution exhibits a naturalistic tendency. It regards the physical world as the essential substance of the real, and differs from materialism only in the circumstance that it conceives the psychical, not as derived from physical processes, but as present from the first even in the most minute elements of the material world, and as forming an integral part of it. Even so, however, the psychical is not thought of as attaining to independence and spontaneity; it has no powers or laws peculiarly its own, but is in every respect subordinate to, and wholly interwoven with, external natural forces. From this theory, human life endowed with any special significance or accorded any distinctive vocation. It is true that this naturalistic monism, in its theory of practical life, recognizes the ideal ends of the Good, the True, and the Beautiful, and undertakes the task of furthering them. But it can do so only by contravening its own naturalistic principles, and thus it comes to exhibit the fatal inconsequence of theoretically recognizing unity as its supreme aim while having to transgress laws to which it is bound to acquiesce. To render a pure reason here to be otherwise so often sadly ignored, has come to mean more and more for the modern mind. Not only does she reveal ever more fully the delicate texture of her being, but in yielding herself to the practical arts she has added a precious and happy element to the environment. The importance of the material factor for human well-being is much more widely recognized in modern civilization than was once the case. The result of these various developments is that
MONOLATRY AND HENOTHEISM

Nature now exercises a much more profound influence upon our thoughts and convictions than she formerly did. This does not, of course, lead necessarily to a naturalistic philosophy, nor was there any great danger of such an issue as long as the great beliefs were submerged among human beings and dominated their common efforts. But such spiritual ends have been, if not entirely lost sight of, yet largely obscured, in the development of modern life; with regard to the ultimate questions of existence mankind is now in a state of grave disunion, and common effort has given place to widely divergent tendencies. Amid so much diversity regarding the content of the spiritual life, the longing for a single all-embracing theory of things is never felt more keenly than in the path of naturalism, which probes what seems to be the simplest and most intelligible solution of the great problem. In reality, therefore, it is the defects of the opposite view that here lend strength to monism.

Another factor which—in Germany at least—operates in favour of naturalistic monism is found in the perplexities that have emerged in the province of religion and the Church. That religion at the present day bristles with problems, and that the adherents of the Churches, as well as the adherents of them, are facts that cannot be denied even by those for whom religion is a supreme interest. In Germany, however, the situation is greatly aggravated by the intimate relations between Church and State. In this circle the doctrines of religion readily come to be felt as a restraint imposed by the State upon thought; and, where large numbers are already alienated from religion, or in dubiety regarding it, there is a natural tendency to break away from any movements that set forth with perfect candour the conflict of ideals, especially the conflict between natural science and the teaching of the Church, and seek to bring it to a decisive settlement. From this position the monist may regard himself as a champion of freedom and truth.

4. Its function and limitations.—When we have in this way explained the spread of naturalistic monism, we have at the same time shown its limitations. It possesses a certain power and has also a degree of rightful authority as long as it maintains a critical attitude and provides incentives to special tendencies of thought; and this condition is fulfilled when it insists upon a higher religious, cultural factor in human life, and demands that the assumed results of modern science shall not be ignored by those who speak in the name of religion. Its weakness, again, shows itself in the positive aspect of its work, and in its claim to lend a hand to human life and to satisfy the human soul. For such ends it has, in truth, nothing to offer but an intellectual interpretation of things—an interpretation which purports, by improving our conceptions of nature and by showing that man forms part of nature, to be able to supply the human heart with powerful ideas of happiness. But between ends and means, between claim and achievement, there is a wide disparity. The scientific procedure of monism, moreover, suffers from the defect of confusing natural science with the philosophy of nature, and of too readily trans-forming the results of natural science into principles of the cosmos, while giving no recognition at all to the peculiar character of spiritual life or the process of universal history. But, whatever the shortcomings of modern monism, it is certainly a notable feature in the history of the present day.

MONKEY.—See ANIMALS.

MONOLATRY AND HENOTHEISM.—A whole group of words, some of them classical, are compounded with μονο- as a prefix. Ecclesiastical usage added not a few others—e.g., 'monomagia,' a marriage only once; re-monogamia after the death of one's wife being forbidden, 'Monoplystes,' 'Monotheletes.' To these was added, in modern times, 'henotheism' (q.v.); this term was touched with ambiguity, since it was sometimes a synonym for unitarianism. Last of all, apparently by Julius Wellhausen, 1 'monotoly' was coined to express not belief in the sole existence of one god, but restriction of worship to one object of trust and loyalty, although other races might admittedly have a multiplicity.

If the first half of the word shows it to be akin to monothelmia, its affinities on the other side are with idolatry (see IMAGES AND IDOLS). Christian usage, from the Bible downwards, vacillates between interpreting idolatry as an all-inclusive worship and as worship of 'false' gods in the sense of non-existent beings. In the Roman Catholic Church the distinction is made between latria, worship paid only to the Persons of the Trinity, and dulia, veneration of the saints (Virgin receives not latria, but hyperdulia). Both in the Roman and in the Greek Churches adoration (προσκύνης) or dulia is rendered to images or icons of the Divine Persons and saints, as well as to the Gospels, relics, etc. (cf. Denzinger's nos. 302, 307, 312, 853 f.).

Unhappily, there is another term which habitually presents itself as a synonym for monolatry and as a rival—henotheism. This word was coined by F. Max Müller while under the influence of Schelling. In a review of Renan's Schelling, entitled 'Semitic Monotheism,' and contributed to the Times in 1860 (reprinted in Chips from a German Workshop, i. [1867], and again in Selected Essays, ii. [1881]), Müller while repudiating Renan's theory of religious history as in accordance with the Semites, finds at the basis of all religion a crude or vague faith in the divine, not yet articulated either into polytheism or into monolatry, and calls this 'henotheism.' As thus defined on its first emergence, henotheism is a hypothetical construction, belonging to a period earlier than recorded history. E. von Hartmann is fairly in line with this when he speaks of henotheism as 'the original nature-religion;' as the 'indifference of mono-, poly-, and henotheism;' as the 'identity of essence of all the gods.'

Much greater importance, however, attaches to Müller's later usage, introduced in a 'Lecture on the Vedas' of 1863 (also reprinted in Chips, i., and Essays, ii.). Here we have a pair of synonymous terms—'henotheism' and 'kathenotheism'—which refer to a well-marked historical phenomenon. Study of the Vedas has impressed Max Müller with the way in which each deity, out of a large recognition of his pantheon, is treated in turn as if the supreme or even the sole god. While Indian religion offers the classical illustration of

1 T. H. Huxley (Nineteenth Cent., vi. [1860] 495) is quoted by E. von Hartmann, 'Semitismus und Monotheismus,' in OED, 1898, p. 273: 'natural—Semitismus monotheismus.'

this attitude, it recurs elsewhere. Max Müller recognizes it in Greece, Italy, and Germany (III. 1878, London, 1879, p. 236), as well as in Finland (Contributions to Science of Mythology, London, 1883, p. 47). Both there speak of ‘heathenism or kathenothism’ (III. p. 271), ‘kathenothism or by a shortened name henothem’, (Contributions to Science of Mythology, p. 140).

When P. Asmus describes the whole of ‘Indo-Germanic’ religion as heathenistic, because of the alleged tendency of all its divinities to pass into each other, he is inspired by Max Müller's second usage, though he distorts it.

It may seem to us that Müller has himself become a certain confusion. But the worst confusion of all is introduced by Pleiderer (loc. cit.), without regard to either of Müller's definitions, and in conscious opposition to Hartmann and Asmus. He recognizes—distinctively among the Semites—not, of course, a monotheist instinct, but a ‘national or relative monotheism which in the case of Israel was the porch to pure monothemism’ (iii. 34 n.) and this he calls heathenism. We cannot wonder if high authorities have proposed to suppress the Hebrew ‘heathenism’ because of its ambiguity (e.g., J. Estlin Carpenter, in ER 1885, III. 22); H. Oldenberg, Bel. des Veda, Berlin, 1894, p. 11, note 1; E. W. Hopkins, ‘Heathenism in the Rig Veda’, in Classical Studies, in Honor of H. L. Satterlee, New York, 1894, pp. 75-82, Beliefs and Attitudes in India, Boston, 1895, p. 120; A. A. Macdonell, Vedic Mythology, Strassburg, 1897, p. 16, with references to earlier literature).

Kathenothism is interpreted by Carpenter as already extinct. The word is cited by J. L. Rymer (P.T.S. 1864), but it has certainly found little favour.

One might have wished to see ‘kathenothism’ and ‘monolatry’ spared, as names for two very different approaches to monotheism, while the word ‘heathenism’ might either be wholly suppressed or else generalized to include both kathenothism and monolatry, together with any other workings of monotheistic tenacity that fall short of monotheism properly so-called. There is much significance for theists in irrepressible movements towards recognition of one great, one supreme power, one sovereign goodness.

Allan蒙roes distinction (Hist. of Religion, London, 1911, ch. 6, p. 57) has been good in directing our attention to the meaning of the word ‘heathenism (and thus to the phenomena of monotheism). But any suggestion that this distinction is Max Müller's own must be rejected. Cf. the discussion in my Physical Religion, Glasgow Gifford Lecture of 1900, p. 151 n.: ‘It is to be regretted that other scholars have used the word heathenism in a different sense from that which I assigned to it. Nothing can cause so much confusion as the equivocal use of a technical term [but in the case of heathenism there is no technical term] and the newer term has generally had the right of defining it.’

The classical region of monolatry is the religion of Israel, whose phenomena, as we saw, probably suggested the name. The First Commandment (of the greater Decalogue, Ex 20 or Dt 5) crystallizes the requirement and carries it into the moral region. Kindred Western Semitic races—possibly other races too—may have known something similar, their gods lower under heaven or in the depths of the earth, but the frame of the law that was general has generally had the right of defining it.

For a time Christian theology was in danger of surrendering to this illogical logic, as was the case, e.g., when it undertook the task of converting to monotheism in order to terms with the Antiochenes (see art. ANTIOCHENE THEOLOGY, vol. i. p. 584 ff.). The Christological interest of the Antiochenes, in contradistinction to that of the Apollinarians, culminated in the view that a monotheism in Christ was retained along with perfect deity in Christ. These theologians, accordingly, spoke of two natures (διὰ
MONOPHYSITISM

In the one Christ—since for their conceptions, two, 

and 

was the monophysites were 

the unity of His person. Their leading opponent, 

CyriI of Alexandria, was supremely concerned 

maintain this unity, but he did it only by leaving 

out of account every element of human personal-

ity. At Antioch, and later at 

Cyril, we must assume that two natures, the divine and the 

human, existed in Christ before He became man, and 

that at His becoming man these two natures 

were faced together in an indissoluble unity (συν-

οικοποιημα 

θων 

λογων 

συνεκπρεπουν: he borrowed it from the professional work of 

Apollinarian — the θεια 

συνεκπρισεσσα 

των 

θων 

λογων 

( 

EHR 

i, 608), of which it is true, he 

believed that Athanasius was the author. We 

can see how closely he approaches Apollinarian 

at this point. The Alexandrian, nevertheless, did 

not proceed to the conclusions drawn by the 

Laodicen, who rejected the view that the Saviour 

had assumed a complete humanity and a ψηφι 

λογος. 

To Cyril the formula remained a religious 

possibility, but he used all the artificial logic to 

give it also a theological validity. Here 

he takes φιλα 

simply as a κατοι — the divine, 

human nature, however, is something new in 

relation both to the divine nature and to human 

nature, and the properties of the one, the 

sovereign majesty and possibility respectively, may be 

in mutual communication in Christ without forcing 

us to assume that there is any blending of them. In 

this way, accordingly, two natures go to form 

το 

θεο-θανατον 

ανθρωπον 

and, although 

in the course of the proceedings he further modified 

his statements, he was condemned on the ground 

that he definitely did not only failed to compose perturbed minds, but 

also fanned the latent elements of controversy 

into flame. In this controversy the disputants, 

moving on the lines of Cyril (and Apollinarian), 

were back to the Boylean, "aionphi'os; but, how-

ever, they spoke, not of the one incarnate nature 

of the divine word, but of the one nature of the 

incarnate word (σωματωματος, not σωματωματος), 

and the meaning to indicate decisively that the 

point involved was not in humanos νομος μετα τη 

σωματωματος. 

We now proceed to trace the history of this 

Monophysitism properly so called.

2. The Council of Chalcedon and its results.— 

After Cyril's death in 444 the episcopal throne of 

Alexandria was occupied by Dioscorus, a man 

of theological learning and possessed with a more daring ambition than even his pre-

decessor. His great aim was to secure the supremacy 

of Alexandria, and the Alexandrian theology, 

in the Eastern Church, and, as long as he had 

the ear of the emperor, and Rome did not 

deny his claims, he seemed to be on the fair way to 

attain his end. At his instigation Theodosius ii. 

summoned a general Synod to meet in 

Epheusc in 449 (shortly afterward, the 

Guscinian, 

ανθρωποκαιρος, 'the Robber Synod'). 

Here, with the assistance of the civil power, and 

the physical violence of fanatical Egyptian monks, 

he succeeded in giving full effect to his claims; 

and, while Eutyches, who enjoyed the protection 

of Dioscorus, was restored to the communion of 

the Church, Flavian of Constantinople, 

Domnus of Antioch, and Theodoret of Cyrus were 

deposed. The triumph of Dioscorus, however, was 

but short-lived, for not only did he dam the stream by 

his ruthless dealings, but he committed the blunder of 

irritating Leo by refusing, in spite of the 

protest of the Roman legate, to have the 

Epistula ad 

Flavianum read at the Council. The result was a 

swift revolting of the emperor; Leo, on 28th July 

450, and his sister Pulcheria, the moving spirit of 

the administration, had even before his death come 

to recognize that the transference of the ecclesi-

astical centre of gravity from the capital to 

Alexandria, and the consequent loss of the Church from political control, might be attended 

with the gravest consequences. As empress, with 

the acquiescence of her husband, the military com-

mander Marcian, who was little interested in 

ecclesiastical or doctrinal affairs, she actively pro-

called nauta (substantia) found an equivalent 

expression in φιλα, and person could be rendered 

by εσωστασια. If to endow the 

human nature (substantia) and in us 

person (σωματωματος) person person in us
nominated a plan of co-operating with Leo to put an end to the theological dispute at a great assembly of the Church and thus to restore the ecclesiastical balance in the East.

To attain this desirable end was the task of the fifth Ecumenical Council, held in 451 at Chalcedon in the vicinity of Byzantium. The deposition of Dioscorus, as it could quite well be justified on grounds of his having been friendly to the Nestorians, was effected without difficulty. The demand that Leo's doctrinal letter should be accorded the authority of a symbol, however, was resisted with the utmost tenacity by a majority of the members. After protracted dis-

The formula, which was carried on Nov. 22nd 451, starts from a recognition of the Councils of Nicea (325), Constantinople (381), and Ephesus (431), and reproduces the Nicene and the so-called Niceno-Constantinopolitan creed; it then affirms that Cyril's letters to Nestorius and the Orientals, as well as Leo's Epistle to Flavian, have been adopted as attestations of the true faith. It next proceeds to the confession of belief in Jesus Christ as perfect God and perfect man, consubstantial with the Father, Father and Son being one God and co-
stant with us according to His humanity, in two natures (εν δύo φθονοιστέ, not εικόνιον φθονοιστέ as in portions of the literary tradition), without confusion or change, without division or separation (ἀνατριχία τοιαύτην, τοίον τε και μην διαφοράν τοιαύτην). The confession ends with a statement already quoted from Leo's letter, now rendered as follows:

της των φθονοιστών ἀνατριχίαν διὰ την ενμοιχίαν, συζευγμένη μὲν τῇ ἑκάτερον εἰκόναν φθονοιστέ καὶ εἰκόνιον εἰκόνιον καὶ μην ἕξοδον ἐπεμελέσιν τοιαύτην.

A decree, promulgated (7th Feb. 452) by the two emperors Marcian and Valentine III, imposed severe penalties upon all who should henceforth dispute in public regarding the faith; offending clergy and army officers should be deprived respectively of their priestly and military status, and others proceeded against by law. Dioscorus was exiled to Gangra in Paphlagonia, where he died in 454.

The acts of the Council were not long in manifesting themselves. In Palestine an active revolt broke out among the monks. Juvenal, bishop of Jerusalem, who had become prominent at Ephesus (449) as an energetic partisan of Dios-
coros at Chalcedon, deserted the patriarch and his protegé Eutyches, and accepted the formula, taking part, indeed, in its final revision. By this defection he lost the confidence of a large and influential body of monks in Palestine, who elected the monk Theodosius as bishop in opposition to him. The spiritual leader of the ins-
surgents was Peter the Iberian, monk and bishop of Mygma, in the province of Gangra. The rebellious monks found a patroness of high rank in the empress-dowager Eudocia, then resident in Jeru-

In fact, it is told of one of these fanatics that, when Leo's Epistle was brought to him, it took to the letter of the Father to His son; he should accept it or not, and that a voice cried from the tomb:

*Cursed be the ungodly Leo, robber of souls, as his name signifies; cursed be his profane monk (Monomachus), cursed also be Marcian and the ungodly Pachylas; cursed be Chalcedon and its Symbol and all who yield acceptance to it; cursed be he who subscribes to Nestorian, or who is in Christ, the Son of God, after not the union* (G. Renaudot, Hist. patriarcharum Alexandrinorum Jacobitana, Paris, 1715, p. 129).

This wild outburst of hate expresses most appropriately the state of feeling then prevalent in Palestine.

By A.D. 453, however, the movement was suppressed for the time by military measures.

In Egypt the situation was still more troublesome. A certain Proterinus was appointed by the government upon the Alexandrines as bishop in place of Dioscorus. On the accession of the emperor Leo I. (457-474), the presbyter Timotheus Aelurus (i.e. 'the Weasel'), who had been on friendly terms with Monophysites, was raised to the episcopal throne by methods of sheer violence. At Easter, 457, Proterinus was murdered by the populace in the baptism of the cathedral church, while Time-

This was a reflection of the division of Diptychs, and pronounced the anathema upon Chalcedon ('the Synod,' as it now comes to be called in the sources). Timotheus held his position until 460, when, after fierce conflicts, he was driven from Alexandria and banished to Gangra; he was subsequently sent to

The patriarchate of Antioch was likewise kept in a state of unrest by long protracted dissensions. Here the presbyter Petrus Fullo ('the Fuller'), who in no long time supplanted Bishop Martyrius, was deposed in 460 by a sentence of the Council, and contended for the doctrine that God had been crucified (ὁ θεὸς ἐκταγμένης). To the liturgy he added the singing of the Trisagion (Is 6, 4) supplemented by the phrase θατρεῖται ἡ ὡρα; and he also introduced (ἀρετικός) the Mass, probably with a view to emphasizing his opposition to the Chalcedonian formula, as also, however, to Eutychianism. But his tenure of the see did not last long, for in 471 the emperor Leo ordered him to be deposed. The imperial govern-

On the one hand, it was a matter of urgency to preserve unity between East and West, between Byzantium and Rome, and this could be done only if there was no defection from the lines marked out at Chalcedon; on the other, those in the East whose dissatisfaction and resentment were due to the Council had to be restrained, pacified, and, if possible, reconciled to what had been done. The emperors Zeno (474-491) and Anastasius (491-498) exerted all their energies to establish ecclesiastical equilibrium in the East, but they failed altogether in the task of maintaining peace with Rome at the same time. A proceeding of signal importance was the attempt of Zeno (482) to introduce for a new formulaii, the so-called Henoticum, in place of the Chalcedonian symbol. The Henotikon was designed to give expressive emphasis to what was common to all parties, and accordingly it rec-

The emperors Zeno (474-491) and Anastasius (491-498) exerted all their energies to establish ecclesiastical equilibrium in the East, but they failed altogether in the task of maintaining peace with Rome at the same time. A proceeding of signal importance was the attempt of Zeno (482) to introduce for a new formulaii, the so-called Henoticum, in place of the Chalcedonian symbol. The Henotikon was designed to give expressive emphasis to what was common to all parties, and accordingly it rec-
necognized the Councils of Nicea, Constantinople, and Ephesus as witnesses to the faith, disclaimed Nestorius and Eutyches, and condemned every one who "now or ever, at Chalcedon or elsewhere, thought or thinks otherwise. The formulaii express the doctrine of the natures of Christ were adroitly kept in the background, so that every cause of offence might be removed. In spite of it all, however, the project of the emperor failed of complete success whether the true Church should accept it or not, and that a voice cried from the tomb:

Cursed be the ungodly Leo, robber of souls, as his name signifies; cursed be his profane monk (Monomachus), cursed also be Marcian and the ungodly Pachylas; cursed be Chalcedon and its Symbol and all who yield acceptance to it; cursed be he who subscribes to Nestorian, or who is in Christ, the Son of God, after not the union* (G. Renaudot, Hist. patriarcharum Alexandrinorum Jacobitana, Paris, 1715, p. 129).

This wild outburst of hate expresses most appropriately the state of feeling then prevalent in Palestine.
MONOPHYSITISM

monophysitism was an ideology that rejected the dual nature of Christ, which was a major theological conflict in the late Roman Empire. It was opposed by the Council of Chalcedon in 451, which affirmed the dual nature of Christ and is considered by most Christian denominations as the correct doctrine. The monophysites, who adhered to the belief that Christ had only one nature, were persecuted and faced schism in the early Christian church. The term "monophysitism" has been used to describe the beliefs of these early Christian communities that rejected the Chalcedonian formula of two natures in one person for Christ.
divided the one Christ into two ἰδρύματα, since no nature could possibly assert itself (ἐνέργειας) that did not remain self-substantive (ὑποκείμενον); the hypothesis of two φύσεων led to that of two φύσεων, and so to the abjured heresy of Nicae- torius. In conformity with the position of Cyril, and with a mode of expression first met with in the writings of pseudo-Dionysius the Areopagite, viz. ἅπαξ λειτουργία (τιμίως καὶ ἥσσος τιμίως) and ἰδρύματα Ἰησοῦν (Paul Melchiades, Litterae, § 829). Severian took as the basis of his speculations the inherently complete divine nature and person of the Logos. The Logos, in His act of assuming flesh—flesh animated by rationality—becomes flesh and man, as His body was born of an immaculate womb, even as He had been, One, since, in virtue of such an indissoluble union, and without detriment to His inherent character, He transmutes and transfigures the flesh with His own glory and power. The united elements thus form a composite nature and a divine-human hypostasis, and it is to this that all His activities are to be traced.

The thesis that the body of Christ was subject to the laws of nature was deemed of the utmost importance by the Severians and Theodosians, who saw in it an expression of the identity of essence between that body and our own, and were thus able to avoid the heresy of Eutyches. It was precisely in this thesis, however, that Severian and his followers were wrong. It was simply inconceivable that Christ's body had been subject to corruption (φθορά), which has been a characteristic of human nature since the Fall. In order to understand the precise usage of this term in the present connexion, we must note that it did not refer to the φθορά which denotes the complete dissolution of the body into its elements at death; all parties were at one in asserting that Christ's body was not subject to φθορά in that sense, i.e. as decomposition. The question at issue here had to do with the natural infirmities of the human body (ἀρνητικῶς πάθως)—its liability to hunger, thirst, weakness, sweating, weeping, bleeding, and the like. The view of Julian, Philoxenus, and the Gaiantites was that, while Christ certainly hungered and thirsted, it was because He desired, not because He required (οἷς ἄρηγκ φθοράς), to do so—because, in short, nothing would have happened had He been unwilling. But the divine undergirding. He had voluntarily taken upon Himself human pains and needs. He was the Son of man, as man was the Fall, while all other men, though sons of Adam too, were possessed of a body and a nature that were different. The question that had to be answered was, was Christ a human being, or was He only a human being?

We are thus able to understand the heretical designations applied by the warring Monophysite parties to one another. The Julianists or Gaiantites charged their opponents with phatholatry, the worship of the corruptible. These 'plathartolatry-laters,' however, retorted upon their accusers with the epithet 'aphatholodectists' or 'phantasistai,' i.e. those who would change the reality of Christ's human experience into a mere appearance. As a matter of fact, the latter view was quite a natural inference, and many of the extremist besides, although not able to prove it, the most extravagant seems to have been reached by those Gaiantites who maintained that the body of Christ, from the moment of its union with the Logos, should be regarded not only as uncorrupted (ἀκλίμακτος) but also as uncreated (ἀκλίμακτος). These were stigmatized as 'ἀκτίστηται' by their opponents, whom in return they called 'ἀκτίστοκοι, i.e. 'watchers of that which was created.' Divisions arose even among the Severians themselves. The Julianists, a dozen, taking his stand upon such Scripture passages as Mk 13:2 and Jn 11:25, maintained that, as the body of Christ was subject to natural conditions, so its animating spirit could not be regarded as immi- scient. To the adherents of this doctrine their opponents applied the name ἀκτίστοκοι.

4. Justinian and the new orthodoxy.—On 1st August 527 Justinian became sole emperor of Rome. It does not fall to us here to set forth fully his far-reaching ecclesiastical policy in its transforming effect upon all things. The decisive factor in his attitude towards the West was his recognition of Monophysitism. Theodora, his empress, had for years been anxious to take the most stringent measures against the Monophysite heresy, which had caused so much trouble during the pontificate of the pope Gregory I. The Emperor, however, was not willing to risk the war with the Persians by creating a new breach with the Eastern Church. But when he learned that the Persian king was to celebrate a special feast in honor of the Virgin Mary, he determined to take immediate steps to suppress the Monophysites.

This project was so disturbing to the Monophysites, especially as the empress Theodora was working with growing fervor for the rehabilitation of the party with which she sympathized in her devout mood. A few years after Justinian's accession to the throne, accordingly, negotiations were opened with the insurgents, and the most eminent of the bishops deposed in 518—no, however, including Severus—were summoned to a council at Constantinople, where they would be won over at a religious conference. In this conference, on the orthodox side, only such theologians were to take part as unequivocally accepted the thesis that one of the Trinity had suffered in the flesh (ἐν τῷ φύσεως ἀνθρώπου). This Theopaschite formula was manifestly a friendly overture to the Monophysites. But the 'Collatio cum Severiano' (538 or 539), after two days of verbal controversy, came to nothing. On 15th May 535 Justinian issued an enactment in which he once more declared Chalcedon to be a standard of faith to coordinate with the three earlier councils. The negotiations with the Monophysites were, nevertheless, still proceeding, and communications were now opened with Severus as well. Severus, yielding to reiterated pressure, went at length to the capital, where in 535 Anthimus, a protegée of the empress Theodora and a theological partisan of Severus himself, had been raised to the episcopate. But this did not satisfy the emperor, who was not satisfied with the Chalcedonian settlement. In the following year (536) Pope Agapetus was able to influence the emperor that the doctrinally suspect patriarch was superseded by the orthodox Menas. It is nevertheless the case that, during the course of Justinian's fall, the Monophysites firmly maintained their position at the court, while in Syria and Egypt their ecclesiastical power was supreme (cf. § 5).

Justinian himself made zealous efforts to comprehend the points of the doctrinal controversy. His great aim was to reconcile the teaching of Cyril and the Symbol of Chalcedon. In this he found effective support in that most eminent of his theologians, Leontius of Byzantium († 543 as a monk in Palestine), who, in his enunciation of the ἔνθεσις τῆς ἐναρμοστῆς, ἐνθέσιας τῆς ἐνεργείας, κατά Νεώτητας καὶ Εὐθειῶδεστής and other writings, won renown as a prolific author and an able assaulter of the Severian Christology. Theologians of that time were based wholly upon the Aristotelian logic. A novel feature of it, however, was his ingenious application of the idea of the ἐνθέσιας of Christ's human nature as ἐν τῷ φύσεως, so that that nature is not ἐνθέσιας, but ἐνθέσιας. The term 'hypostasism' operated like a spell. It seemed to obviate in the happiest way all the difficulties that beset the doctrine of the God-man. By its means the Chalcedonian Symbol could, without violation of its actual words, be interpreted in the sense of
MONOPHYSITISM

5. The independent Monophysite churches.—

The Monophysites of Syria never ceased to regard the banished Severans as the rightful patriarch of Antioch and declined to recognize the successors of those who were successively appointed to the see by the emperor. The organizer of their church life was Jacob Baradai (i.e. "he with the horse-cloth"),† 578, who, originally a monk in Constantinople, had been ordained, c. 541, bishop of Edessa by Theodosius of Alexandria (cf. § 3), then also resident there; and in consequence the Syrian Monophysites came to be called Jacobites. Baradai, in his long journeys in W. Asia and Egypt, attempted to reconcile the patriarchs, bishops, presbyters, and deacons. The chief representatives of literature in Syria were nearly all Monophysites.

In addition to Severus, Philoxenos, and Julian (cf. § 3), the following writers of the earlier period deserve mention; Jacob of Strum († 621), the author of widely read liturgical homilies, which earned for him the title of "Pute of the Holy Spirit"; Sergius of Reiasa († 536), physician and priest, who translated into Syriac several works of Aristotle and Galen, as also of the polemics of Eusebius and Photius; Jacob of Edessa († 679), equally renowned as theologian, liturgical writer, philosopher, historian, exegete, and grammarian; George, bishop of the nomarchate of Arz, a writer whose letters have come down to us in large numbers. Of the medieval authors one of the most prominent was Eustathius, whose Chronicle forms one of the most important sources of information regarding Monophysites.

In the time when Islam became the dominant power in Syria, the Jacobites decreased in numbers more and more. At the present day there are some 200,000 of them in the Turkish empire, and about 1,000,000 in India—on the Malabar coast and in Ceylon. Their ecclesiastical superior (formerly entitled 'masprin,' now 'katholikos') resides in the monastery of Deir-Safaran, near Mardin. Efforts made by the Jacobites, from the close of the 15th., to effect a union with Rome had a very meagre result. At the present day the Roman Catholic Syrians number about 30,000, and are subject to a patriarch, who takes his title from Antioch, but lives in Mardin.

In Egypt the conflicts between the Severians and the Monophysites of Galatia (cf. § 2) at length captured the unity of Monophysitism, which, nevertheless, became the faith of nearly the whole Coptic population. The patriarch of the orthodox, the Melchites (i.e. "Imperial"), who was also proconsul of the province, laid great stress upon the homage of very few outside the higher official ranks in Alexandria and some of the larger towns. The Monophysite propaganda was carried also to the Nabians and the Abolians. From 616 marauding bands of Persians ravaged the religious stations on the Upper Nile, and it was only after the Arabs, with the hearty good-will of the Copts, took possession of the country that the Monophysite patriarch ventured to leave his place of refuge in the Upper Egyptian desert. During the Middle Ages the condition of the Coptic Church was a fairly prosperous one, but subsequently it was sorely harassed by the repeated attacks of Monophysitism, and it is only within recent times that it has been able to make a fresh advance. The Christian Copts of the present day still maintain their Monophysite creed (see, further, art. COPTIC CHURCH).

Finally, Monophysitism penetrated also to Armenia. The Armenians, while still engaged in battling for their own faith with Parn Mazdeism, were quite unaffected by the dogmatic controversies of the Imperial Church. The expanding propaganda of Monophysitism, however, induced them to adopt the Henoticon of Zeno (cf. § 2). Thereafter they maintained close relations with the Syrian Monophysites, and at the Council of Dvin, in 554, they occupied the more radical position represented by Julian of Halicarnassus. From that time they have remained faithful to Monophysitism, though they subsequently gave their adherence to the more moderate Severian school.

LITERATURE.—I. SOURCES.-(a) Decrees of the Councils, Declarations of Synods, papal briefs.

(b) Historical works and Chronologies.—Zacharias Rhetor (Chronikae Scriptorium Byzantinorum), a work which, written from the Henotic standpoint, a record of ecclesiastical events from the Council of Chalcedon to the death of Zeno (extant only in a Syriac version; see below, under Historiae Miscellaneae); Theodorus Lector, Apographa in the Church of St. Sophia in Constantinople at the beginning of the 6th., written from a position of a historian of the Church from Nestorius to Justin I., which now exists only in fragments; Johannes Malalas, Chronographia, written in Julian's reign; Evagrius, Ecclesiastical History, written after 546 (ed. J. Dieder and L. Parmentier, London, 1899); Theophanes Choniastus, Chronographia, written after 1010 (ed. C. de Boor, Leipzig, 1885-88). Of the Latin chroniclers Liberators, Brevariorum Romanorum Notitiae, is of value. The most important of the Syriac authorities are: Chronicon Edessinum (ed. i. Gnid, in Corpus Scriptorum Christianorum Orientalium, "Chronica Minor," i. Paris, 1905), dating from the middle of the 8th. cent.; Historia Miscellanea, a compilation of the same period by an unknown Monophysite writer, and including the history of Zacharias Rhetor mentioned above (ed. K. Ahrens and G. Krueger, Leipzig, 1899); also, F. J. Hamilton and E. W. Broom, London, 1899; and J. Dieder (L. E. 555), Ecclesiastical History (3rd ed., ed. W. Carleton, Oxford, 1855).

(c) Patriotic, Syrian Rufus of Mayyvana, a collection (c. 315) of the sayings, prophecies, visions, and revelations of various distinguished Monophysites, and especially of Peter the Iberian (ed. E. I. F. G. de Strassburg, Orientalia, Paris, 1911); the biography of Peter the Iberian, probably by the Iohannes Rufus just mentioned, written in Old Syrian (Leipzig, 1899); Vito ciminius apud Monophysitae celebrissimus (ed. E. W. Brooks, in Corpus Script. Christ. Orient., "Scriptores Orientales," xxi. Paris, 1899), the biographies of the Syrian monks Euthymius and Sabas, by Cyril of Scythopolis (after 557), etc.

MONOTHEISM.—In the history of religion, monothelism, the doctrine that 'there is one God,' or that 'God is One,' is somewhat sharply opposed to a very wide range of beliefs and teachings. The contrast, when it appears in the religion of a people, or in the general evolution of religion, tends to have an important bearing both upon religious practices and upon religious experience, since to believe in 'One God' means, in general, to abandon, often with contempt or aversion, many older beliefs, hopes, fears, and customs relating to the 'many gods,' or to the other powers, whose place or dignity the 'One God' tends henceforth to take and to retain. If these 'many' belief, or the older beliefs, which some form of monothelism replaces, had dealt with them, were themselves for the older faiths 'gods,' then the monothelism which is each time in question opposes, and replaces, some such form. This is what happens when Judaism and Muhammadanism replaced older local faiths. If one were satisfied to view the contrast in the light of cases closely resembling these, and these only, then the natural opposition doctrines which as a belief in 'One God' would appear to be, in the history of religion, polytheism as a belief in 'many gods.'

Since, however, there are various religions and many superstitions which recognize the existence of powers, despite their more or less divine character, lack some or all of the features which naturally belong either to God or to gods, and since demons, the spirits of the dead, or magic powers may be in question in such religions, the name 'polytheism' can hardly be quite accurately applied to the whole class of beliefs which are in any important way opposed to monothelism. So, in the history of religion, monothelism has two opponents: (1) polytheism proper, and (2) beliefs that recognize other more or less divine beings besides those that are properly to be called gods.

In the history of philosophy, however, monothelism has a much narrower range of contrasting or opposing beliefs. Polytheism, as an explicit doctrine, has played but a small part in the history of philosophy. To the doctrine 'God is One' or 'There is one God,' where this doctrine forms part of a philosophy, there are opposed opinions which are often classified under three heads: (1) philosophical pantheism, (2) philosophical atheism, (3) philosophical scepticism regarding the divine beings. The modern name 'agnosticism' has been freely used for a philosophical scepticism which especially relates either to God or to other matters of central interest in religion.

Frequently, in summaries of the varieties of philosophical doctrine, the term 'pantheism' has been used as a name for such philosophical doctrines as 'identify the world with God.' Pantheism is often summed up as the doctrine that 'All is God,' 'Everything is God,' or, finally, 'God is everything.' But a more careful study of the philosophical doctrine which have gone under the name of pantheism, or which have been so named by their opponents, would show that the name 'pantheism' is too abstract, too vague in its meaning to make any clear insight easily obtainable regarding what is supposed to constitute the essence of a philosophical pantheism as opposed to a philosophic monothelism. The two propositions (1) 'God is One,' and (2) 'God is identical with all reality,' or 'with the principle upon which all reality depends,' are not, on the face of the matter, mutually contrary propositions. How far, in reference to a given creed, or theology, or religious tradition, the first proposition appears to be contrary to the second depends upon the special interpretation, or upon the special prejudices of critics, sects, or philosophers of a given school.

One who asserts the 'unity of God' may or may not be laying stress upon the fact that he also makes a sharp distinction between the real called God and other realities—e.g., the world. That such sharp distinctions are often in question is an important fact in the history of philosophy. Nevertheless the doctrine that 'God is One' has been philosophically maintained at the same time with the doctrine that 'God is all reality.' For such a view, the two doctrines would simply be two ways of expressing the same centrally important fact. One who wishes to understand the numerous controversies, subtle distinctions, and religious interests which at one time or another have been bound up with the name 'pantheism' must be ready to recognize that the term 'pantheism,' when used without special explanation, is a poor instrument for making clear precisely where the problem lies. In brief, one may say that, while the term 'pantheism' has been freely employed by philosophers, as well as by those who are devoted to practical religion, it is rather a name, or a philosophical name, rather a cause of confusion than an aid to clearness. The proposition, 'God is One,' has, despite the complications of doctrine and of history, a comparatively definite meaning for any one who adheres to its implications and is concerned concerning the nature of God. But the proposition, 'God is all,' or 'God is all reality,' has, in the history of thought, no meaning which can be made clear unless one first grasps all the essential principles of the historical name, rather a cause of confusion than an aid to clearness. Thus, one who wishes to understand theessential meaning of the term 'monothelism' by contrasting the historical forms of monotheism with philosophic doctrines which have been opposed to it, we may attempt to solve the problem of defining what is essential to philosophical monotheism by dwelling upon a contrast which, especially in recent discussion, has been truly emphasized, and which could be asserted, e.g., that in speaking of the nature of the 'One God' who is the essential being of monothelistic belief, either (1) one holds that God is 'immanent' in the world, thus asserting the doctrine of the 'divine immensity,' or (2) one holds to the doctrine of the 'transcendence' of God, thus asserting that the divine being is in some fashion 'transcends' the world which He has created or with which He is contrasted. But here, again, one deals with two doctrines which, in certain philosophical contexts, do not appear to stand in contrary opposition to each other. For, as is well known, there are philosophies which insist that God is in a certain sense 'immanent' in the world, and also in a certain sense 'transcendent' in His relation to the world. Aristotle, in a well-known passage (Met. xii. 10), gave a classic expression of the relations of the doctrines which are here in question, when he stated the question thus: 'the divine being is related to the world as the 'order' is to the army, or as the 'general' is to the army. Aristotle replied by saying that 'in a certain sense God is both the 'order' of the world and the 'general,' although rather the general.' Thus the opposition between divine immensity and divine transcendence does not precisely state the issue and class of issues which one finds play-
point, once more to review the issues with regard to the nature of God, but now from a somewhat different point of view. The problems, both about 'God' and about the personal nature of the divine being, have their origins antedated their philosophy. In a few cases, notably in the case of Greece on the one hand and India on the other, the origin of the philosophical tradition regarding the divine being can be traced back to another religious tendency, while the transition from religion to philosophy is fairly well known, and passes through definite stages. In one other instance, the transition from a tribal religion to a form of monotheism which was not opposed to polytheism, has been traced back to another religious tendency, which deeply influenced the subsequent life of philosophy and which is also decisively well known, and can be traced in its essential details. This is the case of the religion of Israel. Now in the three cases in question — that of India, that of Greece, that of Israel — the rise of a doctrine which is certainly in each case a monotheism can be fairly well understood. The three forms of monotheism which resulted led in the sequel to conflicts of doctrine which, in the case of the history of philosophical thought, have been momentous. Ignoring, then, the complications of early religious history, ignoring also the effort further to define and to classify those doctrines which have marked the history of almost all definitions of monotheism and its opponents which we have just reviewed, it seems well to reconsider the important varieties of philosophical belief regarding the divine being in the light of the great historical contrast of the three forms of monotheism which India, Central Asia, and Israel put before us.

We shall discard the name 'pantheism,' and make no attempt to define the contrast between divine immanence and divine transcendence, or to speak of the problem in what sense God is personal and in what sense impersonal. Nor can we here exhaust the varieties of philosophical opinion. But the threefold contrast just given will help us to make clearer the philosophical issues of monotheism by naming certain varieties of philosophical thought which have both a definite historical origin and a great influence upon the character of opinion about the divine being. Simplifying the whole matter in this somewhat artificial but still well-founded way, we may say that, from the historical point of view, three different views of divine life have been of great importance both for religious life and for philosophical doctrine. One of these three views has been exclusively confined to the nature of which the form of opinion in question is most characteristic. The other two views of philosophical thought the three motives are interwoven. But a comparatively clear distinction can be made if we emphasize the three contrasting doctrines, and then point out that these doctrines, while not exclusively due each to one of the three nations or to philosophies which have grown out of the religious traditions of the nation in question, are, still, on the whole, fairly to be associated, one with the tradition of Israel, the other with the influence of Greece, and the third with the influence either of India or of nations and civilizations which, in this respect, are closely analogous in spirit to the civilization of India.

(1) The monotheism due to the doctrine of monotheism in the religious tradition of Israel defines God as 'the righteous Ruler of the world,' as 'the Doer of justice,' or as the one 'whose law is holy,' or who secures the triumph of the right.' The best phrase to characterize this form of doctrine is, therefore, monotheism for the wide variety of special forms which it has assumed, to indicate its historical origin, and also to imply that it has undergone in the course of history a long process of development, is this: 'the
MONOTHEISM

ethical monotheism of the Prophets of Israel. It is
we include under this phrase that form, or type, or
aspect of monotheism, which characterizes philo-
sophies that have been most strongly influenced,
directly or indirectly, by the religion of Israel.

(2) The monotheism which has its historical ori-
dinarily in and through which it defines God as the
source, or the explanation, or the correlate, or the
order, or the reasonableness of the world. It seems
take this form of Hellenic monotheism. In the his-
tory of philosophy, and especially of that philosophy
which has grown up under the influence of Chris-
tianity, this idea of God has, of course, become interwoven—
sometimes consciously, sometimes unconsciously—
with the ethical monotheism of Israel. But, when
a philosophy of Christian origin is in question,
while in some respects this philosophy, if positively
monotheistic, is almost sure to be strongly influ-
enced by ethical monotheism, the most important and
essential features of the philosophy in question
will be determined by this in which it deals with the
relation between the order of the world and the
nature of the ‘One God.’ Aristotle’s statement of
his own problem regarding whether God is identical
with the world is raonotheism. The beginning of the
world as the ‘general’ is related to the array is a good example
of the form which the problem of monotheism takes
from this point of view.

(3) The third form of monotheism is very wide-
spread, and has actually had most influence histori-
cally. In the history both of religion and of
philosophy this form of monotheism, somewhat
like the Ancient Mariner, ‘passes, like night,
from land to land, and has strange power of
speech.’ Often unorthodox at the time and in the
place where it is influential, it has indirectly played
a large part in the creeds of various times and
places. Usually fond of esoteric statements of
document, and often condemned by common sense as
strange and absurd, it has, at many times,
great popular influence. The official Christian
Church has had great difficulty in defining the
relation of orthodox doctrine to this form of
opinion. In the history of philosophy the three
types of monotheism have formed part of
extremely important systems.

This form of monotheism is especially well
marked in the early history of Hindu speculation.
It is often called ‘Hindu pantheism’; and it is
indicated that it is not directly represented by systems of belief
and doctrine which have grown up on Indian soil.
On the other hand, it has a less exclusive relation
My Indian philosophy than the Hellenic form of mono-
theism, in its later history, has to Greek philosophy,
so that the connection here insisted upon between
this kind of monotheism and the early history of
Hindu philosophy must be interpreted somewhat
liberally. In fact, at the close of the history of
Greek philosophy this third form of monotheism
appeared as a part of the Neo-Platonic philosophy.
Yet in this case an Oriental origin or direct influ-
ence is extremely improbable. Examples of
the tendency of this form of monotheism to take on
new forms, and to be influenced by other motives
than those derived from the religion or philosophy
of India, are to be found in the recent revival
of such types of doctrine in various forms of
’intuitionism’ and ‘anti-intellectualism’ in European
thought.

The essence of this third type of monotheism
is that it tends to insist not only upon the ‘sole
reality of God,’ but upon the ‘unreality of the
world.’ The name ‘monism’ therefore is more
satisfactorily for describing it than the name ‘pantheism.’ It
might be summed up in the proposition ‘God is
real,’ but all else besides God that appears to be real
is but an ‘appearance’ or, if better estimated, is a
‘dream.’ If we attempt to make more precise the
vague word ‘pantheism’ merely by saying, ‘God
and the world are, according to pantheism, but
one,’ the natural question arises, ‘If they are but
one, then which one?’ But what we may mean
will, in a general philosophical basis just indicated, ‘Indie monotheism,’
whether it appears in Hindu philosophy, in Spinoza,
or in Meister Eckhart, tends to assert, ‘The One
is God and God only, and is also precisely because the
definition of the third form of monotheism relieves us of some of the
ambiguities of the term ‘pantheism.’

The threefold distinction now made enables us
similarly to review some of the general features of the
history of philosophical monotheism in a way
which cannot here be stated at length, but which,
even when summarily indicated, tends to elucidate
many points that have usually been uncritically
omitted.

The ethical monotheism of the Prophets of Israel
was not the product of any philosophical thinking.
The intense earnestness of the nation into whose
religious experience it entered kept it alive in the
entire history of philosophy. The beginning of
Christian monotheism depends upon an explicit effort to make
a synthesis of the ethical monotheism of Israel and
the Hellenic form of monotheism. This synthesis
was as attractive as in the course of its develop-
ment, it has proved problematic and difficult.

The reason for the problem of such a synthesis, as the
philosophers have had to face, is due largely to the
success of the ethical monotheism of Israel in
the world. Hellenic monotheism, as we have
seen, is deeply rooted in the historical
and philosophical development of the
world. Hellenic monotheism, therefore, is
understood by its many tendencies. On the other hand, the
monotheism
of Israel was, even in its ante-philosophical form,
a kind of voluntarism. God’s law, viewed as
one term of the antithesis, the task and the rules,
or which He saves or kills as the other, was
more sharply contrasted than Aristotle’s ‘order
and ‘general’ tend to be. When, in the develop-
ment of the philosophies which grew out of the
Greek tradition, the Hellenic concept of the Logos
(‘word’) assumed its most characteristic
intellectual was, on the whole, in favour
of defining the unity of the divine being and
the world as the most essential feature of monotheism.
But, at each stage of this development, this intel-
lectual or rational unity of the Logos and the
world gradually came into sharper and sharper
conflict with that ethical interest which naturally
dwelt upon the contract between the righteous
MONOTHEISM

Ruler and the sinful world, and between divine grace and fallen man.

Therefore, behind many of the conflicts between so-called pantheism in Christian tradition and the doctrines of 'divine transcendence' and 'divine personality,' there lies the conflict between intellectualism and voluntarism, between an interpretation of the world in terms of order and an interpretation of the world in terms of the conflict between good and evil, righteousness and unrighteousness.

Meanwhile, in terms of this antithesis of our first and second types of philosophical monotheism, we can state only half of the problem. Had the monotheism of Israel and the Hellenic doctrine of God as the principle of order been the only powers concerned in these conflicts, the history both of philosophy and of religion would have been, for the Christian world, far simpler than it is. The motives which determine the third idea of God have tended both to enrich and to complicate the situation.

It is true that a direct connexion between ancient Hinduism and early Christian doctrine cannot be traced. But what we have called, for very general reasons, the direct type of idea of God because of the course of time, a part of Christian civilization for very various reasons. As we have seen, the doctrine that God alone is real while the world is illusory depends upon motives which are not confined to the Hellenic period. In the conflict between God and man, we have called 'mysticism,' this view of the divine nature in due time became a factor both in Christian experience and in philosophical interpretation. The Neo-Platonic school furnished some of the principal technical formulations of this view of the divine nature. The religious experience of the Greco-Roman world, in the times immediately before and immediately after the Christian era, also in various ways emphasized the motives upon which this third type of Christian monotheism depends. The Church thus found room within the limits of orthodoxy for the recognition, with certain restrictions, of the tendency to view the world as mere appearance, ordinary life as a bad dream, and salvation as attainable only through a direct acquaintance with the divine being itself.

The very complications which for philosophy have grown out of the efforts to synthesize Hellenic monotheism and the religion of the Prophets of Israel to a definite type, are repeated still more in the mystical monotheism. The mystics to insist that what the intellect cannot attain, namely, an understanding of the nature of God and His relation to the world, the mystic experience can furnish to those who have a right to receive its revelations. Philosophy—intellectual philosophy—fails (so many mystics assert) to solve the problems raised by the contrasts between good and evil, between God and the world, as these contrasts are recognized either by those who study the order of the universe or by those who thirst after righteousness. What way remains, then, for man, beset by his moral problems, on the one hand, and his intellectual difficulties, on the other, to come in real touch with the divine? The mystics, i.e., those who have insisted upon the third idea of God, and who have tested this idea in their own experience, have always held that the results of the intellect are negative, and lead to no definite idea of God which can be defended against the sceptics, while the mystics advance the mystics to the law of righteousness, whether with or without the aid of divine grace, does not lead, at least in the present life, to the highest type of the knowledge of God. We approach the highest type of knowledge as the philosophers, but we recognize, in the form of some sort of 'negative' theology, the barrenness of intellectualism, and if, meanwhile, we recognize that the contemplative life is higher than the practical life, and that an immediate vision of God leads to an insight which no practical activity, however righteous, attains.

To teach such doctrines as matters of religion, experience is characteristic of the mystics. To make more articulate the idea of God thus defined has formed an important part of the office of theology.

Without this third type of monotheism, and without this negative criticism of the work of the intellect and this direct appeal to immediate experience, Christian doctrine, in fact, would not have reached some of its most characteristic forms and expressions, and the philosophy of Christendom would have failed to put on record some of its most fascinating speculations.

It is obvious that, on the face of the matter, the immediate intuitions upon which mystical monotheism lays stress are opposed to the sort of insight which the intellect obtains. Even here, however, the opposing tendencies in question are not always in any very direct contrary opposition in the thought or expression of an individual thinker or philosopher. Thus, in an individual case, an exponent of intellectualism may develop a large part of his philosophical work to a return to the Hellenic type of theism. That this was possible the Neo-Platonic school had already shown (see act, NEO-PLATONISM). Whereas Christian monotheism is strongly under the influence of intellectualism, it tends to become a synthesis of our second and third types of monotheism. In such cases the monotheism is Hellenic in its fondness for order, for categories, and for an intellectual system of the universe, and at the same time devoted to an immediate intuition, to a recognition that the finite world is an appearance, and to a definition of God in terms of an ineffable experience, rather than in terms of a rational system of ideas. Such a synthesis may, in an individual system, ignore the conflicts here in question. Nevertheless, on the whole, the opposition is bound to become, for great numbers of thinkers and, on occasion, for the authorities of the Church, a conscious opposition. And the opposition between the ethical and the mystic types of monotheism is in general still sharper, and is more fully conscious. Despite all these oppositions, however, it remains the case that one of the principal problems of Christian theology has been how to synthesize these various tendencies to bring the third of the ideas of God, the third of the tendencies to define God as One, in some tolerable and true synthesis either with the first or with the second of the three types of monotheism, or with both.

In the technical discussions of the idea of God which have made up the introductory portions of many systems of so-called 'nature theology,' it has been very general for the philosophers of Christendom to emphasize the Hellenic type of theism. The so-called philosophical 'proofs of the divine existence' make explicit some aspect of the Hellenic interest in the order and reason of the world. The 'design argument,' first stated in an elementary form by Socrates, and persistently present in popular theology of the monothestic type ever since, is an interpretation of the world in terms of various special analogies between the particular sorts of adaptation which the world shows to divine providence and theist, to the the way in which the world in art, makes use. The so-called 'cosmological argument' reasons more in general terms from the very existence of this 'contingent' world to the Logos whose rational nature explains the world because of the world. The 'argument' insists upon motives which arise in the course of the effort to define the very nature of an
MONOTHELETISM

821

orderly system. In its briefest statement the ontological argument is epitomized by Augustine when he defines God as 'Veritas' and declares that Veritas must be real, since, if there were no Veritas, the proposition that there is no Veritas, would itself be true. The more highly developed forms of the ontological argument reason in similar fashion from our own ideas of the nature of the Logos, or of the rationally necessary order system of things in order to reify the realm of Platonic ideas, in so far as it is manifested through and to our intellect, to the reality of such a system beyond our intellect.

It has been insisted, and not without very general basis in religion and in the controversies of the philosophers, that all such efforts, through the intellect, to grasp the divine nature lead to results remote from the vital experience upon which religious monotheism and, in particular, Christian monotheism must rest. If such a monotheism is permanently to retain the confidence of a man who is at once critical and religious, into the merits of the issues thus indicated, this is no place to enter. In any case, however, both the warfare of the philosophical intellect and the contrast between intellectual theology and the religious life have often led to philosophical efforts to escape from the very problems now emphasized to some measure of solution. The most it has been possible to assert is that there is no philosophical solution to the religious problem of theism. Thus intellectualism in theology, in the forms in which it has historically appeared, has repeatedly tended to bring about its own elimination. The more highly rational it has become, and the more its apparent barrenness, or its inability to combine the various motives which enter into the three different monotheistic tendencies has become manifest, the more the result of a careful analysis of the intellectual motives has led either to the revival of mysticism or to a sceptical indifference to philosophical theism. To say this is merely to report historical facts.

Some negative results of the more purely Hellenic type of monotheism became especially manifest through the results of the Kantian criticism of reason and of its work. It is extremely interesting, however, to see what, in Kant's case, was the result of the criticism of the thought of the time as to the possibility of monotheism and of the existence of God. By temperament Kant was disposed to take interest in experiences of mystic type. For him, therefore, the failure of the intellect meant a return to the motives which, in natural formation, led to the intensely earnest practical faith, had long ago, given rise to the religion of Israel. Therefore the God of Kant is, once more, simply the righteous Ruler. Or, as Fichte in a famous early essay defined the idea, 'God is the moral order of the world.' This Kantian-Fichtean order is, however, not the Hellenic order, either of the realm of Platonic ideas or of the natural world. It is the order of 'the kingdom of ends,' of a universe of free moral agents, whose existence stands in endless contrast to an ideal realm of holiness or moral perfection, after which they must endlessly strive, but of whose real presence they can never become aware through a mystical vision or by a sure logical demonstration. The righteous man, according to Kant, says: 'I will that God exists.' Kant defines God in terms of this will. Monotheism, according to this view, cannot be proved, but rationally must be acknowledged as true.

We have in this Century of Reason recognized that the requirement to bring into synthesis the intellect and the will, and to interpret our aesthetic experience, i.e., our acquaintance with the kind of perfection which beauty reveals—this ideal, a synthesis of the ethical, the intentional, and the rational—remains with us. And, despite all failures, this ideal is one from which philosophy cannot escape.

The revived interest in intuition and in religious experience which has characterized the transition from the 19th to the 20th cent. has once more made the mystical motives familiar to our present interest. The permanent significance of the ethical motives also renders them certain to become prominent in the attention of serious-minded men, even though the Kantian formulation of the ethical ideals seems for the moment, in our mobile contemporary philosophical and religions thought, too abstract and rigid. And so we have the necessary future, to accept any merely one-sided Hellenism.

While no attention can here be given to the solutions of the problem of philosophical monotheism which have been proposed during the last century, we will indicate a more explicit monotheism. In its modern formulation the more we become aware of what constitutes a person. Meanwhile, as was remarked above, the problem of monotheism has other aspects besides the problem of personality.

The essential point is that final end and last aim, as for our fathers, capable of formulation in the terms which have here been emphasized. To repeat, the philosophical problem of monotheism is (1) In what sense is the world real? (2) In what sense is the world ethical? The effort to answer these questions cannot be made by exclusive emphasis on one of them. For, as we have seen, the problem of monotheism requires a synthesis of all the three ideas of God, and an answer that shall be just to all the three problems. Whether monotheism is true or not can be discovered, in a philosophical sense, only through a clear recognition of the contrast of the three ideas of God, and the development of such a kind of harmony. The further discussion of the nature of this harmony does not come within the scope of this article (see art. God [Bible and Christian]).

JOSIAH ROYCE.

MONOTHELETISM.—1. The Problem.—The Mononegetic or Monolethic controversy seems
at first glance to be a mere sequel to the Monophysite conflict, a knowledge of which is assumed in the opening article. But, however, we see that the later controversy has a character of its own, since it shows how the adoption of the orthodox Diphysite point of view was not regarded as leading necessarily and directly to the Chalcedonian or Monothelite (p. 814 f.) it was indicated how the new orthodoxy came to terms with the problem of the two natures in the one person of Jesus Christ—the problem raised by the Symbol of Chalcedon. The person of the God-man was conceived as arising from the person (ἐκ θεότητος) of the Logos, which assimilated the human attributes, and upon which, as the core of personality, human nature was, so to speak, engrafted by the process of ἐνεργεῖα. On this hypothesis it might seem entirely justifiable to ascribe everything that Christ said or did to the one volitional activity (ἐνεργεία) of the God-man, and actually, indeed, to regard all as emanating from His undivided will (θλημα). Such a view, moreover, could be supported by the evidence of earlier Fathers. Cyril, with reference to 1 K 8:4, had said of Christ: μιας τε και συγγενής δ' αμυν [i.e. word and hand] ἐνδεικνύει τὴν ἐνεργείαν; and it was possible, above all, to adduce the witness of a number of fourth-century Egyptian Monophysites—a passage containing the phrase μια θεωρηθηκε ἐνεργεία, which was destined to play so important a part in the coming days. The Monenergists were possessed with the idea that the redemptive activity of the God-man emanated wholly and solely from His divine nature, that nature providing the stimulus which was mediated by His rational soul and brought to realization in His body. Nor had even the natural operations of Christ been the work only of His divine nature, but it had been realized by the human soul as well, as one whole nature of Christ's human nature was conceived as inherently personal. Hence that which in Christ corresponds to human nature was itself the work of God: it was one energy, whose source is God, and whose instrument was His humanity; it was one will, and that will was divine. To Sergius of Constantinople (cf. § 2) it seemed perfectly obvious that the rationally endowed body of Christ effected its natural movements only as far as its divine nature was congenitally united. In this case, the objection urged by the opposite party against this theory of the oneness of Christ's ἐνεργεία was based upon the feeling that it surrendered the distinctively human element in Christ's activity, since it implied that His human nature was a mere passive instrument, and must therefore be conceived as immanent or, at least, as non-rational. Such a view, however, was in reality a reversion to Apollinarism (q.v.), and even if the Monenergists did not go so far, yet their idea of the one composite energy really presupposed that of the one composite nature as held by the Severians. In point of fact, the theses of the Monenergists approximate very closely to those of the Severians—the more moderate party of the Monophysites. As the Monenergists themselves came to recognize this, they surrendered the phrase μια ἐνεργεία and rallied around the τρεῖς θληματα. This position they regarded as unassailable, since two wills (as distinguished from mere impuls or natural tendencies) could not possibly be involuntarily to involve two subjects endowed with volition (δύο ὑποστάσεις). They rightly recognized that, if there was in the God-man a will which diverged from His divine will, that divergent will could spring from nothing else than an ungodly tendency in the nature which He had assumed. Such a view, however, would have been abhorrent to the doctrine of the sinlessness of Christ's human nature, in which all parties were at one, and would therefore have been accursed blasphemy. Gregory of Nyssa, writing long before, had said: τὰ δὲ τῶν Θεολογίων φρόνημα ἐνεργείαν εἶναι τὴν καθαρίαν τῆς θληματος. The adverse party was wont to appeal to passages like Mt 26:24, where the human will and the divine will seem to stand in opposition; but the Monothelites sought to show from the Fathers that, on a strict interpretation of this text, Christ had a human will εἰς ὄνεικόσιον only. They did not mean to deny the presence of a human activity in the one will of Christ, but they held that this activity was entirely due to His divine will. In relation to His divine ἐνεργεία, they maintained, the human ἐνεργεία becomes a πᾶθος, and, when Gregory said of Christ that his soul wills, he meant that the volition of Christ's soul was due to the will of the Deity who was personally united with His soul, and that, accordingly, it was divine volition in a human form.

The Monenergists and Monothelites sought to support their contention also on the ground that the phrase δύο ἐνεργείαι had never yet been heard in the doctrinal writings of the Church. But this was not absolutely valid, yet Sergius could say with some show of reason that none of the δυατοτομίας τῆς ἐνεργείας μεταγιγογός, i.e. none of the recognized Fathers of the Church, had made use of the phrase. As compared with the formula of the δύο θληματα, again, the Monothete case was a still stronger one. In earlier writers the phrase δύο θληματάδων is used only as expressing a final consequence foisted upon those who held the doctrine of the two natures. The use of the phrase in a positive sense can be traced only in a single work, written—i.e. genuine—before the Monothete controversy, viz. the treatise περὶ τῆς ἄγιας τριάδος καὶ περὶ τῆς Θεολογίας ascribed to Eulogius of Alexandria († 607). But, while the Dithelites were thus unable to call tradition to their aid, they operated all the more zealously with the inherent logic of their case. In point of fact, no logical objection could be urged from the standpoint of the new orthodoxy, only in opposition to his position Sergius of Byzantium, against the procedure of ascribing δύο φωναί ἐνεργείαι to the δύο φόντα. Indeed, it was, more than all else, this logical inference, i.e. the consistent development of the opposition affirmed in the use of the phrase, which helped the doctrine of the two wills to gain the day. It is true that the contradiction involved in the doctrine of the two natures was rendered still more palpable in that of the two wills. But those who had come to terms with the former doctrine had no difficulty in accepting the latter, and it is the aim of the following historical sketch to show how this point was reached.

2. The beginnings of the controversy. The secession of the Monophysites did not damage to Byzantium and its Church. It smoothed the way for the advance of the Arabs and of Islam. Far-seeing and energetic politicians sought to arrest the mischief by working for the ecclesiastical reorganization of the eastern and southern provinces of the empire. The most outstanding figures in this movement were the emperor Heraclius (610-641) and the patriarch Sergius (610-638). Sergius, a Syrian born of Jacobite parents, was already giving his mind to the thought of his tenure of office. He caught at the watchwords μια ἐνεργεία and μια θληματα τρεῖς τρεῖς θληματα, which had apparently been introduced into the controversy by the Alexandria Monophysites, and he succeeded at the outset, on the
basis of the doctrine implied by those expressions, in winning the emperor's approval of his designs. Soon afterwards (622) Heraclius issued an edict proscribing the doctrine of the θεός εὐρετέας. But, although the Saracens lough, Sergius sought the means of patriotic bearing to bear upon the Armenian and Syrian Monophysites, the negotiations made little headway. It was not until 633 that indications of real progress began to show themselves. Cyrus, patriarch of Alexandria, whom Heraclius had translated to that city from Phasis in Lazica, succeeded in bringing about a union with the Theodossians, i.e. the Monophysites (see art. MONOPHYSITISM, § 3). The doctrinal programme drawn up by Cyrus, while differing from the Armenian and the Monophysites in the forefront, guarded it carefully by special clauses; it distinctly recognized the Cyrillician terminology of the one incarnate nature, and it adopted the Apekopistic formula of the one anthropic energy. The Monophysites had some grounds for thinking that, as one of our sources puts it, it was not they who made alliance with Chalcedon, but rather Chalcedon with them. About this time, too, the metropolitan church succeeded in effecting an understanding with the Armenian, though this did not last long. The greatest triumph, however, was the winning of Athanasius, the Jacobite patriarch of Antioch; for now the occupants of the three great Oriental sees were all on the same side. But at this juncture the union that had been brought about with such difficulty was gravely imperilled by the action of a Palestinian monk.

This was Sophronius, who had at an early date made alliance with the Alexandrian patriarchs Eulogius and John the Merciful. He now made his way from Palestine to Egypt in order to lodge a protest with Cyrus against the articles of union, in which he thought he discerned Apollinarism. As Cyrus hesitated to withdraw the articles at the request of Sophronius, the latter proceeded to Constantinople and tried to induce Sergius to delete the expression μα της ευρετειας from the document. The patriarch was not prepared to take that step, but for the sake of peace he agreed to send his Alexandrian colleague a letter recommending him to have done with the dispute as to one της ευρετειας or two, but forbidding him to sanction the thesis of the two wills, which he stigmatized as blasphemy (καθαρευχθηκε). Sergius, moreover, secured another triumph in gaining the support of Pope Honorius for his pacific policy (cf. § 3). Shortly afterwards (634) Sophronius was appointed to the see of Jerusalem. He began to advocate the accepted understanding by referring in his inaugural encyclical to the two natures, though he certainly avoided any overt acceptance of the doctrine of the two wills. His action was deeply resented by Sergius, and Honorius tried, though without success, to persuade him to drop the objectionable expression. Eventually the emperor issued a decree, framed by Sergius—the so-called Ecthesis of 638—forbidding any mention either of one energy or of two energies: of one, because the mention of it might lead to a denial of the two natures, and of two, because two energies seemed logically to involve two mutually antagonistic wills.

3. The case of Honorius.—Honorius of Rome, by reason of his attitude in the Monothelete controversy, was as will be explained below (§ 5), put under the ban by an Ecumenical Council. This proceeding has had such important consequences in the war of the confessions that the historian cannot afford to ignore it. Here we must first of all ask what Honorius had really said. The missive in which he explained his theological position to his colleague in Constantinople is extant only in a Greek translation, but the agreement of this translation with the Latin autograph was definitely confirmed at the Council. In this letter Honorius had set in the forefront his desire that the controversy as a whole and its mysteries should be allowed to rest or relegated to the grammarians. The introduction of the new phrases into the doctrinal terminology might bring those who used them under suspicion either of Eutychianism or of Nestorianism. He nevertheless added impartially to the view that, whatever decision might be made between the hypothesis of the one and that of the two energies, it was at all events necessary to adhere in a single will (δύναμις καθαρόν της οὐρανος λόγου τοι); for, as the Son of God had assumed a pure and supernaturally begotten human nature, the idea of a second will, disparate or antagonistic (δύναμις αναρριχησομενον της οὐρανος λόγου τοι), was simply out of the question. Passages like Mt 26' or Mt 5', in which Christ seems to mark a contrast between His own will and the will of God, did not in any real sense indicate a different will, but simply referred to the economy of His assumed humanity (ος καθαρευχθηκε της τετων αναρριχησομενον της οὐρανος λόγου τοι). Christ, as our example, adopted this manner of speaking for our sake, i.e. in order that we should follow His footsteps, not seeking our own will but the will of God.

The letter of Honorius reveals throughout an intelligent and accurate grasp of the situation. To reprop its writer with having adopted the doctrine of the one will is simply a misapprehension, since that doctrine had not yet become ecclesiastically suspect. Even Sophronius himself, in fact, as has already been said, had not put the doctrine of the two wills upon his programme, and the question as to the Monotheletism of Honorius was a piece with that regarding the Monophysitism of Cyril of Alexandria. We might venture to say, indeed, that, if Honorius had, a generation later, occupied the Roman chair in place of Agatho, he would have given the same judgment as the latter did, and thus, to speak paradoxically, would have pronounced his own condemnation. Agatho and the Council of 681 stood face to face with a situation of a totally different kind. As Monotheletism had then become a matter of public ecclesiastical debate, it was simply bound to condemn it, and, in doing so, they could not avoid reproaching the missive of Honorius as well. Above all, however, we must not forget that Agatho not only referred to the missive against the monoenergetic manifestation of his predecessor, but by the voice of his legate actually gave it his sanction. In the following year Pope Leo II. expressly ratified the condemnation in a communication to the emperor, in which he spoke of Honorius as one qui hanc apostolicam sedem non apostolice traditionis doctrina illustravit, sed profana prodiencyne immutabilis iudicium subvertere conatus est. This judgment is, no doubt, unduly severe, and, measured by modern ideas, may even be positively false. Still, it certainly shows the remarkable freedom from prejudice with which the authority of a pope in matters of doctrine could then be viewed even in Rome itself. It is quite incompetent, on the other hand, to use the judgment of Honorius into the question of papal infallibility. If we keep in mind the provisions of the Vatican dogma regarding the import and scope of the pope's infallibility, we shall see at once that they do not apply at all to the missive of Honorius. If the latter is declared to be without error, the same attribute might with equal justification be applied to any other utterance of a pope.

4. Byzantium and Rome in conflict.—After the
death of the emperor Heraclius, and the brief reigns of his two sons, his grandson Constans II, (the so-called Monothlete II) was raised to the throne in consequence of a court revolt. Constans, too, adhered to the Ecthesis, which, however, had meanwhile encountered a keen resistance, especially among the clergy of the East. The patriarch Pyrrhus, officially consecrated Monothelites; the N. African bishops raised a vigorous agitation against it; and soon the whole western province was ringing with passionate debate. Constans, on the other hand, remained loyal to the Ecthesis. The patriarch Pyrrhus, who had preceded Sorgius, was deposed by Constans on political grounds, being superseded by Paul, a man of like doctrinal views with himself. Pyrrhus went to Africa, and there intervened vigorously in the controversy. With Maximus, an aide of Constans, who had likewise removed to Africa, he conducted a discussion the records of which are among the most notable documents of the whole controversy. Here Maximus proved the victor.

This Maximus was the most eminent and effective champion of Dithethelism, and his position to his ered won him the title of 'Confessor.' He was born c. 658 at Constantinople. His career was that of a high State functionary, and he acted as imperial secretary in the reign of Heraclius. From 639 he lived in the monastery of Chrise, near Constantinople, until he was soon attainted to the dignity of an abbot. He worked energetically on behalf of Dithethelism both in Africa and at Rome, and in 641 a council that he convoked (the Lateran Council of 641, below) was summoned. At the part which he thus played ran counter to the policy of the emperor, he was at length put upon his trial. In 643 he was arrested and taken to Constantinople, and two years later he was banished. In 642 the unfortunates were brought before a legal process, the result of which his tongue was cut out and his right hand struck off, and he died within the year in the East coast of the Euxine. The best known of his extant works is his Scholia to the pseudo-Dionysian writings, and it was, in fact, the comments of Maximus that secured the Church's recognition of these texts.

The vehement opposition of the Dithethelates, however, did not wholly fail to influence the ecclesiastical policy of the emperor. Already in 648, acting on the advice of Constantine Paul, had issued a decree, the so-called Typus, declaring that the dispute regarding the doctrine of the wills must come to an end at once. The Typus, unlike the Ecthesis, avoids all argumentation on matters of a detailed point, and withdraws from its provisions all civil and civil penalties. But the Dithethelates would not be silenced. They had now their centre in Rome, and a Council conducted in 649 by Pope Martin in the basilica of St. Martinus, attended by the Greek monks whom he had fled to Rome, affirmed, in explicit conformity with the declaration of Chalcedon, its adherence to the doctrine of the two wills and two energies corresponding to the two natures of Christ. The action of Martin raised an agitation in both East and West, and the emperor, bitter at resenting this, as well as the pope's friendly relations with the exarch Malchus, then lying under suspicion of high treason, had him sent to Constantinople (651). On the trial, banished to the Chersonese, in which he died, he was driven from his sufferings.

5. The 6th Ecumenical Council and the end of the controversy.—For a time it appeared as if the new policy of peace would be attended with success. Pope Vitalian entered into friendly alliance with the emperor; ecclesiastical communion between East and West was tacitly restored; and, when Constans visited Rome in 655, he was received with imperial honors by the emperor, however, the antagonism broke out more fiercely than ever, and the discussion led to a fresh rupture of ecclesiastical relations. Such a state of matters was felt by the politicians, as formerly in Justinian's time, to be intolerable; and to deal with it the emperor Constantine IV. Pogonatus (668-685) resorted to the plan of holding an imperial Synod. In November 680, accordingly, the Eastern prelates, together with the legates of Pope Agatho, assembled in the Hall (procëdil, hence 'Trullan' Council) of the imperial palace at Constantinople.

This Council, which, with brief interruptions, until September 681, is recognized officially by both Churches as the 6th Ecumenical Council. The members, with abundant excerpts from the Fathers in their hands, carried the debate from one point to another, until at last the Roman representatives won acceptance for the doctrine of the two wills, and procured the condemnation of its opponents, living and dead alike, including, as we saw above (§ 5), Pope Honorius. The Roman point of view is set forth in the comprehensive statement laid by Agatho before the emperor—a document that came to be regarded as a counterpart to the Tomus of Leo I. (cf. art. MONOPHYSTISIM, § 4). In the Synod of the Council the terms in which the Chalcedonian formula defines the relation of the two natures are applied to the two inherent wills (δυο φυσικα θεληματα θεοτητας).

Thus the two wills corresponding respectively to the two natures are not opposed to each other (οὐκ ενέχεισθαι), but 'with the human will is obedient to the divine and omnipotent will to which it is subject (οὐκ έν αυτῇ θελεται καί η ουσια αυτης καθεχεται), μεταξιου μεν αυτου καί ενα πληρης θελεται,' or 'the human will is necessary, while the will of flesh must indeed act, it should be subordinate to the divine will. Just as the flesh of the God-Lord (τοις τε θεοις λογοις) is called flesh, and is flesh, so the natural will of this flesh is called, and truly called, the will of the God-Lord. And, as His holy and stainless animate flesh was not taken away in being made divine (θεοφυλαται ον εναρξην), but remained within its own limitations and relations (ον εις ανθρωποτητα και λογον θεοτηταν), so the human will likewise was not abolished in the act of definition, but was still preserved.'

Agatho did not live to see the triumph of his cause, and it was left to his successor, Leo II., to secure the acceptance of the Council's decrees in the West. The most zealous opponent of Dithethelism in the East, Macarius, patriarch of Antioch, was prevented from doing further mischief by confinement in a monastery. The second Trullan Council, the Convoked Council of Constantinople (682), homologated the condemnation of Monothethelism. This does not mean, of course, that the conflict was wholly at an end, and, in fact, it was intermittently fanned to fresh outbursts by the wranglings of the Byzantine court.

Eventually the emperor Phileppius Bardanes (711-713) undertook to deal with it, while his successor, Anastasius II. (713-715), restored the authority of the Council of 660-681. But Monothethelism was still faithfully adhered to by the Monophysites of Mt. Lebanon.

LITERATURE.—1. SOURCES.—(1) letters and other written communications of those who took part in the controversy, as found in the documents of the 6th Ecumenical Council; (2) contemporary works, esp. the writings of Maximus Confessor (Oppositiones theologicae et politicae ad Marium, Disputatio cum Psycho) and statements in Anastasius Sinaita, Ἱερά τοις εὐαγγελίας έκ καί εὐαγγελίας, bk. IV. (A. Mal., Strzyg., Vit. Nova Coll., etc., West, (3) later chronicles and historical works, e.g., the Torpes συναγωγας of the patriarch Nicetasich, and the Τάξες τοις τιθηται Τοις of Theo-

II. MODERN WORKS.—The reader should consult the works cited at the art. MONOPHYSTES. At the murder of the emperor, however, the antagonism broke out more fiercely than ever, and the discussion led to a fresh rupture of ecclesiastical relations. Such a state of matters was felt by the politicians, as formerly in Justinian's time, to be intolerable; and to deal
MONSTERS (Biological).—Monstra vocantur quia monstrant. This ancient platitudinmay seem ridiculous to-day, but it has not yet lost its meaning entirely. Doubtless in a modern civilized society the birth of a two-headed lamb, of a 'bulldog calf,' or of a cycloian child no longer excites attention as a portent of disaster or proof positive of witchcraft. Yet to a certain section of the community the objects present opportunities of enlarging the common store of biological knowledge. The specimens themselves demonstrate eloquently the possibilities of aberration in the processes of normal development and growth. They testify to the existence of numerous independent forces or influences, balanced delicately under normal circumstances. They point to a disturbance of the balance. They reveal the nature of individual influences, as manifested when one has been exerted in excess, to the exclusion or suppression of the countervailing factors.

In the study of monsters two lines of research are indicated by subdivisions of monstrous formations. Variations of lesser degrees constitute the class of 'abnormalities,' although, as explained in art. AbnormaLITIES (Biological), no hard and fast line separates the two groups. Many monstrous formations are determined by disturbances affecting the embryo or the fetus, though the post-natal period of growth is by no means free from disorders productive of a comparable result. And instances of precocious senility may be included fairly with others showing the extreme tenuity of the neutral zone between health and disease.

The study of monsters falls naturally into two divisions: (a) the investigation of their actual structure, and (b) research into the mode of their production.

(a) On the anatomical side a classification has been attempted, and it is based upon consideration of the parts or parts actually affected. In view of the vast number of categories thus recognized, only the most cursory survey is possible here; and, instead of rehearsing the long list of classes and their subdivisions, it must suffice to note that, while the whole body has suffered in some cases, in others certain parts only will be found to be distorted.

The developmental history of monsters shows us that, as a general rule, the departure from what is normal will be greater and more complete in proportion as the disturbance was early in its occurrence. For in the first phases of development, when the total mass of the embryo is almost infinitely small, even a slight error will affect the rudiments of every organ and structure that is to be perfected subsequently. At this point again two distinct groups of monsters must be contrasted. In some cases the embryos may void its contents prematurely and so pass to this, in histological pathology, the antiquated term 'molec' is still applied. Or, again, the disturbance may lead to partial 'geminant,' i.e. to some distorted kind of twin-formation. Thus twins of equal size may contain a monstrosity, and after the birth may produce such a phenomenon as the 'Siamese twins.' In other instances of this class the twins are quite unequal in point of size and, it may be, of development. As a result, an almost normal child may be born with an imperfect twin attached to it. The two are then distinguished as the 'autosite' and 'parasite' respectively. The parasite is most commonly attached to the autosite in or about the middle line of the body. It may present almost any appearance, from that of a mere wart-like excrescence to that of a headless trunk with arms and legs. In rare instances the parasite has been found to be entirely enclosed within the body of its host, so that it is not visible externally at all.

Lastly, in yet another class of monsters, the process of gemination may have been complete but unequal, and one twin is born in a normal state, while the other, instead of being represented by a spherical mass, consisting of various tissues and rudiments of organs in the most complete confusion. Even the latter may be maintained alive throughout the intra-uterine period of existence.

Apart from these instances of twinning,' we may notice that certain particular structures such as the heart or the brain may be defective to the point of obliteration, while a large class bears witness to interference with such normal processes as the formation of the face or the closure of the walls of the body to protect the viscera.

(b) The study of the normal processes of development throws a flood of light on the problem of explaining the particular aberration responsible for the occurrence of extreme instances of developmental anomalies. Variations in the frequency with which grotesquely formed individuals appear among the fry is so well known as to be almost a matter of common knowledge. The eggs of the domestic fowl, the lizards, and other reptiles, and the parasitic organisms have been studied by means of the disturbing causes, and to these we shall now turn.

The artificial production of monsters first claims attention. In fish-hatcheries the occurrence is accidental and unwelcome, yet the frequency with which grotesquely formed individuals appear among the fry is so well known as to be almost a matter of common knowledge. The eggs of the domestic fowl, and the various forms of parasites produced with the aid of the fertilizing element has been varied.

Physiological research of this kind has established clearly the inseparable identity of the egg-cell to a variety of influences, whether these be physical, mechanical, or chemical. At this point another possibility seems to demand notice. The influence of so-called maternal impressions has long been discussed by those who are not prejudiced on this subject. Only the highest forms of life are suitable for observation or research in this respect, and it cannot be said that the potency of such impressions has been established.

Turning more particularly to human beings, it may be mentioned that medical research has shown that certain monstrous developments, viz. Acronegaly and Achondroplasia, are due to the excess or deficiency of certain fluids which normally pass with the blood to bathe the tissues of the body. In this department of research only the first steps have been taken as yet.

In such ways the anatomical study of monsters shows the investigator what parts or parts has suffered, while the physiologist is able to point to the disturbing element. Thus we are left with the impression that, where the balance of reacting forces
The monstrous creatures of Babylonian and Assyrian art are well-known—winged bulls with human heads, hydras, and other abnormals. These were set in front of entrances as a means of frightening away evil spirits, and a similar use of ludicrous figures is known elsewhere (see Door, vol. iv. p. 845). The titles were both lower and a means of identification.

Among the folk everywhere monstrous beings have a real existence to the imagination, and are doubtless survivals of similar beings believed in by their forefathers. But the influence of Christianity was often to give a sinister aspect to the supernatural beings of the older paganism. The water-horse and water-bull of Celtic lore are typical examples of monsters which have still a real existence to the folk in remote districts. Demonic beings are also often envisaged as monsters, and everywhere more or less terrifying giant and dragons have been subjects of popular belief (see Demons and Spirits, Giants).

The mythologies of most races tend to give a demonic, gigantic, or monstrous form to the supernatural agencies of culture—like the Greek—Tiamat and her brood in Babylonia, the opposing gods of whom Delphi conquered, the Egyptian, the demon or monsters who strive with gods in Hindu, Greek, Teutonic, or Celtic myth. They typify chaotic powers, the powers of the powers of the earth, and hence they constantly tend to be regarded as evil, while their opponents embody righteousness and goodness.

As early as the days of primitive man monstrous forms have been depicted in various ways. Thus in caves at Marsonas and Altamira grotesque faces may represent demons while other curious hybrid figures, half-human, half-animal, have been variously interpreted, but may represent monsters of the imagination of the Stone Age. Savage art tends to give all its human or supernatural subjects a grotesque, if monstrous, form, often, no doubt, from lack of skill, but there is sometimes a deliberate exaggeration, in a horrible or grotesque direction, of features or of one or more members of the body. This monstrousness of feature is also seen in masks worn on ceremonial occasions by savages, and often meant to represent the faces of particular spirits. Indian art delighted to represent its divinities as many-headed or many-armed—a method which has spread into adjacent countries. Tibetan representations of demons or gods are often repulsive in their monstrousity. Reference has already been made to the monstrous Babylonian figures. In medieval and later Christian art demons and the devil were depicted in the most sinister and horrible—perhaps as a result of the many instances of demons or devils from the Carthaginian Hanno onwards. In Egypt monstrous creatures were often figured on tombs, and the god Bes is depicted as a dwarfish but monstrous and repulsive figure.

LITERATURE.—Special mention may be made of C. Dareste, Recherches sur la production artistico des monstres (Paris, 1857); other contributions to the literature are so numerous as to preclude even a partial enumeration here. Recent studies of comparative biology are provided by E. Schwabe, Morphologie der Miindlinge, Jena, 1906.

W. L. H. DUCKWORTH.

MONSTERS (Ethnic).—1. Various kinds of monsters.—The existence of monstrous beings, human, animal, or diabolical, is believed in in all levels of culture. They are referred to or described in stories, traditions, or myths, or they are depicted or represented in some artistic form. Among savages monstrous animals are often supposed to exist, like the Bun-yip of Australian tribes—a mythical water-monster who carries off women—or the monster or dragons said to swallow yorkis at initiation in New Guinea. Frequently more or less distant tribes are believed to have some monstrous or abnormal feature—one eye, more than two eyes, eyes under the arms, vast tusks or more heads, to be hideous or featureless or of great size, or to possess tails. Ghosts, especially ghosts of those who have died a violent death, are often visualized as monsters of a more or less horrible kind, usually with a fanged ferocious face and monstrous barbary. The devil is found, especially in Oriental mythology and folklore. Here whole classes or tribes of monstrous beings exist, like the rakshas of Hindu myth—hideous hounds with shape-shifting powers or the hideous hounds of Arab belief, or the satyrs, centaurs, and cyclopes of Greek mythology. Here also human tribes of monstrous form are a subject of popular belief. The people of Babah (Java) were supposed by the Arabs to have two heads in their breasts. Here or there in the West Indies some of the tribes supposed to live beyond the region of the Scythians,—men with goats' feet, men with one eye (the Arimasi)—and other tribes believed in by the Libyans—monsters with dogs' heads, bulls' heads, or with eyes in their breasts. Pliny also writes copiously about such tribes. Irish mythology speaks of tribes of men with dog, or cat, or goat heads. Tribes or individuals covered with an abnormal growth of hair are often mentioned by ancient or medieval travellers from the Carthaginian Hanno onwards. In Egypt monstrous creatures were often figured on tombs, and the god Bes is depicted as a dwarfish but monstrous and repulsive figure.

2. Origin of the belief in monsters.—Probably no single origin is to be looked for. There may have been different origins for the belief as a whole, or particular monstrous forms may have had an origin different from that of some other forms.

(a) Imagination is doubtless responsible for much of the monstrousity that is attributed to men, mythical animals, or demons in mythology or primitive art. As man's imagination peopled the world around him with spirits, so these appeared to him as gorgons, hydras, and putrid monsters from the Nilotic islands (Handbook to the Ethnographical Collections, Brit. Museum, London, 1910, p. 77; cf. RBE III. 85-9).

(b) C. A. Birket-Smith, The Religions of the Ancient Celts, Edin. 1913, p. 271

(c) J. B. P. Head, Head, for instance.

(d) This is particularly noticeable in illuminated MSS or in pictures of the Temptation of St. Anthony type.
and chimeras alike. There was a constant tendency to visualise the creatures of the human form as human yet as more than human, as animal and yet as more than animal. As man drew little distinction between himself and animals, as he thought that transformation from one to another was possible, so humanity spread together. This in part accounts for animal-headed gods or animal-gods with human heads. Or, where gigantic superhuman strength, wisdom, or productiveness was concerned, man represented these to himself by forming images of the beings who possessed them with numerous or enormous heads or arms or phallics. There is little doubt also that the lack of skill in depicting the human form tended to fill with suggestions of monstrous the minds of those who gazed on such images.

(b) This last fact may have in turn influenced the dreams of men, and, as dream figures were realities, such forms were believed to have a real existence. But, apart from that, and especially when we consider the way in which dreams are deliberately cultivated by the medicine-man (see Austerity), they have, no doubt, had strong influence in the creation of monsters, of which the mind in waking hours could no more rid itself than could the skin see its own sores.

The combination of existing but diverse forms would easily occur in sleep, and such monstrous forms would play a part in the drama enacted during the hours of sleep. Such forms, seen in actuality by the waking mind, and still appearing to haunt them when sleep was rudely broken by the effect of fear. Again, hallucinations seen in waking hours by those whose mental balance was deranged might also aid in the creation of monsters, as they form part of the world inhabited by persons with certain kinds of mental affliction.

Such hallucinatory appearances, described to the sane, would by them be accepted as real, and it is probable that the medicine-man, living an abnormal life and seeing strange visions, is never quite sane. But, again, the savage in his waking life is probably the subject of hallucinatory impressions to a far greater extent than the civilized man. His psychic state when awake bears a close resemblance to his psychic state when asleep. What he thinks he sees is actual to him, and every illusion, however incredible or monstrous, is a fact. Even in cultured Egypt there were figured on the tombs the monstrous forms which the deceased thought he had seen in his lifetime.

(c) Monsters, again, may owe their origin to a basis of fact. Any large predatory animal whose coming and going was obscure would tend to be envisaged in still more awful guise. Some, indeed, have argued that the original conception of large and monstrous animals may have suggested the dragons and other monsters of folk-tale and tradition, and, if this were true, it is certain that the impression made by them would easily become legendary. Most savages have such creatures, which are really exaggerated forms of actual animals seen by their ancestors, but unknown to their descendants in their new habitat—e.g., the monstrous lizards of Maori tradition are the crocodiles of the land whence the Maoris migrated. Perhaps actual abnormal or monstrous births may have assisted in the formation of mythical monsters, or would tend to be regarded in popular belief as matters of common occurrence. Thus in China the standard histories are full of such prophecies. It is certain also, apart altogether from the possibility of abnormal births as a result of bestiality, that men have often speculated upon this or imagined the effects of such unnatural unions between different species of animals or between beasts and human beings. This is seen in universal folklore and in ancient myth, as well as in the half-gossipping histories and chronicles of bygone days and in the pseudo-scientific works on natural history from the thirteenth century. Medieval theology also believed that the union of demons and human beings resulted in the birth of monsters.

The brutality or merely the hostility of other tribes, nearer or more distant, would inevitably cause them to be regarded in a still more sinister or monstrous aspect. Horrible deformities were attributed to them, or this or that feature was exaggerated, or habits of a peculiar vileness were ascribed to them—e.g., forms of loathsome cannibalism. Even such tribes would invest them with distorted forms. Here, probably, is to be seen the origin of the belief in those monstrous tribes already alluded to, invading peoples, behaving with brutality, are sure to be regarded as monsters. In the same way the monstrous cannibalistic ogres of folk-tale are exaggerated forms of actual cannibals (see Cannibalism). Again, where certain deformities are assumed by warriors to strike terror into their opponents, where faces are painted or tattooed, mask or animal head-dresses worn, these are apt to be a real part of the men themselves.

(d) Lastly, the misinterpretation of fact may easily give birth to monsters. This is especially seen where the bones of fossil animals of large size have been regarded as those of monsters or giants, or their tusks as the claws of monstrous birds—the griffin or the rach. Hence the rise of many myths about these beings—e.g., of how they were slain by gods or spirits beneficent to men.

There is no doubt that the belief in the existence of monstrous forms has had a profound influence on the minds of man, probably for the reason that, as has been proved experimentally, an abnormal shape has a strong power of suggestion.

2 See the figure Horner and Mushie, 1895, p. 40, for the creation of myths and mythical beings from dreams.

4 S. Freud and his school have argued that the mythological forms may be seen in dreams, equally, as one akin to a waking dream. See his Der Dichter und das Phantasieren, in his Sammlung Kleiner Schriften zur Neurasthenie, Leipzig, 1911.

MONTANISM.—1. The movement now generally known, from the name of its founder, as Montanism had its birth at a village called Arilabu in the province of Phrygia, probably not so far from Philadelphia (Romans, Cities and Biographies of Phrygia, p. 573). There, as it seems, about A.D. 150, Montanus, a recent convert, who had been a pagan priest, began to prophesy. His paralyses were so often accompanied by strange phenomena resembling those associated with demonical possession. In what way his exercise of the prophetic charisma was regarded by his opponents as differing from that of the genuine prophets we have various hints from nearly contemporary documents: he spoke while he was actually in a state of ecstasy; the true prophets received their message in ecstasy, but did not deliver it till their faculties returned to a normal condition. Moreover, the 'ecstasy' of Montanus was a kind of madness, deliberately induced, whereas prophets, acknowledged as such by the Church, even when in a state of ecstasy, were of sound mind; the so-called ecstasy of Montanus was, in fact, not ecstasy at all, but an oracle, as a contemporary writer (Eus. HE v. xvi. 7, 14) calls it, θανάσεως. In agreement with these statements an Oracle of Montanus declares that the prophet is as a lyre played upon by the divine pleurastan; and the form in which most of his extant utterances are commended implies that he was a mere passive instrument, and that the phrases which fell from his lips were actually the ἀποστισμα τερας of the Deity. His opponents reminded him of the style of the ancient prophets, whose human agents proclaimed the will of God in public with the Lord and with the Lord's Church.

2. After a time—as seems to be implied, a considerable time—Montanus was joined by two women, Maximilla and Priscilla, or Prisca, who with his sanction deserted their husbands, and who also claimed to possess the prophetic charisma. Their utterances were similar in matter and in manner to those of their leader.

3. There can be no doubt that Montanus maintained that this 'new prophesying' differed essentially from the preceding prophesying. Thus the novelty of its form was to be explained. It was the fulfilment—so it was alleged—of the Lord's promise of the coming of the Paraclete (Jn 14:16-17). The apostles had not the perfection of the Holy Spirit (Jn 14:26); this was reserved for the new prophets, of whom Christ spoke in Mt 28:19. This is stated to be the Montanist doctrine by many writers, and it is the basis of the exaggerated assertion of Eusebius (HE v. xiv.) that Montanus claimed that he himself was the Paraclete.

4. It is not clear whether in the earliest period the prophetesses were regarded as mouth-pieces of the Paraclete in the same sense as Montanus. Eusebius supports the contrary when he reports that, while Montanus was held to be the Paraclete, the women were 'as it were prophetesses of Montanus' (cf. Ioh. Alex. de Triin. iii. 42; pseudo-Tert. Harr. 7). It is possible that at first they were put in a lower position, Mt 28:20, but not in Jn 14:16, being referred to them only at a later time, perhaps after the death of Montanus, that they were regarded as on a par with him.

5. It is evident that the acceptance of the 'new prophesying' as embodying the final teaching of the Paraclete, and as in some sense superseding earlier revelation, is the cardinal principle of Montanism. This is manifest by the very phrase 'new prophesying', which seems to imply that by the title 'prophets' they who arrogated to themselves, as distinguishing them from other Christians (Psalmus) (Ioh. passio. Clem. Alex. Strom. iv. 13 [PG viii. 1300 E]); and by the polychoty of anti-Montanist writers, whose argument was mainly directed to proving that this 'so-called prophesying' was in truth a false prophecy proceeding from the spirit of evil.

The charisma was not regarded as confined to Montanus and 'the women.' Theolodus, e.g., was an ecstatic, and was reported to have died while in an ecstasy.

6. We are not surprised to learn that this sudden outburst of prophecy, and the claims that were made for its leaders, provoked much opposition. Many of those who heard Montanus and his companions would have silenced them. Two Phrygian bishops made an appeal to 'prove and refute the spirit that spoke in Maximinus; another, who had come from Ancyra in Thrace, attempted to exorcize Priscilla. At first, we are told, the movement advanced slowly; 'but few of the Phrygians were deceived.' But after a time, it seems, the majority of the Phrygian Christians became adherents of Montanus. Thus only can we account for the fact that at an early period his followers were commonly spoken of as the 'Phrygians,' and their teachings were referred to as 'the heresy of the Phrygians' (οι Φρυγες, οι Φρυγιανα διδασκαλια, whence the Latin cathophryg, cathophrygi). In due course formal protests were issued by the bishops. While the movement was still in its infancy, Claudius Apollinaris, bishop of Hierapolis, wrote an elaborate treatise against it, to which were appended the signatures of many bishops, at least one of whom came from Thrace. Other confutations of the new teaching followed it (Eus. HE v. xvii. 1). Many synods met in Asia and elsewhere, and condemned the movement. On the other hand, the Montanists used similar words about the ecclesiastical rulers, and stigmatized them as slayers of the prophets. They put forth treatises in which the arguments of their opponents were answered. It was hoped to determine with accuracy the date of the inevitable crisis; but it is certain that in Phrygia before the year 177 the Montanists were excluded from the Catholic Church (Eus. HE v. iii. 4; cf. xvi. 22), which clearly refers to the persecution under Marcus Aurelius.

7. It is difficult to fix the date of the beginning of the prophesying of Montanus. The choice is usually held to lie between A.D. 152, under which year Eusebius reckons the origin of the movement in its Chronicon, and A.D. 150-157, which is supported by Euphranius (Pat., x. v. 8). It is certain that these two dates are inconsistent, for Eusebius may be giving the year, not of the earliest prophesying of Montanus, but of some prominent event which he regards as the beginning of the 'heresy'—e.g., the migration to Putea (see below, § 9), or the promulgation of one of Montanus' more startling innovations. In any case it is probable that the inference from the fact that Claudius Apollinaris wrote his treatise sometime before the end of A.D. 177, is not based on insufficient grounds after 174 (Lavoir, Eusebiana, p. 1591) when Montanus with his false prophetesses was in the act of introducing his error (HE iv. xxvii.). It must therefore be regarded with caution. It is to be observed that Apollinaris wrote some time after Montanus had been joined by 'his false prophetesses' (ib. v. xix. 3)—an event which was itself probably a good deal later than the beginning of the prophesying. Further, (1) the history of which a short account has been given in the preceding section requires a period of a good many years; and (2) Maximilla, the last of the three leaders, died in 175-176. The movement must have enjoyed considerable dissemination for a sufficiently long time to give it the strength and stability which it undoubtedly possessed. These considerations point to an origin much before 172. The earlier date is therefore to be preferred, though with the qualifying which necessarily attaches itself, in such matters, to the statements of Euphranius. He has certainly fallen into error in one passage (perhaps two) in which he gives dates connected with the Montanist movement (Harr. xvi. 11, 29). The Paraclete was manifest in Montanus, and in him and his companions revealed the fullness of Christian teaching, was, as we have seen, the original and the adherents of Montanism, since it was the office of the Paraclete to supplement the teaching of Christ, it was to be expected that this doctrine would be made the basis of a system differing at many points from the teaching of the Church as usually understood. Montanus,
it is true, did not consciously deviate from ecclesiastical dogmas. His opponents bear witness that he accepted the canonical Scriptures and was orthodox with regard to the resurrection of the dead and the divinity of the Trinity. But such critics, whether they approved or disapproved of the others who were called Montanists, would probably consider his 'innovations' considerable.

Not long after the beginning of the prophesy-4. ing Montanus crossed the Phrygian border and established himself with his followers at a city called Eas. This place, which lies to the west of Eumemia, and not far from the Phrygian Pentapolis, Pepnata, with the neighbouring village of Tymion, he named Jerusalem. To this settlement, which was thereforeforward the centre and holy city of the Eastern Montanism, he endeav-9. ourd to gather adherents from all quarters. These facts, coupled with the lavish promises made by the prophets to their adherents and certain predictions of Maximilla (Ens. HE v. xvi. 9, xvii. 4; Epiph. Harr. xlvii. 2), apart from a more explicit oracle attributed to another prophetess (Epiph. Harr. xlix. 2), would lead us to the conclusion that the 'new' prophet 'taught men to expect in the near future something that was prophesied by oracles (Tert. 14). The primitive Montanists, in fact, of the proclivity of chiliasm, but chiliasm of a new order. It was this hope of the Parousia at their Jerusalem, that gained for them the name of Pepuza.

Connected in some measure with their chil-10. liastic teaching was their view of the prophetic office in the Church. The prophetic charisma was not an occasional gift, bestowed as the need for its exercise arose, according to the dictum of 'the Apostle' (1 Co 13th), it was perpetual, one of the notes of the Church. Consequently Montanus, Maximilla, and Priscilla received their office in a line of succession. Quadratus and Annonia of Philadel-11. phia, were the link between which they continued with Agabus, Judas, Silas, and the daughters of Philip (Ens. HE v. xvii. 3, 4; Epiph. Harr. xlvii. 2).

But, since Montanus and his companions were the channels of the ultimate revelation, they were the last of the prophetic succession. After them would come the end.

Again, the exalted position given to the 'new prophets' led naturally to the assignment to them of prerogatives generally regarded as belonging to the apostles (1 Co 12th), and thus to the prophet and the regular hierarchy. The prophets had the power of absolution (orac. ap. Tert. de Pud. 21). This power they shared with the 'martyrs' or confessors (Ens. HE v. xviii. 7).

And, the association, the recognition, the approbation of Maximilla of two prophetesses involved the recognition that young men might hold high office in the Church. Maximilla and Priscilla seem to have made independent contributions to Montanist teaching (Hipp. Phil. viii. 19; cf. Did. Alex. de v. ca. xii. 3; ZKG xxvi. 490); and they were probably in the habit of prophesying in the congregation (Ens. HE v. xvi. 9; apoc). There is evidence that, at any rate in later times, other women followed their example (Orig. ap. Crescon. Cod. v. 279), or even outdid it; for we read of a prophetess in Capadocia in the 3rd cent., perhaps a Montanist, who baptized and celebrated the Eucharist (Firmilian, ap. Cyrn. Ep. lxxx. 10), of female bishops and priests, and of virgins who regularly officiated in the con-12. gregation at Pepnata (Epiph. Harr. xlix. 24; Did. Alex. de Trin. iii. xii. 3).

Montanus made laws regarding fasting (Ens. HE v. xviii. 2; ἁγιωτάτης ἐνισχυματικής; cf. Hipp. Phil. viii. 19; Tert. de Pud. 21). He made a point, apparently, that he increased the number of the fasting days, rather than that he reduced them to rule, eliminating thereby the element of free will in such matters, making them a duty to be observed by all Christians alike, and not only by those who used them as a means for attaining higher perfection. Among these ordinances (perhaps a later development, due to the 'women' [Hipp. Phil. viii. 19] were those which led to the particular kinds of food (ἐγγερσόμενος, ἐφαρμοσμένος).

There is some evidence that in Phrygia the Montanist rule as regards the number of fasts fell below Catholic custom (Soz. HE vii. 10, where after two weeks of 21st, 25th, and 29th fasts, a but there is no evidence of such a system among the Ephesian Montanists 'of Tert. de Ivi. 15), while in the West it did not greatly exceed it (see de Labriolle, La Grise, p. 391 f.). The regulations about fasting indicate therefore that the instances of the Galatizing or legal tendency which was desirous in Montanism by its adversaries (Tert. de Ivi. 14). This was the natural outcome of a system which invested the exhortations of the prophets with a divine sanction, giving them the character of unalterable laws, to be observed as ends rather than as means for the attainment of holiness.

Under the same category may be brought the Montanist regulation of second marriages. For on this point their divergence from the Church must not be exaggerated. The Church discour-aged second marriage; the Montanists held it to be fornication. That which the Church permitted in special cases the Montanists excluded by a law which admitted no exception.

We learn (Ens. HE v. xvi. 20, xviii. 5) that the Montanists held martyrs (including confessors) in high honour, and even set special stores to their opinion on questions of doctrine and practice. But this was no peculiar feature of their system; it reflected the general teaching of all early Christ. And, when they went a step further and allowed them the power to forgive sins, they were in agreement with the orthodox of the West (Tert. de Pud. 23), if not also with those of Phrygia. It must be stated, however, that there is no proof of the statement, often made, that Phrygian Montanism involved a severe asceticism, or that its adherents were more antagonistic to heathensm than other Christians in the same district, or displayed special eagerness for martyrdom. Such evidence as exists points in the opposite direction (Lavogia, Ensebiania, pp. 127-135).

Montanism, after its severance from the Church, though it retained the hierarchy of bishops, priests, and deacons, developed in its organization some peculiar features. Montanus was responsible for the innovation (as it was esteemed) of salaried preachers, and for the institution of so-called 'deaconesses', or female officials (ἐνισχυματικοί [Ens. HE xvi. 14]). St. Jerome (Ep. xli. 3) reports, in agreement with an ordinance of Justinian (Cod. Just. I. v. 20, 3), that the hierarchy consisted of the patriarch of Pepnata, επισκόπος apparently three or four 'deacons of the stewards', bishops, and inferior ministers.

Of the peculiarities of Montanism here enumerated some were a revival—perhaps rather a survival—of the belief and practice of an earlier period; such, e.g., are the recognition of prophets as a permanent order (1 Co 12th, Epiph. 41; Didache, 11 ii.), the prohibition of second marriage (Athenag. Leg. 33; Theoph. ad Autol. ill. 15; Iren. iii. xvii. 2), chiliasm (Just. Ditt. et Trypt. 80; Ens. HE iii. lxxxi. 121.), the ordination of women, and the expectation of an immediate Parousia (Hipp. in Dom. 18f.; Orig. Cels. vii. 8-10). The substitution of Pepnata for the literal Jerusalem may be due to the same influence. His option for the advantage of possessing a holy city in the district from which Montanus drew the greater number of his adherents.

It is not necessary to pursue the history of
MONTANISM

Eastern Montanism in detail. For some years after the death of Maximilla, the last of the original trio, in 179-180, there were no prophets, and the Church and the world enjoyed peace—famine not, for man was the same as before—peace. Of the Antiochenus, cf. Iren. *H. E.* 4, 12, and ultimately adherents of the movement were found in every part of Asia Minor, in Egypt (Clem. Alex. *Strom.* v. 13 [PG viii. 1300 C]; Did. Alex. *de Trin.* etc.), and even in Constantinople, though they were always most numerous at the following of Theophilus (from orgies connected with a vine-skin [Epiph. *Hist.* xlviii. 14; *Finast.* 49, 76; *Aug.* *Hist.* 76]). It is perhaps scarcely correct to speak of Montanism as a sect. In its later stages it was rather a collection of heterodoxies, which had survived the stringent edicts of various emperors, and was perhaps not wholly extinguished till the period of the Turkish invasion (Ramsay, p. 574).

19. Before we turn to its history in the West, some important facts may be mentioned. The early Montanists were prolific writers. Their controversial tracts have been referred to above (§ 6). Here it is to be noted that Caius (c. A.D. 200) accuses them of composing new Scriptures (En. *H. E.* vi. xx. 2), while other authorities attribute numerous writings to Montanus, Maximilla, and Priscilla. A certain Asterius Urbanus compiled a collection of oracles of the prophets (ib. xvi. 17†); and Tertullian wrote a Catholic Epistle in imitation of (ib. xvii. 5) an anonymous author quoted by Eusebius alludes to literature of this class when he states that he hesitated to write against the Montanists for fear of being charged with adding to the Canon (ib. xvi. 3). It is clear that 'new prophesy' was propagated by writing as well as by oral teaching.

A necessary result of this was a tendency to division. The Montanists must have regarded the writings of their own prophets as of at least equal value with the Scriptures; they constituted in fact, if not in intention, an enlargement of the Canon. It was inevitable that they should be used, like the canonical Scriptures, as authoritative expositions of dogmatic Christianity, and that, like them, they should be variously interpreted. By the end of the 2nd cent. there were two parties of Montanists, who took different sides in the Monarchian controversy, and both of them appealed to the oracles of the prophets as well as to the New and Old Testaments (Tert. *H. E.* 7; Did. Alex. *de Trin.* ii. 13, iii. 18, 25, 38, 41; ZKG xxvi. 452 ff.; *Tert.* *H. E.* 2, 8, 13). Thus the authority ascribed to the writings of the prophets produced a tendency to the dualism, although this was the result, as modern critics generally agree, of matters of faith, and probably also in matters of discipline. This tendency would be greater if, as seems likely, such writings were not collected into a Corpus. Each community would follow the teaching of such books as they happened to possess, without the obligation of harmonizing it with that of the books possessed by other communities.

20. A similar tendency is revealed in the fact that in the earliest times, apart from the title of Phrygians, which merely indicated the place of its origin (Clem. Alex. *Strom.* vii. 17), there was no generally accepted name for the sect. The various communities seem to have been commonly designated by the names of local leaders. Thus we hear of the followers of Proclus or of Alexander (pseudo-Tert. *H. E.* 7), the adherents of Montanus, Alciatiades, and Theolotus (En. *H. E.* iii. 4), the followers of Miltiades (ib. vi. 3: probably the Montanists of the Pentapolis), the Priscillians, and the *neueser* (En. *H. E.* vi. 2; cf. Tert. *H. E.* vi. 7, 11, and see Ramsay, pp. 709 ff.). The latter name see Vögt, *Empfehlungen für verschiedene Erklärungen des anti-montanistischen Kampfes,* pp. 107, 129 ff. Apparently the last name of this class to emerge was that with which we are most familiar, 'Montanists' (first found in Cyril, *Cat.* xvi. 8). There are also nicknames, which we may suppose have been merely local, and to have witnessed to local peculiarities (cf. 29).

Artotyrty of Galatia (from the use of bread and cheese in the mysteries), the Taseodrignite (from a peculiar way of holding the hands in prayer); of this Possessernehmien is a variant form; cf. Ramsay, p. 556), and the Asseodur or Asse of Galatia (from orgies connected with a vine-skin [Epiph. *Hist.* xlviii. 14; *Finast.* 49, 76; *Aug.* *Hist.* 76]). It is perhaps scarcely correct to speak of Montanism as a sect. In its later stages it was rather a collection of heresies, which had survived the stringent edicts of various emperors, and was perhaps not wholly extinguished till the period of the Turkish invasion (Ramsay, p. 574).

21. The earliest notice which we possess of any knowledge of the Montanist movement in the West appears in the year 177. In that year the Christians of Gaul, acting as ambassadors for the peace of the churches, wrote letters to Pope Eulensinus and to the brethren in Asia and Phrygia expressing their opinion of the movement. Since Eusebius (*H. E.* v. iii. 4) pronounces their position, 'pious and orthodox,' it may be, that one of the bishops to whom these letters have been addressed, on the whole, anti-Montanists, dealing with this conclusion is confirmed by the account of the persecution at Vienna and Lyons, written by an anonymous author cited by Eusebius (*Hist.* 7, 225 f.). If we may judge from two passages of Irenaeus (*H. E.* III. xi. 9, *xxviii.* 6 ff.), who was their emissary to Rome, though they avoided the extreme position of the Alegi (see art. Locos, above, p. 197), it is evident that the Montanists rejected the Johannine writings, and though they refused to deny the existence of prophetic gifts or the right of women to prophesy in the church, they yet condemned the followers of Montanus as schismatics. It would seem that Eleutherus confirmed their judgment.

It is difficult to explain this incident without supposing that there was at the time a Montanist propaganda in Rome. No doubt the Montanist missionary there were quickly followed (perhaps preceded) by representatives of the orthodox party in Phrygia; and it may be conjectured that among these was Aviresus Marcellus of Hierapolis in the Pentapolis, 'the chief figure in the resistance to the Montanism in the later times' (Ramsay, p. 709). He certainly visited Rome with a purpose in some way connected with the welfare of the Church; and in one of the passages from Irenaeus just referred to there are phrases which indicate that some Christians for the peace of the churches (cf. *Iren.* *Hist.* iii. 7 with *H. E.* v. iii. 4) and a treatise dedicated to Aviresus almost at the time when his famous epitaph recording the visit to Rome was written (cf. *Iren.* *Hist.* iv. *xxvii.* 6 with *H. E.* v. vii. 7, and see Ramsay, pp. 709 ff.).

22. Twenty-five years later, under Pope Zephyrinus, a fresh attempt was made to introduce Montanism into Rome. The Montanist leader Proclus held a disputation there with Caenis, which was afterwards published, and some fragments of which remain (En. *H. E.* II. *xxix.* 6 ff., vi. xx. 3). The pope favoured the 'new prophecy,' and had actually put forth letters of peace to the churches of Asia and Phrygia; but in the end, under the influence of Praxeas, these letters were withdrawn (Tert. *H. E.* 1). There were doubtless later attempts of the same kind; one is referred to by St. Jerome (Ep. XII.). But Montanism was never strong in Rome, and it disappeared from the church after the beginning of the 5th century.

23. It secured some foothold in Spain. But of its history in that region we know nothing except...
MONTANISM

that it had some adherents there at the end of the 4th century (Pacianus, Ep. i. 11.).

24. In Africa the propaganda had more success. By the end of the 2nd cent. knowledge of the 'new prophecy' had reached Carthage—perhaps from Rome, less probably direct from Phrygia—and it gained there its most illustrious convert in the person of Tertullian. St. Augustine seems to have gone over to it (v. 30, 31., 32, 33.), though he found it in 22, 33., in Tertullian at first opposed the movement; he was certainly in later life a sincere and ardent champion of the teaching of Montanus, as he understood it.

25. The qualifying words are necessary; for Montanism, as an institution, in the sense in which the name applies in Tertullian, differs so much, and withal is so little consistent, that from the Montanism of Phrygia that we are compelled to suppose that his acquaintance with the teaching of the prophets was imperfect. He can hardly have received direct instruction from Eastern Montanists; his knowledge of their tenets must have been, in the main, derived from books, including a collection (de Fuga, 9; note the words 'et alibi') of the oracles of Montanus and Priscilla (he never quotes Maximilla by name), which was apparently incomplete.

Tertullian accepted, without reserve, the claim of the prophets to inspiration by the Paraclete. But it seems to us that those who speak of the Oracles of Phrygia (I.c. 3), we find no hint in his writings of the strange phenomena which were the normal concomitants of Montanist prophecy in the East. He tells us (de An. 9) of a sister who fell into an ecstasy during a church service; but she was not permitted to communicate the revelation which she had received till the congregation had departed. None of the usual anti-Montanist arguments (see Epiph. Hier. xlvii. 3-9) would have had the force against so well controlled as this. Tertullian, indeed, identifies ecstasy with amnesia (adv. Marc. iv. 22, v. 8), but with such qualifications of the meaning of amnesia (de An. 43) as to bring him very near to the conclusions of Eusebius. Moreover, with habitual inconsistency, he affirmed, in direct opposition to the Phrygians, that the apostles had the fullness of the Spirit.

Further, Tertullian seems to betray no consciousness of the doctrine that there was a succession of prophets from the days of the apostles to Montanus. In his view prophecy ceased with the Baptist (de An. 9, de Ici. 12), till it was restored in the prophets of the Paraclete.

Montanus mentions Pepuna. He was a chiliasm, and he expected the Parousia in the near future; but he believed that it would take place in Jerusalem (adv. Marc. iii. 24). He cannot have read the oracle (Epiph. Hier. xlix. 1) which declared that the New Jerusalem would descend at Pepuna.

Tertullian agreed with the Phrygians in allowing to the prophets authority to absolve from sin, though he has some difficulty in reconciling this view with his own opinion that certain acts are unpardonable (de Pud. 19, 21). But he is indignant with those who hold that martyrs have a life prerogative (ib. 22). On another subject he is in conflict with the Phrygians. He will not permit a woman to speak in the church, nor to teach, nor to baptize, nor to offer, nor to assume any function which belongs to a man (de Virg. Vel. 9). If the sentence had been less rigorous, one might have supposed that it came from an anti-Montanist polemic.

26. Thus Tertullian rejected much that in Asia Minor was counted Montanist. And he added much, especially in the direction of rigorism, of acute opposition to paganism, and of avidity for martyrdom. For it is not to be assumed that, when his later views differ from his earlier, and when he proclaims them as taught by the Paraclete, they were really derived from primitive Montanism. Thus in his de Fuga he denominates flight in persecution as sinful, though in his ad Uzorici (i. 3) he counts it lawful; and in his de Pudicitia, forsaking the milder teaching of the de Perpetuius, he denies the power of the Church to forgive grosser sins.

But in the latter he maintained that which makes no reference to flight; and in the latter one which flatly contradicts his thesis (de Fuga, 9, de Pud. 21). In both, the oracles are more in harmony with his earlier than with his later opinions.

27. Even on subjects in which he was in entire accord with Eusebius we find a difference between his earlier and later teaching; e.g., he expressed disapproval of second marriage in his pre-Montanist treatise ad Uzorici; the arguments used are identical with those of his de Exhortationibus Christianis and only, in the fact that an absolute prohibition takes the place of a strong expression of disapproval; or, in other words, that he drew the logical conclusion from his argument. Here, as elsewhere, he found in oracles or visions only a new sanction for opinions already formed.

28. Thus we see that, if the form of Asiatic Montanism was largely determined by environment, and possibly by the influence of individual leaders, the form of African Montanism, as it was afterwards rightly called, 'Tertullianism,' was determined by the personal force of Tertullian himself, and doubtless in some degree by the environment which moulded his character. We cannot forget that the home of Tertullianism was later to become the home of Novatianism and Donatism.

29. If it be asked, What was there in Montanism to attract such a man as Tertullian? It must be remarked that he was unaware of, or ignored, many of those features of the movement which to Eastern opponents caused most scandal. There remained the proclamations of the inspiration of the living Church, burdened with many which had been anticipated by his own thinking. Premising this, we may accept the answer of Sweete (Holy Spirit, p. 79): 'For Tertullian the interest of Montanism lay chiefly in the assurance which the New Prophecy seemed to give that the Holy Spirit was still teaching in the Church.' It need only be added that the acceptance of the Montanist oracles as embodying the teaching of the Paraclete was made easier for him by the support who seems to have given to opinions which he maintained in opposition to other Christians.

30. The Tertullianists seem to have become an insignificant body after the death of their founder. They are never referred to by St. Cyprian, in spite of his veneration for Tertullian. The last adherents of the sect returned to the Church when St. Augustine was at Carthage, and he reports that, when he wrote his work on heresies, their basileia was in Catholic hands (Herr. 86).

LITERATURE.—1. PRINCIPAL SOURCES.—The oracles of the prophets (ed. with commentary in de Libror. La Cit. pp. xliii. 340-350); the anonymous writer of a n. 36 (de An. 43); Apollonius (v. a. 220, quoted de xvii.); the early document worked up in Epiphanius, Hier. xlvii. 2-13 (a. 180-200); Hippolytus, Syntagma, represented by pseudo-

MORAL ARGUMENT.—'Moral argument' is distinguished from logical either in the nature of the facts to which appeal is made or in the assurance which the conclusion expresses. It is possible that both implications are associated with its meaning. But in general it is often used to denote something more or less of the nature of an appeal to the personal experience, to the personal sympathy, or to the moral feeling of the hearer, as distinguished from the certainty of logical argument.

It is probable that the term derived its specific import from the implications of the 'moral argument' for the existence of God and immortality. In this method of 'proving' them Kant remarked the impossibility of meeting the demands of the moral law in this life, and, as this law required the adjustment of duty and happiness, he sought this realization in life to come. To effect this adjustment the existence of God was supposed to be required. This argument was assumed to be valid when all the logical arguments for the same conclusion were null and void. The want of absolute assurance implied in the conclusion was transferred to all arguments which gave what is called 'moral certainty.'

It also derives part of its meaning from the implication that the moral order of things favours or expresses the ultimate significance of what lies behind it. That is, the assumed rationality of things is taken to imply the nature of the causal agency behind it, and the 'moral argument' is an expression of what is supposed to be implied by the above. In other words, while the logical argument is supposed to be limited to a physical order and its implications.

A fuller exposition of Kait's moral argument for the existence of God and immortality is the following:

Happiness is the natural condition of a rational being in the world, and is the natural accompaniment of virtue. In fact, the moral law itself requires a union or some synthetic connection between virtue and happiness. But in the present natural order this ideal union is not effected, and we cannot treat the world as rational in this connection. Even in the natural order, the connection requires an infinite time for its realization, and hence we have to postulate immortality as the condition of realizing the demands of the moral law which holds valid for the present. Immortality, therefore, becomes a necessity of a rational order. But this union of virtue and happiness, not being a necessary one, requires the causal introduction of something to bring it about. Since we postulate immortality as the condition of rationality, we postulate the existence of God to effect the realization of happiness in connection with virtue. The argument, thus, is that morality, if valid and binding at all, requires God and immortality to make its imperatives rational and its rewards possible.

JAMES H. HYSLOP.

MORAL EDUCATION LEAGUE.—Following on the rise of the Ethical Movement (p. 81) in England, a number of persons interested in the training of the young began to study methods of imparting moral instruction on an ethical basis pure and simple, and in such a manner as to meet the needs of children drawn from all denominations. The Union of Ethical Societies seized the opportunity of an approaching election of the London School Board to invite a wide variety of societies to send delegates to a conference. In July 1897 the delegates met under the presidency of Frederic Harrison, and adopted a policy of which the two leading statements were as follows:

(1) That there is urgent need of introducing systematic moral instruction without theological colouring into the Board schools in place of the present religious teaching.

(2) That this moral instruction should be made the central, culminating, and concluding point of the whole system of elementary education, giving unity and organic life to all the other lines of teaching, and to all the general discipline of the school life.

A direct result of this conference was the establishment of the Moral Instruction League at a well-attended meeting in St. Martin's Town Hall on 7th December 1897, and annual meetings have been regularly held and reports issued since January 1898. The original object, 'to substitute systematic non-theological instruction for the present religious teaching in all State schools,' was changed, in 1901, to the purely constructive policy 'to introduce systematic non-theological moral instruction into all schools.' On the same principle, the object was, 'to substitute non-theological,' and made to run thus: 'To urge the introduction of systematic moral and civic instruction into all schools, and to make the formation of character the chief aim in education.'

At the same time that the title of the society was altered to the Moral Education League.

The League, however, 'affirms that it works on a non-theological basis,' and both its considerable output of literature and its practice during the seventeen years of its history (1898-1915) has obviously exhibited its detachment from all forms of sectarian and denominational principles. Its supporters in the earlier stages made attempts, with some success, to induce parents to take advantage of the Conscience Clause of the Education Act of 1870, withdraw their children from religious instruction, and apply for special moral lessons. These efforts ceased as the League became more absorbed in its scheme for building up a sound method of civic teaching, and for moral moral order in the world, while the logical argument is supposed to be limited to a physical order and its implications.

A fuller exposition of Kait's moral argument for the existence of God and immortality is the following:

Happiness is the natural condition of a rational being in the world, and is the natural accompaniment of virtue. In fact, the moral law itself requires a union or some synthetic connection between virtue and happiness. But in the present natural order this ideal union is not effected, and we cannot treat the world as rational in this connection. Even in the natural order, the connection requires an infinite time for its realization, and hence we have to postulate immortality as the condition of realizing the demands of the moral law which holds valid for the present. Immortality, therefore, becomes a necessity of a rational order. But this union of virtue and happiness, not being a necessary one, requires the causal introduction of something to bring it about. Since we postulate immortality as the condition of rationality, we postulate the existence of God to effect the realization of happiness in connection with virtue. The argument, thus, is that morality, if valid and binding at all, requires God and immortality to make its imperatives rational and its rewards possible.
devoted its energies to influencing the opinion of education. A return issued by the League in 1908 showed that, of the
327 local education authorities in England and Wales over 100 had taken definite action in
emphasizing moral instruction in their schools, in some cases in the secular time-ebable, but usually by incorporating special
moral elements into the religious course; and twenty
authorities had adopted the syllabus drawn up by
the League. Besides this syllabus, which supplies a
detailed series of notes for teachers, and the regular
literature of the League includes a number of text-books by A. M. Chesterton, Baldwin, Wilde-
grave, Robson, Reid, Wicksteed, and F. J. Gould,
umerous pamphlets, a Quarterly (beginning April
1905), and a volume designed for use in India
(Youth's Noble Path, 1911). The education authori-
ties in Bombay, Ceylon, and Mysore have evinced
practical interest in the methods of the League;
and significant sympathy has been shown by H. H.
the Faqir, system, and many other Indians as
well as Anglo-Indians. Each annual report testifies to a spirit of inquiry aroused in various
colonies and foreign countries. A remarkable
testimony to this spirit was afforded in 1895, when a
committee of inquiry into moral instruction and
training in schools examined witnesses and col-
clected papers, its report being published in two
volumes in 1908 (vol. i. *United Kingdom,* vol. ii.
*Foreign and Colonial*). The inquiry was carried
on independently but several members of the
League sat on the Committee and contributed to
the volumes just named. A still more striking
reinforcement of the League's endeavours appeared
in 1911, when in the shape of the first International
Moral Education Congress, held in London under
the secretaryship of G. Spiller. A similar con-
gress was held at The Hague in 1912.

F. J. GOURD.

MORAL LAW.—The concept of law is one of the
two concepts which may be taken as fundamental
in an ethical system. According as we
start from the idea of a good to be attained or of a
law to be obeyed, we have a teleological or a juridical
theory of ethics. The former of these was the
characteristic type of Greek theories; the latter
became predominant in Christian times. Under
the teleological conception morality is looked upon
as fundamentally a matter of self-expression or self-
determination of the individual. The latter, we have
indicated, is a legal system, and many of its
theoretical principles are applied to the
attainment of a good which every man
naturally seeks. It is in this sense that Socrates
was able to maintain his paradoxical position that
no man is willingly vicious and that all vice is
ignorance. Such is the general public. A return
from the League's work was that of moral
self-expression applied to the law. The idea of
law is of an order which is to be imposed
upon human nature and, accordingly, to be accepted
by the rational will. One must, therefore, dis-
tinguish between such an imperative, which does not
rest upon any human desire for happiness, and a
moral rule or law in the teleological sense of the
term. The moral laws, in the teleological view,
are not imperative, but commands of prudence, point-
out the best ways for the attainment of happi-
seness. Their practical and teleological
character, and hence, in their hypo-
thetical character, they have the nature of
uniformities in the scientific sense of the term
law.' They are rules of applied psychology.
Although such rules are often spoken of as laws,
yet, lacking the element of imperativeness, they
are perhaps better not designated by that term.

Historically, the conception of morality as law
is an early one, primitive morality consisting in
obedience to tribal custom regarded as ultimately
imperative for the individual. When ethical re-
flexion awakes, however, with its scepticism and
questioning of authority, the natural view of
morality is the teleological one, and the concept of
moral law gives way to that of good. Experience
and a deepening of the moral and religious
consciousness, such as occurred in the Hellenistic
age and in early Christian times, revived the dual-
istic idea of morality and we have moral
theories with their central doctrine of moral law
and obligation. While these were at first theo-
ological in character, in modern philosophy we find
the idea of law maintained also on a natural
basis.

Considered with reference to the nature of moral
law and its authority, three types of system may
be distinguished: (1) teleological, (2) natural, and
(3) rational.

1. Theological.—In the theological systems
moral law is regarded as a rule of conduct which
has its ground in the nature or will of God
and not in the nature of man or in the consequences
involved in obedience or disobedience to the
law. The rule may be his will because it is the divine will, and not
the divine will because it is for his good because it is the will, sometimes it is the intellect, that
sets the standard, but in all cases systems of this
type are theocentric in nature. To this type belong
the various forms of scholastic theory, so far as
they succeed in raising away from their
classical originals, as well as the chief systems of
Protestant moral philosophy.

The serious difficulty in theological systems has
always been the question of the authority of the
divine law and its relation to the individual. Em-
phasis upon the divine has tended by contrast to
raise new centres of interest in the human, and
men have always refused to remain satisfied with
the idea of a law whose basis is outside themselves.

2. Natural.—Natural law as a basis for morals
may therefore be described as an order of human
nature, known to be such by the unaided reason of
man, and recognized as binding without reference
to the desires or moral efficiency postulated by
human life. Man knows himself as properly of a certain
nature, and cannot reasonably depart from the
rules involved in its realization. These rules are
not imposed from without, but are the expression
of his own nature and binding only as such. To
be moral is to be truly a man, and to be truly a
man is to be truly a rational animal. The norms
of reason are the moral laws. This type of theory
MORAL OBLIGATION was prevalent in the earliest period of modern ethics, and represented the attempt to place morals upon a rational basis. The general idea takes various forms, but is essentially the Stoic form of Grotius and the Neoplatonic doctrines of the Cambridge Platonists and their like. While theistic in their philosophical implications and foundations, these systems agree in their desire to free morals from theological authority and to found them upon an immanent rather than a transcendent basis. Yet in so doing they tend to lose their jural character and revert to the teleological type of their Greek originals. The dictates of reason have revealed these moral or natural laws as indeed authoritative, but their authority really rests upon the value of the good end or ideal which they express. Moral law, when rationalized, ceases to be supreme, whence it was very easy for the transition to be made from these Platoizing systems to the early forms of English utilitarianism. Indeed, in spite of their legal terminology, it is hardly accurate to include them at all under the jural type; they are the natural compromises of the transitional period.

3. Rational. — The rational interpretation of moral law finds its clearest expositor in Kant. It is true that Butler formulated the traditional English theory of conscience half a century earlier, but his conception of the rational nature of philosophical moral science does not involve independence of consequences; its function is to decide between the rival interests of self-love and benevolence, not to dictate a law irrespective of either. It was Kant’s merit, as he conceived it, to separate the ethical principle of a moral law and present it free from any admixture of motives drawn from a consideration of consequences. To be moral is not to seek to satisfy a desire for anything, however good, but to obey a reason, which is the only thing we cannot do without its own rationality. A moral law is thus a categorical imperative addressed by the reason to a being not naturally inclined to obedience. The motive to obedience is respect for the law itself whose authority we feel in our sense of moral obligation. The law, as grounded neither in the nature of God nor in its consequences for man, is thus absolute and the expression of a free reason which commands of itself alone, or is autonomous — to use the term. This being the case, such a categorical imperative is the only fact given us by pure reason, and that, if there are free beings, they must govern themselves by such laws is evident; but how there can be free beings at all, and how we as such can be the products of such dictates of reason — those are matters involved in the mysteries of personality. The form of such a law, as independent of consequences, must be abstract. We rational, or ‘act from a maxim fit for universal law,’ is the formula. It is thus essentially negative — a critical test rather than an informing principle. No act is to be done whose maxim is not capable of universalization, but no principle is given us, apart from experience, by which to determine any possible control for the will.

In its illustration of this rational concept of moral law, Kant’s theory also illustrates most adequately the jural concept of morality in general, the essence of which, as in Kant’s system, is the primacy and absoluteness of law. In the theological forms the law tends to become heteronomous and foreign, and hence immoral, while in the natural systems it tends to subordinate itself to the concept of good and thus lose its jural character. In Kant’s system alone is it at once a law and absolute.

NORMAN WILDE.

MORAL OBLIGATION. — The word ‘obligation’ comes from Lat. obligare, and implies that we are bound to some rule or norm. While legal obligation involves, in any last analysis, some external coercion, moral obligation assumes an inner compulsion, a sense of the personality being bound by that which may have no external authority to enforce it, and which, indeed, may be very imperfectly formulated. Language bears witness to a universal human experience of a sense of this obligation or ‘oughtness.’ Even the most primitive speech reveals the sense of an inner compulsion, an inner voice that says ‘I must.’ In its actual history, however, this inner compulsion has rarely been quite separated from the sense of some external coercion. We find it first expressed in a series of more or less definite inhibitions. Its earlier chapters are written in a series of commandments, saying, ‘Thou shalt not,’ and this primitive morality is based upon customary and largely external usage. It is, moreover, shaped and sustained in an increasingly elaborate system of ‘tabus,’ which form a link between the external and internal authorities. The realization of an internal authority as compelling as any external coercion is a relatively recent conception. Indeed, only quite recent discussions have distinctly distinguished in theory what previously may have been both. It is, however, a very old, a very ancient, and a very natural idea, namely, that to the extent that coercion becomes foreign to the agent’s will, to that extent it ceases to be the agent’s action. Moreover, older moral reflection failed to draw any sharp line between the sense of moral obligation, and the practical understanding, and that empirical content of the rule or norm to which the moral agent feels himself bound.

1. Uncritical religious intuitionism ascribed both the sense of moral obligation and the content of the ethical code to an innate sense, and regarded both as a divine implanting in the human soul. Thus to both was ascribed a certain absolute and fixed character that often ended in an unreal and atavistic morality. Religious and philosophical reflection have revealed the fact that all codes are, in part at least, subject to change according as social and economic conditions change. And, as it became clear that empirical morality was thus conditioned, the whole ascribed absolute character of the whole sense of moral obligation was not equally empirical and destitute of any normative or permanent character. Men began to seek its origin in the ebb and flow of human tradition. Thus arose the question of the seat of this inner voice and the historic genesis of conscience.

2. Greek intellectualism was prone to seek the origin of this sense of obligation in the rational process. Plato represents Socrates as identifying all moral obligation with rational insight, and he himself taught that morality recognized the given heavenly types or forms of conduct in the eternal ideas of the good. And, though Aristotle parted company at this point with Plato, and saw the social and empirical character of the ethical norms, yet on the whole Greek intellectualism never succeeded in keeping clearly apart these two elements in every ethical situation—the code of morals to which a moral agent is bound and the inner compulsion by which he is bound. Thus swung between an uncritical intuitionism and an equally uncritical empirical rationalism. It may now be taken for granted that, though the discursive reason is and always must be concerned
MORAL OBLIGATION

in every ethical situation, and is more particularly interested in the critical analysis of every given code of ethics, nevertheless it is vain to seek the origin of the sense of moral obligation in the rational process alone. Nor can we successfully resolve moral obligation on the basis of a clear rational insight into consequences of any kind.

3. Critical rationalism began with the work of Hobbes, Locke, and Hume. Locke had little difficulty in showing how untenable was the uncritical intuitionism that sought to define codes of morals. But both Hume and Hutcheson leave unanalyzed a "moral sense" as something ultimate. This moral sense, Adam Smith, in his brilliant ethical treatise, sought to resolve into sympathy, or at least to trace its origin to sympathy, as a natural attribute of man. It was distinct on the basis of this critical rationalism that Bentham and the two Mills made their famous analysis of the sense of moral obligation in terms of utility, and more recently, L. J. Hand, and others. So far as this empirical rationalism dealt with the codes of morals found in human history, it was fruitful and stimulating in a high degree. At the same time, it became increasingly evident that empirical utilitarianism could build no bridge from the sensation of the useful to the sense of personal responsibility to be socially useful. And, when John Stuart Mill conceded an intuitive capacity for estimating values as the basis of his doctrine, the case for the intuitive recognition of moral values as higher over against other types of value, clear-eyed critics of rational utilitarianism realized that Bentham's system had gone into bankruptcy.

4. Biological evolution, however, infused new life into the discussion as to whether the origin of the sense of moral obligation might not be found in the socially useful. It was suggested by Darwin himself that the conflict of instincts, and the survival of group-purposes, as von Hirzenh also shows (Der Zweck im Rech^, esp. vol. i. ch. vi.), but the biological analogy has been distinctly overworked, and it is becoming increasingly evident that evolutionary philosophy must assume variations and does not explain them. Thus on the ethical field origins are no more explained than on the biological, and the sense of a moral obligation cannot so far be successfully analyzed into immoral elements and group-purposes, in detail the sense of individual moral obligation presents many difficulties in connexion with the socially useful, for historically it is easy to show that the sense of moral obligation has time and again protected themselves of conduct patently socially destructive.

5. Critical intuitionism is therefore in many different phases restated itself, and, especially on the ethical field, there are many attempts to re-state more satisfactorily the position of Kant and Lotze. There is some return to Hobbes and Fries, and the philosophies of Wundt, Eucken, Eisele, James, and Bergson are suggesting new formulations for the sense of moral obligation as a category of the practical reason incapable of further analysis. From the psychological point of view, too, there is a sense of moral content is given in empirical experience and is subject to the laws of evolutionary process and progress, among which laws the socially useful is one of the most important factors. Thus from the biological and ethical points of view, as well as from and others, assume the capacity for moral distinction and the sense of moral obligation, without attempting to analyze the category further, while realizing that the content of moral appreciation is a subject for scientific attention, and has its own evolutionary history. From this point of view the feeling of moral obligation arises as a variation, and maintains itself by its social usefulness. Bergson has as yet given no development of the philosophies of moral content, as the sphere of psychical intuitionism has found support in his main contention, and followers of Fries and Jacobi see in the sense of moral obligation the evidence of a capacity for reaching beyond the phenomenal, and link this with an argument for God's existence. According to this school, the fundamental significance of the sense of moral obligation is the compelling power of the purposeful character of man. The mental and spiritual life demands that moral judgments be not irrational, even though complete rationalization may be beyond our power. However divergent the empiric codes of social behaviour may be, the existence of a moral obligation is an element everywhere; hence the very rational process itself is involved in a defence of the inherent validity of moral obligation.

6. Conclusion.—Moral obligation may then be said to so far as it is that which makes for the advantage of the group and of individuals; and, as its origin is as mysterious as are all other origins and variations. It is a category of the different reason, and is in no super-rational, but the contents of the moral judgment are subject to the rational process as such. Thus the total ethical complex reveals rational, sympathetic, endamonic, and hedonistic elements. But into one of these the fundamental sense of personal obligation be quite successfully resorted to. Moreover, the compulsion, covering it as does fields of action which no external coercion could regulate, is everywhere becoming the regulative principle of human society, displacing in the moral man outward law, and gaining the socially useful and the sense of moral obligation is the categorical imperative of the informed conscience, and has its seat within, and is not based upon, outward law with its concomitants of external coercion.

Thomas C. Hall.
MORAL SENSE. — The term 'moral sense' is practically equivalent to the field of ethics, and shares with such principles as rectitude and duty, happiness and social health. In the form of *croyances*, the term 'conscience' appears as early as Periander and Bius (Stolzec, p. 192, 23); as an approving and fortifying moral sense. The synonyme *conscience* (bk. ii. ch. xxii), while the disapproval of *conscience* is referred to by Cicero (Lev. i. 14). Upon the basis of a natural moral sense, St. Paul speaks of the Gentiles, those who performed by nature *sensum* the works of the law, being guided by conscience (Cicero, Ro 2.23). The appreciation of an inner moral sense distinct from external commandment seems to have been indicated by Sophocles in the *Antigone*, where the heroine appeals to a higher principle of action, while she repudiates the established law: the Sophists' distinction between *φύσις* and *διάνοια* further marks off the internal sanction of conduct from all forms of external statutes. However important the principle of a moral sense may appear to be, it cannot be denied that the most profound moral systems have been elaborated in dependence of it. Socrates based Greek ethics upon the general principle of knowledge, whence Plato and Aristotle, Stoic and Epicurean, have become ethicists as well as moralists, leaving the ethics of conscience to the minor moralists. The merger development of ethical theory in medieval times failed to develop the notion of a natural moral sense; it is in modern systems of ethics that to 'conscience' and shares its name to be found; even here such ethical philosophies as those of Kant and Spinoza were perfected without appealing to a special sense of morality.

When modern ethics began with Hobbes, it was the opposition to relativism and egoism, that led R. Cumberland (de Legibus Naturalis, London, 1672) to postulate conscience and benvolence as the true foci of conduct, although it was the latter principle that received chief emphasis. As a deist, Shaftesbury insisted upon a 'natural sense of right and wrong' (*Inquiry concerning Virtue*, London, 1669, bk. i. pt. ii. 2), which he identified with conscience, and thus spoke of 'religious conscience' and a 'displeasing consciousness' (bk. ii. pt. ii. 1). With the modernization of society the emphasis was gradually more aesthetically than ethically in the form of a disinterested regard for universal humanity, whence he inquires,

"If there is no moral sense... if all approbation be from the approval of the approver, what's Hebra or us or we to Hebra?" (*Inquiry concerning Moral Good and Evil*, London, 1720, sect. 2).

J. Butler was the first to subject the moral sense to exact psychological analysis, whence he regards conscience as the 'principle in man by which he approves or disapproves his heart, temper, and actions' (*Sermons upon Human Nature*, London, 1720, serm. i. [Works, ed. J. H. Bernard, London, 1800, i. 31]). This inward sense of approval and disapproval is further regarded as a 'reflection' whose essence is that of 'authority' (serm. ii.). Butler tends to complicate the problem when he asserts that the dictate of conscience is ever in accordance with the impulses of reasonable self-love, while the supreme sanction of the moral sense is found in the principle of harmony with nature.

Among the ethical idealists of the 18th cent., Richard Price and Kant opposed the notion of a moral sense, and thereby share in the ultimate moral authority. In his Review of the *Principal Questions and Difficulties in Morals* (London, 1758), Price denies the validity of Hutsenius's 'moral sense', and appeals to the 'understanding' as the ground of ethical distin-
MORAVIANS. — 1. History. — The Moravian Church, or the Unitas Fratrum, belongs to the historic Churches of Christendom. For more than four and a half centuries it has never wavered in its claim to be a part of the Catholic Church, possessing the historic episcopate and the three orders of the ministry, administering the sacraments according to apostolic precept, laying special emphasis on the importance of Christian unity, the cultivation of personal religion, and the necessity of personal service.

However obscurity surrounds certain points in its history, there is nothing doubtful as to its origin. It dates from the year 1521; Bohemia was the land of its birth; and the most spiritually-minded followers of John Hus were its first members. Among these, the young men of the University of Prague, as earnest reformer and eloquent preacher, owed much of his religious enlightenment to the writings of Wycliff, introduced into Bohemia by the wife of Richard II., a princess of that country. After his martyrdom at Constance in 1415 the greater part of his followers took up the sword in defence of their religious liberties. Some were pacified by concessions, such as their partaking of the eucharist as well as of the bread at the Holy Supper; but others, whose convictions went deeper, the Puritans of their day, withdrew from political life, retired to a remote corner of the country, and settled down in the Barony of Littitz. Here they formed themselves into a religious community, thriving along the lines of the institutions of the early Christian Church were revived, under the leadership of duly elected elders. At the Synod of Lhotz in 1461 they further proceeded to elect their own ministers, and for these they obtained ordination from the Waldenses (p. r.), whose bishop, Stephen, consecrated Michael Bradacius as the first bishop of the Unitas. The episcopate was given and received in the conviction of its apostolic origin, coming from the Eastern, not the Western, Church, transmitted possibly through the so-called sects, such as the Encichites, the Paulicians, the Cathari, etc. The validity of these orders was recognized even by the enemies of the Unitas; and, as the papal bulls taken to prove a complete ecclesiastical separation from Rome, it resulted in fierce persecution, despite which, however, the membership increased, the congregations multiplied, and the Church’s influence spread far and wide, not merely in Bohemia, but beyond its borders also. The name adopted was Jednota Bratrovčká, the Latin rendering of which, “Unitas Fratrum,” fails to give the exact meaning; “Ecclesia Fratrum,” the Church of the Brotherhood, would be more correct. The leaders in those early days were Peter of Cheltec, Gregory the patriarch, and Lucas of Prague,—men of very different temperaments, but of equal devotion. The Church’s doctrines soon became distinctly evangelical; thus, at the Synod of Reichenau in 1405, the Brethren decided the great question, “How shall a man be justified before God?” by the answer, “Through the faith of our Lord Jesus Christ and the righteousness which is of God: they lay down certain rules of Christian character and conduct; hence their strict discipline, which later excited the admiration of the Reformers. By the year 1500 they had over 260 congregations with more than 100,000 members; and in 1555 these figures had doubled themselves. It was the Brethren who issued the first hymn-book in the vernacular, in 1501; they set up some of the finest printing-presses in Europe, and used them largely for the production of their own translation of the Bible, which is still the standard Bohemian version of to-day. Their schools had a well-deserved reputation; Bohemia’s best literature was the product of their scholars. Their church music became famous, especially for the congregational part-singing. Family worship was a feature of their homes; the children were early grounded in the Scriptures; the catechisms were clear, concise, and practical. The Church government was Presbyterian, with the Synod as the supreme authority. Under its rule the bishops controlled their own dioceses, and they alone ordained; the presbyters preached and administered the sacraments; the deacons acted as assistants. Infant-baptism was practised, followed by confirmation.

As the Church expanded, it came to include three separate branches, in Bohemia, Moravia, and Poland; yet the three remained organically one, and thus the Unitas became the earliest International Church. The period during the greater part of the 16th and 17th centuries is one long record of persecution, broken by intervals of rest and of official favour. It suffered terribly during the period of the Counter-Reformation, especially after the disastrous battle of the White Mountain in 1620. A veritable Book of Martyrs’ might be compiled dealing with the days when Rome set itself to exterminate the Unitas. Its foremost leaders among the nobility were executed, its clergy imprisoned, its members sent to the mines or kept in dungeons; its churches were closed, its schools destroyed, its Bibles and hymn-books, catechisms and histories were burned. More than 30,000 families fled from Bohemia, and, under the leadership of Bishop, John Amos Comenius, the herald of humanistic and religious training for the young. He was at that time the leading educationalist in Europe, and his writings still rank among the standard authorities. His wanderings took him to Poland and Holland; and he was also invited to England to re-organize the very defective system of education which prevailed in that country. Much sympathy for the Bohemian martyrs had already been aroused during the Commonwealth, when Cromwell offered the Unitas a home in Ireland; and this continued afterwards also, when collections on its behalf were made in many of the Anglian churches. Indeed, it is said that the days of the Unitas were numbered, Comenius drew up a remarkable document in which he says:

“As in such cases it is customary to make a Will, we hereby bequeath to our enemies the things of which they can dispose as they please; but to you, our friends (of the Church of England) we bequeath our dear Mother, the Church of the Brethren. It may be God’s will to revive her in this our country or elsewhere. You ought to love her even in her death, because in her life she has given you an example of Faith and Patience for more than two centuries” (Memoirs of the Unitas Fratrum, Amsterdam).”

He also secured the episcopal succession, apart from the Polish branch in which it still continued, by having his son-in-law, Peter Jablonsky, conse-
Moravians and, possessing and, came to fervent found. In their others, and to the estate of a young nobleman, Count Nicolas Ludwig von Zinzendorf. They were soon joined by others from Bohemia; and in association with a number of German Pietists they formed themselves into a society similar to that which then flourished within the Lutheran Church. But this did not satisfy the descendants of the Unitas; they insisted that they were not Lutherans, they belonged to a much older Church; and, being now in the possession of a certain amount of religious liberty, they desired its re-establishment. To this Zinzendorf was at first opposed, till from a chance copy of the writings of Comenius he learned what the history of the Unitas had been, how glorious its past, how evangelical its doctrine, how strict its discipline, how firm the faith and stedfastnesses under sufferings. Almost unconsciously he found himself being led onto to devote his life, his means, and his talents to the re-organization of this venerable Church, and its equipment for further service. But the Re-organization was not of Zinzendorf's creation. Its points of contact with the Unitas lie in the personal descent of many of its members, in the church regulations which were again introduced, and, above all, in the orders of the ministry, which in 1729 were restored, with a David Schmidt was consecrated bishop by Bishop Daniel Ernst Jablonsky, whose father had received the succession from Bythner with the written commission of Comenius.

The little community at Herrnhut rapidly increased and developed in spite of the banishment of Zinzendorf by order of the Saxon Government, on the ground of his having introduced unauthorized religious novelties and of teaching false doctrine. Its fame spread far and wide, since in it a striking union of spiritual life with good works and industrial activity was to be seen. The danger of a narrow type of Pietism (q.v.) was averted by a wonderful experience of revival and a wave of evangelistic missions which with which in 1729, under the impulse of which it embarked on that particular work in the doing of which lay the pledge of its continued existence. At the beginning of the 18th cent. foreign missions were already being carried on within the Church, and it was left to the Moravians to inaugurate the modern missionary movement. This dates from the year 1722, when two of the Brethren set out to evangelize the enslaved Negroes in St. Thomas, wishing to become slaves themselves if that should be the only way of winning them for Christ. In the same spirit others went to the Eskimos in Greenland; others settled in S. America, and carried the gospel for the first time to the natives in the Dutch Colony of Surinam. Work was also begun among the N. American Indians, to whom David Zeisberger devoted sixty-three strenuous years of life. In S. Africa these early missionaries were to be found teaching Hottentots and Kaffirs the faith of Jesus. They penetrated to Persia and Ceylon, they preached in Egypt and Algiers, they established their stations on the Gold Coast and in eight of the W. Indies, they started a mission to the Jews—and all this as preaching a reformation of that little Saxon village whose inhabitants numbered only some 600. They formed the first Protestant Church that recognized and attempted to fulfill the duty of world evangelization; and in this effort they stood alone for sixty years. This early characteristic of the Renewed Church still remains its outstanding distinction; and that is why, among all others, it possesses no separate missionary society, since the whole Church is the society, and within it the principle prevails that 'to be a Moravian and to further missions are identical.'

From Herrnhut strong religious influences began to spread at home as well as abroad among the students in the German universities, the landowners in the Baltic provinces, the merchants of Amsterdam, and the industrialists of Berlin and his Brethren were invited everywhere, and, as the result of their evangelistic work, societies or congregations, known as settlements, sprang up in Denmark, Holland, Russia, and Switzerland, and in several of the German principalities. Each became, like Herrnhut, an industrial as well as a religious centre, for the apostolic rule of being 'diligent in business' as well as 'fervent in spirit' was insisted on. It was largely by means of these industrial undertakings, supplemented by the unadorned generosity of Zinzendorf, that the cost of the mission work was met—not to mention the fact that most of the missionaries provided for their own necessities.

The first official visit was paid to England in 1735; and here it was that Peter Boehler three years later met with John Wesley and became the means of his spiritual enlightenment. Here also the name 'Moravian' came into use; given originally as a convenient nickname (like 'Methodist'), it has now gained a kind of permanence, though it cannot be regarded as satisfactory, since it emphasizes only one point, and that a comparatively unimportant one, in the long history of the Unitas.

The Moravian influence was unquestionably one of the main factors in the early days of the Evangelical Revival; for a time it equalled that of the Methodists. Moravian evangelists preached throughout the length and breadth of the United Kingdom, leaving their mark especially in Yorkshire and the Midlands; and, through the preaching of John Cennick, to a yet greater degree in Ireland and the west of England.

In America also the Church took root in the middle of the 18th cent., around two centres, Bethlehem in the American S. and the Moravians, and from these two places it spread rapidly. Thus the Church came to consist again of three distinct provinces, according to the different nationalities—German, English, and American. These form the home base, and, though widely separated, they are organically one. Each province is independent as regards the conduct of its own affairs, elects its own bishops, appoints its own administrative boards, and legislates for itself through its own synods. The main outward bond of union between the parts (and the seat of final authority) is the so-called General Synod, made up of delegates from all the provinces. This bond may seem a very slight one, yet through these many years the spirit of brotherhood in Christ has been strong enough to prevent any kind of schism in the body.

The death of Zinzendorf in 1750 had important results. It involved a severe financial strain which at one time threatened disaster and dissolution, but it also led to the framing of a distinctive system of church government, the settlement of its constitution, the definition of its doctrine, and the reorganization of its undertakings. The administrative centre still lies in the founder's home. In the latter part of the 18th cent. the Moravians found themselves in the forefront of the controversy with rationalism; they became the recognized chan-
pions of orthodox Evangelicalism. Here also their influence was as far-reaching as in England, though in a different way. In this case it was due largely to the writings and the personality of Bishop August Gottlieb Spangenberg, originally a professor at Halle. It made itself felt in the universities; Schleiermacher had learned his conception of the historic Christ at a Moravian college; and Kant, the philosopher of Königsberg, referred his students, when searching for peace, to the little Moravian church over the way; that," he said, "is the place in which to find peace.'

2. Characteristics. — (a) Diaspora. — A unique feature of the Church's work on the Continent was, and is still, the so-called Diaspora, an extensive agency for promoting spiritual life and fellowship within the National (Protestant) Churches. It is carried on in many parts of Germany, in Denmark, Norway, Sweden, Switzerland, and Russia; and, according to synodal resolution, no worker in it is allowed to seek converts for the Moravian Church from among the members of other communions. The effort is in the interests of the Kingdom of God as a whole, supplementary to the existing religious agencies, and is designed to strengthen and promote the unity of believers. This accounts for the frequent complaint of the Moravians by those who know the disinterested nature of their labours, and the catholicity of their spirit. Had there been more denominationalism, no doubt a larger numerical increase would have resulted. The work would have had the kindly-knell of mutual feeling which has marked the Church's relationship to other Christian communities.

(b) Education. — Another Moravian characteristic is the educational system, officially recognized and regarded as belonging to the Church's work and responsibility. Love of education, and enthusiasm for it, formed a part of the inheritance which had come down from the days of the Unitas. It was held that, just as the Church had its mission to the heathen, who had never heard the gospel, so had it also a mission to the young to ground and train them in its divine precepts. To carry this out was a priceless privilege ordained of God, to be undertaken with prayer, and to be done for Him. In this spirit numerous boarding-schools were opened in Germany, Holland, England, Switzerland, and America; many of them have become famous, not only on account of the education given, but on account of the consecration of the whole of their proceedings. From them, men distinguished in almost every calling and rank of life. The standard was high; and, if in many cases the discipline was strict, it was always blended with the kindly influences of a distinctly Christian atmosphere.

(c) Missionary zeal. — The third, and the most characteristic, feature of Moravianism is its missionary zeal. Never since the beginning of the work in 1722 has this waned; the Church has sent forth its sons and daughters in an unbroken stream, in some cases through five generations of the same family. Most of its congregations have their representatives in the missions, and through these lines the blood of their Church is kept from them, men distinguished in almost every calling and rank of life. The standard was high; and, if in many cases the discipline was strict, it was always blended with the kindly influences of a distinctly Christian atmosphere.

3. Worship. — The worship of the Church con-
the liturgical element with a large measure of freedom in a more temporary phrase—a blending of order and liberty. The British Book of Worship includes two liturgies for public service, a confession of faith, and formulas for the baptism of infants and adults, for confirmation, ordination, marriage, and burial—and combined with these is a newly-revised collection of hymns of all ages. The successor of the first Protestant hymn-book ever issued. The Church's ritual is marked by simplicity and directness of purpose, due largely to a wise caution in the use of symbolism, and also to a dislike of whatever would serve to quench the spiritual impulse of the moment. A stately dignity marks the special services and the doxologies in use at the consecration of bishops and the ordination of ministers. The same applies in a measure to the confirmation service, which, as in the Greek Church, is not considered an exclusively episcopal function, but may be performed by a presbyter. At all these services the surplice is worn, as well as at the administration of the sacraments. The Apostles' Creed is in use as representing the oldest, simplest, and most generally accepted expression of the faith of Christendom; and in addition a special confession, based on that compiled by Luther and made up mainly of a connected sequence of Scripture passages, is recited on the great festivals, as the Christmas, Easter, etc. In it the Trinitarian belief of the Church finds marked emphasis—the Fatherhood of God, the Creator of all things and the Author of salvation; the redemptive and mediatorial work of the Son in His suffering humanity; the Church's union, now risen and glorified; the presence and power of the Holy Spirit, 'Who proceedeth from the Father, and Whom our Lord Jesus Christ sent after that He went away . . . that He should abide with us for ever.'

4. Doctrine.—The main points of doctrine as held and taught are defined in the Church Book under the following heads: the doctrine of the total depravity of human nature; the doctrine of the love of God the Father; the doctrine of the real Godhead and the real humanity of Jesus Christ; the doctrine of our reconciliation unto God and our justification through the sacrifice of the Cross; the doctrine of good works as the evidence of faith and of the grace of the Holy Spirit; the doctrine of the Second Coming of the Lord; and the doctrine of the Headship of Christ over the Church, which is His Body. Thus in essence the theological position is that of the Nicene, Athanasian, and Westminster Confessions; but, since no one Creed can be said to be a complete statement of the whole range of Christian dogma, liberty is allowed for difference of view in non-essentials. The Holy Scriptures are regarded as the only rule of faith and conduct, the basis of all teaching, and the final court of appeal. More stress is laid on Christian life and character than on perfect agreement of opinion. Devotion to Christ, and personal union with Him, form the foundation of the Brotherhood. The Church has kept itself free from anything approaching sectarian peculiarities of doctrine, and this because it came out from Rome on the broad ground of gospel truth and liberty, and did not separate itself from any other Evangelical Church.

5. Constitution and government.—The constitution and government of the Church, which at one time was something of an oligarchy, is now essentially a form of republic, with a constituted power, a constitution, and a hierarchy. The constitution of the Church is that of the government of the people, by the people, and for the people, 'under the sole headship of Christ.' The bishops have no administrative powers on account of their position, though, as a matter of fact, a bishop is in the interest of the men and should be the leader of the board of elders which directs the work of each province. These boards are elected by synod, the members holding office only during the inter-synodal period; they are responsible to the synod for their administration, and it is one of the functions of the board to maintain the mission board, on which each of the home provinces, as well as the foreign field, is represented. This has at present its seat in Herrnhut, though it might just as well be located anywhere else. In addition there is a general directing board of the Unity, which has to see to the carrying out of the principles laid down by the General Synod in regard to constitution, doctrine, worship, orders, congregation rules, and discipline, the execution of the Synod's donations, the carrying out of the Synod's donations, the carrying out of the Synod's missions, as the concern of the whole Church, stand under the management of an international mission board, on which each of the home provinces, as well as the foreign field, is represented. All appointments in the ministry are made by the directing board of each province; each congregation is entitled to suggest names for the filling of a vacancy, and each minister has the right to accept or decline a call sent to him. The different provinces make their own arrangements for the training of their students, with all the various colleges the standard is equally high. The normal course includes the work necessary for a University Degree in Arts, which each student is expected to gain; then follows a three years' study of theology. As a rule, some period is devoted to teaching in the boarding-schools. Later on comes ordination, in the first instance as a deacon when acting as assistant minister; and, on being appointed to a separate charge, a second ordination admits to the presbyterate. Thus the Church possesses and combines within itself many of the features which in other cases separate some of the larger religious bodies. Its orders are strictly episcopal, for only bishops can ordain, but its government is presbyterian, the fellowship of believers the body of Christ, making the Church universal, though no formal subscription to any specific Creed is demanded, or expected, from ministers or members. The individual conscience is bound by no formularies; the bond of union lies in the confession of the Church of Christ; and the exercise of mutual love is the supreme mark of discipleship. Infant-baptism and confirmation are practised; at the Holy Supper the wafer is generally used; the Church seasons are observed with the same special stress on the services of Holy Week and Easter. In some of these observances there is a marked element of ritual, baulked by the usage and tradition of past centuries; but at the same time the Church is as free from the bondage of form and ceremony as it is from all sacramentarianism.

The whole body, scattered over the world's surface, on the Continent, in Great Britain, in America, and in the 14 mission-fields, is still an organic Unity, each portion maintaining its own national characteristics, the Germans attached to their German ways, the English and Americans equally loyal to their own country's interests and customs. Jointly they form an international body of men of many differing opinions, all banded together, not to propagate any special system of church government, or any kind of ritual, or any particular point of
MORBIDNESS

The term 'morbidness' as applied to moral and religious states of mind is popularly a misdesigned word. It designates particularly any undue depressed state connected with one's moral or religious status. Little effort has been made thus far to discover a scientific difference for religious and moral disease or morbidness. General terms such as moral pathology, treats largely of ordinary moral faults and classes as pathological such habits as result from mistaken conceptions of the moral life. Here 'pathological' loses all definite meaning; as well might we class as morbid the mis-spelling of a word.

On the other hand, neurologists and medical writers tend, on the whole, to limit moral and religious morbidness to certain phenomena of the insanities, such as the delusion that one is God or Jesus Christ, or that one has committed the unpardonable sin. While it is difficult to differentiate between sanity and insanity, a useful mark of the insane is that they are incomplete, for the time being at least, of fulfilling their social functions. Thus, all the insanities are cases of moral inability and, in this sense, of moral morbidness.

There is, however, a broad expanse of moral morbidness that is neither insanity, on the one hand, nor, on the other, mere delusion from a moral ideal through erroneous thinking or through the common instinctive impulses. The best example is the moral distortions frequently found among adolescents. Under the stress of the natural and instinctive reorganization of life is going on, at this period of life, the following types of moral morbidness are not uncommon.

1. Excessive or minute introspection of one's desires, motives, or choices, often with the application of excessively severe standards to one's self. In religious communions that emphasize such experiences as conversion, regeneration, and the witness of the Spirit, this introspection often consists in a search for signs of the divine presence or of divine operations within one.

2. Hypersensitiveness to moral and religious situations and conclusions. To be wrong at all is to be heinous; only perfection is really good—this is the attitude of mind. This is what is often called 'morbid conscience.' The victim of it is likely to put absurd emphasis upon the exact performance of trifles that seem to be duties. Habitual self-discipline or censurings towards others may also appear.

3. A passion for certitude, and refusal to live by the ordinary, common-sense assumptions, probabilities, and 'rule of thumb' devices of mature practicality. So to live a sense of certainty becomes almost an obsession. The victim feels uncertain, for instance, whether he has looked the door, although he knows, in the ordinary sense of 'knowledge,' that he has not.

4. Feversh or self-analiminating devotion to a cause, a concept, or an idea. Here morbidness consists partly in emotional excesses, partly in the egregious self-assertion upon which the supposed sublimity of self-obtiteration depends.

5. In the four types thus far named we behold a sort of psychical congestion and soreness. A fifth type displays the opposite—insensibility and failure to function in the presence of normal stimuli. Callousness towards the pains and pleasures of others and lack of sense of obligation are its marks. In less extreme cases such callousness appears onl in spots, as towards some one person, human interest, or kind of duty.

These adolescent twists illuminate the whole subject of moral and religious morbidness. For, if the five types be broadly interpreted, they will be found to cover all cases of such morbidness at whatever stage of life. Here we have over- and under-sensitiveness, excess of action and defect of it, excess and defect of introspection, over- and under-caution, and the like.

This is not normal or healthy, yet it includes no insane delusions and no such failure of practical adjustment as puts one outside the pale of social tolerance.

The causation of morbidness in the sense that now grows towards definiteness includes two factors: neural depression (or at least lack of vitality), and some incidental experience that starts an unfortunate mental habit. The fundamental facts with which we have to deal are excess, defect, and distortion of emotion. Not infrequently morbid persons cherish a conviction that their mental processes are rational rather than emotional even though observers easily discover the lack of emotional elements. Confusion of fact and fiction, compassion as reason, are alike determined by some congestion or soreness, or by abnormal callousness. These emotional tendencies are primary psychical signs of neural conditions. The depression may be a hereditary or temperamental trait, an incident of a disease, or the product of an internal irritant, of a drug, or of fatigue. The reason why morbidness occurs so frequently in adolescence is that the puberal change and the consequent reorganization of the personality is going on.

To this cause must be added the peculiar loads in school life, economic life, and social life that our occidental customs impose upon youth. Finally, in many cases sexual perversion and difficulties connected with the firm establishment of a healthy sexual life increase the tendencies to depression. In mature life the same general principles apply. Morbidness may safely be assumed, in practically all cases, to spring partly out of the excessive depression, which, in turn, may have many causes.

The last of the five adolescent types enumerated does not readily reveal its neural basis. Moral insensibility, indeed, may not seem to require any special neural basis. May it not be a matter of...
MORDVINS.

The Mordvins form a branch of the Finno-Ugrian race (cf. vol. vi. p. 229), and consist of two tribes called respectively the Erzy and the Moksha. Their knowledge of their ancient religion, coming, as it does, almost exclusively from a time when, in many districts, they had been converted to Christianity by the Russians, and when they could practise the rites of their earlier faith only in secret, is very scanty and defective. After the Mordvin people, as a whole, in consequence of the victories by which the Russians finally overthrew the Tatar Khanate of Kazan (1552), had come under the sway of the conquerors, measures of a more or less violent nature were taken here and there to convert them, and we cannot even in the 17th century. It was not, however, till about 1740-50 that they came to submit en masse to the rite of Christian baptism, and the following decades witnessed the disappearance of the last vestiges of their heathenism. Yet for a long time their conversion was, in the main, a merely nominal change, and, although in quite recent times the exploration of remote districts has yielded much valuable material for the elucidation of their ancient religion, our earliest information on the subject comes from an Italian traveller, G. Barbaro, who visited the district now called Eastern Russia in 1446, and who gives a short account of how the victim was dealt with in the horse-sacrifice of the Moksha tribe.

The notes on the religion and sacrificial practices of the Mordvin tribe made by N. Wilson, a Dutchman, at the close of the 17th century, are altogether negligible; nor can we gather much of value from the accounts of P. J. Strahlenberg, K. Müller, L. Lepechin, J. G. Georgii, and V. S. Vallás, in the 18th century. A more useful source (in spite of errors due to misapprehension) is the Russian MS written by a land-surveyor named Miljikovitch in 1783, and several times printed (most recently in Slavonickija Ezhegodnik, no. 18, Petrograd, 1905, p. 819). From the middle of the 19th century, we find in Russian newspapers and periodicals especially those of the provinces, as in other publications, sporadic notices and descriptions of local conditions. Accounts of a more general character have been published by A. Baranovsky and Smirnow (cf. Literature at end). Meljukov (writing c. 1830) draws his material mainly from MS sources; but, as regards the ideas of the gods, deals with his data too freely, and adds imaginative embellishments. The same may be said of Mainsor, who, some thirty years later, devoted himself to the investigation of Mordvin ethnography, and even travelled over the Mordvin district; in many points he merely follows Meljukov. A much more valuable production is that of Smirnow, who, after a long and careful study, and who, naturally, carefully utilizes the available literature as well as a number of MS sources, and also draws upon his own observations. The following account is based not only on the published sources, but also upon letters written by the present writer among the Mordvins themselves, and the fairly abundant MS material subsequently forwarded by native Mordvins to the Finno-Ugrian Society in Helsingfors; it likewise draws upon some (in part very valuable) MSS dating from the middle of the 19th century, now in the keeping of the Imperial Geographical Society, or else deposited in the Asiatic Museum of the Imperial Academy of Sciences, Petrograd. The latter group of MSS had been already used in part, though very unsystematically, by Meljukov and Mainsor.
2. The dead.—Life after death was regarded as a direct continuation of earthly life. The departed in their graves live and occupy themselves in much the same way as they did upon earth—hence the articles required by them were placed beside their bodies in the grave. In the family, the deceased and the living (known as the kin) are still together, so that the graveyard is the counterpart of the village; there is no realm of the dead in a universal sense. From the graveyard the human-like shades come forth to visit the living. Each family worships its own dead, the oldest and most respected of whom is the first to be buried in the particular graveyard, i.e., the progenitor of the family (together with his wife), who was often still spoken of by his own name and was honored with the title of rafter of the graveyard (lutan' birdi). The prevailing idea seems to be that this progenitor should not belong to too remote a past; thus among certain Erzâ Mordvinis in the government of Saratov, who migrated there some 200 or 250 years ago, the earliest ancestors to whom worship is accorded are positively stated to have been the first settlers—the memory, and thus also the worship, of the earlier generations having faded away. Festivals in honor of departed individuals are celebrated during the first year after death—one immediately after burial, and others at specified times, as, e.g., six weeks, or the fortieth day, after death, from which time onwards the shades and the like, the dead become more closely attached to the corpse in the grave, while prior to that time it lingers chiefly in its former home or, it may be, in places which the living person had been accustomed to visit. At this festival the previous deceased members of the family are believed to be in attendance, and are invited to take the newly departed into their midst.

General festivals for all departed ancestors (pas, pa, or atoh bat), again, are celebrated at least twice a year, in spring and autumn (latterly the dates of both the individual and the general festivals were for the most part brought into coincidence with those of the commemorative celebrations appointed by the Russian Church). The ancestors are invited in due form to a feast in the village, the several houses of the family-group being taken in rotation for this banquet of the living and the dead. Festivals, and is a traditional custom from the beginning of the 17th cent., joint festivals for the dead were in an earlier period held by larger family-groups or clans also at intervals of some fifty years. Formerly, animal-sacrifices were offered on these occasions to the deceased, who were connected with them contain features that seem to point to a still earlier practice of human sacrifice. The living approach the ancestors with prayers and gifts in all circumstances in which, as they think, they require the help of these ancestors, either for their own benefit (particularly in cases of illness, which may be sent by the ancestors themselves, if angered) or in order to injure others. Moreover, at the sacrificial feasts which are held by the community in honor of the (nature-) gods, the ancestors are in some districts conjoined with these as objects of worship, being invoked in the prayers immediately after the deities, and besought for the same earthly blessings—success in tillage and cattle-rearing, good fortune, and health. The dead, when thus present by invitation, are welcome guests, from whose benignity all good things may be expected—though at the close of the festival, it is true, they are driven away, sometimes with threats, but, when their own initiative, they are greatly feared, especially as causing disease. Peculiar terrors are excited by the dead who perish by accident—e.g., by drowning—or who for other reasons have not received proper burial, as also by those who die without surviving kindred; such unfortunate are, accordingly, attended to only in the festivals for their own ancestors.

In connexion with the ceremonial of this ancestor-worship, special mention must be made of the fact that at the festivals for deceased individuals, according to some other accounts, a wooden image or a doll representing the dead was set on the beach by the dead, the festival being subsequently replaced by articles of clothing belonging to him. At these festivals, however, the departed has also a living representative, a person of the same sex and of about the same age, who acts in his place, and is treated by those present as if he were the deceased. He presents himself in the clothes of the dead, and frequently is conducted from the graveyard, and then, at the end of the feast, taken back to it. According to some accounts, he never speaks at all, but takes heartily of the food and receives the tokens of respect accorded by those present. Other accounts inform us, however, that he carries on an active conversation with them; he tells them of the life of the under world, and of those who have gone there before him; he gives them good counsel, admonishing them to live in unity, to abstain from theft and excessive drinking, to look well after their cattle, and persons, and beast, settles disputes regarding inheritance, etc.

According to some authorities, the dead, during their existence in the grave, undergo a second experience of death, passing thereby into a higher state, in which they no longer maintain direct relations with those living upon the earth, but have intercourse only with those who have died once, and through the latter alone influence the fortunes of the living.

Although the oldest ancestors are worshipped and invoked like the gods, and to some extent conjointly with them, the two classes are, nevertheless, rigidly distinguished from each other. Still, there seem to be cases where the people have quite forgotten the human origin of a dead person whom they worship, and he is invoked as a god (pas). Among the Erzâ in the governments of Kazan and Samara we find a deity called Staka pas, 'the heavy god,' who is honoured with special sacrificial ceremonies on their holidays, and is a traditional deity from the beginning of the 17th cent., his epithet of 'heaviness' (i.e. evil generally) being addressed to the sacrificial prayers also as Kan pas, Kuvan pas, and regarded as living 'in the black earth.' The word kan, the signification of which is now unknown to the people at large, is simply the Tatar kan, 'prince,' so that kan pas means the god-prince; kuvan, again, is in all likelihood traceable to the Turkish princely title kagau in its Chuvash or Bulgar phonetic form kogan or kupa (with o or u instead of the common Turk. a), which, though it has not come down to us, would correspond perfectly to the Mordvin kovan. As the Mordvin, in part at least, were at one time among the subject peoples of the Volga Bulgars, the ancestors of the Chuvash of to-day, we may be permitted to conjecture that the 'heavy god' was originally the spirit of a high Turkish ruler; similarly, the other heavy gods, such as Onto, etc., perhaps represent native princes of a bygone age.

With the Mordvin cult of the dead is probably connected in some way also the worship of the deity or spirit called Keremet (Erzâ) or Kerânît, Kerâmad (Moksha), a name of Chuvash origin (in
the Chuvash tongue of to-day, Kirimmit, originally an Arab word). Among the Mordvins this deity bears the titles *sotan, sultco,* which is obviously the Arabic *sulthan,* which was told of him among the Mordvins is meagre and inconsistent. Among the Moksha, according to an early account, he was a deity of great prestige and power, and superior to all others in his influence upon everyday life—in no sense a minor spirit, like Keremet among the Cheremiss. Although he bears a name of foreign origin, and was regarded by the Moksha, as 'born and bred with the earth'—a fact which shows that the people had no idea of his human origin—it would seem, nevertheless, that his worship contains certain elements of a former native hero-cult. In the legal proceedings of the community oaths are taken in the name of Keramit, and it is believed that he punishes those who are guilty of crimes.

3. Nature. (a) Air and sky.—In the Erzi tribe the deity of the sky is called Verepas, i.e., 'the god who is above.' We also find mention of Ski-pas and Niske-pas or Niske, the latter of whom, while now identified by some of the Erzi with Verepas, was originally in all likelihood a distinct god (probably of foreign origin). In a number of ancient MSS the name Niske occurs in the form Imseke, whence it appears that the name is really a compound of an old 'great' + the great proper name of the divine name Ski-pas just mentioned. Ski, again, is a participle of an obsolete verb sker, meaning 'bear,' 'procreate,' so that Ski-pas signifies literally the 'generative god,' 'procreator-god,' and not the 'great god,' as the great proper name of the divine Ski-pas just mentioned. The sky-god of the Moksha is called Skaj—a name corresponding exactly to the Erzi Ski—or, with the addition of the term for 'god,' which among the Moksha is still found in the more primitive dissyllabic form pas, Ski-pas, and Ski-pas, which accordingly corresponds in form with the Erzi Ski-pas. In the prayers he receives the designation Vardá, 'he who is above,' or Osun' (the 'great one' (see above), the explanation of the Erzi name Niske). The Erzi Niske or Niske-pas has a consort named Niske-ava, 'Mother Niske,' who is worshipped at any rate by women in their homes (she is now often identified with the Virgin Mary, the Theotokos); he has also two daughters, Kastargo and Verepas, who are the progenitors of the corn and corn-harvest deities. Among the Moksha the wife of the sky-god is, so far as is known, mentioned, along with a daughter, only in a single song, where she is called Skahnas-ava, 'Mother Skahnas.' Strahlenberg states that the highest deity of the Mordvins (of which term he obviously means the Erzi tribe) is Junichiplas; in the first portion of his name, jum, we have perhaps a cognate form of the Cheremiss term jumo, applied to both the sky-god and the sky, and of the stem in the Finnish jumela, 'god,' while the second element is either equivalent to Sj-pas, 'sun-god,' or, more probably, an incorrect form of Ski-pas (see above).

Among the Mordvins generally the sky-god ranks as supreme among the gods, and to him must frequently be offered the first sacrifice and prayer. It may be noted, however, that, according to a report from the middle of the 19th cent., the Moksha, or at least part of them, did not offer sacrifice to Skaj at all, but simply, at the beginning of every sacrificial festival, addressed him with a brief prayer for protection. A special deity of thunder, who is worshipped in the communal sacrificial feasts, is found among the Erzi, and among the Mordvins. Purg'ina-pas ('the god Thundcr,' 'thunder-god'), and the worshippers beseech him to send a beneficent rain, but not the noisome hail; his figure has been strongly influenced by that of the prophetic Elijah in popular Russian belief. Among the Moksha thunder is called olaen, a derivative of ola'at, 'grandfather,' 'old man,' and this, together with the fact that the word is etymologically *janka* (janka = 'bowl,' 'cross-bow'), seems to indicate that the Moksha also personified thunder, though the imperfect sources certainly say nothing of a thunder-cult among them.

In the prayers and elsewhere the sun as well as the moon is designated a god (pas, pavnas), viz., Tsipas (Erzi), Si-bavas (Moksha), 'the god sun,' 'sun-god,' and Kov-bas, Kov-bavas, 'the god moon,' 'moon-god.' Special obligations are accorded to the sun at the sacrificial feasts. The worship of the sun appears to involve no more than that, when a person first descries the new moon, he bows before it with a prayer for good health, and promises it a whole (i.e., uncut) loaf. The morning and the evening glow are invoked, with Russian proper names attached to the terms, almost exclusively in magic formula—e.g., as 'morning-glow Maryia,' 'evening-glow Dariya'—and were probably derived, along with the formulae themselves, from the Russians, resembling in this the spirits of midday and midnight, and others of similar character, which are likewise designated by Russian proper names in the magic formulæ.

Among the deities of the sky should perhaps be included a name (probably the first element of the divine name Ski-pas just mentioned) which, in addition to Keramit, was once highly revered among the Moksha, at least in some districts. She was said to dwell 'in the high place, in the upper parts of the atmosphere,' and was therefore the 'upper-god,' the 'sky-god,' the 'up-generator;' she seems, however, to have been rather closely related in some way to Keramit, as in the local law-courts oaths were taken in her name and in his (see above). Here, too, may be mentioned the name Olsam-pas (patc, more correctly polc, means 'elder sister'), who is said in one MS to have been worshipped among the so-called Teryuchans (Russianized Erzi in the government of Nijni Novgorod), but is otherwise unknown.

The name Ujsud or Uvys'd—a word of obscure origin—is used among the Moksha to denote a host of spirits who move about in the upper atmosphere and harmonious sounds (mingled, indeed, with harmonious and inharmonious) but are otherwise unknown in the present form of their hair. Should one who catches a glimpse of these spirits at once implore them to send him good fortune, he obtains his wish, though at times the gift may be death. With this host may be compared the 'Mordvins as Kevak Xopp, the 'gate of heaven'—the personification of some luminous appearance; when the gate of heaven opens, one obtains what one asks for.

In some districts the Mordvins worshipped the wind, mostly under the name of Veriava, 'mother wind,' 'wind-mother,' both privately and at the communal sacrifices; and in her divine capacity she was specially invoked not to damage the corn and hay crops. Worship, with offerings of food, was accorded also to frost, usually as Moroz-at'a or Kelme-at'a, 'old man frost,' but only within the house; the ceremonial of this cult is manifestly of Russian origin, as is probably also the spirit itself.

(b) Earth, field, and grain. — Mastor-ava, 'mother earth,' 'earth-mother,' especially among the Erzi, appears as one of the most revered of deities, being often named, indeed, immediately after the sky-god; the Erzi, and we often find the set phrase, 'First he bowed before the sky-god, and then before mother earth.' At the communal sacrifices the Erzi besought her to give them a good harvest and to bestow good health upon the
tillers of the field. She seems sometimes to have borne the epithet Mastor-pas, 'god earth,' 'earth-god,' although elsewhere Moksha-speaking as a distinct (male) deity, whom people invoked in their imprecations to bring their enemies to destruction. The Moksha, too, had their Master-ava, 'mother earth,' but in their official worship her place is taken, the place of that spirit usually taken by Norov-ava, 'mother corn,' 'corn-mother,' also designated Norov-pas, 'the god (goddess) corn,' to whom, among the Moksha, corresponds S'or-ava (or sometimes Noru-ava), 'mother corn'; S'or-ava, however, is found mainly in the magic formularies and the songs. Each tilled field had its own particular spirits. For the meadow likewise there was a special presiding spirit, called Nor-azarava, 'mead-mistress,' or the like; but, as far as we know, she was not the object of a distinct cult, or, at most, she was presented before the hay harvest with a few pieces of bread, accompanied by a prayer for her protection.

(c) Fire.—Among the nature-spirits should also be included Tol-ava, 'fire-mother,' 'mother fire,' who is often named in magic formularies and in songs, but of whose public worship we know virtually nothing.

4. House, court-yard, etc.; the village. —The spirit of the dwelling-house bears various names. Among the Moksha it appears as Kud-azarava or Kud-azcrava, 'house-mistress,' 'house-hostess,' and also as Kud-ava, 'house-goddess,' Kud-pas, 'house-god,' 'the god house'; while among the Erza we find Kudon'-tsin' pas, 'god of the house' (ti, 14 or 12 being the analogue of kudo, kod, 'house'), or Ker'an' sofskon' pas, 'god of the lime-bark and the lime-steam' (or lime-house) -- a god, sometimes (perhaps through a misunderstanding and corruption of the original name Ker'an' sofskon' pas, 'the god of thearrow beam, or beams,' and in some districts also Kudon-jurtava, 'house-mother' (lit. dwelling-place-mother of the house):'

The dwelling-place as a whole, i.e., the court-yard, the dwelling-house, and its adjoining buildings, which the Mordvins designate by the name jurt, a word borrowed from the Tatar language, has a special spirit of its own, the Jurt-ava, 'dwelling-place-mother,' known among the Moksha also as Jurt-azarava, 'dwelling-place-mistress.' This spirit, especially among the Erza, has in many cases dispensed with the above-mentioned household spirit in the proper sense, and taken its place; in this capacity it is also called Kudon-jurtava (see above) by way of distinguishing it from Kardis-jurtava, 'dwelling-place-mother of the yard,' and is represented as a dwarfish female being, or as a dwarf, a spirit which lives under the stove, being thus obviously connected with the Russian domestic spirit Donojoy (on which see KEB iv. 6251.), which likewise lives near the stove, and has the form of a dwarf or a demon. Common to all the Erza is a special spirit of the court-yard named Kardis-sarko, 'court-sarko' (a word of obscure meaning in this connection), who

More particularly in the magic formularies we find a vast number of domestic spirits, qatir-personifications of various parts and articles in the living-room, and generally described as 'mothers,' 'mistresses,' 'mistresses' or 'muses,' i.e., Patavka-azarava (Moksha), 'stove-mistress, Utmanu kirda (Erza), 'ruler of the stove,' Kekai-ava, 'door-mother,' etc. Among the Moksha Kubregia, and among the Erza Tr'amo, the latter, who is the head of the household, is supposed to be an evil spirit of dwarfish human form, who, however, is not worshipped. He brings to his master whatever of other people's property the latter may desire, but a task must be set for him every night, else he will begin to carry his master's goods to others. Those who wish to obtain such a spirit must keep an egg of a hen or a cock (1) from seven to twelve weeks in the usurp, remaining meanwhile under the floor; it is then hatched out. It is also impossible to kill this spirit, unless by burning in a certain way the beast from which the word Eta, 'to nourish,' while Kubregia is probably a compound form of ketu, 'croup,' and taex, 'horn' (the term originally meant 'serpent-owl'), though the Mordvins no longer think of it as having such a form. With this we may compare the name Kubegia, which, among the Lithuanian and the Kaukas (on which c.f. KEB iii. 609), is represented now as an owl and now as a fiery dragon; cf. also the myth of the basilisk.
lies beneath a stone situated in the court, and is generally represented as a male, though sometimes as a female. Among some of the Moksha we hear of a court-spirit named Koram-ot's'unik, "the chief of the court," while others speak of a special spirit called Kubis-ava, "cultivate-market." In the latter, the sacrifices offered are performed by the individual family at stated seasons, and also on special occasions—the birth of a child, the birth of a cow's first calf, etc. At the legal tribunals held by the head of the household with his family, according to any Moksha account, it was the practice to wear by the house and the dwelling-place-spirits as well as by deceased ancestors. As protectors of the cattle we also find, sometimes even at the communal sacrifices, certain saints of the Rus-sian Church—e.g., Prolavas (a distortion of two saints' names, Flor and Lavr), surmounted Alasan-pas, "horse-god," Nastusia (Russ. Anastasia), with the epithet Reven'-pas, "sleep-god(dess)"; Milykoev mentions also a swine-god (Tuon'-pas), etc. Moreover, the store-pit, the bathroom, the threshing-place, etc., had each its special presiding spirit, usually designated "mother," or (among the Moksha) "mistress," "hostess, as, e.g., Ban'-ava, "bathroom-mother," or Ban'-azetara, "bathroom-mother," or even on certain occasions offerings of food and drink were presented to these spirits. Likewise the bee-garden, sometimes forming part of the house-garden, sometimes situated in the forest, had its particular spirit: Neskepervava (the garden mother, the garden-spirit); Neske-ava (Bees'-ava, "beehive-god," etc. Mention is made even of an alley: or lane-god (Ulit's-a-pas). The village, too, had its spirit, named Vel-ava, "village-mother," or Vel-azetara, "village-mistress," or Vel'en-pas, "god of the village," the "village spirit" was worshipped at the communal sacrifices.

5. Evil spirits.—To this class belong the spirits called leyf'on ("Satan"; pl. leyf'at), who dwell in marshes and waters (especially in deep parts), but also on dry land, in caverns. They beget children; they appear in various forms, including that of a fish. In the Mordvin spells they are found also as servants of the wicked earth-god Mastor-pas (see above, p. 159). The Erza believe in a distinct spirit of curses, "the ruler of the curse," called Ert, "curse," Ert-pas, "curse-god," the "god curse" (also Erks), and is anthropomorphically figured as having a wife and a large family. Another evil spirit is Avu's, or Yav's (Moksha), Eys' (Erza), or diys' (Russian), described as a forest-god (especially of honey, "the forest mother," Neske-ava (Erza), "beehive-god," etc.). Mention is made even of an alley: or lane-god (Ulit's-a-pas). The village, too, had its spirit, named Vel-ava, "village-mother," or Vel-azetara, "village-mistress," or Vel'en-pas, "god of the village," the "village spirit" was worshipped at the communal sacrifices.

6. General observations on Mordvin mythology.—Among the Mordvins the personification of the deities (nature-spirits) is of a very fecund character, especially in the cultus—a fact signified by linguistic usage, and more particularly by that of the sacrificial prayers. Thus the "rising and settling sun-god (god sun)" and the "moon-god (god moon)" who moves in a circle are simply the sun and the moon in their visible form, but regarded as a god. The sacrificial prayers are addressed to the amorphous and indistinct "souls" of natural objects, etc. Thus men "dig" the earth-mother, and "sow corn in her"; the field-mother—in place of whom the "tilled field" is sometimes invoked—may be crushed by the house-foot, and "carried away to another person's field"; the corn-mother, it is true, appears in a popular lyric as singing songs in the festive attire of a Mordvin woman, but this personification is not long maintained, for in her song the corn-mother speaks of herself thus: "I was sown in the morning twilight, reaped in the evening twilight, thrown into the granary in order to be brewed into "snail beer at Easter, and baked into pastries at Christmas"; the water-mother "streams," or "wells forth like silver"; the fire-mother "blazes," and so on. So, too, with the household-spirit, we can still to some extent distinctly trace the original idea that it is the animate dwelling-house itself, or, in other words, the amorphous soul of the house. Thus we find the following invocation: Moksha: "Kud-azetara ("house-mistress"), pardon him who built you and heats you;" in an Erza petition of similar character we read, "Kudo-jurtava ("house-mother"), above is thy lime bark (the roof is hatched with this), bees in the garden, (pl. bee-licks), while a parting utterance of a girl who has just been married runs, "Dear house [= soul of the house], I have sojourned much in thy warm house." In conjunction with the spirits designated "mothers" (Erza: "house-mistress" or "hostesses") are found the correlative (male) "old ones" (al'at) and "lords" or "hosts" (azéch)—e.g., Vel-at'a, "water old one," Vel-azér, "water-lord," "Kud-at'a, house old one," Kud-azé, "house-lord." They are for the most part absent from the sacrificial prayers, belonging rather to the sphere of the magic formulae and of folklore, where such married couples are even represented as having children. Here we have obviously a later development, perhaps not unconnected with ancestor-worship, in which male and female progenitors are generally named together as married pairs. It is only in the case of the god of the sky and the god of thunder that personification has reached a more advanced stage, etc. According to a Moksha account, this spirit and his wife produce seventy-seven children every year; every year, however, the whole family is killed by thunder except two, who in the following year beget other seventy-seven, and so on. The Erza seem to regard this spirit as a wicked sorcerer, who flies in the air as a meteor. Numerous diseases are personified, and addressed as "mother"; some of these diseases-spirits, too, are thought of as married people, who also have children.

1 The blood of sacrificial animals is allowed to run into the city under this rule.
as his 'elder sisters'), are all endowed with life, and their aid is sought to expel disease.

It is manifest that, in the course of centuries, the religion and worship of the Mordvins have been affected by Lithuanian (and to some extent Turkish) influence, as shown by, for one thing, a number of mythological terms—e.g., pasas, pas, 'god' (cf. O. Ind. bhrgas, O. Pers. bura), Fargine, the thunder-god (cf. Lith., perlautas), Keramit (cf. Tatar, kermit), Sattar (cf. Tatar Sajtan, Chuvash Sajttan); in later times they have also been greatly influenced by Russian popular beliefs, especially in ancestor-worship.

7. Worship.—Besides the obligations performed according to the religious calendar, men usually under the direction of the head of the household or his wife, and accorded mainly to the domestic spirits and to ancestors, every village community held its own sacrificial feasts, in which the participants frequently arranged themselves in groups corresponding to their families or clans. From certain reports and indications, however, it would seem that at an earlier time there were joint sacrificial festivals for larger districts. The places at which sacrifices were paid to Keramit appear to have been fenced in. On at least some of the sacrificial sites stood a simple building without windows, which, like the ordinary dwelling-house, was subdivided, and served for diverse purposes. The deities were not represented in material forms—the obscure indications of such likenesses found in Russian sources probably refer to representations of the dead. The offerings comprise all manner of foods from horses, fowls, while, as has already been said, allusions to an earlier practice of human sacrifice are not wholly absent from the tradition. Parts of the sacrificial animal—especially, but not exclusively, the heart—were usually paid to the deities, and in the sacrifices in honour of the dead the idea that the soul of the victim is to serve the dead person in his under-world life is brought out quite distinctly. There are indications that the colour of the animal sacrificed corresponded with that of the natural phenomenon or the object worshipped, so that the earth-spirit received a black animal, and so on. The ceremonial of the sacrifices to the nature-deities sometimes included magical actions (astrological signs), while the prayer used occasionally recalls that of a magic formula—e.g., 'Sky-god, may the corn prosper!' The ceremonies have, on the other hand, been noticeably influenced by the cult of the dead. In the sacrifices to the sky-god, like the dead in the mortuary feast, had a human representative, who in his stead responded to the person praying.

The notices regarding the sacrificial priests show great diversities. According to some accounts, there were priests and priestesses—designated respectively in-at'a, 'great old man,' and in-baba, 'great old woman,' among the Moksha—who held a life appointment, and who did duty also at marriages and in the legal proceedings of the community, while other reports indicate that they were selected for definite periods of longer or shorter duration. In addition to the designations just given, we find the following: at'a, 'old man,' was the object of frequent sacrifice; anat'a, 'the old man,' was the object of sacrifice; aban, 'he who sacrifices or prays,' aban-baba, 'the old woman who sacrifices or prays,' and pokh-baba, 'great old woman.' In some of the sacrificial feasts both sexes took part, but there were also distinct festivals for males and females respectively. The public worship of the deities was connected in the closest way with agriculture, the principal employment of the people, and also with the related industry of cattle-rearing, and the deities were specially besought to grant success in these. In the cult of the nature-deities there is no trace whatever of an ethical element, prayers being addressed to them for earthly boons alone; but that element, as already indicated, does not seem to have been wholly absent from the cult of the dead, or from the worship of Keramit (and the obscure Azer-ava), and the spirits of the house and the homestead.

8. Magic.—From the sacrificial priest should be distinguished the sorcerer and sorceress, although there is certainly a suggestion that the priests were selected from the family or caste of the sorcerers. The latter are now usually designated by a term borrowed from the Russian, viz., vorekli, varl'iti (now vorekli, varl'iti), and there is a genuine native term, sodit's'a, sodit'ja, 'she (he) who knows.' These sorcerers prophesy; they discover lost things; they find out the causes of disease and all misfortune with the aid of forty-one (or forty) beans or other objects like beans or by gazining into water freshly drawn from a well in the early morning, or by looking into the face of the person afflicted; they cure diseases by magic spells and magic prayers conjured with the appropriate offerings, and among these prayers there is a specially large number in which a spirit (e.g., the earth-mother) is solicited to pardon a presumptive injury unwittingly done to him by a fall, a punch, etc., and for religious purposes. Other kinds of disease (disease-spirits) are driven out by threats and by magic practices, special magic formulæ serve to protect against the evil eye, and so on. Magic might, of course, be employed all the year round.

The magic formulæ and associated practices of the Mordvins show, on the whole, strong evidence of Russian influence, or, to speak more accurately, have for the most part been borrowed from the Russian people.

MORMONISM.—See SAINTS, LATTER-DAY.

MOSQUE.—See ARCHITECTURE (Muhammadan in Syria and Egypt).

MOTHER.—See CHILDREN, FAMILY, MOTHER-RIGHT.

MOTHER OF THE GODS (Greek and Roman).—The Mother of the Gods was identified by Homer (H. xvi. 187) and Hesiod (Theog. 634) with Rhea, the wife of Cronos. She was famous in legend for having prevented Cronos from swallowing Zeus by providing him instead with a large stone which she had wrapped inotphing clothes (Hes., Theog. 483-4; Apollod. i. 5). The story was localized in Crete, which thus became the fabulous birth-place of Zeus. There is some evidence of an old-established cult of the Mother of the Gods at various places on the mainland, although the name Rhea scarcely appears in this connexion. Thus,
there was an altar of the Mother of the Gods in the city of Athens. Eschylus (frags 204, 206, 299) speaks of a sanctuary at Cossoi, which represents the goddess standing on the top of a mountain and guarded on either side by a lion (see art. MOUNTAIN-MOTHER).

To disentangle the actual course of development from these extraneous elements is one of the most puzzling tasks within the sphere of Greek mythology. The leading consideration is that, though the name of Rhea was often associated with Cybele, the identity of the two goddesses was never so completely lost that the Rhea of the Greek theogonies did not remain distinct from the partner of Attis (Gruppe, Griech. Mythologie, p. 152). Some modern investigators hold the opinion that the fusion did not take place until the period subsequent to the Persian Wars (J. Beloch, Griech. Geschichtc, Strassburg, 1893-1904, ii. 5). Others, while maintaining that the residence of the Mother belonged to the oldest stratum of Greek religious thought, believe that her legend and ritual passed from Crete to the Greek settlements in Asia Minor, where she was completely assimilated to Cybele in the 7th cent. or earlier (Gruppe, p. 1526 ff.). Beyond this lies the question whether the goddesses subsequently identified were in origin the same or different (Aristoph., Sipylus, 1879-1882, ii. 117; cf. lib. xvi. 193), or whether the Phrygian Cybele and the Cretan Rhea both developed in their separate manifestations from an identical substratum of belief belonging to the pre-Hellenic and pre-Phrygian inhabitants of Crete and Asia Minor (P. Kretschmer, Einleitung in die Gesch. der griech. Sprache, Göttingen, 1896, p. 194 ff.). Modern theory inclines to go further (A. Rapp, in Roscher, ii. 1699), and to distinguish from Rhea a Greek Mother of the Gods, whose relation to the Phrygian Mother is to be looked upon as that of an extension. It had belonged to a period anterior to the separation of Greeks and Phrygians. It is argued that, though the evidence of the cult of Rhea is scanty, its existence as distinct from that of the Mother of the Gods is well attested in Arcadia (Paus. viii. xxxvi. 2), at Olympia (schol. Pind. Ol. v. 10), and at Athens (Paus. i. xviii. 7). To this it has been replied (CGYS iii. 296) that the double title justified the establishment of distinct sanctuaries, and that it was quite possible that the title of Rhea was found in Crete the worship of a great maternal goddess of fertility, bearing the name of Rhea, to transfer her cult to the mainland, using sometimes her original name, and sometimes the title θυτίος θεία, in preferable to explain the name of Zeus, if they enlited to her. From this point of view it becomes significant that the cult of the Mother prevailed especially in districts which are known to have been affected by Cretan influences. Instances of such coincidence are the appearance of the Idean Dactyls at Olympia (Paus. v. vii. 6) and the legendary connexion of Athens with Crete. Moreover, the result of recent Cretan discoveries enables us to gauge better the extent of the influence which Crete exercised over the mainland, a feature which has been derived in pre-historic times. On the other hand, although Cybele did not appear in myth as the Mother of the Gods, the supposition that she was originally distinct from Rhea, and that some accidental resemblance led to their coalescence, seems to be refuted by the remarkable agreement of the traditions relating to the two goddesses. Thus, the birth of Zeus in a cave on Mt. Ida in Crete corresponds to the establishing of the hollows of Trojan Ida (Eur. Or. 1449; Eur. ii. 611 ff.); the stone which Rhea offered to Cronus to the sacred stone of Cybele at Pessinus (Livy, xxix. 11); the noisy rites of the Cretan Curetes to those of the Phrygian Corybantes (Lucian, de Car. 8); and the Idean Dactyls, the attendants of Rhea,
were located both in Phrygia and in Crete (Soph. frag. 237). Since it appears to be established that there was a primitive cult in Crete and Asia Minor, and to a lesser degree in Greece proper, devoted to the goddess Cybele as the Mother of the Gods, or Great Mother, but, on the other hand, the specifically Oriental features attending the ritual of Cybele were regarded as essentially foreign to Greek sentiment and were introduced to the mainland at a comparatively later period, if by mere conjecture, it is inferred that the character of the Asiatic cult had been largely modified by barbary, especially Semitic, influences. The native Hellenic conception of the Mother is best illustrated by an Attic relief (now at Berlin) in which 400 B.C., and in the form of a μακάρα, where the beautiful and benign figure of the goddess is represented enthroned and holding the tympanum, with lions couching at her feet (reproduced by Rapp, p. 1068, and by Parnell [CGS liii. 24]).

The general characteristics of Cybele-worship have been described elsewhere (see artt. ATITIS, CYBELE), and consequently we may limit ourselves to the impression which it made upon Greek civilization. A very early stage is suggested by the youth beloved by Cybele, and the story of their relations is parallel to that of Aphrodite and Adonis. According to the various narrations, none of which is earlier than the Hellenistic age, and according to the latest, Cybele, who loved Adonis, was killed by a boar (Hesiod, ap. Paus. viii. vii. 9), or a hind (Theocr. xx. 40) that mutilated himself under a pine-tree and died from loss of blood (Ov. Fast. iv. 225 f.). At the festival held in his honour a mimus representation of his death, burial, and resurrection took place, in which a pine-log was substituted for the corpse (GP ii. 130 ff.).

The story, which attests the identification of Cybele with a Sarmatian goddess in the 5th and the beginning of the 4th centuries, refers to the lover of Attis (Herod. i. 740 K.), and it is probable that the name is to be recognized in the cry ἀνεστρίσαι mentioned by Demosthenes (xviii. 260) in his famous account of the worship initiation-rites the novice was placed on a chair (ὑμποτρόπος), while the celebrants danced round him, accompanied by the wild notes of stirrers music (Plat. Enul. 277 D, Legg. 790 D). Although, in consequence of the syncretism already explained, we must be satisfied that Cybele was sometimes identified with the Eleusinian mysteries of Demeter, the symbolic words of initiation, as recorded by two of our authorities (Clem. Alex. Protrept. i. 13, p. 14 f.; schoel. Plat. Gorg. 487 C), are undoubtedly derived from the Phrygian worship of the Great Mother: 'I have eaten from the tsambu, I have drunk from the cymul, I have borne the sacred vessel; I have entered into the bridal chamber' (J. E. Harrison, Prolegomena to the Study of Greek Religion, Cambridge, 1907). In another context the last phrase relates to the mysterious communion between the goddess and her lover, which was ritually enacted all over the East, whether in connexion with the name of Cybele and Attis, of Aphrodis and Adonis, of Alat or Astarte (GP ii. 159 ff.). It was common to each of these legends that the lover was put to death and afterwards restored to life, if not always in the same incarnation. The mysterious marriage may have been in its origin a magical precaution to stimulate the reproductive forces of nature, while the subsequent death and resurrection of the priest-king represented the annual decay and revival of vegetation. The name of Attis, which, of course, the transference into myth of a primeval custom of priestly consecration, though at first sight not easy to reconcile with the other data, probably belonged to the same circle of ideas. Whether we should regard the act in its primary intention as the final obligation by means of which the votary seeks to assimilate himself to the essential nature of the goddess (E. Meyer, Gesch. des Alterthums, Stuttgart, 1867-90, ii. 649), or whether the idea of the Autumnavit the Great Mother and the renewal of her crops (GP, pt. iv., Adonis, Attis, Osiris, London, 1907, p. 224 ff.; Cumont, in Pauly-Wissowa, vi. 681), is not altogether certain, and the two ideas are not necessarily inconsistent with each other. Considerations bearing on the question may be deduced from the fact that the severed genitals were dedicated in the sanctuary of Rhea-Cybele (schoel. Nicand. 12. 8), and from the statement of Lucian that they were stored away in a certain house from which the Gallus received female raiment, and ornaments (de Dea Syr. 51). Anyhow, it is unnecessary to suppose that the custom was introduced into the cult during a period in which anarchy reigned over the East.

The worship of the Mother was distinguished from the indigenous Greek cults chiefly by its emotional, ecstatic, and mystical character. Indeed, whereas the Pythian rites of Delphi, and the Eleusinian mysteries, were characterized by participation in the rites of the Mother was inconstant with the requirements of womanly modesty (Stob. Floril. lxxiv. 61). In the Corintebian initiation-rites the novice was placed on a chair (ὑμποτρόπος), while the celebrants danced round him, accompanied by the wild notes of violin music (Plat. Enul. 277 D, Legg. 790 D). Although, in consequence of the syncretism already explained, we must be satisfied that Cybele was sometimes identified with the Eleusinian mysteries of Demeter, the symbolic words of initiation, as recorded by two of our authorities (Clem. Alex. Protrept. i. 13, p. 14 f.; schoel. Plat. Gorg. 487 C), are undoubtedly derived from the Phrygian worship of the Great Mother: 'I have eaten from the tsambu, I have drunk from the cymul, I have borne the sacred vessel; I have entered into the bridal chamber' (J. E. Harrison, Prolegomena to the Study of Greek Religion, Cambridge, 1907). In another context the last phrase relates to the mysterious communion between the goddess and her lover, which was ritually enacted all over the East, whether in connexion with the name of Cybele and Attis, of Aphrodis and Adonis, of Alat or Astarte (GP ii. 159 ff.). It was common to each of these legends that the lover was put to death and afterwards restored to life, if not always in the same incarnation. The mysterious marriage may have been in its origin a magical precaution to stimulate the reproductive forces of nature, while the subsequent death and resurrection of the priest-king represented the annual decay and revival of vegetation. The name of Attis, which, of course, the transference into myth of a primeval custom of priestly consecration, though at first sight not easy to reconcile with the other data, probably belonged to the same circle of ideas. Whether we should regard the act in its primary intention as the final obligation by means of which the votary seeks to assimilate himself to the essential nature of the goddess (E. Meyer, Gesch. des Alterthums, Stuttgart, 1867-90, ii. 649), or whether the idea of the Autumnavit the Great Mother and the renewal of her crops (GP, pt. iv., Adonis, Attis, Osiris, London, 1907, p. 224 ff.; Cumont, in Pauly-Wissowa, vi. 681), is not altogether certain, and the two ideas are not necessarily inconsistent with each other. Considerations bearing on the question may be deduced from the fact that the severed genitals were dedicated in the sanctuary of Rhea-Cybele (schoel. Nicand. 12. 8), and from the statement of Lucian that they were stored away in a certain house from which the Gallus received female raiment, and ornaments (de Dea Syr. 51). Anyhow, it is unnecessary to suppose that the custom was introduced into the cult during a period in which anarchy reigned over the East.

1 Gruppe, p. 1541, points out that the names χαλκός, κάλκης, and μακάρις, given to sanctuaries of Cybele (schoel. Nicand. 12. 8; Hesych. s. v., and Kudra; Anth. Pal. iv. 340), 4) are to be interpreted in the same way.

2 The notion that the name of Attis and stand for the generative principle and its terrestrial process survives in the Neo-Punic traditions of Sultanah el-baït (W. G. M. Murray, "Four Stages of Greek Religion, New York, 1907, 65). A few examples of this may be conjectured with some probability that the influence of this traffic was considerable, although

3 Some of these may have been eunuchs (Fabricius, cxxvii. 1).
the conception of the frenzied Galli who scourged themselves with whips (Plut. adv. Colb. 33, p. 1127, 1128, 1129). This was a practice which, according to Lucan, (A.D. vi. 94, 5.), cannot be traced to an earlier source than the Alexandrian writers (Cumont, op. cit., lib. vii. 675, and has become known to us chiefly through Latin literature (e.g., Sen. Agam. 723; Luc. 69, 56; 61). In this year 295 B.C., a Sibylene oracle was discovered by the Decennivirs, directing them, as a condition of success in the war, to introduce into Rome the worship of the Great Mother of Pessinus (Livy, xxix. 16). After the arrival of the sacred stone, which was then in the custody of Attalus, king of Pergamus, having been removed from its original home at Pessinus (L. Bloch, in Philol. l. i. (1853) 589 ff.), was brought to Italy in circumstances of great ceremony, and reached its destination in the year 264. Strange happenings marked its arrival. The ship conveying the sacred object grounded on a sandbank in the Tiber. Then Claudius Quintus, a noble patron of speech had provoked censures of tongues to slander, prayed to the goddess that her character might be cleared by the oracle, if she succeeded in drawing off the ship after strong arms had failed. The ship at once began to follow her directions, and Claudius's name was triumphantly vindicated (Ov. Fast. iv. 291 ff.; Suet. Tib. 2; Tac. Ann. iv. 64). On the 4th of April the goddess was received as a temporary guest, until a permanent home could be provided for her, in the temple of Victory on the Palatine, and the day was set apart for a festival to be known as the Megalensia, on which gifts were presented to the shrine, and a lectisternium and public games were held (Livy, xxix. 15). Ten years later scene performances were given in the first time exhibited at the Megalensia (ib. xxxiv. 54). Subsequently, thirteen years after the contract had been placed, a temple on the Palatine for her sole and separate occupation was dedicated to the Magna Mater Idea on the 10th of April 191, when the Lucil Megalenses were included for the first time in the State calendar (ib. xxxvi. 36). Somewhat later, if not immediately, they were extended so as to occupy the entire interval between the 4th and 10th of April (CIL i. 314). The performance of the festival the proctor urbanius made a solemn offering to the goddess in her temple (Dion. Hal. Ant. Rom. ii. 13). The third day was reserved for the performance of stage-plays (Ov. Fast. iv. 377), and that for the first time works of Terence were presented on this occasion. Races (circens) were held on the last day (Marquardt, Rom. Staatsverwaltung, iii. 501), and in the age of Nero and Domitian these had become by far the most popular feature of the whole celebration (Juv. xi. 163). The recurrence of the festival was marked by general merrymaking and licence; clubs were formed to promote social enjoyment (Cic. de Senect. 45); and so lavish was the expenditure that the imperial hospitality that in 161 a sumptuary law was found necessary to restrain it (Aul. Gell. ii. 24).

In the last two centuries of the Republic the participation of State officials in the cult was limited to the praetor, admirably described; but dating from the time of Augustus, who restored the temple of the Magna Mater after it had been burned down in A.D. 3, there is evidence that the function was continued by the emperors. From the time of Augustus (ib.), the festival was known as the lausvatis, when the symbolic stone and possibly also the knife of the Gallus (Mart. iii. lxvii. 2) were conveyed, by the direction of the Quindecimviri, through the Porta Capena, and washed in the waters of the Almo, which debouches into the River Tiber just outside the city (Ov. Fast. iv. 357; Lucan, i. 368). In all other respects the administration of the cult was vested with the knowledge (Ath. Pal. vi. 94, 5), cannot be traced to an earlier source than the Alexandrian writers (Cumont, op. cit., lib. vii. 675, and has become known to us chiefly through Latin literature (e.g., Sen. Agam. 723; Luc. 69, 56; 61). In this year 295 B.C., a Sibylene oracle was discovered by the Decennivirs, directing them, as a condition of success in the war, to introduce into Rome the worship of the Great Mother of Pessinus (Livy, xxix. 16). After the arrival of the sacred stone, which was then in the custody of Attalus, king of Pergamus, having been removed from its original home at Pessinus (L. Bloch, in Philol. l. i. (1853) 589 ff.), was brought to Italy in circumstances of great ceremony, and reached its destination in the year 264. Strange happenings marked its arrival. The ship conveying the sacred object grounded on a sandbank in the Tiber. Then Claudius Quintus, a noble patron of speech had provoked censures of tongues to slander, prayed to the goddess that her character might be cleared by the oracle, if she succeeded in drawing off the ship after strong arms had failed. The ship at once began to follow her directions, and Claudius's name was triumphantly vindicated (Ov. Fast. iv. 291 ff.; Suet. Tib. 2; Tac. Ann. iv. 64). On the 4th of April the goddess was received as a temporary guest, until a permanent home could be provided for her, in the temple of Victory on the Palatine, and the day was set apart for a festival to be known as the Megalensia, on which gifts were presented to the shrine, and a lectisternium and public games were held (Livy, xxix. 15). Ten years later scene performances were given in the first time exhibited at the Megalensia (ib. xxxiv. 54). Subsequently, thirteen years after the contract had been placed, a temple on the Palatine for her sole and separate occupation was dedicated to the Magna Mater Idea on the 10th of April 191, when the Lucil Megalenses were included for the first time in the State calendar (ib. xxxvi. 36). Somewhat later, if not immediately, they were extended so as to occupy the entire interval between the 4th and 10th of April (CIL i. 314). The performance of the festival the proctor urbanius made a solemn offering to the goddess in her temple (Dion. Hal. Ant. Rom. ii. 19). The third day was reserved for the performance of stage-plays (Ov. Fast. iv. 377), and that for the first time works of Terence were presented on this occasion. Races (circens) were held on the last day (Marquardt, Rom. Staatsverwaltung, iii. 501), and in the age of Nero and Domitian these had become by far the most popular feature of the whole celebration (Juv. xi. 163). The recurrence of the festival was marked by general merrymaking and licence; clubs were formed to promote social enjoyment (Cic. de Senect. 45); and so lavish was the expenditure that the imperial hospitality that in 161 a sumptuary law was found necessary to restrain it (Aul. Gell. ii. 24).

In the last two centuries of the Republic the participation of State officials in the cult was limited to the praetor, admirably described; but dating from the time of Augustus, who restored the temple of the Magna Mater after it had been burned down in A.D. 3, there is evidence that the function was continued by the emperors. Agam. 723; Luc. 69, 56; 61).
Great Mother, by passing under State control, lost many of its original characteristics; but the power of the Roman organization was such that, by the adoption of suitable accretions from outside, and by its association with the cults of Isis and Mithra, it exercised during the last days of paganism a wider and more potent influence than at any earlier time.

A. C. PEAKE.

MOTHER-RIGHT—1. Introduction—Mother-right is a form of social organization in which the rights of a person in relation to other members of his community and to the community as a whole are determined by relationship traced through the mother. In this condition the duties which a person owes to society, the privileges which he enjoys, and the restrictions to which he is subject are regulated, and their scope is determined, by the relations in which the person stands to his mother's relatives and his mother's social group.

Mother-right is a highly complex condition in which a large number of social processes are involved. The following are the chief elements therein involved:

(1) Descent.—This term should be limited to the process which regulates membership of the social group, such as clan, caste, family, etc. In mother-right descent is matrilineal; a person belongs to the social group of his mother. The use of the term is most appropriate when the community is divided into distinct social groups, and this distinctness is most pronounced in the clan-organization in which the practice of exogamy separates the social groups called clans clearly from one another. The social organizations based on the family or kindred are made up of social groups less clearly distinguishable from one another, and, though we may speak of descent in the family without an extended sense, the term is here less appropriate.

(2) Kinship.—In a community based purely on mother-right kinship would be traced solely through the mother and would not be recognized with respect to the father. This condition obtained in the world, but especially among peoples who possess the clan-organization, kinship carries with it a large mass of social duties, privileges, and restrictions (ERE vii. 705), and in a typical condition of mother-right these social functions exist only in connexion with the mother's relatives. We have no evidence, however, of the existence of any society in which kinship is not recognized with respect to the father. In the larger families in many cases the functions are very restricted as compared with those of relationship traced through the mother, good examples being those in which marriage is allowed with any of the father's relatives, but is strictly forbidden with equally near relatives on the mother's side.

(3) Inheritance.—In a condition of typical mother-right children would inherit nothing from the father; their rights to property would be determined solely by relationships through the mother. Mother-right does not imply that rights in property should be vested either mainly or exclusively in women. On the contrary, in many cases in which children inherit nothing from the father, women are debarred from looking property, though they form the channel by which it is transmitted from one member of the community to another. The usual rule of inheritance in mother-right is that the property of a man passes to his brother or his sister's son. Often it passes to the brother to brother in the female line and, on the death of the last surviving brother, to a sister's son.

(4) Succession.—This term is most conveniently used for the process whereby rank, office, or other social distinction is transmitted. In mother-right succession usually follows the same rules as inheritance, a chief, priest, or other holder of rank or office being succeeded either by his brother or by his sister's son.

(5) Authority.—Mother-right has often been supposed to imply mother-rule, but in the great majority of the societies which furnish us with examples of mother-right authority is definitely vested in the male—in the father or oldest male as the head of the household, and in the chief as the head of the tribe or corresponding social group. In some societies, however, authority in the household is vested in the mother's brother, giving rise to a form of social organization which has been called the 'avunculiculate,' and the authority of the mother's brother in one form or another is very common, not only associated with other features of mother-right, but in societies in which descent, inheritance, and succession are patrilineal. Very rarely is authority in the household vested in the mother or eldest female. The term 'matrarchate,' which is often used loosely as the equivalent of mother-right, should be limited in its scope to this condition of mother-right. Yet, there exist in which women are chiefs or monarchs, but, as a rule, this condition is not associated with mother-right. Among peoples over whom women rule the father is usually the head of the household.

(6) Marriage.—Mother-right in its typical form is associated with a mode of marriage, most suitably called 'matrilocal,' in which the husband lives with his wife's people. In its extreme form the husband may be only an occasional visitor to his wife's home, so that the children grow up with little or no social obligation towards their father, and live under the authority of the mother and the mother's brother.

In a state of typical mother-right a person would belong to his mother's social group. He would not recognize the existence of any kind of social duty except towards his mother's relatives, and would ignore the relatives of his father; property, rank, and office would pass solely through women. It is not a necessary factor of the mother-right that authority should be vested in the woman. It might be so vested, but, if the woman is not the ruler, it would be vested in her brothers. In mother-right in its most typical form the father should have no authority in the household.

The condition thus described as typical mother-right occurs very rarely, being found most purely among such peoples as the Iroquois and Seri Indians of N. America and the Khasis of Assam. In many cases which have been regarded as examples of mother-right some of the social processes included under this head depend on the tie with the mother, while others are determined by relationship traced through the father, producing a social pattern which may be the most varied kinds. Thus, while descent is matrilineal, succession may be patrilineal. Kinship is everywhere, so far as we know, recognized through the father as well as through the mother, and authority in the household is often paternal where descent, inheritance, and succession are all matrilineal. Moreover, a mixture of social groupings may be present, one of which may be patri-
especially the one when local organizations accompany different forms of exogamous grouping.

There are cases in which matrilinyal processes shoulder the entire burden of social life. Thus, a people who possess patrilineal institutions in general may yet show the presence of matrilineal practices in connection with slavery. The children of a free father and a slave mother may be slaves even if the father is of high rank, while the children of a free mother and a slave father may be free, and even noble, if the mother belongs to the nobility.

Another condition in accordance with mother-right is that in which marriage between half-brother and sister is allowed when they are the offspring of one father and different mothers, while it is forbidden when they are of the same mother by different fathers. The form of marriage which is forbidden would be impossible with mother-right, while that which is allowed would be natural, provided that the mothers belonged to different exogamous groups.

Another large group of matrilineal practices is characterized by the authority of the mother's brother. Among a people who practise patrilineal descent, inheritance, and succession the mother's brother has sometimes more authority than the father, and this authority may be accompanied by a certain social condition that the tie with the mother's brother is closer than that with the father. Thus, mother's brother and sister's son may hold their property in common, or the sister's son may take the goods of his uncle without any trouble. The mother's brother may act as the special guardian and instructor of his nephew, he may initiate him into the mysteries of secret societies, or may take the leading part in such rites as circumcision and its variants, ear-boring, and other operations.

2. Distribution and varieties.—Owing to ignorance or neglect of the complexity of mother-right on the part of ethnographers, the available evidence often leaves us uncertain how far the social processes of a people correspond with those of mother-right.

(i) American.—Mother-right exists in America in an especially pure form. Not only are descent, inheritance, and succession purely matrilineal among the majority of its people, but there may be a place in social life which would justify the use of the term 'matriarchy.' A striking example of this condition is found among the Iroquois and Hurons, where women are the heads of the households, elect the chief and form the tribal council. Almost as striking an example occurs among the Pueblo Indians, where, with the exception of the Tekw, descent is matrilineal, the house is the property of the woman, marriage is matrilineal, and the children are regarded as belonging to the mother. Other purely or predominantly matrilineal stocks are the Chadic (Pawnee, Arikara, the Muskogean (Creek, Choctaw, Seminole), the Yuchi, and the Tunica) in any other cases matrilineal and patrilineal tribes are found among one stock. Thus, though the Sianan tribes are mainly patrilineal, the Biloix, Tutelo, Crow, Hidatsa, Oto, and Mandan are matrilineal; while among the Winnebago the sister's son formerly succeeded, a woman could be chief, and the mother's brother exercised much authority. Again, though the majority of Algonquians are patrilineal, the Mohegans are matrilineal, succession formerly passed to the sister's son among the Ojibwa, and there is evidence of matrilineal institutions of the mother's brother among the Menomini. Two tribes with both modes of descent is the Athapascan. While the outlying Navaho and Apache in the south are matrilineal, the main body of the people in the north vary. The western tribes, such as the Loucheux, Takulli, Tahltan, and Kuxakhokote, have matrilineal moieties or clans with inheritance and succession in the female line. The eastern tribes, on the other hand, are made up of bands within which social rights pass patrilineally. The tribes of California, broken up into a large number of linguistic stocks, are organized in villages. Marriage is often matrilineal, but inheritance and succession are patrilineal. A totemic clan-organization has been recorded among the Miwok, and the totemic organization of the Yokuts is said to be associated with matrilineal descent.

The Yunnan stock practise patrilineal descent, but have also another form of social grouping which may stand in some relation to mother-right. The local form of organization seems to prevail in the Shoshonean stock, except among the Hapi, who, in this case, Pueblo Indians in general culture though they speak a Shoshonean language. This form of organization is also found in the Salish, beyond whom the Kwakintla form an intermediate link with the matrilineal Heiltuk, Haida, Tsimsihan, and Tingit. The Tsimsihan show traces of a mixture of matrilineal and patrilineal modes; i.e., their man belongs to his mother's clan, he takes the name of his father's totemic crest as part of his personal name. This mixture is still more evident among the Kwakintla, where a man belongs to his father's clan, but takes the totemic crest of his father when he marries, and transmits it to his son, who bears it till his marriage, when, in turn, he takes the crest of his father-in-law.

It is very doubtful whether the E-kimos possess any form of clan-organization. The chief social unit seems to be the family, the social rights of which pass from a father to his children.

Southward of the United States, the Seri Indians possess mother-right in a most complete form. A family may stand in some relation to the members of another family at times putting their decisions into execution themselves, while in other cases their brothers execute their wishes and are consulted by them in cases of difficulty. The husband only visits the wife and takes a very light of the tribals in his household, though he may occupy a leading place in another household in his capacity of mother's brother.

We have little knowledge of the social organization of the peoples of Central America, but the Aztecs appear to have been matrilineal, at any rate so far as succession was concerned, the ruler being followed by his brother or by his sister's son.

Our knowledge of the social organization of S. America is more fragmentary than in any other part of the world, but there are definite records of the presence of mother-right in several regions and facts which suggest its presence elsewhere. One centre of the practice is the Santa Marta peninsula in Colombia, where the Guajiro are...
organized in totemic clans with matrilineal descent. Property passes to the sister's sons, and compensation for injury goes chiefly to relatives on the mother's side. Among the Aruans, who are said to have been the original inhabitants of the penisula, we have no record of the nature of the social organization; but the people trace their descent to an ancestress, and women take an important place in social life. Another centre of mother-right is in the Siulas, where the Aruans practice matrilineal descent and matrilocal marriage. The neighbouring Warau and Makusi are also said to be matrilineal. If a Makusi woman marries a man of another tribe, the children belong to the Makusi; but, as it is said that these people may marry the daughter of the sister, it is improbable that they have a matrilineal clan-organization. Apparently this region is in an intermediate condition, and the presence of patrilineal succession among the Makusi. The branch of the Aruans, also points in this direction. The Aruans who have wandered into Brazil are matrilineal, and there is another centre of mother-right in this country on the Kulikul branch of the Xingu River. The Bakiri of this region are matrilineal in that the children of the Bakiri woman who marries a man of another tribe belong to the Bakiri, and this is true of other tribes; but, as in British Guiana, we do not know of any definite matrilineal clan-organization. In this region, an intermediate condition, a chief being succeeded by his son, his sister's son, or his daughter's husband. The mother's brother shares the exercise of authority with the father.

Among other peoples of S. America, such as the Caingang and the Tsurorti, there is matrilocal marriage; but we do not know whether this custom is associated with other features of mother-right.

(2) Oceanica.-Since the great majority of Polynesians do not possess any form of clan-system, and we know little of their local organization, the nature of descent is doubtful; but where the clan-organization exists, as in Tokiope, it is definitely matrilineal. The common descent of the clans also makes the nature of inheritance doubtful, but there is certainly no evidence of any of the modes of transmission which accompany mother-right. Chiefs are usually succeeded by their children, and the mode of succession also looks like hereditary occupations. In Tonga, however, succession may pass to the sister's son, and a woman may be chief in several parts of Polynesia. As a rule, the father has authority in the household; in some islands, such as Tonga and Tokiope, the mother and brother has certain social functions, but not of a kind that shows any special exercise of authority. In New Zealand, and perhaps elsewhere, matrilocal marriage is frequent.

Mother-right, on the other hand, is the seat of definite mother-right. In the Marshall and Mortlock Islands and in the Carolines, with the exception of the island of Yap, the matrilineal mode of transmission is general. In Ponape there are exogamous clans with matrilineal descent, and property passes to the sister's sons. But, in Yap, the son follows his father, who elsewhere is said to be a stranger to his children. Marriage appears to be largely matrilocal. In many islands all that we are told is that the woman commands absolutely in the house. In the Palaue Islands there are exogamous totemic clans with matrilineal descent.

Melanesia has usually been regarded as one of the most definite examples of mother-right; but, even where descent is matrilineal, its social organization departs so widely from the typical condition as to make it doubtful whether the term should properly be used. Doubt is often matrilineal, but follows the father in New Caledonia, and in many islands of the New Hebrides as well as in one part of Santa Cruz. In other places, such as most parts of Fiji and one region of the Solomons, the absence of a clan-organization makes the nature of descent doubtful. Chiefship is always patrilineal where it is hereditary at all, and inheritance is in an intermediate condition. Property passes to the children in some places and to the sisters' children in others, while elsewhere different kinds of property follow different rules of inheritance. In Santo in the New Hebrides, people take the patrimony of the father as part of the personal name, but belong to the mother's clan, and in Vana Levu, in Fiji, to be in an intermediate condition, a chief being succeeded by his son, his sister's son, or his daughter's husband. The mother's brother shares the exercise of authority with the father.

Among other peoples of S. America, such as the Caingang and the Tsurorti, there is matrilocal marriage; but we do not know whether this custom is associated with other features of mother-right.

(3) Australia.-There are at least four forms of social grouping in this continent: the moiety, the matrilocal clan, the local group, and the totemic group; since two or more of these may co-exist, there may be more than one rule of descent.

Wherever there is a simple dual organization, as among the Dieri and Ngarabarra (Uralanna) of Central Australia, descent is matrilineal so far as the moiety is concerned.

The peculiarity of descent in the case of the matrilineal class is that it is not matrilocal nor matrilineal, but descent follows rules different from that of either father or mother. Where marriages follow the orthodox rule, it is not possible to tell definitely the nature either of descent of the class or of the moieties of which the classes may be regarded as members. Most marriages do not always follow the ordinary rules, however, and A. R. Brown has used the exceptional marriages of certain eight-class tribes as the means of detecting the true nature of descent.

By means of evidence provided by H. H. Mathews, it shows that among the Arunta the children of the chief form of irregular marriage belong to the class to which they would have belonged if they had been the children of the man by a regular marriage, thus showing that descent among this people is determined by the father. Among the Tjingili, on the other hand, the children of an irregular marriage belong to the group to which they would have belonged if they had been the children of the man by a regular marriage, thus showing that descent among this people is determined by the father. Among the Tjingili, on the other hand, the children of an irregular marriage belong to the group to which they would have belonged if they had been the children of the man by a regular marriage, thus showing that descent among this people is determined by the father.
The local group is probably always patrilineal, but this form of social grouping has been largely neglected by ethnographers, and we must await further information to show whether this mode of descent is universal.

The totemic grouping shows great variety of descent. Sometimes the totemic group corresponds with the local group, and where this is so descent is necessarily patrilineal. In other cases, where the totemic groups form subdivisions of the matrilineal moieties, they are of equal necessity matrilineal. Among the Dieri there are two forms of totemic organization: one kind of totem, called *pintora*, is transmitted from father to son together with special knowledge of legends and rites, while a man takes another kind of totem called *mutha* (the *mutha* of Howitt) from his mother. The intermediate condition of the people between matrilineal and patrilineal transmission of the totem is shown by the fact that the father often transmits his totem as well as his *pintora* to his son. Each man also obtains from his mother or her relatives special knowledge of legends, etc., relating to his maternal ancestors.

The communal habits and the poor development of personal property in Australia make the subject of descent of living forms of descent. But so far as it exists it seems to follow the same lines as descent of the moiety or class. Thus, among the Arunta, whose irregular marriages point to patrilineal descent, certain objects, and especially ornaments, are transmitted by a man from a man to his son, or, if he has no son, to his brother and his brother’s son. Among the Tjungilli and other tribes whose irregular marriages show them to have matrilineal descent, property passes in the same way. In the possession of the daughter’s husband, the inheritors being men of the moiety of the mother of the dead man. The latter mode of inheritance also occurs among some of the tribes of the northern territory.

Since the Australians have neither chiefs nor priests, the subject of succession is also quite unimportant. The special powers of a wizard or leech are acquired by special processes of initiation. Perhaps the totem which comes most definitely under this head is the knowledge of native legends and rites, the double character of which among the Dieri has already been considered. Elsewhere this kind of knowledge is closely connected with totemism, and probably follows the laws of transmission of totemism.

(4) New Guinea.—The most definite example of mother-right in this region occurs among the Massim of the south-eastern islands. This people, who speak a Melanesian language, practise mother-right in a purer form than is found anywhere in Melanesia proper. Not only does a man belong to the totemic clan of his mother, but property passes to his sister’s children in some localities, and everywhere a chief is succeeded by his brother or son. Among the Papuan tribes the Papuan descent is probably matrilineal, but succession to the rank of chief is patrilineal. Another locality where mother-right apparently prevails is on the Mamberamo River, in the Dutch portion of New Guinea, where a boy belongs to his mother’s tribe, and wears its distinctive dress, even when he lives with his father’s people.

Elsewhere in New Guinea patrilineal customs are found, though here and there indications of mother-right occur. Thus in the Mekeo district, which has a form of the dual organization, descent sometimes passes in the female line, and among the neighbouring Pokao descent is sometimes matrilineal, and a woman may be chief and be succeeded by her child. Among the Koita, Motu, Roro, and Mekeo peoples the mother’s brother has certain social functions, and these functions are highly developed among the islands of Torres Straits, where, side by side with patrilineal descent, inheritance, and succession, the mother’s brother has more authority than the father.

(5) Indonesia.—Father-right prevails throughout the greater part of the Malay Archipelago. There is a peculiar form of matrilocality in some of the Timor, in which the husband returns to his own home after a time, leaving behind him his children, who inherit their mother’s property.

In several parts of Sumatra mother-right is present in its most definite form. Among the Malays of Minangkabau, of Upper Padang, and certain other districts there are matrilineal clans and the extreme form of matrilocality in which the husband continues to dwell in his mother’s house and only visits his wife. The people live in long houses, which accommodate a family in the extreme case consisting of persons descended from one woman, the head of the household being the eldest brother of the leading woman. He takes the place of a father to his sister’s children, who inherit his property after it has been enjoyed by his brothers and sisters. A form of organization intermediate between the condition of Minangkabau and father-right occurs in Tiga Loereng, where husband and wife live together, but the father has little power over his children, authority being exercised by his eldest daughter’s children.

Property belonging to husband or wife at the time of marriage passes to their respective clans, but that acquired by them after marriage is divided between their children and their sisters’ children.

(6) Asia.—There are no examples of mother-right in E. Asia, with the possible exception of the Ainus in the north and Cambodia in the south. Among the Ainus relationship through the mother is said to be more important than that through the father, and the mother’s brother is the most important member of the family group, but we have no definite information about descent or inheritance. The peoples of Siberia are usually organized in patrilineal clans, but matrilocality is frequently present.

In India there are two centres of mother-right. One of these, represented by the Khesis and Syn-teg of Assam, affords a most definite example of the condition. Descent is matrilineal in the clan, which is traced back to an ancestor and embraces kindred groups consisting of the female descendants of a great-grandmother. The house and other property belong to the women, and the husband or father-in-law are considered as their servants. In cases in which, at some time after marriage, he removes his wife and children to another house. Property is inherited by daughters, the house and its contents going to the youngest daughter, and, in default of daughters, the inheritance passes to a daughter of a mother’s sister. The *aunm*, or chief, is a man, except in Khyrim, but is succeeded by his brother or the son of his eldest sister.

The neighbouring W. people show an intermediate
form in that both men and women inherit, but the youngest daughter obtains an additional share. The Gáros, who live to the west of the Khasis, and the Megam, or Lyyangam, who are a fusion of Khasi and Gáro, practise a form of mother-right closely resembling that of the Khasis. Though a man cannot inherit property and can possess only that acquired by his own children, he nevertheless exercises some control over the property of his wife, and can even appoint a member of his clan, usually his sister's son, to exercise this control in the event of his death.1 Among the Kochs of Assam, and the N. Bengals, who are in contact with the Gáros, marriage is matrilocal, and a man is said to obey his wife and her mother.2

The other Indian centre of mother-right is on the Malabar coast, where matrilocal descent, inheritance, and succession are practised by the Náyars, northern Tiyans, and other peoples, including even the Muhammadan Mápilas, or Moplahs, of N. Malabar. This system of law, known as warranakañtayam, is closely connected with the so-called polyandry of this part of India. In the unions of Náyar women with Nambútrí (Nam- bútrí) men, which are habitual in this region, the father has so little to do with his own children that, although they may meet them, he is not their father in any true sense.

Elsewhere in India, descent, inheritance, and succession are patrilineal in the traditional sense, but occasionally occur in the form known as idatam. This custom is especially followed in families in whom a branch or a relative has obtained the property of the daughter at her own home after marriage. Matrilocal marriage also occurs in Ceylon.

Several peoples of the Canaceans show traces of mother-right. Thus, in marriages between slaves and free persons the child follows the station of the mother, and a woman may habitually go to her father's house for the birth of her children.3

The maternal uncle has much authority, and in Georgia takes the leading part in all that concerns blood revenge.4

The earliest record of mother-right comes from Lydia, where, according to Herodotus, the people took the mother's name, and the status of children in marriage between free and slave was determined by the condition of the mother.

Among the Arabs of Yemen succession passes to the sister's son, and many records of the Semites of Arabia and Palestine have been regarded as evidence of an early community of mother-right.5 The marriage between half-brother and sister, of which the story of Abraham affords an example, accompanies mother-right elsewhere, and several passages in the OT, such as Gn 31:18 and Jg 8:2, suggest this form of social organization.

At the present time the mother's brother has some degree of authority in Palestine, and a formula used in the Bedu (Bedouin) marriage ceremony shows that great importance is attached to motherhood.6

(7) Africa. — The Semites of N. Africa are definitely patrilineal, but in some Arab tribes of the Sudan, including the Fatimí Sudan the wife returns to her own home for the birth of every child—a custom probably connected with matrilocal marriage. Though the Hamitic Beja are now patrilocal, there are records which show that five centuries ago they counted genealogies in the female line and practised succession to the sons of sister and daughter. Among the Digo, Baren, and other allied Hamitic or partially Hamitic peoples the mother's brother takes an important place in social life, though the patrilineal character of their institutions is otherwise very definite. The Nalaus of S. Kordofan form a striking exception to the patrilineal institutions of most of the mixed Hamitic and Negro Nilotic peoples, such as the Shilluks and Dinkas: as boys grow up, they spend more and more time with their mothers' brothers, who are held to be more closely related to them than their fathers. Property is transmitted to the sister's sons, and a man lives for some time with his wife's people.7 The Masai, Nandi, Sok, and other partially Hamitic peoples of the northern part of tropical E. Africa are purely patrilineal.

The Bantu peoples show much variety in the mode of transmission of social rights. About Lake Nyasa and the Kivu River there are a number of definitely patrilineal tribes, such as the Wa-Yao, Achewa, Wa-Makonde, and Wa-Makna. The children take the totem of the mother, a child is succeeded by his sister's son, and the mother's brother is regarded as mother's relative and the natural guardian of his sister's children. The Anyanja, in northern descent, but the patrilineal sections are said to have derived this form of transmission from the Angoni and Ama Zulu. This people, together with the Ama Xosa, Ba-Süto,8 Ba-Thonga,9 and other Bantu peoples of S.E. Africa, are definitely patrilineal, though the mother's brother exercises much authority.

Passing northwards from Lake Nyasa, we find a more or less gradual change from matrilineal to patrilineal descent.9 The Wa-Sagara and Wa-Digo are definitely matrilineal, while among the tribes about Lindi inheritance and succession pass to the sister's children. In other tribes, such as the Wa-Nianwesi and Wa-Jagga, the mode of descent varies according as the bride-price has or has not been paid, the children belonging to the mother's people in the latter case and to that of the father in the former. In general in this region the social institutions tend to become more patrilineal on passing from the coast to the interior.

The Ba-Gando, Ba-Hima, Ba-Nyero, and other Bantu peoples of Uganda are definitely patrilineal.10 The only exceptional feature is that, while the mode of succession is purely patrilineal, the king of Uganda belongs to the totemic clan of his mother, though he also takes certain other totems connected with royalty.

The Bantu of the northern part of the Belgian Congo are mainly patrilineal.11 Among the Bangala children inherit, but the mode of descent is determined by a family council, which usually ordains that a child shall take the totem of its

father. Here the same rule holds as in E. Africa; social institutions become more matrilineal on passing from the interior towards the coast. Mother-right also occurs in Luango and Angola.

Among a group of Bantu peoples in the S.W. Free Congo property and rank are transmitted to the brother or the sister’s son, and among one of these peoples, the Ba-Mbaka, kinship is said to be counted farther in the female than in the male line. Not only is succession matrilineal, but the mother of the chief enjoys great e-treme, if not authority. We are not told of any definite social groups with either line of descent, but respect is shown to animals by not eating their flesh, and this ikina bari is transmitted from father to son.

This institution is almost certainly a kind of totemic grouping, so that these people show a condition almost exactly the reverse of that found in Melanesia, descent being patrilineal, while inheritance and succession are mainly matrilineal. If, as seems almost certain, the ikina bari is a form of totem, we have here an example of the connexion of totemism with patrilineal descent, and this association comes out still more strongly among the Barotse of the N. Congo. Of these people possess two distinct forms of social grouping, one matrilineal and the other patrilineal, and the most recent and trustworthy account shows that, while there is no definite association of animals with the totem, the phrase lela corendu, the patrilineal oruza, is definitely totemic.

In Nigeria and the countries west of it, we find an interesting series of transitions between mother- and father-right. The westernmost peoples of whom we have knowledge have knowledge of the Dinka-speaking peoples of the Gold Coast. They have totemic groups with matrilineal descent, property passes to the eldest brother born of the same mother, and, in default of brothers, to the eldest sister’s son. Only if there are no nephews does the son inherit; and, if there is no son, the chief slave inherits. Succession passes to the brother and the sister’s son. In addition to the totemic clans, called abuna, there are also groups, called nuro, which appear to have a totemic character. In these groups descent is in the male line, or, as the people themselves put it, ‘a person takes the fetish of his father and the family of his mother,’ the condition thus having a remarkable resemblance to the two totemic groupings of the Yoruba and the members of the Bantu-speaking peoples. The property and the family of the chief is inherited by the property of the mother, a slave inheriting the property of a man if he has no sister’s son.

Among the Ewe-speaking peoples of Dahomey kinship is counted through females in the lower, and through males in the upper, classes. Among the former property passes to the brother and to the sister’s son, while a chief is succeeded by his son. The Ewe of Togoland are said to count right of succession through the father rather than through the mother, but the mother’s brother is the proper heir. It is noteworthy that the knowledge of the art of circumcision is transmitted from father to son. Among the next people, passing eastwards, the Yoruba we do not know of any definite rule of descent, but the people are said to trace kinship in both lines, and a chief is succeeded by his son. That kinship through the mother is regarded as of great importance is shown by the fact that children of one father by different mothers are scarcely considered as blood-relatives. The property of a man passes to his wife or her daughters. Next to the Yoruba come the Edo, who practise two forms of marriage. In one, the anonuwa marriage, apparently the more regular, the children belong to the clan of the father, while in the other, called izomi, they belong to the mother’s clan, unless they are bought by the father, or unless in later life they elect to stay in their father’s country. In the Sobo country, whence the Edo are said to have come, there is matrilineal marriage.

8. Europe.—There is hardly a European people of antiquity to whom some form of mother-right has not been ascribed. Perhaps the clearest evidence comes from the Basques, among many of whom the father has little authority, whereas women hold property, and may inherit rights to their children, even when they cannot exercise them themselves. According to Strabo, women were the heads of families in Spain, and the PIEs are said to have been matrilineal, the chief line of evidence being that where the fathers of kings are mentioned they are neither kings nor PIEs, but belong to neighbouring tribes. Among the Celts the king and magician are said to have been succeeded by the sister’s son. In Ireland the sister’s son was important, and the frequent mention of this relative in English ballads has led F. B. Gummere to infer the close relation between a man and his mother’s brother which is one of the features of mother-right. The account by Tacitus of the authority of the mother’s brother affords the chief evidence in favour of mother-right among the Teutoons, but the position of a woman at the head of the genealogical tree of the Lombards and passages in the Nibelungenlied and Edda among the Germans, and the inscriptions on tomb and other facts point to the prevalence of some form of mother-right among the Etruscans, and this form of organization has also been claimed for the early inhabitants of Latium. The evidence for matrilineal institutions among different elements of the population of Greece has been much discussed. Perhaps the

strongest evidence is that in Athens half-brother and sister were allowed to marry when by the same father. Lastly, though in, rather than of, Europe, may be mentioned the Gypsies of Transylvania, among whom a father is the only father of the children, who remain with their mother's people if their mother dies and their father, as usual, marries a woman of another clan.

3. Mixture-forms. — The preceding survey has shown not only that descent may follow one mode of transmission, while other social processes, such as inheritance and succession, may follow another, but that there may also be two kinds of descent. This is especially frequent when a local grouping is composed of exogamous clans or moieties, the usual rule being that the local grouping is patrilineal, while the grouping in clan or moiety is matrilineal. Another kind of mixture is that found among the Bori of Australia and the Tshi of Africa, in which there are two forms of totemism with different modes of descent. The condition of the Ova-Herero of S. Africa, where a patrilineal totemic grouping is combined with matrilineal clans which are probably non-totemic, affords an example of the mixture of the two modes of descent. A less definite condition is that in which, combined with one or other definite mode of descent, there are customs which bring a present or ascriptive social relation on the side from which descent is not counted. An interesting example occurs among the widely separated Tamshiyans of N. America and the people of Santo in the New Hebrides. In both of these localities a person belongs to the totemic clan of his mother, but takes the totem of his father as part of his personal name. Another form of totemism which shows mixture of the two modes of transmission is found among the Massim of New Guinea. The people of Vanua Levu in Fiji, where persons belonging to the social group of the mother pay special respect to the totem of the father. A still more eccentric example is that of the Kwakuitl of the N.W. Pacific coast, who belong to the clan of the father, but are indirectly brought into relation with the clan of the mother by receiving from the father the totemic crest which he had adopted from the father of his wife when he married.

4. Mixture conditions. — It is not at present possible to connect mother-right with race. It occurs side by side with father-right and with intermediate forms among many peoples, including the Australian, Melanesian, Indonesian, Bantu, West Siberian, and the people of Vanua Levu in Fiji, where the present time is absent among Caucausian and Mongolian peoples, but it is doubtful if this has always been so. There is more reason to connect mother-right with scale of culture. Most of the peoples who practise it rank low in the scale, but there are definite exceptions to this generalization in the Khias of Assam, the people of the west coast of India, the Minangkabau Malays of Sumatra, and many tribes of N. America.

As already pointed out, mother-right in its purest form can only occur in conjunction with the clan-organization, but it is not connected with any special form of this organization. The dual system, in which the whole community forms two exogamous moieties, is always matrilineal in Melanesia and, where not complicated with a class-system, in Australia, but the dual systems of N. America are sometimes patrilineal. Totemism is still less habitually associated with mother-right. As was said above, one people may even possess two forms of totemism, one associated with matrilineal and the other with patrilineal descent. The special regard for the father's totem which accompanies some cases of matrilineal transmission suggests a peculiar connection of totemism with father-right, and other considerations make it likely that the totemic organization tends to be patrilineal. Social organizations founded on a local basis, especially those with local exogamy, are usually patrilineal, and in societies devoid of the clan-organization, in which kinship is equally important on the two sides, it is exceptional for inheritance and succession to be patrilineal.

If mother-right is especially connected with the clan-organization, we should expect to find it associated with the classificatory clan, system of relationship, and so it is. We do not know of any people with definite mother-right who do not use the classificatory system. The correlation is especially striking in Africa, in more than one part of which classificatory kindred systems exist side by side. Thus, in the Anglo-Egyptian Sudan the only people who use the classificatory system are the Nubas, and they are also the only people to practise mother-right. Again, in the series of peoples of W. Africa who show evidence of a transition from matrilineal to patrilineal institutions (see above, p. 560) it is the Tshi, with their classificatory system, whose social institutions are most clearly matrilineal.

There is some reason to suppose that mother-right may be peculiarly associated with agriculture. In N. America typical clan-systems are found especially in the maize culture, and in Africa mother-right seems to be present especially among peoples who live chiefly by agriculture, while father-right is associated with pastoral life. The association is, however, by no means universal.

5. Survivals of mother-right. — By this expression is meant social customs found in societies organized on a patrilineal basis which are the natural concomitants of mother-right and are, therefore, assumed to be vestiges of the earlier presence of this form of society. A kind of permanent of the customs which have been so regarded is the relation between a man and his mother's brother. Many peoples among whom descent, inheritance, and succession are patrilineal show the existence of such a relation between his sister's child as are prominent among the social practices of mother-right. That they are such survivals is especially probable where they show the authority of the mother's brother, while the authority of the mother's sister's son is also a natural survival of a social condition in which the sister's son is heir to his uncle's good. Advocates of the view that these relations between a man and his mother's brother are survivals of mother-right regard it as psychologically natural that such rights to authority or property would not easily be relinquished, but would persist in one form or another long after the formal laws of the community had ordained a different disposition of authority or property.

The marriage of half-brother and sister when of the same father but different mothers has also been regarded as a survival of mother-right. In a society which attached any great importance to kinship through the father such a marriage would be impossible, while it is natural among people who pay special regard to kinship through the mother. When, therefore, this form of marriage is found among a patrilineal people, it has been held to point to an antecedent condition of mother-right.

Other survivals of mother-right have been seen:

1 H. von Wildecki, Tom wanderden Rigenerede, Hamburg, 1890, p. 66.

2 For Melanesia see Rivers, II. 327.

3 Swanton, Amer. Anth. vii. 671.
in tradition and myth. It is frequently the case among matrilineal peoples that the descent of the clan or tribe is ascribed to a female ancestor, and the belief in a female ancestor among a patrilineal people has been regarded as a survival of mother-right. Thus, in the mythology of a people is the widely spread mythological theme of unwitting patricide. This absence of knowledge of the father would be natural in the more pronounced forms of matrilineal marriage, and, in consequence, the occurrence of the theme in the mythology of a people has been regarded as evidence that the people were once in a stage of mother-right. Amazon-legends have also been interpreted as relics of mother-right.

Less direct is the relation of certain social customs, such as the coutade and the cross-cousin marriage. According to one theory, the coutade is associated with the desire on the part of the father to assert his rights over his child, and those who adopt this explanation of the custom will regard it as a survival of mother-right when it is found in a patrilineal society. Again, there is reason to believe that in some parts of the world the cross-cousin marriage (see above, p. 425 f.) has come into existence through the desire of a father that his son should marry a woman who would be one of his heirs under a condition of mother-right. Another custom which may be a survival of mother-right is the rule found in several parts of Africa that the daughter or sister shall not marry a brother of her parents. Such a prohibition would put an end to succession by the sister's son.

Etymology has also been called upon for evidence of former mother-right. Thus, the fact that the Chinese word for clan means a 'woman' has been held to point to matrilineal descent in China, and the derivation of the Arabic word for clan has been adduced to support a similar conclusion in the case of early Semitic society.

6. History.—In several parts of the world we have definite evidence that a condition of mother-right has changed either into one of father-right or into a form of social organization in which social rights are recognized with the relatives of both father and mother. Thus there is evidence that some form of mother-right once existed in Europe, while in the Sudán there is historical proof that five hundred years ago the Deja, who are now definitely patrilineal, kept their genealogy and social lines in family groups. Various parts of the world, and many peoples, have thus produced the various forms intermediate between the two kinds of society which are found in so many parts of the world. According to this school, the undoubted changes from matrilineal to patrilineal institutions which are found in certain regions are the result of later movements, the change in Melanesia, e.g., being due to relatively late Polynesian settlements, and that in N. America to European influence.

There is much reason to suppose that Graebner and Schmidt have gone too far in their reaction against the prevailing view, and that the evidence on which they base their opinions is fallacious. But, while it is almost certain that by far the most frequent process is the withdrawal of the women from the group, the reverse change may have occurred. The region which presents the strongest evidence of a change in this direction is N. America. Not only do some of its matrilineal peoples, such as the Iroquois and Pueblo Indians, possess the most advanced cultures of the continent, but, where one people, such as the Déné or northern Athapascan, practise both lines of descent, it is the less cultured who use the patrilineal mode. Moreover, it is said that there is definite evidence that matrilineal institutions have been taken over from other peoples by who were previously patrilineal or were devoid of any form of clan-organization. Several peoples of N. America possess a custom which provides a mechanism for changing one mode of descent into another. Personal names are often definitely connected with a moiety or clan, each social group having names especially reserved for its members. Among some matrilineal peoples of N. America, like the Shawnees, a father gives his own clan-name to his child, thus taking a definite step towards the transference of the child to his own social group. This or some similar mechanism might well have come into play to assist a change in the opposite direction.

One of the cases most often put forward by
MOTIVE

American ethnologists as an example of change from father-to-mother-right is that of the Kwa-
kinti. This people practise patrilineal descent in
the peculiar system by which a man takes the
rest of his wife's father has been ascribed to the
influence of their northern matrilineal neighbours,
the Tsimshian and Haida. Other examples are the
Athapascan tribes bordering on the Tlingit, who
are said to have adopted the patrilineal dual
organization of the people, and the Babine branch
of the Takuli, another Athapascan tribe who are
said to have taken their patrilineal four-clan system
from the Tsimshian.

In other parts of the world there is definite evi-
dence that the change has been from the matrilineal
to the patrilineal mode. There is a large body of
evidence pointing to the change having been in this
direction in Melanesia;7 but even here it is possible
to discuss its origin at length, but some of the
leading views which have been put forward may be
mentioned.

In the first place, mother-right has been widely
held to be the natural consequence of sexual pro-
miscuity. The less important is fatherhood in a society, the more will that society be
driven to base its social rights upon the mother.
Another view is that matrilineal descent is a
secondary consequence of matrilineal marriage.
When a husband merely visits his wife and is only
an outsider in her household, descent and other
social processes must be expected to rest on the
relation between mother and child. A third view
regards mother-right as a social state which has
resulted from the dominance of woman, and espe-
cially from her importance in agriculture. As
already seen, there is reason to connect mother-
right with a high development of the art of agri-
culture, especially in N. America, and it is not
worrying that it is in this continent that we have
our clearest evidence of the dominance of the
woman.

MOTIVE.—1. Different senses. The term 'motive' is used in philosophy and psychology in
different senses.

(1) In the first and most general sense it means
any force, of an internal or mental character,
which impels to action or prevails over some kind
of action, be the force conscious or unconscious,
and the action voluntary or non-voluntary. Thus
Bentham defines motive as 'any thing that can
contribute to give birth to, or even to prevent, any
type of action' (Principles of Morals and Legislation,
p. 46). In this sense motive includes what
Reid calls mechanical principles of action, such as
instinct and habit, and also what Bentham calls
'speculative motives,' which influence acts that
rest purely in the psychological.

(2) In a second sense 'motive' is taken with a
more restricted signification, as limited to some end
which we present to ourselves and of which we are
conscious. Bentham has this in view when he defines motive as 'any thing whatsoever,
which, by influencing the will of a sensitive being,
is supposed to serve as a means of determining
him to act, or voluntarily to forbear to act, upon
any occasion' (ib.). These are called 'inner motives
by Bentham practical,' and are, he holds, ultimately
redescribable to pleasure and pain, though whether it
be the expectation of the pain or the pain which
accompanies that expectation that is the motive he
leaves undetermined. This contains the germ of an
important distinction. In motives in this sense we may distinguish two things: a
subjective and affective element, sometimes called
affect, a spring of action, Triebfeder; and an ob-
jective, presented or intellectual element.

(3) A third sense of the word 'motive' occurs in
the writings of Green and his followers. Accord-
ing to the teaching of Green, something more is
required to constitute a motive than the conscious
presentation of an end. In the analysis of one
of Green's followers, the voluntary satisfaction of
a want involves five things:

(1) The want. (2) The feeling of the want. (3) An idea of an
object by which the want can be satisfied. (4) An idea of the
satisfaction actually taking place, the work of the hunger
of the stomach. (5) The presentation of this satisfaction as, under the circum-
stances, the best means of satisfying the wants. The self distinguishing itself with the
satisfaction of the object; finding in the realisation of the idea,
not the satisfaction of a want merely, but the satisfaction of
self (D'Arcy, Short Study of Ethics, p. 253).

It is only to this last stage (5) that Green and
D'Arcy apply the term 'motive.' Hence the doc-
trines that a conflict of motives is impossible and
that a strong motive an absurdity (Green, Protege-
mena to Ethics, bi. ch. 1).

(4) A fourth sense of the word 'motive' belongs
to Kant. Kant reserves the term Begriffsgang
as the objective ground of the volition, which he
connects with the subjective ground of an Ireland
the spring (Triebfeder). The objective ground of
the self-determination of the will is the end which
is assigned by reason alone, and is free from all
mixture of passion and sensame affection (Werke, ed. Koschmieder and Schubert, viii. 55; Abhott, *Kant's Theory of Ethics*, London, 1909, p. 45). Such objective ends are common to us with all rational beings, and are to be distinguished from subjective ends, to which we are impelled by natural disposit.

In these four senses of the word 'motive' we see a progressive change of motive from a motive re impelling force, not even necessarily accompanied by consciousness, to that of an internal impulse to the existence of which consciousness is essential; passing thence to the idea of an object which gives satisfaction, or may be a motive to the conception of motive as an object which is free from, and even opposed to, all subjective ground of desire. Green's view, though later in point of time, seems not so developed as that of Kant, since in Green the object is still made to be a motive by relation to a want or internal principle of desire, though such want or desire is again conceived as dependent on the object with which the self identifies itself. Kant's distinction of motive and spring and origination of the consciousness and discharge of action got rid of the wavering between contradictory points of view implicit in Green's doctrine.

Whether we shall give to the term 'motive' the extensive significance which Green's doctrine gives it (1) may appear as more of a question of the use of language; but, as is the case in most questions of terminology, important issues lie concealed beneath the purely verbal discussion. This extensive use of the word early arose, as a critical view of Crombie's *Essay on Philosophical Necessity*, said: 'I understood a motive, when applied to a human being, to be that for the sake of which he acts, and, therefore, that what he never was conscious, can never be a motive to determine his will, than it can be an argument to convince his judgment. Nor, I learn that any circumstance arising from habit, or some mechanical instinctive cause, may be a motive, though it never entered into the thought of the agent.

From this reinforcement of motive, of which we are unconscious, every volition may be supplied with a motive, and even a predominant one, when it is wanted' (Reed, *Works*, ed. Huxley, p. 87).

Reid then acutely remarks that 'this addition to his [Crombie's] defensive force takes just as much from his offensive', since it undermines the evidence for the necessary action of motives known or felt. In the same words, necessitation by efficient is fatal to necessitation by final causes. At this stage the distinction seems to turn upon the presence or absence of consciousness. But, even if we regard consciousness as the condition of the existence of motive in sense (2), this does not prevent the motivation or impelling force being essentially mechanical as when non-voluntary in sense (1). Green's doctrine tries to evade this by assigning to self-consciousness the power of determining the presence and termination of the motive, and Schlueter, and the other, assigns to reason a power of determining action to an end, which is quite independent of, and even opposed to, the pathological feeling. 'Motive' in this sense has passed over entirely from the meaning of an impelling force to that of an object determined and decided upon by reason.

The motives are only bound up with the inquiry regarding the freedom of the will. If our will is possessed of an original power by which it can control the direction in which it utters itself, then the causal action of motives must be distinct from mechanical impulsion; they may induce, or incline, but do not determine, according to irrevocable law. If, on the other hand, our will has no such power, what we call inducing and inclining must be merely the subjective side of the collision of predestined forces, of which we are the theatre or rather the play itself. If this be the case in which may yield to conscious motives, but is not controlled by them, must be an illusion. The illusion demands explanation. This Münsterberg undertook to furnish in his *Willeshandelung* (1878). In *Men's Place in the Cosmos* (plan London, 1902), J. Seth Pringle-Pattison gives an acute analysis of Münsterberg's views. According to Münsterberg, the will is only a complex of sensations. Our activity, whether the inner activity of attention or the outer activity of muscular contraction, appears to us to be free, just because the result of the activity is already present in idea, and is, in all cases, accompanied by the sensations flowing from previous motor innervation. The feeling of innervation itself is 'just the memory idea of the movement, anticipating the movement itself.' In the *Grundzüge der Psychologie* (1900) Münsterberg's position is modified by a Fichten's point of view. The 'action theory of mind' here put forward makes the conscious different classes of action the mere discharge of a rational law. It, therefore, precludes any theory of action other than that of mechanical causation.

Nor is this conclusion altered by the theory of taking an attitude (Stellungnahme) towards the world, which Münsterberg puts forward. Such activity as lying outside consciousness could not even give rise to the illusion of voluntary activity. It was maintained by Hartley (Observations on Man, London, 1810, i. 522) that 'to prove that a man has free will, it is necessary to establish the law, he ought to feel that he can do different things while the motives remain precisely the same,' and that here 'the internal feelings are entirely against free will where the motives are of a sufficient magnitude to be evident,' while he admits a power of resisting motives. Such a power, on Hartley's view, can come only from some other and stronger motive; that is, there is no intrinsic power of resisting motives. The attribution to the self of an intrinsic power of strengthening certain desires, which then become motives (in Green's sense), seems the essence of the third theory of motives. There is an illusory atmosphere of determinism about Green's theory. The will is determined by motive, that desire is the one which is successful. There is no conflict of motives, nor any strongest motive. But then the strongest desire is made to be the strongest, i.e. to be a motive by the action of the eternal consciousness which is perpetually reproducing itself in all eternity, and yet the same. The result is practically identical with Hartley's—the eternal ego, since it determines the motive, is consequently, in being determined by the motive, determined by itself. This is only Spinozistic necessity. But, if the action of the eternal ego on the finite ego is not so predetermined, is something which, at the moment of decision, may fall out differently on different occasions, notwithstanding identity of desire and circumstances, then such action is not different from the free will in the ordinary sense, and implies a self-determined free activity of the ego, as in the Kantian doctrine.

Green's theory of motives must be carefully distinguished from a modern psychological doctrine, to which it bears a strong verbal resemblance. Green says (Proleg. to Ethics, p. 89) that...
an appetite or want 'only becomes a motive, so far as upon the want there supervenes the presentation of the want by a self-conscious subject to himself and with it the idea of a self-satisfaction to be attained in the filling of the want.' Stout, too, says (Manual of Psychology), p. 709: 'Motives are not mere impulsi. They come before conscious perception of them as objects or events in that way. They are not independent forces fighting out a battle among themselves for the control of our action, where spectators. On the contrary, the motives are motives only so far as they arise from the nature of the Self, and pre-suppose the conception of the Self's psychical and moral states as factors. From this it follows that the recognized reasons for a decision can never constitute the entire cause of decision. Behind them there always lies the Self as a whole, and motives can never be completely analyzed or stated in the form of definite reasons or special motives.

The great verbal similarity of this to what Green says is evident. But to Green the self-conscious subject, through determination by which a want becomes a motive, is 'a principle of other than natural origin,' is, in fact, an entity of a sort. To Stout the self as a whole, even if what it involves can never be completely analyzed or stated, is not an entitative principle eternal or otherwise, but, rather, the 'thought of the self.' In deliberation, he says, 'the concept of the Self as a whole will not directly tend to reinforce or suppress a desire' (p. 719).

'A certain line of action being suggested as possible, I contemplate myself as I shall be if I put it in execution, so as to make it part of my actual self-history, and on the other hand I contemplate what I shall not do if I decline. I follow out this representation of a hypothetical self in more or less detached perceptions, a passionate process which is called Voluntary Decision emerges' (ib. p. 700).

This theory, that motives arise and are constituted by relation to the conception of self, whether we take it in Green's metaphysical or in Stout's psychological form, as a conception of motives, seems not to be true. That very many motives are determined by conscious relating of the end in view to the self is true—notably the self-regarding ones. But it is difficult to regard altruistic motives as necessarily related to the concept of self. They may sometimes be so, but not necessarily or universally. The highest moral ends are disinterested. The disinterested character of aesthetic emotion has been emphasized by Burke and Kant. Hegel and Schopenhauer. Molinos. Vénelon. and Madame Guyon have maintained the possibility of a disinterested love of God. It must, therefore, be admitted that, while the adherents of the term 'motive' given under (2) and (3) is in many cases correct and forms a motive analysis, there are other cases where, even it impelled towards the end by some subjective affective element, the self-conscious satisfaction of this impulse need not form part of the objective end in view nor even of the subjective impelling force.

It is when we come to the fourth sense of the term 'motive'—the strict sense given to it by Kant—that we find the most striking detachment of the wants from all association with the subjective self. It may still bear relation to something universal, common to the individual selves, but the ends are then ends in which the individual self loses its individuality. They are objects of the term 'motive' given under (1) and Kant, and the point which separates the ethics of Kant from the ethics of Green. It was to retain in the moral motive the reference to self that Green was compelled to characterize the good as the human, and the human self, is able to give itself an end, which, though realized in the matter of desire, is independent of the relation of that matter to the particular self. Kant is often criticized as if the categorical imperative set up ends to itself through the medium of desire and inclination, as if purely formal ends existed by themselves. It is the impenetrability of particular desires and inclinations by the categorical law of duty that gives to the individual absolute value in that in which the categorical imperative which is expressed: 'so treat humanity whether in thine own person or that of another always as an end and never as a means.' We have, therefore, in our highest ends, moral, aesthetic, and religious, the singular paradox that in them an element, which comes into existence only through particular feelings and inclinations, becomes, as regards its essential character, independent of these and a motive of selfless and disinterested action.

In the above discussion we have considered the several distinct senses in which the term 'motive' may be used. There are, however, some ambiguities connected with its use which, while not really adding to the multiplicity of senses, might nevertheless appear to do so. Bentham says: 'Owing to the poverty and unsettled state of language, the word motive is employed indiscriminately to denote two kinds of objects, which, for the better understanding of the subject, it is necessary should be distinguished. The first is employed to denote any of those really existing incidents from whence the act in question is supposed to take its rise. The second may be any act or unfigurative sense. On other occasions it is employed to denote a certain fictitious entity, a picture, a creation of motive, an ideal being, which upon the happening of any such incident is considered as operating upon the mind, and prompting it to take that course, towards which it is impelled by the influence of such incident. Motives of this class are Avarice, Indolence, Benevolence, and so forth. . . . This latter may be styled the figurative sense of the term motive (p. 46).

The real incidents—motive in the unfigurative sense—are: 1. The internal perception of any individual lot of pleasure or pain, which has been ably criticized by Sidgwick (Methods of Ethics, bk. i. ch. iv.). They may be reduced to those drawn by Fleming (Manual of Moral Philosophy, ed. London, 1870, p. 176) between the external object, the internal principle, and the state of affection from which the one being addressed to the other. The internal principle may be dismissed as, at any rate for the purposes of this article, a fictitious entity. The distinction, however, between the external object and the resulting state or affection of mind has an important bearing on the foregoing discussion. It might seem plausible to say, as Fleming says, that Kant uses the term to mean, that it should be applied to the terminating state or affection of mind which arises from a principle of human nature having been addressed by an object adapted to it; because it is this state or affection of mind which prompts to action. This is true in the sense where an affection is the spring of action. But there are cases in which the affection does not exist, or the action takes place without, or contrary to, its prompting. In the 'beautiful soul' in Schiller's Lament and Words, affection produces moral results, but, to Kant, true moral action is independent of such affection. In art, however
much feeling may guide, it cannot be considered as the motive. In true art it cannot even be said that there is a conscious (or unconscious) motive which is intended to produce. In art, as Schelling says, the ego is unconscious in regard to its product (System der Transcendentalen Idee), vi. Tübingen, 1800 (Sammtl. Werke, Stuttgart, 1836–61, iii.).

An important distinction is that between motive and intention. The nature of intentionality is thus stated by Bentham:

‘Let us observe the connexion there is between intentionality and consciousness. When the act is done intentionally, and with respect to the existence of all the circumstances ascribed, as also with respect to the material of those circumstances, relation, and disposition, and to consequence, and there is no misapprehension with regard to any preventive circumstance, that consequence must also be intentional. In other words, awareness, with respect to the circumstances, if clear from the mis-supposition of any preventive circumstance, extends the intentionality from the act to the consequences’ (p. 16).

The distinction itself is most clearly expressed by Martineau (Types of Ethical Theory, ii. 272):

‘The Intention comprises the whole contemplated operations of the act, both for the sake of which, and those in spite of which, we do it. The Motive comprises only the former.’

Dividing the intention as Martineau does into perspectival, dissuasive, and neutral consequences, it is only the first that fall under the heading of ‘motive’ in E. H. Huxley’s book. Utilitarianism, p. 27; Muirhead, Elements of Ethics, 2, 61; Mackenzie, Manual of Ethics, p. 64 ii.

This excludes from intention all motives in sense (1) which are unconscious or involuntary. It includes motives in sense (2) and (3). It is more difficult to say whether it includes motives in sense (4). The particular object or end is certainly included in the intention, but the law which will give to itself, while controlling and determining the intention, and will, for the sake of it, act, even if done for the sake of the law, has not the law in its universality as its end. To make Martineau’s statement true we must understand ‘perspectives’ in an affective sense.

2. Classification of motives. — The various classifications reflect the difficulties which have attended the foregoing discussions. Our impulses or active principles are classified by Reid into mechanical, animal, and rational; but only to the last two does he apply the term ‘motive’. He has classified the animal principles on the grounds that ‘mechanical’ cannot be applied to instincts and habits (which is done by Reid), nor to any of our active principles. It is capricious to call our appetites animal principles and to say that reason and the discerning instinct of the animal are analogous to the lower animals. Mechanical principles of action produce their effect without any will or intention on our part. Animal principles of action require intention and will, and not judgment. Rational principles of action require not only intention or will, but judgment or reason. Stewart censures Reid for including under animal principles of action the desire of knowledge, of exercise, pity, and to distinguish our instincts as mechanical, in regard to which our nature bears so strong an analogy to the lower animals. Mechanical principles of action produce their effect without any will or intention on our part. Animal principles of action require intention and will, and not judgment. Rational principles of action require not only intention or will, but judgment or reason.

Stewart censures Reid for including under animal principles of action the desire of knowledge, of exercise, pity, and to distinguish our instincts as mechanical, in regard to which our nature bears so strong an analogy to the lower animals. Mechanical principles of action produce their effect without any will or intention on our part. Animal principles of action require intention and will, and not judgment.

Stewart's own classification falls under five heads: (1) appetites, (2) desires, (3) affections, (4) self-love, (5) moral faculty. This classification has been ably criticized by Martineau (ii. 134).

MacNish gives the following classification of the motive or motive powers, or, as he prefers to say, of the motive and moral powers:

1. The native appetites of the mind leading to emotions, likes, dislikes:
   (a) the inclination to exercise every native power voluntarily or involuntarily; (b) the desire to receive pleasure and avoid pain; (c) the appetites which tend to seek for knowledge, exercise, society, power, property; (d) an inward principle that inspires seeking for the highest. (2) The moral or rational motive power (a) in the mind as a prompting energy; (b) as moral motives prompting to action in relation to other beings, e.g. sympathy.

2. The will not as furnishing inclinations, inducements, or motives, but as acted upon these, sanctioning, retracting, and deciding among them.

3. The conscience in compelling certain beliefs and judgments (Intuitions of the Mind, p. 242 ff.).

More important than any of these classifications is that of Martineau (i. 129–175). He begins by distinguishing between two sets of impelling principles in man: (1) those which urxe him, in the way of unreflecting instinct, to appropriate objects or natural expression, and (2) those which suprave upon self-knowledge and experience, and in which the preconception is present of an end gratifying to some recognized feeling’ (p. 135). The former he calls primary springs of action, the latter secondary.

Under the primary come — (1) propensions: including original appetites and animal spontaneity; (2) passions: antipathy, fear, anger; these do not arise as forces from the needs of our own nature, but are rather what we suffer at the hands of objects; (3) affections: parental, social, compassion; these operate as attractions towards other persons; (4) sentiments: wonder, admiration, reverence, of a relative and ideal relations, objects of apprehension or thought that are above us, yet potentially ours.

Under the secondary principles which are characterized by their interested nature or inanimate objects, we find: (1) secondary propensions: love of pleasure, money, power; (2) secondary passions: malice, vindictiveness, negligence, sensuality; (3) secondary affections: sentimentality; (4) secondary sentiments: self-love, vanity, selfishness.

The secondary series is the self-conscious counterpart of the primary series. These principles give rise to ulterior combinations, such as love of praise, emulation, fellow-feeling. In addition to these, Stuart remarks, that the self-consciousness which we associate with the primary principle, according to Martineau, a positive principle, so as to range in the series of impulses. Each exercises a judicial function — prudence among the secondary principles, conscience over the whole.

If we examine these various classifications, we shall find much to confirm the wide view of motives which we have taken. Martineau’s distinction of primary and secondary springs of action directly contradicts the narrow view of motives taken by Green, which separates primary from secondary motives; or, as he expressed it, ‘the notion of the self-realised instinct, and the idea of a motive being identified with an affective element. In Martineau’s theory the moral element consists in relative position in a scale of excellence intuitively discerned. Other moralists might seek to analyze further in what this excellence consists, and this analysis might be dangerous to the intuitive scale, might show that the position of a spring varies with circumstances; but the insight that the moral element is not an affective spring of action, in either the primary or secondary form, remains.

In the third place, it remains the necessity of recognizing a fourth form of motive, the motivity of which, whether proceeding from an autonomy of the will itself or from a recognition of an intrinsic authority in certain imperative acts of action, or from a recognition of superiority or authority in inward springs or outward courses of conduct, demands a unique position for itself in the classification of those forces which impel the human will to action.

MOUNTAINS, MOUNTAIN-GODS.—

There are few peoples who have not looked upon mountains with awe and reverence, or who have not placed worship to them in the form of gods, or spirits associated with them in various ways. Their height, their vastness, the mystery of their recesses, the veil of mist or cloud now shrouding them, now dispelled from them, the strange noises which the wind makes through them, the crash of a fall of rock, or the effect of the echo, their suggestion of power, their appearance of watching the intruder upon their solitude—all give to them an air of personality, and easily inspire an attitude of reverence and a veneration of respect. They are next thought to have a spirit akin to, yet greater than, man's, and such a spirit may become separate from the mountain and exist as a god of the mountain. The natural dangers encountered by the traveller on a mountain-wander, as well as the mystery of the gorge, precipice, or cove, suggest the presence of spirits, dangerous or at times beneficent, and in many cases also ghosts of the dead are thought to haunt the mountains. Their summits, being near the atmosphere, as it were, and being the objects of their connexion with gods of sky or rain; or the remoteness and mystery of their peaks cause them to be regarded as dwellings of gods or of ghosts.

Sporadically we find cults of mountain-gods, but that is generally where no cult of nature exists, or, of course, where no mountains exist. Where they are feared, it is generally because of the dangers supposed to infest them as because of their own suggestion of danger. The horror of mountains found in writers from Walter to the time of Scott, Byron, and Wordsworth was perhaps a literary affectation as much as genuine lack of appreciation. Wordsworth's voice of the mountains has generally made a strong appeal to men and given a great impulse to the imagination.

1. The personification of mountains.—The various impressions which mountains made upon men's minds led to their being regarded as alive, or as possessing a personality behind their massive forms, and, finally, to their personification in a greater or less degree. The next stage was that the mountain-god—the personified mountain which receives word of the mountain to separate from it, yet connected with it. It is difficult in particular cases to say which of these stages is intended, or to disentangle them, since the human mind so easily adopts either attitude; and, even where a god of the mountain is worshipped, the mountain itself still looms vast and, as it were, personal. In this section we shall examine instances where the mountain seems to be worshipped for itself alone or to be regarded as sacred and to some extent providential.

The Choiseul-Gouffier regarded one particular hill as god of all the mountains, and on it burned a perpetual fire.1 To the Hopi Indians every mountain peak is a deity, and hills as well as lakes, rain, etc., are tribal gods of the Thompson Indians.2 The Mexicans had gods of mountains (Tlaloc), and mountains surrounded their cities.3 Mount Shasta in California is the abode of one of the gods of the Sierran Indians.4 In Korea mountains are personified, and the idea of guardianship, e.g., of towns, is associated with them (cf. § 5). Yet there is evidence that in many instances, the term kami, applied to deities, is likewise applied to mountains, which are supposed to possess great power.5 Similarly in China, where spirits of mountains have always been worshipped, mountains themselves are included among the shrines, or, if bereft of shrines, are the home of deities. There are ten principal Deities of Tapai, or earth-gods—the five goh, of which the greatest is T'ai Shan in Shantung,10 and, J. McConnell, Intuitions of the Mind, London, 1893; J. D. Morell, Introduction to Mental Philosophy, ed. 1842; J. S. Mackenzie, Manual of Ethics, Edinburgh, 1866; H. Sidgwick, Methods of Ethics, ed. 1897; G. F. Stout, "Aston, Manual of Psychology," ed. 1913.

Mountains, Mountain-gods

Mountains worship a god of hills, and among the Kel the great deities are 'Great Mountain,' or 'Great Mountain-top.'1 The term-god, Masi-p, being a conspicuous peak in Ohta Napur which is either the god himself or his dwelling-place. Before the time of rain children take place of the mountain on the place for rain and a fruitful season.2 Mt. Shasta is thought by American Indian tradition that the soul of snow and ice by the Great Spirit from the sky, after which he stepped down upon it and hovered it out as a vignernach whom it might live on his visits to earth.3 American Indians the mountain in Arcadia.4 Malagasy thought that Thales, god of rain, dwelt on the highest mountain-tops where the feet of his great gods, his lieutenants, bearing his name, dwelt in hills and were worshiped as gods of water and of mountains. The cult of Thales was of great importance, and was continued with the first rain.5 In Central India the sun-god is supposed to dwell on hills, and isolated wooded hills are hence called 'sun-casts.'6 Several outstanding mountains are the seat of gods—Kalasas of Siva and Kubera—and a title of Siva is the 'mountain-god.' Other mountain chains or peaks are associated with divinities—e.g., the Vindhyas ranges with Maharajah Vindhyeshwar, the goddess of the range. In earlier times Raudra was believed to dwell among the mountains, or on their tops, and Durbah was called 'the dweller in Mandura.'7 Mann is said to have descended on a slope of the Himalayas called 'Mann's Descent,' and to have tied his ship to a peak after the flood.8 As has been seen, there is a constant confusion between the mountains personified and the mountains where those personified dwell. In Greece, 9 the gods were closely associated with mountains. The habitual cult of Zeus on mountain-tops, like that on certain Mexican Thales-peaks, shows a connection with rain, thunder, and lightning sent down from the heights, and he probably had been identified with them. In later times similar earlier gods there worshipped, e.g., at Mt. Lykaion in Arcadia (Zeus Lykaion). In several other instances the mountain where the cult took place gave a title of a god. Thus the Lykaion (mountain where no cult no deity was there), Zeus Laphtyos (Bacchus); on Mt. Pelion he was worshipped as Zeus Pelion. Clouds resting on peaks when Zeus was there was worshipped as a sign of rain.9 Hermes had a temple on the summit of Mt. Cyllene, and Apollo on the hill of Dicte.10 Arcturus was also worshipped on high places in Arcadia. The Cretan Mother-goddess, like the Parian Orphee (p.), was represented on standing hill (cf. art. Moct.). She was the mother of the Minotaur and was loved by the mountain and its recesses, called by her name. The cult of her divinity associated with mountains was Pan, who was born on Mt. Lykaion and had one of his sanctuaries there. Several mountains—e.g., Mt. Manala, Mt. Lampsal—the Himalayas dwelt there. There he loved to hunt, and there he might be heard piping.11 The personalized nymphs were also of the mountains, and were worshipped there. They had caves on Mt. Cithern, and gave oracles from them. Certain nymphs, called 'Opephes or 'Opeides, presided over mountains, and were companions of Arcturus.12 Mt. Olympus was supposed to be the seat of the gods, with the palace of Zeus on its summit. In Cappadocia, according to Strabo,13 a mountain was called after a god Omans. Some Babylonian gods were called 'ruler of the mountains,' and Enil is described as the 'great Earth-Mountain' a reference to Babylonian conception that he was god of all the foreboden life. For his worship, and later that of all the gods, an artificial mountain was erected on the plain. The 'world-mountain' was the seat of the gods. Among the Celts gods were associated with hills, where some cult was offered to them, or with mounds. Words believed to have related to the coming of Christianity, and there they live as fairies.14

For Berbers see ERE ii. 596.

3. Ghosts dwelling on mountains.—To some extent the belief that ghosts haunt mountains or that the other-world of the dead is situated on a mountain-top may have arisen from the custom of burying the dead on hills, but the belief often goes with them.15 Such a belief is not found. It is doubtless connected with the fact that mountains are lofty and touch the clouds or are swallowed at times in mists. They are near the sky-land which is so often associated with the dead. They are lofty and mysterious, and, as they are the dwelling-place of gods and spirits, it was natural enough to regard them as also the habitation of ghosts.

Burial on hills is only one of many methods of disposing of the dead, and is by no means universal. It is found among the Comanches, Arawak, and other N. American tribes, the tribes of central Africa, the Malagasy of Madagascar, in Arabia, and among the Perses where no deads exist (the body is surrounded by stones, not buried). Hill-burial was also favoured by the Norsemen.16 In Melanesia the idea that ghosts dwell on mountains is frequently found.17 In British New Guinea it is said that of earth (Kolda): a blasphemous Elysium (Arcadia) as a light or a founus (Rrove-speaking tribes), and among the Kal of German New Guinea (ghosts an animals bringing wild grains). In the D'Entrecasteaux it is the spirit-mountain Bubwebos, the spirit-hill which the gods reach by a slope-bridge over a chasm. No mortal dare climb it or speak above a whisper when passing it.18 In Tahiti the heaven of the dead, Tamahani, is on a mountain on the north-west side of Raikiau, In the D'Entrecasteaux is a lonely spot on a crest of a hill.5 Various African tribes have similar beliefs.

The Ambaia think that ghosts dwell on hills, and the volcanic veins are their paths. Sacrifice is made to them there, and they fear to approach the hill among the woods of which the ghosts dwell.19 Among the Ragonese in the Philippines there are no mountains. The Bondel god, Iluiga, is a mountain, and some other, still more sinister, does not appear to be heard upon it. Death is the penalty for trespassing on it.20 The Anyanga hear the ghosts talking on their spirit-hill, or drum beating. To hear these is dangerous to the health. Malagasy ghosts and animal spirits reside in a great mountain in the north.21 In Lama the Spoon Indians thought that ghosts dwelt in caves and rocks, the echo being heard as the voice of other tribes it is said that souls of the dead go to Wokondah, who dwells in the Rocky Mountains of America, and there live in bliss.22 Tho-""
In Mexican belief the soul of one dying a peaceful death had
to pass between two mountains which threatened to meet and
crash, whereupon the mountain of Danann, the dwelling-place of
deities, is seen to be between the mountains and the
Mountains of Heaven, which are on the other side of the
West, through which lay the road to the region of the dead,
while the mountain of Danann believe in the Phoe de naevus or
eternal mountain, from the mountains, where Ra also sits. At the tomb of the
cobra was set on a small sandhill, representing the mountain.

1 Many folk-tales and myths tell of a deliverer, sometimes
the hero, sometimes the witch, like Arthur, who
is one day to return as the saviour of his people. 2
In some of these he is in fairyland or heaven, but
the cruder and more archaic belief is that he is
elected by men or the earth to save them. 3
Sometimes he is seen by those who have been able to
penetrate into these places. Such tales are told of Arthur, Merlin,
Fionn, and many another hero, and there are
innumerable Celtic, Teutonic, and Slavic
instances. 4 The story is also found in Korea.

5. Sacred Mountains.—Wherever mountains are
personified or associated with gods or are the seat
of a cult, their sacredness is obvious to their
adherents, and mountains have a peculiar sanctity.
Legend clusters thickly round them, and they are places
of pilgrimage or sources of merit.

In Ancient India the peak of a hill was considered a
habitation of demons, and the hill-top was
endowed with a cult, so that the
mountains were shrines or gods, and the
hill-tops, among other places, are
named from them. They send disease, and are much
feared. Some of these peaks are the shrines of the dead—of
headmen or their wives. They also have a dangerous aspect—sending
sickness or tricks at children—and are pacified by offerings. 5

The Yanass and other tribes of the Andes believe in spirits
manifesting themselves in parts of nature—oases, mountains. Spirits
of this kind are called tut, and are malevolent; hence people
are careful not to offend them. The most dangerous are found on the
most rugged summits, which the natives will hardly
approach. Among the Lushai Kuki clans tut is being
drawn or turned into a mountain, or a hill, or
a tree, and the spirits that live in people, hills, streams, etc.,
and cause much trouble. 6 In Chitral had spirits, with feet turned
backward, crops, and in Youth, it is supposed
that in the orchards every mountain and natural feature is haunted
by demons, and this is true of every part of
India. 7 

The mountain of Danann is the sacred mountain of Ireland.
It is reconned to be the dwelling place of
deities, its caves of witches and fetishes. Other hills
are equally haunted and consequently feared. As early as
the Vedos times such beliefs are found, and in the Mahabharata
witches are said to live in mountains. 8 In Korea the spirits
of mountains are duly worshipped by sacrifices, and on every pass
is a shrine where prayer is made to them or an offering laid.
They control tigers and give the hunter power to catch them.
In China mountain spirit, called Tao, is
worshiped. 9 In Nepal, also, the sacred
mountains, their power being proportionate to the size of
these. Only on certain days should mountains be crossed, and
the gods of mountains are more friendly and have a regular cult (q.v.).
In Indo-China the
mountains are treated as gods, and the ancient Annam
worshipped the mountains, power being imputed to the
mountains. 10 In Annam female spirits or babies called chiu of dwell in forests and mountains,
and for each hill there is an annual sacrifice. Among the
Bantu of S.E. Africa demons haunting mountains are much feared. 11 On the other hand, the Aborigines believe in guardians
spirits attached to hills, etc., who send rain and fertility. 12 For
similar beliefs see ERE II. 13 In New Guinea the
token belief that evil spirits dwell on mountains, and the
people are driven from the mountains. Demavend is the house of genii and demons, 14 and wizards assemble there. It is a general Mohammd form belief that the
mountains of Qi, supposed to be sacred, are the
earth, the chief abode of jinn and firds. 15 European folklore
makes hills and mountains one of the dwelling-places of
evils, fairies, dwarfs, and similar beings, 16 and the devil (demon)
of Armenian folk-belief live in mountains. 17 While
mountains are often within a hollow hill (see ART. FAITH, c. 41). So the Serbs call
the Serbs riles 12 and the Nereids of modern Greece haunt
the mountains. Certain mountains are trysting-places of spirits,
demons, and witches—e.g., the Horselsch, the Brecken, the
Fy de Dune, and innumerable others in every part of Europe, these gatherings probably being remnants of sacrificial rites
in pagan times on the same spots. 18

In Mexico and India, the belief that the mountains are
the abode of spirits, besides being the seat of gods, mountains are also
peopleed, like other parts of nature, by spirits, or are
haunted by demons.
6. Fabulous mountains. — As the preceding section has shown, actual mountains are often regarded in a mythical light. As an Egyptian author, G. Alizar in Zoroastrian belief, Hiinav in Hindu, Kwan-lun in Taoist. Some mythologies, however, have invented mythicid mountains, mainly in connexion with cosmogony.

Among such is the 'mountain of the world' (§ 96). In Hindu and, more particularly, Buddhist mythology Merg or Sumeru, the abode of the gods, occupies a prominent place. It was the primal and the chief of the three mountain-worlds, and was regarded as God's holy mountain, the 'mountain of the Lord's house.' In ancient times Mt. Atlas in Morocco was held in great reverence. In later times, the most famous mountain in the earth was, the 'mountain of the men who are good,' the Libyans say, is regarded as a temple and a god, the object by which they adore, and a sanctuary.

Inscriptions have a curious importance, especially the two groups of tablets already referred to and other sacred mountains are mentioned in the form of the names of gods, every mountain, temple, field, etc., should be so situated that the benedictory influences of the universe may be freely exercised upon mankind. It is, therefore, in the configuration of the earth. Hence hills intercept excessive influences—e.g., bad winds—or they send far and wide the beneficial influences of the universe. This is the reason why in the earth various mountains are high. In thousands, however, it is said that a student who has completed his term in Mount Athos, the first mountain, in 15 years, after their substance was molded in the earth during 1000 years. High mountains, being near heaven, are apt to become seats of heavenly beings. At the top of one Ahura revealed the law and mountains are said by the Spirit of Wisdom to be molotors of wind, wanderers, rest-places, and supports of rain-clouds, emitters of Ahura and the thunder and lightning, and victors of the creations of Ahura Mazda. Of him who goes to the lofty mountains' their glory is said to 'bless him and be friendly to him.'

The sacred mountain, moreover, is the summit supports the Chinava bridge, will never longer exist. Perhaps also this conception accounts for the tabs in the Sardar against women after child-birth, looking at a hill. J. H. Mouton regards this idea, so contrary to Farsi and Aryan notions of the sacredness of mountains, as one of the beliefs borrowed by the Magian adherents, other Aryan or Semitic, and superimposed upon Zoroastrianism. A similar idea is seen in the description of the Buddhist paradise, Sukhavati, which will be the abode of the blessed. In the Sukhavati the cliffs are marked in the OT, as natural where so many of them were sacred, and Zoro in particular is the seat of the gods' house. The hill of the holy mountains, and may be symbolic of the sun. The heaven is thus connected with the sun, moon, and planets revolve. In Tibet the Lamas offer to the Buddhas daily the universe in effigy: Meru is represented by a disc of rice in the middle. In Muhammadan belief the mountains of Qaf are believed to encompass the earth and its surrounding ocean like a ring, as Alarib was held to be in Zoroastrian belief. They are of green chrysoprase, and are the chief abode of the jinn. Our earth is one of seven successive earths, rising above each other, and supported by a rock, communicating with Qaf by veins or roots, the origin of earthly mountains. In Malay belief Qaf (which may = the Cosmos) is being pierced through by people called Yaqi and Muloq, and when they succeed, the world will come to an end. The Malays believe in the existence of a central mountain Mahameru—borrowing from Hindu belief.

7. Cult of mountains. — A cult offered to mountains or to divinities connected with them cannot be sharply divided from a cult on mountains, whether that is to such gods or to others. In doubt, monuments were selected for shrines, or temples because of their supposed nearness to heaven—one seat of the gods. Here and there, however, the difference can be seen even in the same religion.

Among the Naids, after harvest the people of each geographical division hold a feast on the top of a hill, and in drought people look to Timbrel or Christoper hill every morning and say, 'May sun, do the rain, Timbrel.' The savages of the goldfields, looking at the mountain-spirits on the summits, make a wish, addressing the spirit, and then part of the tree, and these are the three times, if not successful; should a third visit fail, another mountain is visited. Among the American Indian tribes Lacordair says that a direct worship of hills was usual, and in offering up to them. The Mexican worshippers mountains and mountain-gods, and when no hills were available for temples, made artificial mounds, or toconuli, for worship. Effigies of the mountains were made of dough and eaten in connexion with human sacrifices to the gods of the mountains, and not even the gods were sacrificed on high mountains. In China from ancient times mountains and rivers were things of the same reverence of the自主山, the sacred peaks, and historical notices in the sacred books of this or that emperor or king worshipping towards the hills, and it was the custom to take favouring personages, and sacrificing the appropriate sacrifices to them, usually to the five mountains (§ 1), or to the spirits of the hills. This was done on festivals, and the successful conclusion of war. This way rest was given to the spirits of the hills, the oblation to sacrifice to any of these spirits was an act of reverence, and the ruler was deprived of part of his territory. At Peking the great altar of 'Empress Earth,' and held at the summer solstice, when sacrifices to heaven are made, the emperor sacrifices to earth’s chief components—mountains, rivers, and seas. Similar sacrifices are offered to the ten mountains on other State occasions, as well as to the ranges dominating the site of the imperial palaces. 17

In India from early times a cult has been paid to or on moun-
tains (§ 8). The Institution of Vigna say that mountains are excel-
lent places for performing sacred rituals, and of an oblation of butter or milk on a mountain to east or north. The worship of sacred peaks, on which shrines or temples are commonly built, has already been referred to. Aboriginal tribes attach a high importance to this cult, and many sacri-
fices are offered to the peaks of mountains (Sambal, Kowara, Kol, etc.). In Korea people go once a year to wor-
ship the Pusan sacred mountains for merit, and carry a pebble, which is placed on the heap at the top dedicated to this god. In ancient Persia there are frequent records of books to worship and sacrifice being offer-
ted to mountains 'glorious with sanctity,' or 'brilliant with holiness.' The mountains which give understand-
ing in the slightest slight of libations, are part of the Burgess service (Tir A). The Sarmize worship of Sasan (Haoma or Haoma), or the height of high Harata (Nand Herodotus speaks of the custom of ascending the highest peaks and offering sacrifice to Zeus, calling the whole vault of the sky Zeus, probably some Zoroastrian sky-cowering the primitive Indo-European god of the sky.

In Greece numerous moun-
tains were crowned by temples dedicated to some particular god, but no deity was so much worshipped on mountain-tops as Zeus, who from his heights was supposed to rule the world. The Greek cults on high places of ancient date, and perhaps concerned gods supposed to dwell in heavens, rather than gods of the heights. In modern Greece mountain-churches often stand on the site of these ancient mountain-shrines.

Pausanias describes the cult of Zeus on Mt. Lycaon. There was a sacred rock face of the peak, with two pillars facing the rising sun. Here also and on Mt. Timolos the priest performed certain rites for the production of rain. In ancient Asia the peaks of mountains were com-
bated on the tops of Ida and Berezjceus, where she was sup-
poused to reside, and where the trees were sacred to her and never cut down. Among the Samnites on a certain mountain-top there was a mount which was the god they considered to be the god of thunder and tempest. Among the Scythes hills or high places were favourite places of worship, and are frequently referred to in connexion with the worship of pagan tribes and with people and with Israel. It was common worship on high places, and was supposed to dwell there, according to an older strain of thought, while Israel also offered sacrifice and incense on them to the local gods—the Bull of Amon—or other gods from time to time (cf. Hose 4:3, Jer 22:28 257, Ezek 39:17, 17 16 179). For the Canaanite cults see Dt 33, Num 332, Moab, Num 22:35-36. The words to worship of Jehovah on high places, whether natural or arti-
ficial, are frequent (e.g., 1 Kings 11, 12 17 57, 2 Kings 12 24 27, Joshua 21:40)

Archeological research has discovered remnants of many 'high places,' often on hills, and even now

remains of temples and sacred groves are to be seen on Hermon and other mountains. On some mountains worship and sacrifice still take place, and on the peaks of some of the mountains the peaks the summits. Aaron has a shrine on Mt. Hor, and is supposed to visit it twice a week. Muhammadan saints have also shrines on hill-
tops, where no hills were available for worship. Some of these mountains were of great size. On them sacred buildings were erected, and the higher these could be placed the more sacred they seemed. Teocalli were also erected on high mountains. The mounds are found in the bottom lands, though occasionally on mountain grounds.

Heaps of stones, often dedicated to the local genius on the highest point of mountain-passes, to which every traveller adds a stone, are found in all parts of the world on the summits of cultic. The added stone may be an offering (in Ladakh the mountain-spirit is said to be offended if no stone is given), or many carry off weariness (it is often alleged that weariness leaves the traveller when he offers it), or the contemplation of evil, or it may drive away evil spirits, or it may be a materialization of the prayer made at the moment. See LANDMARKS, vol. vii. p. 794 f.; G.1., pt. vi., The Scope, London, 1913, p. 11 ff. In all religions which have encouraged ascetic

isim men have chosen to live a solitary life among mountains, partly because of their loneliness, partly because of their sacred associations. Their living there tended to increase the sacred aspect of some mountains.

In India Himavat has always been the resort of saints and

ascetics. Buddhist monasteries in Tibet are often on inaccessible heights, like those in Eastern Christian regions. Taoist hermits have been fond of mountains, as also have Christian ascetics.

8. Symbolism.—Mountains are everywhere sym-

bolic of strength and everlastingness (cf. the frequent phrase in OT 'the everlasting hills,' though compared with Jehovah they are as nothing). To the Hebrews they symbolized the seat of righteousness. His kindness, His guardianship, in the 'Th King a mountain is a symbol of resolute-

ness.' The Bab, Bel is called 'the great mountain,' or 'the great Earth-Mountain.' The Zulus speak of their king as being 'high as the mountain,' or address him as 'Yon mountain,' and elsewhere 'mountain' is a title of honour. Buddha is said to be composed and firm as Sumerus, or he is called 'the golden mountain,' and he is illustrious among men as Sumeru among mountains. The name montagne was given to the extreme French Revolu-
tionists, who occupied the higher part of the wall where the Assembly met.

9. Mountains in cosmogony.—(a) The creation of mountains is referred to in some cosmogonies.

In an American Indian myth they were made by the crow and the hawk and mud brought up by a duck. In Australia one myth tells how they were formed from a heap of roots which a man kicked in all directions. A Maori myth describes how the mountains and valleys of New Zealand were carved out by the knives of Maui's brothers, and an Australian myth of the god Bunjal and his knife is like this. Scandi-

navian, Cehua-Chinese, and Orphic the mountains were made from the bones of a giant or of Zeus. An Indian myth regards certain mountains as off-shoots from the Himalayas, brought (for Brahmans) in the days of some mountain-god, and the highest is a mountain of fire (see also §§ 5, 6).

(b) As to the ordinary observer the sky seems near the tops of mountains, so many myths regard it as so near as to be easily reached from them; or, again, the mountains, real or mythical, support the sky or the heavens.

Mt. Atlas was formerly known as "the Pillar of Heaven." In Bab. cosmogony the sky rested on the "mountain of the world," i.e. the world itself conceived as a hemispherical mountain with gently sloping sides. In Hindu and Buddhist cosmogony the various heavens are arranged on and above the mythical Mt. Meru in an ascending series (see Commonly [Hinduists], [Hindus]). Fragments of Celtic myth suggest that with the Celts also a mountain supported the sky, e.g., a mountain near the sources of the Rhone was called "the column of the sun," perhaps bearing up the sky while the sun revolved round it. We may note the Greek myth of the Titans piling Mt. Ossa on Olympus, and Pelion on Ossa, in order to scale heaven.

(c) In Hebrew story the ark rested on Mt. Ararat after the Flood (Ga 6:4). So in Bab. with the "mountain of the land of Nimrod" held the ship, but Nimrod did not let it slip, and on its top the Babylonians offered sacrifice and incense to the gods. The Hindu flood-myth tells how the fish rode the seven potsbind the ship to the highest peak of Himalayas. Man descended from it on Hanuman; hence the northern mountain is called Manu's descent (c, De Rigo).

J. A. MacCulloch.

MOUNTAIN-MOTHER. The Mountain-Mother is the only Greek divinity certainly Kourotes to be of pre-historic origin. In the accompanying figure we have a seal-impression of late Minoan style (c. 1500 B.C.) found at Knossos. It is of cardinal importance and embodies, indeed, nearly all that we certainly know of the Father, but only wears the typical flounced Minoan skirt, and, always the Mother is dominant. This dominance of the Mother divinity is of prime importance, and is in marked contrast to the Olympian system of Homer, where Zeus the Father reigns supreme. The Mother—also the Father—characteristic of the two strata that go to the making of Greek religion—the southern (Aegean or Anatolian) stratum has the dominant Mother-god, the northern (Indo-European) the dominant Father-god, the head of a patriarchal family, who is, ostensibly at least, the monogamous husband of a subordinate wife. The northern religion necessarily reflects patriarcal, the southern matrilinear, social conditions. A further distinction is of importance here—the Homeric Olympian is the outcome of an "heretic" condition of society; it emphasizes the individual; it is the result of warlike and migratory conditions; the worship of the Mother focuses on the facts of fertility, and emphasizes the race and its continuance rather than the individual and his prowess. Mother-worship is of the group rather than of the single worshipper. We find the Mother and her subordinate son or lover attended always by groups of demonic personages—Kourotes, Korybantes, Telchines, Dactyls, Satyrs, and the like.

A further characteristic of this southern matrilinear group-worship of the Mother is that it is mystical and orgiastic. The mysteries all centre not on Zeus the Father, but on the subordinate son—Demeter in Greece, whose daughter, Kore, is but her younger form, and Rhea or some other form of the great Mother; the Dionysos of the mysteries is son of the Earth-Mother. The reason is simple; mysteries are now known to be simply magical ceremonies, dramatic representations of birth, marriage, and death, enacted with a view to promoting fertility. Mysteries, in fact, spell magic, and the mysteries of the Mother stand again in marked contrast to the rational worship of the Olympian Father. In the Olympian system the worshipper approaches his god as he would his fellow-man, with prayer, praise, and presents; his action is rational and anthropomorphic, not magical, not mysterious, not orgiastic. The mysteries of the Mother are based, like all other mysteries, on initiation-ceremonies, which have for their object to prepare the boy for adult life and especially for marriage (see INITIATION [Greek] and Kourotes and Korybantes). Each young man, each member of the band of Kourotes, or grown youths, became by initiation not only the son but the prince-consort of the Mother; he went through a mystical and magical training (γήμα). This explains at once the expression used by Euripides (Πηγήθος, 120, άθανάτωμα Καρνήμα), also elucidates the confession made by the Orphic initiate, δεκατοιον ἐν ὑπὸ τοῦ κάλλους των ὁμοιώματος. Marriage is the mystery περιτελεία, in the matrilinear worship of the Mother the series of consorts was perennial. In Crete the sanctifying of the Mother was mimetic and dramatic; in some Asia Minor cults it was attended by the horrors of castration. In the Cretans of Crete (frag. 472, Nauck) the mystic "held aloft the torches of the Mountain-Mother" (μυστήριον χερσεύον εἴς ἄνω τοὺς, the blazing torch being a familiar purifier and purifier of fields and crops. To the Olympos of Homer—a product of the Achaean hero-worship—new gods were admitted; even Demeter had there only a precarious footing. But in post-Homeric days, when north and south were freed, a place was found for her in a more chaotic pantheon as Mother of the Gods.

MOUTH

869

She lent many of her sacred animals, attributes, and traits to the women-goddesses of Greece—to Hera her λέπις θυατείς, and sometimes her lion, to Artemis her huntress wild boar, to Aphrodite her dove, to Athene and the Erinyes her snakes, to Demeter her mysteries. How few these several goddesses were indigenous forms of the Mother, how far they were directly immigrant from Crete, cannot certainly be stated, but undoubtedly the dominant Mother with the male attendants—e.g., Attis and Atonis—half son, half lover, is echoed in Hellenic mythology in the figures of the great patroness-goddesses with the heroes whom they protect. In, i.e., in Hera Athene and Persas. The Mother has many names—Rhea, Cybele, Dindymene, Ma—but her functions remain the same; her characteristic attributes and sacred animals—lion, bull, and goat—vary with the culture and local surroundings of her worshippers. Cf., further, art. MOTHER OF THE GODS (Greek and Roman).

MOURNING.—See DEATH AND DISPOSAL OF THE DEAD.

MOUSE.—See ANIMALS.

MOUTH.—In many ways the mouth is of importance from a religious point of view. It is that by which man speaks to the gods in prayer, or utters or sings their praises; many wind instruments used in sacred rites are blown by its means (see MUSIC); sacred things and persons are kissed with the lips, and the kiss has an important part to play not only in sexual but in social and religious life, while it has also a large folklore of its own. Silence is sometimes even more important than speech with the lips in religion and magic as well as in social affairs. Laughter is also a function of the mouth, and plays a large part in life, while it has likewise a ritual and folkloric aspect. The Bhagavat-Gītā regards the body as ‘the city of nine portals,’ of which the mouth is one. Voice and sound are a large part of the mouth, and all the immortal parts of the body, according to the Satapatha Brahmana, and it calls Indra the breath and Sarasvatī the tongue. On the lips sit the seven yāsī (the senses), and the tongue is an eighth which communicates with Brahmā. In the account of the creation of the different classes in the Rigveda, priests are said to be from the mouth of the primeval man. In the Egyptian Book of the Dead the god Amēnis has charge of the lips, as other gods have of other parts of the body.

Hell is often conceived in Christian literature and art as a monster with a vast mouth into which souls fall and are swallowed, as already stated (p. 115; cf. Xen. 125B). In Scandinavian mythology Hel has also a gaping mouth. Mythology often makes night a monster which devours the light or the sun. Cf. Skr. rajataḥsūla, ‘the mouth of night,’ evening.

Arts and mouth and the soul.—Whether the soul is regarded as a breath, a mannikin, or a tiny

animal, the mouth is one of the orifices by which it may leave the body either during life or at death. Popular sayings like ‘to have one’s heart in one’s mouth’ or the soul on the lips’ illustrate this. It is also seen that in the Hindu religion of snapping the thumbs to keep the soul back when any one yawns. The soul may escape from the mouth during sleep, as is illustrated by many tales where, in the form of a small animal, it has been seen doing so. By preventing its reentering one can cause the death of its owner. At death, in the belief of many peoples, the soul finally makes its exit by the mouth. In the Mahābhārata (iii. 257) Yama opens the mouth of Sātyavan while he sleeps and draws out his soul, which is afterwards given to his wife, who replaces it in his mouth. Ovid tells how Hylonome applied her lips to those of the dying Cyllarus to prevent his breath leaving him. Homer says that life cannot return once it has passed from the lips. On the frescoes of the Campo Santo, Pisa, the soul is depicted as a sexless child leaving the body by the mouth. Similar beliefs are common among savages and with the folk everywhere. Hence, where the soul as a ghost is feared, prayers are sometimes to prevent its egress from the mouth. The mouth and other orifices are forcibly closed or stopped up, as the S. Australians, Itomans and Caymans (S. Americ), Mahays, New Caledonians, and Marquesse Islanders. In some cases the jaws are bound for the same purpose, and it is possible that, where this is done merely to keep the mouth closed, its real origin may be traced here. De Groot holds that the placing of a coin in the mouth of the dead had the same purpose. This practice is best known from its use among the Greeks and Romans, but it is also found among the Phœnicians (small pieces of gold in mouth, etc., or melted butter allowed to trickle down [Hindus]; coin, etc., placed with dead [non-Aryan tribes]), and among the Litu-Slavics and Tentonics. This practice has generally regarded either as a fee for the ghostly ferryman, as held by Greeks and Romans themselves, or as part of a gift to the dead, or a communion of such a gift. The Chinese practice, however,
throws new light on the subject, and points to a possible origin for the same practice elsewhere, though it came to be regarded otherwise.

To the same origin may be ascribed the practice of having the deceased with or without the corpse laid in food before burial. This, often regarded as a sacrificial feeding of the dead, may have been intended as a means of recalling the dead, though such instances must be examined in its own context, and it must be admitted that quite different reasons are often given by those who practise this rite. Yet, if the dead used earthy food, this would keep them from eating the food of the Other-world, which binds the eater to that world. Thus they might be able to return. 3

It is found among the Tho of Tongking (ERE iv. 418), among Papuan and Polynesian tribes, and the Baduays (de Groot, i. 537). In the Panjabs leaves of the /unci plant and Gangen water are placed in the month as offerings to Yama, that he may be merciful to the dead (PR ii. 69). In S. India the /kuma fills the corpse's month (Lewin, Wild Races of S. E. India, London, 1876, p. 220). At the funeral feast of the father among the Kaka food is placed beside him and his pipe is put in his mouth, and he is hidden to keep because he is going on a long journey (ib. p. 253). The ankh-shaped /sold, which produces immortality, or some pomegranate seeds into the mouth of the dying (ERE iv. 529). This was not only the practice of placing the Host in the mouth of the dead, which was abolished at the 3rd Council of Carthage and at other councils.

Of course, if the dead are to be fed at all, it is most natural to place food in the mouth, and in some instances a tube connected with the mouth is made to protrude from the mouth and may be lowered down through it. Where head-hunting is practised, the heads or, rather, the spirits connected with them are often fed by having food placed in the mouth. The Egyptian ceremonies of the mouth and eyes were performed that the deceased might see and eat the food offerings and utter the right words in the right manner.

As a preparatory rite the mouth and eyes of the unamn or status representing the deceased were rubbed with part of the food to excite the appetite. Then the /som priest addressed the deceased: 'I have set in order for thee thy mouth and thy teeth. I open for thee thy mouth, I open for thee thy eyes. I have opened thy mouth with the instrument of Anubis, the /soma-instrument with which the mouths of the gods were opened.' Mouth and eyes were touched with this instrument, and were opened by the mouth of the deceased as he had opened that of Osiris. With another instrument the lips were touched so that right words might be spoken. Then the mouth is fed with bread and other things. The lips are fed with food and the eyes to the lips, and touched again so that the jaw-bones might be established; and, finally, food was then placed in the mouth.

The act of feeding the jaw-bones primarily refers to an old custom of dismemberment. Various texts speak of restoring the jaw-bones and the mouth in the reconstituted body. The lists of the members of Osiris include lips, mouth, and jaw-bones, and there have been an ancient rite of cutting out the jaw-bone and preserving it separately. This is done by some African and Melanesian tribes.

In Uganda the king's jaw-bone is cut out and preserved in a special place, where it is revered as an oracle, as the spirit is supposed to attach itself to it. 8 Where among the tribes of

6 T. H. Cobbold, The Egyptian Necrology, i. 357, ii. 49.

the flood peninsula carry the husband's jaw-bone. 1 The temples of German New Guinea extirpate the corpse after some months and with great ceremony remove and wash the bones. Similar customs are observed by other tribes of this region. 2 Again, the Sia (Solomons) preserve 3 a hollow wooden image of a fish in or in the public canoe-house. 4 In New Britain the jaw-bone is worn by a relative as a means of obtaining his own body. 5 These customs are perhaps akin to that of making trophies of the jaw-bones or lips of enemies, as in Ashanti, Ibohoun, Tabbi, etc. (see II. 102). 6 If the purpose is to secure power over the dead man's ghost.

The Egyptian custom should be compared with the 'way of purifying the three dead'—body, mouth, and heart—as practised on the Nile by the Shingon set in Japan. 7 Among the Basoga the lips of the dead are smeared with oil. 8

2. Hostile spirits and the mouth.—The mouth as a spirit-opening is naturally one which is exposed to the entry of hostile spirits which take possession of a man. In India "batlas" are thought to enter by the mouth, and in Egypt in common opinion all kinds of evil spirits try to do the same. Various customs are more or less clearly connected with this belief, and have for their object the warding off of such noxions influences. Eating in private is one of these; uttering a charm or performing some ritual act after yawning is another; scraping teeth-cleaning, as with the Hinals, is a third; veiling the face is a fourth; 9 perhaps also against the escape of the soul. This custom is found among the Eskimos, Haidas, and other North American tribes, and very commonly in S. America (the most extravagant use of it being among the Boto-odeus), as well as among many African tribes. 10

3. The mouth and the breath.—As the soul or life is so often connected with the breath—whether breath in general, or, as has been suggested, the last breath—which may be with the lips to yawn, and which leaves the body finally at death, 11 certain rites in connexion with the mouth have arisen. In some instances a relative receives the last breath into his own mouth, by application of his lips to the dying man's. 12 For the Alfoors, on the other hand, close the mouths of animals at a birth lest they swallow the infant's soul, and the mother and others in the house must keep the mouth shut. 13 The breath, again, may have life-giving properties. Hence the Eskimo anjokal will breathe on a sick man to cure him or give him a new soul; 13 or, as among the Bribri Indians, the medicine-man purifies a woman after

childbirth by breathing on her first. Breathing by breathing or by blowing upon a patient is also found again in Indian, Zend-Avesta, and in the sacred books of Oriental countries. On the other hand, the breath as connected with the life may contaminate sacred objects. Hence these must not be breathed upon, or the mouth must be covered when one is near to the dead.

In Times the common people, in addressing the Raja, place the hand before the mouth, lest they profane him by their breath. Among the Parsees this worship is performed in the presence of the priest as he enters the church; it is believed that if it is not done in a proper manner, the worshiper will be affected by the breath of the priest. Hence priests have also to veil their mouths when cooking the sacred food, and also when they cook the Mikado's kitchen. Saxo Grammaticus tells of a shrine at Rogen so sacred that the priest might not breathe in it, but had to go to the door for that purpose. On the other hand, a Mo-rist chief would not blow upon a fire lest his sacred power should pass to it and so to the food cooked on it, and then to the eater of the food, connected by breath.

The ancient custom of a scorning the breath, i.e. making an incision on a witch's forehead to neutralize her evil power, may have been connected with the idea that her evil life-influence could enter and contaminate the breath and thereby the mouth, is at once a tabu thing and a source of danger and magic influences and also a safeguard — e.g., against witchcraft — as well as of unwholesome rites (see Saliva). See also DEATH.

LITERATURE — This is given throughout the article.

MOUGGLETONIANS. — See BHAGAM SAMA.

MOUGGLETONIANS. — The followers of the London prophets, John Reeve (1608-38) and his cousin Lodowicky Muggleton (1609-38), were designated Muggletonians. Both Reeve and Muggleton were Puritan and Quaker, but Reeve became a Ranter and Muggleton dropped all public worship, being attracted by Boehme's writings and by the prophecies of John Robinson and Thomas Tany. In 1601 Muggleton had inward revolutions interpreting the Scriptures; Reeve had the same experience next year, and on 3rd-5th Feb. 1652 Reeve announced an audible commission urging him to rebuke Robins and Tany and constituting him the last messenger of the third and final dispensation, to prove that the end was near. He witnessed of Rev. 11, to announce a new body of doctrine and to declare the eternal destiny of individuals. By 27th July 1652 their Transcendent Spiritual Treatises was complete for publication. They declared that all succession had ceased for 1300 years, and, when challenged to prove their new commission, their latest resort was to curse their opponents; a great accidents or deaths from fear established their credence. Being imprisoned for blasphemy in 1653, they issued two more pamphlets. Demands for new truth were met by Reeve laying down six principles, published 15th Aug. 1656, as to the person of God, person of angels, person of devils, condition of Adam at his creation and how he lost his estate, heaven and glory, hell and death. The same year a full exposition appeared in The Divine Looking Glass, or the Third and Last Testimony, printed in this year. The leading doctrines run thus. Matter is eternal and independent of God; this earth is the centre of the universe, sun and moon being fixed in the firmament about as big as we see them. God is one and eternal, with the material body rather larger than human, clear as crystal. The One God came to earth as Jesus, entrusting the temporary charge of the universe to Elisha. Angels have spiritual bodies and rational natures; Adam's body was natural, and his life-influence, everlast, important person; one angel and one only fell; he tempted her, entered bodily into her, and then dissolved, whence was born Cain. Eve tempted Adam to carnal intercourse, and thence arose Abel and Seth. Thus in the world of darkness cursed and cursed. The soul is mortal, generated with the body, and returning to dust, whence it shall rise with the body. At the resurrection each person shall be re-created where he died, the wicked lying immoveable in wrath, and the righteous in glory.

Reeve died in 1658, and Lawrence Clarkson aspired to fill his place, publishing three works. At the Restoration Muggleton was abandoned by many, but he regained his influence, as did Clarke. He added the new doctrine that God has ceased intervening in the world, so that prayer is useless. For the next few years he was at war with the Friends, till William Penn, in 1672, published his New Witnessk, Provided no second secession took place in 1670 in consequence of his Nine Assertions, but Alexander Delamina and John Sadlington vigorously supported him. In 1670 G. Sheldon found some followers near Ashton. Next year he was again indicted for blasphemy, pilloried, imprisoned, and fined. He then wrote his autobiography, and, though no new revelation came, he was highly respected during the rest of his life for practical counsel. An anonymous attack by Bishop J. Wilkins in 1684 was promptly repelled by Thomas Tomkinson, who, in 1689, published his correspondence and autobiography, under the title Acts of the Witnesses.

Though one early revelation was quite explicit, the doctrine in 1670 was imprinted and persisted. Many works were reprinted in 1756, after Swedemborg announced a kindred system, and others were written. Then James Birch led a reform movement back to the views of Reeve; but in 1778, he claimed direct inspiration, so that a secession took place, known especially in Pembroke and Bristol, as well as in London till 1871. A revival occurred about 1820-31, resulting in a fine edition of the primary works in three quarto volumes; and The Looking Glass was reprinted even in 1816. Prayer and preaching not being practised, public worship was confined to reading the standard books aloud, and singing the Divine Songs; the chief reading-room was in New Street, off Bishopsgate Street. Since 1870 worship seems to have ceased, though annual meetings were held at Denby in Derbyshire within living memory.

MUHAMMAD. — I. Historical sources. — Muhammad († 7th June A.D. 632) called also Ahmad, and by poets Malikbud Abul-Qasim, sometimes
localized as Al-Thānī (‘of the Thamah’ [Muttalib, ed. F. Diez-Cirici, Berlin, 1881, p. 331]), known by his followers as ‘the Apostle or the Prophet of Allah,’ and also by numerous other names, variously estimated at 30, 500, or even 1000 (see the collection in Qasmi, Lail, Cairo, 1275, ii. 133-179), was the founder of the religions and political system called in Europe after him, but named by him Islām or Ḥanīfīn. The event in his life which furnishes his followers with an era, viz. his migration (Hijrah) from Mecca to Medina, is fixed by synchronization with the Jewish Day of Atonement for 20th September, A.D. 622. That era was introduced several years after his death, and, indeed, for the purpose of arranging the events in his career, by his second successor Omar I. (Mubarrad [†255 A.H.], Kōmil, Cairo, 1308, i. 325), whereas the calendar on which it is based uses a lunar year of 354 days, introduced by the Prophet near the end of his life. Since both the calendars and the eras previously employed in Central Arabia are only vaguely known, and the story of ‘Omar implies that he had not before heard of an era (which perhaps is confirmed by the fact that the word used for ‘era’ signifies ‘month-making’), accurate dating of the prophet’s life is impossible. This era is, however, an allusion in the Qur’ān (xxx. 1) to the victory of Chosroes in the Near East, which took place A.D. 616, and this agrees with the tradition that Muhammad preached for ten years in Mecca before his migration. Probably the earliest written account of him is that in the Armenian Chronicle of Sebōs (Armen, text, Petrograd, 1879, pp. 104-106; Russ. tr. by K. Patkanian, do. 1882, pp. 116-118), of the 7th century, in which he is called an Ishaqī but the statement that he taught his countrymen to return to the religion of Abraham and claim the promises made to the descendants of Ishmael. His career may, therefore, be said to be known entirely from Islamic sources, which contain no biography that is quite contemporary. The earliest work that was intended to be a chronicle of his life is that by Muhammad b. Ishaq (c. 150 A.H.), who composed his work, if any, in the year 190 A.H., Mansūr (136-158 A.H.) = A.D. 754-775, at least a century and a quarter after the death of his subject. This work does not appear to exist in its entirety, though probably the bulk is preserved in that of Ibn Abī Jahl, which he claims (†288 A.H.) to be the Chronicle of Tabari (†310 A.H.). Its author was in communication with eminent members of the Prophet’s family, but is said to have been a man of indifferent morals, besides being a Shi’ite and a Qudari (believer in the freedom of the will); he employed versifiers to compose poems to be put into the mouths of the personages who figure in his narrative; and his credibility was otherwise impeached.¹ Contemporary with Ibn Ishaq was Ma‘ṣūr (†250 A.H.), who composed his work, the KauqFUNd of Hence the chronicle was studied in Cairo as late as the 15th cent., but of which hitherto only some fragments have been discovered (ed. E. Sachau, SBAlW, 1994), and those of little value. Shāfi‘i (†204), who appears to have made accurate search in Arabia, could find nothing in writing referable to the Prophet except the Qur’ān and one apocryphal documen1t, of which he knew only by hearsay. Contemporary treaties, produced in ancient and modern times, have been shown to be forgeries by the anachronisms which they contain (see Yaqūt, i. 248). The Qur’ān and Isbra‘i1le to be the most part authentic, but those who collected it avoided chronological arrangement as much as possible, combining in the same sūrat, or chapters, matter belonging to widely different periods. In order to put it for historical purposes the reader has to interpret it by Ibn Ishaq’s biography; but there are many cases in which that biography appears to be conjectural interpretation of the Qur’ān. It is true that the commentaries on the latter, of which one on an entire of QulLās is by the historian Tabari in the middle of the 3rd Islāmī cent., profess to locate most or all of the texts; but, unfortunately, they give a variety of locations, and leave on the mind the impression that nothing was certainly known or remembered about the ‘occasions of revelation’ beyond what the texts themselves imply.

Ahmad b. Ḥanbal (†241), and the recollections of these persons, after being critically sifted, were arranged in the order of subjects for the use of lawyers by numerous authors shortly after this date, and by some considerably earlier. Very little of this main text’s historical value. In the main, then, our knowledge of the Prophet’s career comes from the work of Ibn Isra’i1il.

There is reason for thinking that shortly after Muhammad’s death some sketch of his life, comparable to the Christian apocrypha, was communicated orally to those who embraced Islam, enabling them to understand allusions in the Qur’ān; but this is likely to have been brief, and statements in early-law books indicate that considerable uncertainty prevailed with regard to events of primary importance in the Prophet’s biography. It is of interest that the Khalifah ‘Abd al-Malik (65-86 A.H.) wrote to Uwrab b. Zalair (born 22) for an account of the battle of Badr, and his letter in reply is preserved by Tabari (†1284) - as usual, not from a copy but from oral tradition. This personage was born twenty years after the event, and appears in treating the subject to have consulted the Qur’ān. Another letter of this jurist in reply to a question about the Prophet’s life is impossible. There is, however, an allusion in the Qur’ān (xxx. 1) to the victory of Chosroes in the Near East, which took place A.D. 616, and this agrees with the tradition that Muhammad preached for ten years in Mecca before his migration. Probably the earliest written account of him is that in the Armenian Chronicle of Sebōs (Armen, text, Petrograd, 1879, pp. 104-106; Russ. tr. by K. Patkanian, do. 1882, pp. 116-118), of the 7th century, in which he is called an Ishaqī but the statement that he taught his countrymen to return to the religion of Abraham and claim the promises made to the descendants of Ishmael. His career may, therefore, be said to be known entirely from Islamic sources, which contain no biography that is quite contemporary. The earliest work that was intended to be a chronicle of his life is that by Muhammad b. Ishaq (c. 150 A.H.), who composed his work, if any, in the year 190 A.H., Mansūr (136-158 A.H.) = A.D. 754-775, at least a century and a quarter after the death of his subject. This work does not appear to exist in its entirety, though probably the bulk is preserved in that of Ibn Abī Jahl, which he claims (†288 A.H.) to be the Chronicle of Tabari (†310 A.H.). Its author was in communication with eminent members of the Prophet’s family, but is said to have been a man of indifferent morals, besides being a Shi’ite and a Qudari (believer in the freedom of the will); he employed versifiers to compose poems to be put into the mouths of the personages who figure in his narrative; and his credibility was otherwise impeached.¹ Contemporary with Ibn Ishaq was Ma‘ṣūr (†250 A.H.), who composed his work, the KauqFUNd of Hence the chronicle was studied in Cairo as late as the 15th cent., but of which hitherto only some fragments have been discovered (ed. E. Sachau, SBAlW, 1994), and those of little value. Shāfi‘i (†204), who appears to have made accurate search in Arabia, could find nothing in writing referable to the Prophet except the Qur’ān and one apocryphal documen1t, of which he knew only by hearsay. Contemporary treaties, produced in ancient and modern times, have been shown to be forgeries by the anachronisms which they contain (see Yaqūt, i. 248). The Qur’ān and Isbra‘i1le to be the most part authentic, but those who collected it avoided chronological arrangement as much as possible, combining in the same sūrat, or chapters, matter belonging to widely different periods. In order to put it for historical purposes the reader has to interpret it by Ibn Ishaq’s biography; but there are many cases in which that biography appears to be conjectural interpretation of the Qur’ān. It is true that the commentaries on the latter, of which one on an entire of QulLās is by the historian Tabari in the middle of the 3rd Islāmī cent., profess to locate most or all of the texts; but, unfortunately, they give a variety of locations, and leave on the mind the impression that nothing was certainly known or remembered about the ‘occasions of revelation’ beyond what the texts themselves imply.

those battles, since each was followed by some
successions. (2) The biography rarely has recourse
to supernatural, and even when this element is
introduced, it does not appear to affect the causa-
tion; where, e.g., angels or the devil take part in
battles, they do not really contribute to the result.
(3) The character which the narrator ascribes to
his ancestors cannot have greatly impressed him;
To this may be added the fact that, although Ibn
Ishāq wrote for an 'Abbasid patron, he takes very
little trouble to glorify his ancestor 'Abbas, where-
as he paints a pleasing picture of Abū Tālib, the
uncle of the Prophet, which can be found. Surly
was the history of a family which also claimed to succeed
the Prophet. Hence it is clear that this biographer
has not as a rule yielded to the temptations which
lead astray men in his position.

2. Life.—For the present purpose the briefest
sketch of the Prophet's career, as Ibn Ishāq
narrates it, will suffice.

It is not possible to throw any serious doubt on the
location of Muhammad as a member of a numerous
Arab family, though the name of his father excites suspicion, since
'AbdAllah (the equivalent of 'some one') is used at a later
period as a substitute for an unknown name; perhaps it is in
this case a substitute for a name of which the second element
was a qālin. Few have accepted the suggestion of
Spranger that the name 'Mohammed' itself was adapted
by the Prophet when he entered on his prophetic career; for
the name is found in ancient inscriptions, and its connexion
with the prophesy Hag 2, 'and the desire (bēnēkha) of all
nations shall be for him,' seems to have been an afterthought;
therefore no reason for supposing that this name or its variants
had Messianic associations. According to the biography,
the life of Muhammad may be divided into four periods. (1)
For forty years, he lived as a pagan at Mecca (which comes into history with his
exile and migration) or formed innocuously. At the age
of twenty-five he married a woman much older than himself,
who bore him one or more sons (who died in infancy) and
dauras. In his forty-fourth year he became the recipient of
revelations, wherein the office of prophet was conferred upon
him. (2) For three years he carried on private propaganda,
whereby he converted his own and his principal
friends, and among the humbler classes in the town. (3)
For ten years he carried on his mission publicly in Mecca,
for the greater part of the time under the protection of his uncle
Abū Tālib, who was not a unbeliever; after his death the mission had
for a time to be transferred to Medina, until another protector
could be found among the Meccan magnates. Meanwhile a
temporary refuge had been obtained for the Prophet's perse-
cuted followers in Christian Abyssinia. Towards the end of
this period the consternation of war at Yathrib (Medina)
suggested to some of the inhabitants the desirability of inviting
a prophet to settle their disputes. Muhammad was invited to
undertake this task; and accepted; but he wisely sent his
followers to Medina where he waited for them. As soon
as he arrived, he himself escaped with difficulty from Mecca,
where danger was anticipated from this move. (4) Once in
Medina, he proceeded to organize his followers as an army,
rutlessly suppressed internal opposition, secured the alliance
of the Abu Sufyan tribe, of whom he took a number,
and started raiding the Yathrib caravans. Involved in war with his former fellow-citizens, he
instructed on a series of defeats, culminating in the capture
of Medina and the destruction of the Arab nation of his migration. By the era
of his life he had imposed his doctrine on the whole of Arabia,
exterminating the Jewish communities, with few exceptions,
rendering the Christian communities tributary, and abolishing
paganism.

So far as this career is that of a military and
political adventurer, countless parallels could be
adduced. A man who can organize an armed force
and lead it to victory may rise from obscurity to
autocracy anywhere. Probably every century of
history presents at least one case. The Tālibid,
Fātimid, Buwailid, Seljūq, and Ottoman dynasties
all arose in this way; and in most of these the
religious appeal played an important part.
The success of the founders was clearly due not to the
objective truth of the doctrines which they professed
but to the skill by which they were associated, but
to their skill as organizers and
military leaders. In Muhammad's case, owing
to the amount of information which we possess
about him, it is easier to analyze the qualities
which rendered his the doctrines which
were associated, and which skill of the
choice of subordinates he seems to have made
mistakes. In the second place, he was thoroughly
familiar with the foibles of the Arabs, and utilized
them to the utmost advantage. The stories of his
successes as told by the Sungilid biographer
are depicted as a series of moral japes—Mr.
has correctly recorded, and no events of great
importance in his early life occurred, his military
career began when he was over fifty; this seems
astonishingly late, yet analogies, if not parallels,
can be found in the Bible. But it is also excited by the case
with which the Arabs abandoned their gods and
goddesses, readily accepting the logic of the stricken
field; for, though new prophets arose after Muhammad's
death, there appears to have been no re-
crudescence of paganism. Yet to this, too, some
analogies can be discovered. The fact of primary
importance in the rise of Islam is that the move-
ment became considerable only when its originator
was able to draw the sword and handle it success-
fully, that he was summoned to Yathrib was
without due in part to the presence of a Jewish
element in that community, intellectually further
advanced than the Arab tribes, which at first
evidently favoured this advocate of monothelism;
that he was able to reach the fullness of prophetic
opportunity was due to his own ability. The only
difficulties which are to be found in his career are,
therefore, those which render all history difficult.
It is impossible to say why one man should be
more gifted than his fellows, or that such a gift
should occur for the development of special talents.

According to the Qur'an (xiii. 30), he was not a
'great man' in his city, and, if the words of xvii.
are to be taken literally, he lost his parents at
an early age, and at some period was poor
and burdened with a family. The question whether
he could read and write has been much discussed,
and it is unfortunate that we do not know certainly
whether those accomplishments formed the basis
of education in Mecca when he was a lad; there
is, however, some slight reason for supposing that
they did. The evidence indicates that he could
do both of them, but not well. Thus, when he
records the charge made against him of copying
the ancient history (xxv. 5 f.), he does not refute
it by the assertion that he could not write. The
tradition makes him a tradesman, and can even
name his partner and the goods in which he dealt.
Some have tried to find evidence of the language
of the Qur'an, which undoubtedly takes
metaphors from sale and barter, profit and loss;
but whether it does so to a greater extent than
other books may be doubted. Some stories say
that he was employed by his first wife Khadijih
in the conduct of a caravan; and others tell of
him following this occupation early in life.

It is, on the whole, probable that he travelled
in his youth, for, though the geography of the Qur'an
is vague, the description of 'Abbad is
it seems to be based on personal experiences.
Moreover, the charge of ignorance which is repeatedly
made against the people of Mecca is more likely
to have been brought by one who had some acquaintance
with a higher civilization.

3. Origins and development of system.—The
tradition does, indeed, name precursors of Mu-
hammad at Mecca, among them a relative of his
wife who had either copied or translated a
portion of a gospel; but the progress
and S. Arabia, it is not unlikely
whether that missionaries had found their way
to Central Arabia, or that travellers thence had
had their curiosity aroused and made inquiries into
the system. The phenomena of the Qur'an on the
whole render it improbable that any part of it is based on book learning; for, though in one place the Psalms are quoted with fair accuracy (xxxi. 165 — 166), with which the writer is familiar, in another (xxvii. 15) the procedure is explicable only as the reproduction of hearsay. Thus it is said (lxxvi. 37 f., lxxvii. 19) 'The Scroll of Moses and Abraham' for maxims that are analogous to those occurring in the Prophecies or the NT, though not quite identical with them; and the mode of quotation implies that the writer had a vague notion of the book cited, such as actual perusal would have corrected. Further, the form assumed by the proper names and the religious terminology insinuates a great variety of linguistic sources; for in these Ethiopic, Greek, Syriac, Hebrew, and perhaps other languages are represented. Some of the proper names are not at present traceable to any version of the Scriptures — e.g., 'Talbot for Soul,' 'Isa for Jesus. Moreover, from the manner in which the Biblical narratives are told it is difficult to imagine that the writer was acquainted with the continuous history of the Bible; he knows only stories out of it. All this points to the probability that Muhammad heard the stories from narrators of different nationalities, who translated them orally into Arabic, leaving on their hearer a decidedly vague impression, in spite of the fact that they interested him keenly, because he was no mere literary man and his works contribute to the matter of the Qur'an, which, in addition, refers to prophets not mentioned elsewhere. The Prophet was charged with employing as mentor a resident in Mecca, and after the migration from Mecca to Medina, Jews, he may have been able to utilize the Biblical learning of one or other among his converts. But it seems probable that what was reproduced during the Meccan period had been heard from travelling converts in Mecca and Christians whom he had met in foreign parts.

Prior to his call Muhammad is said to have practised ascetic retirement on Mts. Ithir and for this an old technicality, tahimmah, is preserved, which is said to mean 'to acquire merit,' and certainly has nothing to do with the Heb. thimnath, 'supplications.' The call itself evidently took the form of a command to read, which the Prophet reluctantly obeyed. The communications emanating from the Qur'an in the tradition, made to the Prophet and uttered by him in trance; he would wrap himself in a blanket and perspire copiously at the time. A certain number of these stories may be inference from sūrah xxvii. Lxxii. 20. The Prophet is addressed as 'Thou that art wrapped up,' combined with sūrah xxi. (supposed to be the first revelation), where he is hidden 'read.'

The form of the utterances at times approaches verse, i.e., a series of sentences in which the same quantity and quality of syllables are reproduced, the termination of each unit being marked by rhyme, whereas more usually rhyme only, and this of a somewhat loose character, is observed. The relation of this Qur'anic style to the verse and rhymed prose of classical Arabic is an enigma which cannot at present be solved. An artifice based on the recurrence of letters is obviously literary; i.e., it depends for its existence on the practice of writing, since only those who are accustomed to read and write think of their words as agglomerations of letters; to the illiterate the word, if not the sentence, is the unit. Indeed, in what is supposed to be the earliest revelation the deity is said to be present in the form of a scroll, or written document. The early existence of poetry before the Qur'an is attested by a sūrah which is directed against them (xxvi.) and a text in which the deity states that He had not taught Muhammad poetry (xxvi. 69). If the poetry which existed before the Qur'an was analogous to the classical poetry, the people of Mecca cannot have been in the state of naivé ignorance which is ascribed to the Umayyad period — i.e., the second half of the 1st Islamic cent. — is to a great extent clearly authentic, while its authors represent the continuance of a pagan tradition. With regard to rhymed prose, probably we have nothing in this style that is certainly genuine and older than the 2nd cent. of Islam. It is, however, a much easier performance than verse, though no less dependent on writing. Oracles are supposed to have been delivered in it by pre-Islamic wazirs.

Now the respect of ignorance for knowledge is a well-attested phenomenon, displayed in the desire of the Prophet that Jews and Christians should not be molested in the exercise of their creeds. It is therefore unlikely that the poets and wazirs who preceded Muhammad presented a higher stage of education; hence, according to natural sequence, the style of the Qur'an would seem to come between such poetic types as may have equipped for versification in Arabic and the highly artificial products with which we meet in the Umayyad period. It would follow that all the pre-Islamic poetry as well as all that ostensibly belongs to the time of the Prophet and his immediate successors is spurious; but, as has been seen, the spuriousness of that which is incorporated in the Prophet's biography is otherwise attested; and the most distinguished philologists of the early Abbasid period, to whose labours we owe there where we lack written documents of early poetry, were unscrupulous forgers.

The Prophet, then, claimed to introduce literature into his native language, and the form was probably modelled on the quasi-poetic experiments which had preceded the Qur'an. Many cases noticeable in his lifetime his book resembled a newspaper in having a fluid rather than a stationary existence; it was as a whole continuous, but each number had ephemeral importance. The theory was gradually evolved that it was a reproduction of a divine archetype, first as a series of copies, then as a single copy. The complete development of this theory was not possible before the collection of the Qur'an; and the Prophet himself never thought of attempting such an undertaking.

The difference between his first conception of a prophet and that current in ancient Israel, before the literary prophet had arisen, was perhaps not very great. The oracles were partly spontaneous, partly required for emergencies; their form differed from that of ordinary speech by the presence of an artifice; and the prophet delivered them in what spiritualists call 'the superior condition.' At times the oracles were supplemented by dreams. Further, the Hebrew prophet was a 'warner,' which is one of the epithets applied by Muhammad to himself; he foretold misfortunes, which, however, were ordinarily contingent, since it was his business to indicate the line of conduct whereby they could be averted. Muhammad's notions of prophecy seem to have been chiefly influenced by those cases in which the prophet also claimed to be the head of the community, its priest and its king.

Attempts have been made by Spranger and others to specify the epileptic fits which in Muhammad's case ostensibly accompanied the revelations; but it is doubtful how far these are to be regarded as real occurrences or accidents of great physical strength, since his life as tyrant of Medina was spent in constant military expeditions, added to the cares of a rapidly increasing community, of which he was at once priest, legis-
labor, ruler, and judge. Yet we never hear of his health breaking down under the strain. The ‘fits’ seem to have been experienced only when they were required for the delivery of the revelations, and in no case to have interfered with his activities.

A message must have matter as well as form, and, when Muhammad became head of a State, his Qur’an served as government organ, containing scripts and something like an official chronicle of important events, with comments upon them. But before the migration the matter was not so easily supplied. To a certain extent it reproduces narratives from the Christian Bible, which ez hypostasis could not have been known to Muhammad from Scripture, but a name, used mysteriously, was invested with him by direct inspiration, and so are a proof of the miraculous character of the whole work. The chief purpose of these and of the other messages is to insist on the importance of obeying God's laws.

It is not easy to say whether Muhammad had any desire to incalculable any particular doctrine, for there appears to be none which he was not prepared to abandon under political pressure, and the doctrines of Islam are for the most part rather attached than himself to the dogmas. The main doctrines of the early teaching are the future life, the unity of God, and the folly of idolatry. Since he was a merchant, and the growth of the ritualistic Black stone (cf. ERE vii. 743), it is difficult to treat the campaign against idolatry as quite serious. The doctrine of the future life was preached in the early days as a warning of the approaching end of the world and the Day of Judgment; yet he had afterwards to make the martyrs in his cause enter paradise at once, and his enemies enter hell immediately after death—a belief not easily reconciled with the former. According to Tabari, during the Meccan period he made a single profession of faith, with stress, issued a revelation admitting the Meccan goddesses to his pantheon; and, though this text was expunged from the Qur'an, the apology for it, viz. that it was the devil’s interpolation, remains (III. 19-22, xxii. 51; see ERE vii. 150). He even consented at one time to erase his title 'Apostle of God' from a document, when it stood in the way of the ratification of a treaty. Even the formula with which the surahs and meditations begin, 'In the name of Allah the Merciful,' since the last adjective is an Arabic rendering of the second, which is Aramaic, used as a divine name by Jews and pagans, and in Arabic not indeclinable, must be attributed to the development of the present use of the formula and translation following it. The tradition suggests that the name 'Allah' was familiar to the Meccans, but not the name 'Rahman,' which, indeed, had been adopted by one or more false Messiahs. In certain parts of the Qur'an, however, it may be said to be dominant. This formula, then, was doubtless accommodated to Meccan prejudices.

The tradition does not conceal the fact that the 'restoration of the religion of Abraham,' one of Muhammad's precessors, Zaid b. 'Amr, is represented as traveling with the intent of discovering the religion of this patriarch, from whom the tribes of N. Arabia, according to Genesis, are descended. It is not probable that his name was known in Mecca before Muhammad introduced it, or that, in doing so he was treading on safe ground, since the 'people of learning,' i.e. Jews and Christians, were agreed about the relationships. If the tradition is to be trusted, the new system was called by the Meccans 'Sabism,' a name connected historically with Harran, where a cult of Abraham is likely to have existed; the Harranians appear to have been called 'Anap, 'beneath,' by their Christian neighbours, and possibly this is the solution of the puzzling name 'Hanif' applied in the Qur'an to the religion of Abraham, and synonymous with 'Muslim,' which, according to the same book (vi. 163), was a title invented by the patriarch. The Qur'an's tales about Abraham are traceable to the Jewish Midrash; what is chiefly known about his religion is that he was an iconoclast, and was not one of the messinian, i.e. polytheists. When the Prophet decided to make the Meccan pilgrimage part of his system, he ascribed the building of the Ka'bah to Abraham and Ishmael (II. 127), 1 in order to bring the prayer-ceremonial into connexion with the former. It is probable, though not certain, that both that ceremonial and the fasting month are Harranian.

There is reason for thinking that, besides the prohibition of idolatry, the earliest form of Islam enjoined certain daily ceremonies which were afterwards developed and regulated until they became stereotyped as the code of the faith: and it is not easy to dissociate from these the theory of legal purity, which, however, seems to have existed in parts of pagan Arabia, since some of the technicalities are found in Sabean inscriptions. Of the actual acts of which nothing is known; the prayer which corresponds with the Paternoster, and is called the Fatiha ('Opener') because it is prefixed to the Qur'an, contains polenical references to Jews and Christians ('those who have incurred anger and those who go astray'), which point to a late period in the Prophet's career: for his hostilities with the Jews did not commence until after the migration, and those with Christians were some years later. Moreover, the prayer-ceremonies were connected with political drills, which is unlikely to have been required before the raising of an army was contemplated.

The other canons or main institutions of Islam—the pilgrimage, the fasting month, and the tax called 'alms' (zakat or salagation)—belong to the Medina period, though they cannot be precisely dated. The establishment of the first indicates the Prophet's resolve to conciliate so far as possible the pagans of Mecca, and to abandon Judaism, which on his arrival he was compelled to adopt; it belongs to the same policy as that which dictated his making the Meccan temple the direction of prayer instead of Jerusalem (li. 139 f.). The fasting month, whatever its origin, is evidently a military exercise; on the other hand, it may have been brought by the fighting men to endure privation, and, on the other, they train them to turn night into day. The alms or income-tax of 2½ per cent is organized poor relief. An innovation which is at least as important as the canons, though it is not termed one, is the tabn on intoxicants (lii. 218, v. 92), which is said to have been introduced in the third year of the migration, and appears to belong to military discipline. There may, however, be some truth in the idea of W. G. F. Browne that this tabn is definitely anti-Christian in intent.

It is probable, then, that the positive parts of Islamic teaching belong to the period after the migration, and that they were largely suggested by the Judaism which the Prophet had to know there. His usual plan when he adopted institutions was to disguise the borrowing; but he also introduced serious modifications. Thus, in the case of the Sabbath he let only shifted the day from Saturday to Friday, but reduced the time when business might not be transacted to the period occupied by the mid-day religious service (xlii. 9 f.). Instead of the elaborate system of

1 Central and Eastern Arabia, London, 1906, i. 128.
food tabus which occupies so prominent a place in the Mosaic Code, he adopted the minimum retained by the Council of Jerusalem, recorded in Acts 15, which is precisely the same as the tenets which were originally to be found in those regulations (ii. 185, v. 4, xvi. 116). He held that each of the communities (Jewish and Muslim) might eat the food of the other, and, indeed, went on his way to record in the Quran what he supposed to be the Jewish rules on the subject (vi. 147).

From Christianity he appears to have taken very little in the way of either doctrine or practice. His first relations with Christians seem to have been friendly, and, as has been seen, during the Meccan period he is said to have found a refuge for persecuted followers at Christian Axum; at a later period he used enlogistic language of Christian monks whom the Quran had affected to tears (v. 85 f.). He supported (v. 110) the Christians in worship three deities, Allah, the Virgin Mariam, and 'Isa, whom he identified with the spirit of God, but also called a Word (iv. 169). When he became acquainted with the division of Christians on the subject of the nature of Christ, he conceived that it was his mission to settle the dispute; it is noticeable that he fully accepted the Virgin-birth and the Ascension, though not the Resurrection, as he denied that Christ had been crucified. He rejected the doctrine of the divinity of Christ (xix. 17 f., iii. 40 f., iv. 156). Spranger fancies that he horrified his Christian visitors by his harangues as much as he shocked his Jewish subjects by his ignorance of the O.T.; but it is certain that the embassy from Christian Najran which waited on him in Medina, when his power was making progress in Arabia, ultimately espoused religious discussion and resigned themselves to the payment of tribute.

4. Relation of systems of thought. In comparison between Muhammad's system and that of those which it displaced in non-Christian Arabia is difficult owing to the fragmentary nature of our information about the latter. The name applied to the heathen Arabs in the Quran, mushrikin, if it really means 'those who assign associates to Allah,' would imply that these pagans were to some extent monotheists, i.e., recognized one Supreme Power; but it is curious that the sub独角兽 are called 'true' and their worshippers 'false' idolaters (vi. 138). It is likely that the communities had their tribal and local cults, the abolition of which was regarded as a preliminary for the political union of Arabia. In order to employ monologue for a political and, indeed, imperialistic object the deity had to be treated as a tribal god, favouring one community and hostile to all others. The men whose accession to Islam after the migration led to its great military successes, especially Khalid b. al-Walid and 'Amr b. al-Asw, appear to have had little or no religious conviction, but to have been moved by admiration for the Prophet's military and diplomatic skill, and anxious to serve under so able a chief. So far as religion entered into their consideration, they probably thought of the god of the community as leading it in war, and found the deity of the Muslim society able to defeat the others. More devout members of that society regarded the Prophet as able to call in the divine aid whenever he was in need of it. As the political programme increased, doctrine diminished in importance; and the institution of practices seems to have been based on the desire to give the new system the equivalent of what other systems possessed, in order that those others might have no rival attractions.

5. The Prophet's sincerity. The question of Muhammad's sincerity in his claim to be the spokes-
man of God has often been discussed, and various views have been held on the subject; as examples we may quote the divergent opinions of the traditions which regard Muhammad's assertions on this subject as a case of epileptic mendacity, while L. Caetani finds no contradiction between his supposed elaboration of the revelations and his ascription of them to direct communication from the deity. The former view, as has already been seen, is scarcely tenable; nor does the latter correspond with the facts, for the revelations furnish little indication of elaborate preparation, and, when once delivered, they appear to have been neglected; there are, indeed, traditions of collections of revelations having been made by some of his followers, but it seems certain that Muhammad himself kept no such collection. Caetani's theory, however, is probably sound to this extent, that in Muhammad's case, as in those of many other men of vast energy and ability, there was a belief or consciousness of being directed by the deity, which, however, by no means led to his trusting anything to chance; and, while the angels whom he declared to have warned his battles were partly pious, partly poetical personifications of the heroism of his followers, he was fully conscious of the value of attributing his victories to these supernatural auxiliaries; to be defeated by them was no disgrace, and he might even pay any fee. He was also quite conscious of the value attaching to the right to dictate the moral law.

6. Moral reforms. As a moral reformer Muhammad had his task of the condition of infantilism in which, if we may trust the Quran (vi. 61 f., lxxxi. 81 f.), was commonly practised in Arabia in the case of female infants. On the other hand, serious evil was caused by his institution (v. 91) of compensation for murder, i.e., the payment of blood-money. The rate might be fixed at the pleasure of the person who had sworn if, if he performed some sort of penance. While the Quran scarcely formulates any general principles of morals, it draws the line between murder and manslaughter, and probably aimed at no considerable departure from current notions on these matters. Hence it tolerates polygamy and unlimited concubinage, and assumes the institution of slavery. In the matter of the blood-feud Muhammad did not go further than his predecessors; i.e., if a man endeavoured to mitigate its consequences and favoured mild reprimands (ii. 173-175). With the institution of private property and the acquisition of wealth he found no fault, and he deprecated extravagance as unbecoming an officer of God. The quality of personal courage he rated very high, and, though he often inspired it by the promise of paradise, it is clear that his followers were largely persons who required no such stimulus to make them brave. The ascetic morality afterwards taught by Sufi preachers and, if the tradition is to be believed, approved by some of Muhammad's early adherents finds little support in any interpretation of the Quran that is reasonably literal, and clearly receives no countenance from the Prophet's own career, if any credibility attaches to his biography. Like other sovereigns, he claimed a large share of the booty won in his raids as his perquisite, and appropriated territory as his dominion.

It is not clear, then, that Muhammad can be credited with any considerable reform except in the matter of infantilism, whereas in the subordination of the family tie to the religious brotherhood he appears to have weakened and, without introducing any other equally strong way of compensation. The history of this sub-

1. v. 37 f.
MUHAMMAD 877

ounishment can be traced in the Qur'an rather more continuously than most institutions.

When the chief Christian doctrine is said in the Qur'an (xxii. 92) to be so blasphemous as to be calculated to produce a general conviction of nature, this toleration, though praiseworthy, is clearly illogical; for we can scarcely conceive a conversion of a society and the payment of a modern poll-tax.

8. Legislation. — As a legislator Muhammad probably perpetuated current practice rather than introduced a fresh system, and the Qur'an is on many grounds regarded as the basis of jurisprudence. It is imperfect, self-contradictory, and destitute of order. So far as any principle can be traced in its arrangement, the collector seems to have been anxious to avoid any semblance of chronological order, whenever, in the case of conflicting enactments, it has to be supplemented by tradition. Where there is anything like systematic treatment of any topic — e.g., the laws of inheritance in sûras lv. — the signs of improvisation are very apparent; and even a little consideration should have shown the barbarity and folly of the

punishment of hand-cutting for theft (v. 42). There is a curious tradition that on his death-bed Muham-

mad desired to frame a code for the guidance of the community; but to those who supposed that they had in the Qur'an the actual word of God this utterance was not unnaturally seen as delirious. The State, however, suffered very seriously for the want of guidance in the matter of appointing successors to the sovereign; and until the introduction of European codes it was never able to get rid of the doctrine that all law was to be got from the Qur'an or the Prophet's equally inspired conduct, and so lacked the power to legislate on a sound basis.

9. Philosophy. — Though it is not probable that Muhammad had any liking for metaphysical speculation, the role which he had assumed as the necessary supplement to any sort of belief in a future life, and the tradition Muhammad was the fountainhead of, they have frequently been Muslim communities, and, indeed, families claiming descent from the Prophet himself.

7. Toleration. — On the question of religious toleration the Qur'an contains a series of utterances belonging to different periods, and varying from large-minded tolerance to extreme fanaticism. In one text (v. 78) future happiness is promised to four communities — believers, Jews, Sabians, and Christians — on condition of their believing in Allah and the last day, and doing good works; in another the last three communities are mentioned with the pagans and the Mazdeans in a context which implies that the prophet whose religion is less satisfactory (xxvii. 17). At times no form even of controversy is permitted except rivalry in kindness; elsewhere the Muslims are told to fight with other communities relentlessly until they accept Islam or pay kharaj, which they are then allowed to keep as long as they remain in it. Friendship with members of other communities is forbidden. The most intolerant utterances are the latest ones, but the progress in this direction does not seem to have been regular.

The proposition granted the Muslims that they did not cease to consider their faith if confession is dangerous (iii. 27, as ordinarily explained) is characteristic of a system which is more political than religious. The ultimate system adopted was to permit the existence of such a book, which promised to follow a revealed book, but to disarm them and make them tributary; this condition is identified by some jurists with that of slaves. The existence of communities to which this description did not apply was forbidden. Since the chief Christian doctrine is said in the Qur'an (xix. 92) to be so blasphemous as to be calculated to produce a general conviction of nature, this toleration, though praiseworthy, is clearly illogical; for we can scarcely conceive a conversion of a society and the payment of a modern poll-tax.

8. Legislation. — As a legislator Muhammad probably perpetuated current practice rather than introduced a fresh system, and the Qur'an is on many grounds regarded as the basis of jurisprudence. It is imperfect, self-contradictory, and destitute of order. So far as any principle can be traced in its arrangement, the collector seems to have been anxious to avoid any semblance of chronological order, whenever, in the case of conflicting enactments, it has to be supplemented by tradition. Where there is anything like systematic treatment of any topic — e.g., the laws of inheritance in sûras lv. — the signs of improvisation are very apparent; and even a little consideration should have shown the barbarity and folly of the
to the utmost from the cruelty of the Meccans, hekinsed it with the Meite. He organized assassinations and wholesale massacres. His career as tyrant of Medina is that of a robber-chief, whose political economy consists in securing and dividing plunder, the distribution of the latter being decided by principles which a prince might adopt to satisfy his followers' ideas of justice. He is himself an unbridled libertine and encourages the same passion in his followers. For whatever, he does is prepared to plead the express authorization of the deity. His object is, therefore, to find any doctrine which he is not prepared to abandon in order to secure a political end. At different points in his career he abandons the unity of God and his claim to the title Prophet.

This is a disagreeable picture for the founder of a religion, and it cannot be pleaded that it is a picture drawn by an enemy; and, though Ibn Ishaq's name was for some reason held in low esteem by the classical traditionalists of the 3rd Islamic cent., they make no attempt to discredit those portions of the biography which bear hardest on the character of their Prophet. The theory that this person's conduct was a model for his followers has in consequence done serious mischief.

Apologies for Muhammad were started in the 18th cent. by H. de Bouhainville,1 who was favoured by Gibbon because this apology provided some instruments against Christianity. More important was the attempt of Carlyle on "The Hero as Prophet," incorporated in the collection called On Heroes and Hero Worship (London, 1841), in which Muhammad was taken as the type of a heroic prophet, just as Odin was made the type of a heroic divinity, the author's knowledge of the two personalities being about equal. Another apostate who acquired some popularity was Bosworth Smith,2 who, too, was satisfied with superficial and second-hand information, and committed the error of basing his estimate of Muhammad's character and aims on the ill-recorded Meccan period instead of on the far more accurately chronicled period of Medina. No European apostate for Muhammad seems to have possessed any knowledge of the Qura'a' or the later traditions. Only after the definite assertion of European superiority over the world of Islam, which may be dated from the Napoleon invasion of Egypt, and the acquisition of European nationality or its equivalent by the author, was the necessity for apologies made itself felt in Muslim communities. The most prominent writer on this side—Syed Ameer Ali,3 but there are many others. These apologists endeavour to discredit the biography of Ibn Ishaq where it shocks the European reader; and, where this cannot easily be done, they suggest honourable motives or suppose the course followed by the Prophet to have been the least objectionable of those that were open to him at the time. Thus his tolerance of polygamy is declared to have been a limitation with the view of ultimate suppression, and his attitude towards slavery is regarded as similarly intended to lead to its abolition. He has even been made to set an example of monogamy, but the ingenuity required for this is so great that the result is unconvincing.

But, while Muslim dogma, by assuming that whatever the Prophet did must necessarily have been right, must under menacing country, from the earliest times there has been much calling fiction in which the Prophet is shown to have practised all the virtues which mankind agree in admiring. The lines on which the historical character

1 Le Vie de Mahomet, London, 1729.
3 Life and Teachings of Muhammad, London, 1891.
system of jurisprudence began to be established by the labour of jurists of Medina. The impartial criticism of these traditions seems to lead to a purely negative result; the practice of inventing
sciences in which the Prophét delivered some judgment
or of fathering sayings upon him was so
common from the very beginning of the Islamic
empire that any genuine sayings of his are in-
extricably mixed up with doubtful or apocryphal.
The native criticism of this tradition consisted in
ascertaining if possible the credibility of the per-
sons who had handed it down. This was by no
means easy, and various motives prevented those
who was elevated from exercising their judgment freely; hence the chains which are
technically regarded as strong appear to the
Muslim critic fatally weak. The Prophét's merits
as a legislator must, therefore, be judged ex-
clusively by the Qur'an, for, though the rest of the 'sacred code' is ascribed to him, there is little
reason for thinking it to be his.
(3) The Prophét is supposed to have expressed
several as well as all sorts of figures, e.g., medicine
—and writers of essays usually start by quoting
these dicta. Those which have to do with the
commendation of various virtues or the condam-
nation of vices were collected on a considerable
scale. The Prophét of the Religious Sciences (Cairo, 1282 A.H.), the standard
text-book of orthodox Islamic theology; he was,
however, criticized severely for employing so many
spurious dicta, many of which could be traced to
fabrications.

11. The Prophét's Companions.—No account of
Muhammad, however brief, could omit all notice of
his Companions, the persons by whose instrumen-
tality he accomplished so much. Many of those
became historians of figures, e.g., medicine,
—some writers of essays usually start by quoting
these dicta. Those which have to do with the
commendation of various virtues or the condem-
nation of vices were collected on a considerable
scale. The Prophét of the Religious Sciences (Cairo, 1282 A.H.), the standard
text-book of orthodox Islamic theology; he was,
however, criticized severely for employing so many
spurious dicta, many of which could be traced to
fabrications.

12. His domestic affairs.—The women of the
Prophét's family enter into the story of his career
somewhat as they enter into the sub-sequence of
the history; the tradition makes the first wife, Khadijah,
a woman of wealth, whose acceptance of his
husband's claim to a supernatural mission was an
important element in determining its success.
Her death is said to have occurred shortly before the
Prophét's arrival. She had died the Prophét of the Religious Sciences (Cairo, 1282 A.H.), the standard
text-book of orthodox Islamic theology; he was,
however, criticized severely for employing so many
spurious dicta, many of which could be traced to
fabrications.

MUHAMMADANISM

Central Asia (A. Vanden Eynde), p. 885.

China (M. Hartmann), p. 892.

MUHAMMADANISM

in Central Africa.—Muhammadan is said to have reached Central Africa from three sources: Egypt by the Nile and its adjacent countries; Tripoli via Ghadhames to Timbuktu; and Algeria via Warga. Certain details of the dates of its introduction into various communities were collected by the traveller, Barth; about A.D. 1000 it found its way into Songhai, near the end of the 11th cent. into Kanem, about 1500 into Bagirmi, and not much later into Katlama. It was introduced into Logon about the beginning of the 19th century. In 1897 it was computed that the number of indigenous Muslims in British Central Africa was 50,000 as compared with 950,000 fetishists. Its introduction in certain places is connected with the names of historical personages; the chief missionary for Central Negera was one Muhammad b. Abd al-Karim b. Maghali, a native of Buda in Tawat, who flourished about 1500. The Islam of Central Africa seems to be everywhere of the Malikite school; and, if it has produced no, or few, monuments of it have not yet come to light. In Recue du monde musulman, xii. [1910] 197, Ismael Hamet gives a summary of the Kitab al-Tairiyy by Muhammad b. al-Mukhtar of the Kunta tribe of Azawad; this personage probably wrote twenty years after the completion of his work, which consists of an edifying biography of his parents, containing the kind of matter which is usually found in hagiographies. In Recue du monde musulman, xiv. [1911] 275, Hamet gives extracts from the works of a somewhat earlier writer Sidi Muhammad al-Yadili († 1752), a poet by whom in praise of the Prophet was published by L. Massignan (ib. vii. [1909] 199). Some contemporary poems (safires) by one Bakai were published by Barth: There appears to be nothing in these specimens that is distinctly African. In the same magazine (viii. 409) Massignan published the catalogue of a library belonging to a Central African chieftain Sheikh Sidi; the editor notices the absence of books bearing on philosophy, alchemy, and music; but otherwise it does not differ in character from other Islamic libraries, and the want of representation of these subjects may be due to accident.

T. H. Weir, 1912. More recent biographies are those by H. Grimm, Mohammed und die Muslime (Munich, 1911); D. S. Margoliouth, Mohammed and the Rise of Islam, London, 1909.

Descriptive biographies, numerous works deal with either the heroic or the prophetic character of Muhammad or certain aspects of his work. One of the most popular of the former sort is the Shifs fi Hamq al-Mu'tazil (of European Re-prints), as there is a vast literature, described by Hajji Khalilah, iv. 56-61; the ed. of Constantinople, 1315, in 4 vols. with the commentary of Qarafi (1600 A.D.) also called Zindeliyya of Qutslani (1523 A.D.) with the commentary of Zayfang, 8 vols., Cairo, 1578. Of European works mention may be made of Q. Pantz, Mocnacca Lehr von der Offenbarung, Leipzig, 1898; J. Prokesch, Uber die Einnahmen und Moglichkeiten der Islamischen Welt (Munich, 1899); A. F. Novak, Mohammed und die Heile des Welt (Munich, 1911); H. Lammons, Mocnacca, fust-i cüdeer, Paris, 1914. The ninth volume of V. Chauvin's Bibliothequeleine, issued in 1908, contains a list of all European works on the subject from 1530 to 1908.

D. S. MARGOLIOUTH.

MUHAMMADANISM

in N. Africa. — 1. History. — The introduction of Islam into N. Africa commenced shortly after the conquest of Egypt by 'Amr b. 'Abd, as early as A.D. 641 penetrated as far as Barca, and in the fourth century by Tripoli by storm. It was not till the autumn of 647, however, that an expedition on a great scale was organized for the subjugation of Africa, where the Patriarch Gregory had declared himself independent of the Byzantine emperor, and made Sbeitla (in Tunisia) his seat of government. The Arab invader, Abdallah b. Ali Shir, who had advanced through the interior, defeated the forces collected by Gregory in the battle of Akuba, where Gregory himself perished, took and pillaged Sbeitla, and proceeded to devastate the country southwards as far as Gafsa and Jerid and northwards as far as Marmarajama. Permanent occupation was not yet contemplated, and the conquerors were satisfied with a heavy money payment, on the receipt of which they withdrew; certain conversions, however, were made. The civil war which followed the death of 'Uthman delayed the activities of the Muslims in this region for a time, but in 655 the first Umayyad Khalifah, Marwah, dispatched an expedition thither, which overcame the troops sent by the Byzantine emperor, and in 660 established a province Irifiyya, with 'Uqlah b. Nafi' for its first governor, who for the first time employed Berber troops as soldiers, and founded the city of Kairawan. Since the Islamic programme was carried out by this governor, who threatened the pagans with extermination, the religion began to spread fast among the Berber tribes. In 675 Uqlah was replaced by a less vigorous governor; but he was sent back to his province by Yazid I. shortly after his accession, and proceeded to organize an expedition which finally reached Cauta in the extreme west of Africa, whence he turned south and saw the Atlantic before starting homeward; but he did not again reach Kairawan, as his army was attacked by superior forces and annihilated at Tehuila, N.E. of Biscra. His defeat and death (683) were followed by a general revolt of the Africans from Arab rule, and an independent Berber state, with Kairawan for capital, was able to maintain itself for five years. In 690 this city was re-taken by the Arabs, who, however, evacuated the province, which lapsed into anarchy. An end was put to this by Musa b. Nusayr, who in 705 to Kairawen as governor of Irifiyya, who traversed as far as Cauta the country previously invaded by 'Uqlah, penetrated as far south as the Oasis of Tijijina, took Tangier, and installed

2. Sects and orders.—It will have been seen from this sketch that during the first four centuries of Islam both Kharijite and Shi'ite opinions held sway in different parts of N. Africa; these former are still represented by certain isolated communities (see art. KHAIRIAT); when the Zirids asserted their independence of the Fatimids, Shi'ite opinions were condemned, and a general persecution of those who held them took place (1014); some years later (1045), on the occasion of a further dispute between the Zirid and the Fatimid monarchs, the former asserted the legitimacy of the 'Abbasid Khalifah and proclaimed the orthodoxy of the Maliki system, upon which the Almoravids also insisted. The founder of the Almohad dynasty was a follower of the 'Ash'ari theology, and himself propagated it in Africa, displacing that of the Zumiyids (Qaisibarri). The Sharifs at first different parts of Morocco and Fez, and sometimes Meknes; their first dynasty, that of the Sa'dians, lasted from 1620 until 1654, when it was ousted by that of the 'Assasins, which became prominent in 1939. The Sharifs and the Turks succeeded in ousting the Christian invaders from the places which they had occupied, but in 1830 Algiers was occupied by the French, whose empire has ever since been extending in N. Africa. The connexion of the Turkish settlements in N. Africa with the government of Constantinople grew constantly looser from the time of their establishment, and the pasha of Algiers had difficulty in maintaining his authority over the territories which lay to the west of that province.

The population forming the Islamic communities has remained Berber in the main, but, besides the influx of Arabs at the time of the original invasion, the introduction of the Arab tribes Hilal and Sulaym in the 11th century, has been of great importance for the political development of the country. These tribes, which had been located in Egypt, were, it is said, sent westwards by the Fatimid Khalifah Mustansir, by way of avenging himself on the Zipri Mutiz, whose sycophancy to the sultan of the 'Abbasid Khalifah, destroyed the Isma'ili college at Kairawan, where the Shi'ite doctrine was taught, and burned in public all that was indicative of Shi'ism. The Arabs advanced victoriously, and retaken the lands of the Zipri Mutiz, in their flight, and the government as a military force.

Far from attaching themselves to the Seljuk as the al-Mohads had hoped, these tribes continued to live in the nomad state and to annoy the government by their turbaned 'Omar II., 'Les Tribus arabes de la vallée du Lekkous,' in Archives africaines, iv. (1905) 59. Indeed, their risings form a chapter in the history of N. Africa. Towards the end of the 17th century, the Hassand Sharif Ismail purchased or procured a great number of Negroes, of whom he formed agricultural colonies, chiefly in the neighbourhood of Morocco, enjoying various privileges, but bound to place all male children from the age of ten at the disposal of the sovereign, to be trained for his guard, while various employments were also found for the females. By the end of his reign, in 1728, 180,000 negroes were registered in his lists; they were placed under the patronage of Bukhári, the author of the chief collection of traditions, whose sanctity in certain parts of the Islamic world approaches even excess, and the Prophet. The purpose of this scheme was to provide the Sultan with a guard unconnected with the native population, on whose fidelity he could rely. A Turkish and a Levantine element, neither very considerable in magnitude, were introduced into the eastern provinces by the Ottoman conquests.

Vol. VIII.—50

MUHAMMADANISM (in N. Africa)
rejected the claim of the founder of his dynasty to this title, asserting that the only Mahdi was Jesus the Son of Mary, and that the ascription of it to Ibn Tamart was a fable. Numerous claimants to it have risen since that time (see art. MAHDI).

Of an obscure or unknown date, it was located on the right bank of the Sebou, an account is given by G. Salmon in Archives marocaines, ii. (1903) 358-363. A branch of these called ‘the sect of Yusef’ is mentioned as having arisen in the 10th century (ib. vi. 214). Apparently they base their system on the Qur'an, but differ from other Muslims in points of ritual.

The general dominance of the Malikite code, of which the most familiar compendium is that of Sidi Khalil (Abu Diya), was not affected by the dynastic changes, except in those provinces governed by Turks the official system of the Ottomans, that of Abu Hanifa, was introduced without displacing the other; in these regions there were two qadis. In the cities of N. Africa there were theological schools which produced orthodox writers and teachers of eminence, and such were to be found as far south as Timbuktu, which was made subject to Morocco in 1580: one of the prisoners of a Moslem expedition then taken to the holy road of Badr, died on the journey, and Musulmans of the Algerie, Paris, (1846) various popular beliefs about this personage are collected.

It is, however, a fact that the Moslem of Morocco, by whatever name he is known, is the man who has survived and continued his career in the plural. He was defeated in the neighbourhood of Tangiers by a force sent by the Spanish Unayar al-Qarsh in the year 927, and his head was sent to Cordova.

In the year 1228 another prophet arose among the Gharumar, called Muhammad b. Abi 'Tawalih, who performed miracles and instituted a code: he was, however, cursed by the saint and ascetic Abi al-Salam b. Mashis, in consequence of which most of his Berber followers withdrew from him. The prophet in retaliation caused the saint to be assassinated, but was himself shortly afterwards defeated by the garrison of Ceuta, and killed by a Berber; his descendants are still among the inhabitants of the Moulay Wardas, where, however, they are under a sort of ban, and forbidden access to the Jabal Alum, where the saint Ibn Tawalih dwelt, of whose cult hatred for the Bani Tawalih forms a part (Archives marocaines, ii. (1838)). Ibn Khalidin gives no details of the system which this prophet tried to establish (History, ed. Cairo, 1244, vi. 222). The title ‘Mahdi’ is said to have been taken by the first of these prophets, and, being adopted by others, the title ‘Prophecy’, it has been assumed by many pretenders in Africa—e.g., the founders of the Fatimids and Almohads dynasties, a contemporary of the former, ‘a young man at the commencement of the year 1329’ (Archives marocaines, i. (1826)). It is noticeable that the Almohads Ma'mun, at his triumphal entry into Morocco in 1239, definitely

MUHAMMADANISM (in N. Africa.)
MUHAMMADANISM (in Arabia)

The people are fanatic, rather than believers, haters of the non-Muslim rather than religious; the member of an order shares the superstitions of the ignorant, but is more bigoted and more stupid. For no one can make the ascent to the Gates of Heaven, unless he walks in the straight path, and he who is thus not fortunate, is convinced and becomes a heathen. Convinced of his insufficiency, he shuts himself up in a strict formalism, acropolizes and publishes the rites which take up his time and save him the trouble of reflecting (p. 4).

It is asserted that religion occupies a much larger share of Berber than of Arab life, and the names of the dynasties, Almoravids, Almohads, bear this out. In the 16th. century the devotees (called marabouts) or mediators endeavored to play a political role of great importance; their zawiyyahs, or hermitages, which at times were like towns in magnitude, are regularly employed as refuges; they themselves in times of peace (so far as there were any) enjoyed divers privileges.—e.g., under Turkish rule, the marabouts of the Amokran family in the neighborhood of Djjeli had the right to direct the provision of timber for shipbuilding, and others had a share in the proceeds of the piracy; they were employed as mediators and, at times, as regents. Most frequently we hear of them as heading insurrections. The dynasty of the S'djian Sharifs is said to have commenced by the inhabitants of Sus at the time of the fall of Carthage in the year 426 of the Gregorian calendar, under the title of marabout, which they implored to place himself at their head and march against the Christian invaders; he referred them to the Sharif Ab'l-Abdallah al-Qaim, then residing at Tdjan, who, with others, met him under the title of the S'djian Sharifs. In 1612 the S'djian Sharif al-Mahmud, who, in order to regain his throne, had handed over Al-Arais to the Spaniards, was assassinated by the marabouts, and the maraboutic order, which belonged to the Rahmani order, and even proclaimed himself Mahdi. This personage was able to take Morocco, where he established himself as sovereign until defeated by another marabout Yalija, who espoused the cause of the S'djian Zaidan, and was then, not without difficulty, persuaded to return to his monastery. In 1619 an insurrection in the province Habi was headed by a marabout al-Hassan b. Raisan, also in favor of a maraboutic order, to restore orthodox practice; and early in the 17th. century, the marabouts of Della, Sale, and Sijilmassa headed political parties in different parts of the S'djian empire. In 1639 a Turkish force dispatched from Algiers was invited to enter the country by the intervention of a marabout, who obtained reasonable terms from the natives for it. In 1641 the Algerian pasha Yusuf, starting an expedition for the suppression of anarchy in the province of Constantine, obtained the good offices of the marabout Ibn Sasi of Bone. In 1686 one named Sidi Hannad obtained a passage for the Algerian troops marching to the relief of Djjeli, which had been occupied by the French. In 1686 the maraboutic order of Della received assistance from the French against Sharif Rashid, who defeated them and stormed their zawiyyah, which had grown into a populous and sumptuous town. His brother and successor, Inam, had to face an insurrection headed by one of the survivors from this monastery, named Ahmd b. Abdallah, who was defeated in the neighborhood of Tella. Their activity was no less marked in the 18th. century. In 1757 a marabout raised the standard of revolt against the Hassanian Sharif Muhannad Sharif, b. Abdallah in the country of the Gharb. In 1777 an insurrection was started at Tlemcen by a fanatical of the Dlkawi order, named Muhammad b. Abdallah, whose followers were generally thought of as descendants of the Sahabas of the Prophet, and the latter of the Dlkawi and Kafar orders. The revolt of 1759, which followed the death of the last Sa'di of Morocco, was conducted by the Sahabas and some other groups, and was called the 'Abdallah war, in which the marabouts of the province gave further trouble, and many more recent instances of their activity are recorded.

In general the ostensible aim of these devotees has been to free the soil of Africa from Christian occupation; but this has not invariably been the case, as there are instances of the marabouts compromising with the Christians or even invoking their assistance against rivals (Archives marocaines, ii. 36).

3. Cult of saints.—Closely connected with the orders is the cult of saints, which is wide-spread in N. Africa. The tomb of Idris, founder of the Idrisi dynasty, is a common place of pilgrimage, and both it and other places figure in the histories of the country as places of refuge. The tomb of Ibn Mashiach (see above, p. 887) is visited in the month Shiban, and comprises a visit to the tombs of his ancestors and descendants (Archives marocaines, ii. 24). A list of the tombs visited in the Ghari is given in Archives marocaines, xx. [1913] 246-276; of the saints thus venerated the most popular is Sidi Qasim b. Balluiss († A.D. 1666). What is certain is that he has two sanctuaries, one on the left and one on the right bank of the Sou (p. 261), and that he has several festivals in the year, one of which lasts three days. A list for the province of Habi is given in Archives marocaines, xvii. [1911] 481 ff. These saints have functions corresponding closely with those of the patron saints of Christianity.

The zawiyyah Sharqiya of B'di al-Jalid is not only a religious centre, but likewise a centre of preparation for the sacred war, and the greater number of the horsemen and shoots of the Ghari are placed under the patronage of Sidi B'di al-Jalid. In this region one frequently finds the name B'di, which is considered to be of good omen for horsemen. Parents often give their children the name of a marabout under whose patronage some military exercise is placed (ib. xx. 23).

An account is given (ib. p. 276 ff.) of various Maraboutic 'tribes,' i.e., groups of villages attached to some saintly cult, and not, like the zawiyyahs, isolated villages.

D. S. MARGOLIOUTH.

MUHAMMADANISM (in Arabia).—One of the results of the taking of Mocen by Muhammad was a determination on his part no longer to tolerate paganism in Arabia, and the destruction of the ancient cults took place through the intercession of the Qur'anic texts, and the so-called 'pre-Islamic poetry' must, if genuine, have undergone wholesale expurgation. Even the revolts in Arabia which followed the death of the Prophet were designed to exhibit any recurrence of paganism, but merely a desire for liberation from some of the
more onerous exactions of Islam; and permanent relief in one matter (the number of daily prayers) is said to have been obtained by one of the rebellious tribes, though the revolt was otherwise a failure. It is worthy of notice that these rebellions were confined to parties hostile at re-entrenching Muhammad's part, not by priests or other representatives of the fallen idols. The liberation of Arabia from paganism is speedily followed by the penalizing therein of all non-Islamic cults, even the Jews and Christians, whose rights had been respected by the Prophet, being either banished or forcibly converted in the time of the second Khalifah.

The murder of the third of these rulers in the year 53 A.H. was an event of the greatest importance for both Arabia and Islam. On the one hand, as some of the far-sighted are said to have urged at the time, it split the community into sects; complete unity has never been restored. On the other hand, the political centre of Islam was thereby shifted to a point outside Arabia: the Assassins came from Egypt, and the battles for the succession were fought from Basra, Kofa, and Damascus. These cities became the capitals of the countries in question, and were not thereafter restored to the position which it had once held. Arabia has, therefore, ever since been a province, at a distance from the seat of government; and such principalities as have asserted their independence within the peninsula have been meagre in both their magnitudes and in importance. Sneed talent as Arabia produced has been attracted to the political centre, whereas the persons attracted to it from outside have been mainly devotees. There has been a continual pining away in the area which the influence of Arabia upon Islam has been constant or permanent. On the one hand, Mecca has maintained its position throughout history as the greatest Islamic sanctuary; some sovereigns are said to have contemplated substituting either Jerusalem or Baghdad, but to have abandoned the idea as impracticable. This place has not only served to perpetuate the traditions which Islam took on from older times, but has also served as a rallying-ground for the sects; and only occasionally has its stability been questioned when Mecca is also the place where the Islamic world as a whole can be most easily addressed, and to this day revivalist movements, which are usually reactionary, have a terminus at Mecca.

On the other hand, Medina remained the chief seat of Islamic learning some generations after it had ceased to be the political capital. At this place, the residence of the Prophet's widows, several of whom survived him for many decades, and the theatre of his most eventful years, the science of tradition came into existence, and this speedily became the most important source of law, though not first in the list. In the 1st cent. of Islam Medina produced a school of jurists who, through their keen minds in writing, by their labours prepared the way for the codes whose publication followed shortly after the foundation of Baghdad. In the middle of the 2nd cent. it was the home of the jurist Malik, where he received as pupil Shafi'i; Shafi'i in later life went to Baghdad, where alone conspicuous ability could find its reward. With the names of these personages two of the three great Islamic codes are connected. It is, therefore, Arabian (and indeed Medinese) law that which has been preserved in the other, as a result of the civil and criminal portions have given way to the Code Napoleonic.

The development of the other Islamic sciences has taken place with Arabia, which in these matters has lagged behind the other countries. The earlier battles of the sects, too, have been fought outside Arabia; they could not, however, cut quite adrift from the rooted territory, where they did not, as a rule, win many enthusiastic adherents. There has, however, been always a smouldering desire to recover that hegemony which was lost after the murder of Othman, but which was generally disfavour towards the ruling power. Perhaps the most serious attempt made at recovering the lost hegemony was when in the early 'Abbasid period Abdallah, son of Zubair, was able to maintain the two knives for a time against the Umayyad generals. His cause perished with him; and rebellions which have since taken place in Arabia have had for their object recovery of independence within the peninsula rather than re-establishment of the political headquarters of the empire.

An account of the religious condition of Arabia in the 4th cent. of Islam is given by the geographer Muqaddasi (ed. M. J. de Goeje, Leyden, 1877, p. 96). The three great political sects, the Sunnite, Shi'ite, and Kharijite, were represented in different parts of the peninsula. One sect which has since disappeared, the Qari'a', was dominant in Hijaz. The Sunnite schools were also not the majority; in them the systems of Abu Hanifah and Malik, those of Dawud al-Zahirf, Suyfyn al-Thauri, and Ibn al-Mundhir had adherents. The Shi'ite sects in parts of the country were also distinguished as Mu'tazilites. Of the rise of the Kharijite power in Oman an account has been given in the art. Idris. Of a Kharijite who maintained himself in Yemen from 531 to 569 A.H. a notice is given by Ibn Khaldun (tr. H. C. Kay, Omari's History of Yemen, London, 1891, pp. 161-165). Another brief notice of the sect which has maintained itself permanently in S. Arabia is the Zaidi (q.v.). It is called after a descendant of Ali, Zaid, who perished in an abortive rising of the year 122 A.H. For its history, references may be given to the work of H. C. Kay (pp. 184-190), and Kinnan's History of the Rashid Dynasty of Yemen (tr. J. W. Redhouse, London, 1907). An account of the Qari'a's sect in Yemen by Janidi is also translated in the work of Kay (pp. 190-212). Other sects were either at one time represented in Arabia or are still held there; of a Shi'ite sect called Saiyyah representatives are to be found in a Yemenite community called Yamin (Abd al-Rahid, History of Yemen and San'a' [Turkish], Constantinople, 1891 A.H., ii. 871, which is also represented in the Mashriq), and appear to be similar to those of Azazb' (Ya'qub, Dictionary of Learned Men, ed. D. S. Margoliouth, London, 1907-13, i. 301).

Probably the most important religious movement which has taken place in Arabia since the rise of Islam is that called Wahhab (q.v.), the origin and course of which have been described by the English travellers W. G. Palgrave, Lady Anne Blunt, C. M. Doughty, and the Austrian traveller E. Nolke.

So far as the literature of these sects has hitherto been made accessible, it would appear that they have had to adopt and modify the results of the labours carried on at the great Islamic centres, and have themselves been incapable of producing original works of any consequence. One of the few specimens as yet accessible of purely Arabian theology, Al-Ilbun al-Shuristib, by Sahl b. Mahdi of Yemen (1108 A.H.), in which an endeavour is made to find a common ground for the sects by going behind Islam, though the innovations of the founders, appears to rest entirely on the older theological works, already known in Europe, the authors of which were natives of extra-Arabian provinces. We learn from it that the Sufi orders and practices, which originated in Baghdad and Basra, were in the author's time
well represented in S. Arabia. Against these the Wahabhi movement in the centre and north of the peninsula was to some extent a revolt.

From the statements of the few travellers who have spent much time in the peninsula and have been able to familiarize themselves with its condition, it appears that the social and political organization of the people are, in theory at any rate, fiercely Muhammadan, but that the observation of the practices which the system enjoins is much more regular in the towns than in the desert. There is, here, within the limits of any given territory, a distinct difference between the statements of different travellers, and much variety has doubtless been occasioned by local, temporal, and personal factors. When K. Niebuhr (in the latter half of the 18th cent.) visited S. Arabia, he found that a Christian was there treated somewhat as a Jew was treated in Europe—as an inferior being, but not necessarily to be molested. 1 Perhaps the greater number of visitors in the 19th cent. either adopted or simulated Islam; and this, indeed, has been a necessity in the sacred territory, where the presence of unbelievers is not tolerated by the government. In the Wahabhi States the tendency seems to have been in the direction of intolerance; yet on this matter most contemporary accounts are inconsistent, and it would appear that the demeanour of the traveller has largely determined the conduct of his entertainers; even a missionary who went to Had el with the avowed object of elucidating missionary innovations, was conducted ostensiibly in the interest of the Muslim chieftains of S. Arabia has for its proprietor and editor a Christian with the untranslatable name 'Abd al-Misli, 'Slave of Christ.'

LITERATURE. This is sufficiently quoted throughout the article.

D. S. MARGOLIS.

MUHAMMADANISM (in Central Asia).—In sketching the peculiarities of Islam in Central Asia, it is necessary to begin with the fact that the difference between the religions life in western and middle Asia must make upon any one who has occasion to study these wide-spread portions of the Muhammadan world. From Constantinople east and gradually increasing faith that the Central Asian Muslim in his daily life, his social intercourse, his trade, and his attitude towards his government, one is tempted to believe oneself not in the 14th, but in the 2nd cent. of the Hijrah, and probably even then the jorunments which is conducted ostensibly in the interest of the Muslim chieftains of S. Arabia has for its proprietor and editor a Christian with the untranslatable name 'Abd al-Misli, 'Slave of Christ.'

1 Description de l’Arabie, Amsterdam, 1774, p. ix.

wanderings as a devilish in Iran gave him a very poor opinion of their piety and the moral effect of their teachings. Outward appearance and formalities, hypocrisy and fanaticism, hatred and implacability, are the main characteristics of the national religion of Persia; and, whereas in Turkey a good deal of the hierarchy and upper order is a Turk of the hands of the Sultan, in Persia we find the clergy the supreme arbiters of the spiritual life, unchecked by the secular government, and very frequently its rival. During the more than 100 years’ rule of the present Persian shahs have striven in vain to curtail the influence of the priests; the Imam Jama’ of Isfahan and Karbala were and are their equals if not their superiors in power, and the shah’s ordinances are nil without their consent.

If we turn now to Central Asia, the difference will at once appear which separates Islam there not only from Iran—which is very natural—but also from the western portion of the Muhammadan world, in spite of their common Sunniite character and common Hanifite rite. For it is only in E. Turkestan that adherents of the Shi’ite rite are to be met with. There we find a distinctly different religion, the manifestations of which do not resemble those of W. Asia. There everything bears the special stamp of extravagant fanaticism, of an exalted conception of the value of ritual trivialities, and of a deep hatred against innovations. In observing the Central Asian Muslim in his daily life, his social intercourse, his trade, and his attitude towards his government, one is tempted to believe oneself not in the 14th, but in the 2nd cent. of the Hijrah, and probably even then the jorunments which is conducted ostensibly in the interest of the Muslim chieftains of S. Arabia has for its proprietor and editor a Christian with the untranslatable name 'Abd al-Misli, 'Slave of Christ.'
of **dervish** *followers*; and Bābur and his followers transported this vice to the court of the Mughals. This, however, could not be said of the masses. In the present writer's time (1862-64) they were rigorously abstemious, and it is only since the annexation of Russia that the use of brandy and beer has begun to spread among the inhabitants of the towns.

In the observance, then, of the ruling precepts of the Qur'ān and Sunnah the Muḥammadan in Turkestan surpasses all his co-religionists elsewhere; his creed is the moving power in his spiritual and material life; by it he is guided in all his undertakings, thoughts, deeds, and wishes. His Muslim brother in Turkey and Persia is satisfied when he is able to perform his five daily prayers, consisting of a certain number of *rak'a* (bowings), and has spent three to six minutes at *mindī* (contemplation). The religions man in Central Asia must go far beyond this, for he has to add a few *nāfā'a* (additional *rak'a*); he remains for ten to fifteen minutes in contemplation, and, after having performed this extra prayer, he has to read in the forenoon either the sārah *Fā Sin* (xxxvi.) or *Fārūq ul-Habīb* (xlvi.), and in the afternoon he has to recite a portion of the *Muhājirun* of Jalāl al-Dīn Rāmī (*q.v*.) or chant a few *hīzq* (hymns). This form of devotion is obligatory on every educated and respectable man, whereas the performance of the five prayers is indispensable for every Muslim irrespective of sex, age, or profession; and with this, or remains ignorant of the elementary teachings of Islam, cannot escape every kind of vexation and reproach on the part of the authorities. For this purpose a special functionary called *risā'ī* (chaplains) attached to his town, has to traverse the bazars and the public places with the *dirrāh*, a whip made of twisted thongs, in his hand, and, whenever he notices anyone who does not go to the mosque on the first sound of the *mu'ahab*āh (the public crier who assembles the people to prayer), he is entitled to beat the lingerer with the whip, or to put him in prison. The *rizā'ī* plays, besides, the part of a public examiner: he stops at random any one in the street who looks as if he neglects the main prescriptions of Islam, and the individual unable to answer is sent at once to school without consideration of age or profession. Full-grown and even grey-bearded men are sent to school by this officer to explain to him his obligations before being allowed to go. The *rizā'ī*, whose office is a survival from the early Khilāfate, non-existent elsewhere in Islam, also superintends the laws of public morality. Women indecently dressed are publicly rebuked and sent home, and even children are subjected to his control. What he is still for Central Asia that the *muḥāfāth* (police inspector) was for all Islam in former times; but at present, when modern European institutions are growing up, the old system of the Khilāfate, Persia as well as in Turkey. Further, not only are the precepts of the Qur'ān more rigorously kept; they are also differently expanded. In Turkey, e.g., the cutting or shaving of the beard has been practised at all times, whereas in Central Asia it is looked upon as a deadly sin, or even as apostasy. In Turkey, again, and everywhere in Islam, it suffices for the believer to wash certain parts of his body after relieving nature; in Central Asia this is considered a constant affair. One must apply *isti'āj* (cleaning with a lint or with a cloth), *isti'āj* (washing with water), and *isti'āb* (drying). For this purpose he conceals a few cloths in the fold of his turban.

But these and many other peculiarities of Islam in Central Asia are of secondary importance in comparison with one salient phase of the religious life, namely, the wide-spread and highly influential religious orders which dominate the situation, and have ever been the main moving power of the spiritual life. During many years' intimate acquaintance with the Muḥammadan lands of Turkey and Persia, the present writer never observed such strict adherence to the rites of the different orders and such veneration for their members, generally called dervishes, as in Turkestan. In the Ottoman empire and this is particularly the case with the genuine Turks—the Mālāvī, the Baqṭāshī, the Rīfā', and the Qādiri orders have many votaries among the lower classes, and the respective dervishes are looked upon as saints.

The better classes, i.e., the Efendi and the higher dignitaries, very rarely manifest the same degree of attachment. They visit the convents on Friday afternoons, they attend the sacred ceremonies, they take advice sometimes on both worldly and spiritual matters; but they have long ago ceased to use the instruments in the hand of the Shaikhs, and particularly of the Baqṭāshīs, who, having acted as revolutionary factors against the innovations in the time of Sultan Mahmūd II., are officially interdicted and ordered to retire. Somewhat singular is the case in Persia, where the conflicts between Shi'ites and Sunnites engage too much attention to leave room for the orders, although the Shaikhs and Ali Ĥāfīdī and followers among the lower classes. The least in towns and villages are either vagabonds, living upon the credulity and superstition of the people, or harmless idlers who conceal their laziness under the khīyqi (mantle) of religious exaltation.

In the settled parts of Central Asia, and even among the nomads, the orders play a very different and a far more important part. There they have taken hold of the entire population; they have passed aside the secular clergy, i.e., the *ullāmā* or priests educated in the madrasahs, and appointed as such by the government. These, of course, are continually at war with the members of the orders, among whom the Naqšbandīs, founded by Bābā al-Dīn, best known as the author of the *Pecurān* and other *khawās* in which the present writer found among them various sub-divisions, the lesson by heart. They, partly in outward appearance, partly in the way in which they fulfill their obligations. They begin as *mutabā* (disciples), and as such they must forswear all worldly purposes and, clad in the khīyqi and khunbī (conical hat), holding in one hand the *risā* (staff) and in the other the kashkālī (bowl made of a half coco-nut), have to wander about singing hymns or taking part in the *dhikh* (mentioning the name of God) and *tawâf* (acknowledgment of the superhuman) as the majority of the dervishes are iliterate. They learn a certain number of hymns by heart and recite them in chorus, accompanying the monotonous melody with frantie gesticulations and wild exclamations.

Public places are usually selected for such performances, in order to attract attention and to collect contributions; for the dervishes, although forbidden to accept money, often betray the greatest greed, and their obtrusiveness has become proverbial. The present writer tried to join such a howling company, but he could barely stand the fatigue for more than an hour, whereas these adepts wander about for days without becoming exhausted. What struck him most was the endurance manifested during *dhikh*, and he remembers having seen one dervish crying
tor two nights without interruption the Yā Ḥe, Yā Ḥāqiq (He is the true and the right) and the
and the neighbouring countries than in the West. This refers particularly to the saints (ndiyān)
renowned by their learning, and their chiefs of orders (pura), and not to attain the rank of khanif, a kind of
khanif is mostly given to learned dervishes, who afterwards are addressed as khānīn (they, as a
A fine description of Takiyah, or Kāhghān, and of the khanīn themselves. It is a kind of lodging-house in
In this state of excitement and hallucination; their eyes turn wildly, their mouths foam, they
in all kinds of iniquities. Strange to say, the spiritual leader, who presides over the exercise, always remains
quiet and motionless, unaffected by the eccentricities of his disciples, and expressing his satisfaction only by
young women, children, greybeards, and particularly alluring people, press around; they spasmodically seize
the dervishes by their arms, head, or shoulders; they cling round their necks and embrace them, crying and sobbing; and some of them actually surpass the dervishes in their ecstasies. In
Turkey this excitement, bordering on madness, is seldom or never seen, nor is there a similar participation on the part of the public.

In the case of Yezidi, the Islam of Central Asia stands alone. Everything in it bears the stamp of extravagance, unbridled passion, and weirdness of aspect. The believer is expected to follow blindly the tenets of the Qurān; no discussion or controversy is admitted in the effort to attract. Hence we see that, whereas in Western Islam the callān (call to prayer) is given from the top of a minaret in a sweet melodious song, the masjādāhūs in Turkestan summons the faithful in rough and half-articulated sounds from the flat roof of the mosque. The performance of religious duty, they say, does not require any ablution. Anusterity and dronetic rigour, too, prevail with regard to food and drink. In particular, the present writer states a Muslim convoluted the use of alcoholic drinks was sentenced to death by being hurled from a tower, and a woman caught in adultery had to undergo the penalty of ḥiyya (life) in a very rare event. For the Central Asians are themselves fully alive to the exception position which they occupy in Islam; they are even prouder of it, asserting that they are the most
execrable executors of the ordinances of the Prophet, and the only Muslims whose religious belief has not been contaminated by foreign influence, but has remained as pure as in the time of the Prophet, they call ṣarq-i-ṣalbāt (the period of happiness). Accordingly, the spiritual leaders and teachers in Central Asia form a distinct class, and enjoy greater fame and reputation in Turkestan
and the neighbouring countries than in the West. This refers particularly to the saints (ndiyān), religious teachers (khawwād), and chiefs of orders (pura), and not to attain the rank of khanif, a kind of
khanif is mostly given to learned dervishes, who afterwards are addressed as khānīn (they, as a

In particular, the present writer states a Muslim convoluted the use of alcoholic drinks was sentenced to death by being hurled from a tower, and a woman caught in adultery had to undergo the penalty of ḥiyya (life) in a very rare event. For the Central Asians are themselves fully alive to the exception position which they occupy in Islam; they are even prouder of it, asserting that they are the most
viction that most of them are cunning men with a lust for adventure, ready to exploit the plain people, and willing to mutilate the sometimes rigorous monastic regulations of the orders to which they belong, or dismissing the individuality of their islam, or spiritual chief. It was chiefly in the villages and in the tents of the nomads that he met with these religious vagabonds; there they are highly revered. The mu'ulés, on the other hand, abuse them of ignorance, and of breaking the precept of Islam—La yubhīkin fi'l-islām. There are no monks in Islam. The majority of them are dervises, but the present writer has met with divānāhā who were versed in religious lore, had studied in madrassah, and had been moved simply by wandering propensities to renounce the regular and sedentary life of a priest. Among these dervishes there is also a certain Türk-dīvānāh, a Turk by origin, as the name indicates (date unknown), who is very often spoken of by the nomads as a saint, and who interceded with Allah for sinful humanity. He asked Him to deliver mankind from hell, to which Allah replied that He would when peace, justice, charity, etc., reigned supreme in the world. Further, among the latter dervishes there are many of local celebrity, though others coming from distant quarters. Their existence has to be reckoned with, but rather in the tyrannic rule of the governing classes, who, lay and ecclesiastic, are everywhere hated. These unofficial servants of God, then, discredited and despised by the mu'ulés, are regarded by the lower classes as efficient helpers for the quiet of the wandering dervish. The Ottoman Turk, like the Kurd and the Arab, clings with great attachment to his faith; but he is very far from giving way to the religious ecstasy and wild fanaticism which are imputed to him by his detractors. In this respect the Western Muhammadan is many hundred years ahead of his fellow-believer in Central Asia; for the latter has remained absolutely in the position of the first centuries of Islam, and, indeed, at the beginning of the past century was even more fanatical and orthodox than in the time of Harūn al-Rashid and al-Mamān. Such, however, was not always the case. As long as the Iranian element was predominant among the Ouxas, worldly science found many votaries, and during the reign of the Samanids and later Central Asia was the birthplace of literary celebrities of high standing. But with the increase of the Turkish population and under the rule of warlike Turkish chieftains, mostly of nomadic origin, a great change has set in. The place of scientific culture has been taken by exclusively theological studies and mystic speculation. There has been no notable decline in the number of students, but the students, flocking from all parts of Central Asia and India, have turned their attention to purely religious questions, neglecting even such subjects as philosophy, law, and philosophy, which are still cultivated in the colleges of Western Islam. Naturally, then, scientific inquiry having been gradually banished, religious eccentricity has taken its place, and even then to the seat of fanaticism. Jalāl al-Dīn Rāmī, the author of the Mathnāwi, was right in saying:

'Thou wilt to Bakhārā? O fool for thy pains! Thither thou goest, to be perished.'

Similar things were said to the present writer by his learned friends in Turkey and Persia when they heard of his intended visit to Central Asia; and when, on returning, he related to them his experiences, many of them disdained to criticize and laughed at the superstitious rites of their fellow-believers. Another reason for this great difference is to be sought in the belt of dreary sand steppes, infested by nomadic robbers, which surrounds Central Asia, and has always been a great hindrance to its communication with the rest of the Muhammadan world. Whilst Western Islam has undergone essential changes in the course of time, Islam in Central Asia has remained stationary, unaffected by the temporary intellectual movements in the West, and checked by the strong conservatism of a fanatical clergy and a despotic form of government. If Shī'ite Persia had not produced its great chief in the general Muslim body, extending from W. China to the shores of the Caspian, the opportunities for the penetration of Central Asia might have been limited to the hitherto insecure and barbarous mountaineers of Afghanistan. When we hear of a murderous attack by some Pathān or Khaibari on an unoffending British officer, we have always to think of one of these fanatics, who, anxious to become a ghūzi, a warrior for the faith, is ready to sacrifice his life for the title of martyr, and for the prospect of a place in Paradise. The existence of such ghāzīs was formerly reported among the adherents of Shaikh Shami in the fierce struggle begun in the time of Harūn al-Rashid in the N.W. Caucasus, but nowhere else in Islam. It is, therefore, to the wild influence of the Islam of Central Asia that their appearance in the north of India must be ascribed.

A. VANDERVE.

MUHAMMADANISM (in China).—1. Historical. China, regarded as a portion of the Muhammadan world, may be divided into (1) China proper (the 'Eighteen Provinces'), and (2) the external provinces (Turkestan, Tibet, and Mongolia). Of the external provinces only Turkestan need concern us here, for the Muhammadans resident in Tibet and Mongolia have never been more than an insignificant fraction. According to H. d'Ollone, Recueil du maconage oriental, v. (1888) 94, they are to be found all along the highway from India through Tibet; thus, e.g., there is a mosque at Tatsienlu for the hundred or so Muslim families living in the vicinity, while mosques are found also in Batang and Lhasa, those in the latter city being attended, it is said, by Hindu Muhammadans. The Lāmās of Tibet are in no way hostile to Islam—a fact that need excite no surprise, since the adherents of the two religions have a common political interest in making all peace with each other in order to ward off the invasions of China. Nevertheless, there is no prospect of any considerable expansion of Islam in Tibet (cf. RMM v. 458). Hitherto, at all events, the commercial relations between Muhammadans and Tibetans
MUHAMMADANISM (in China)

have brought about no conversions to Islam, though the commercial bond is far from being insignificant. In particular, the Muslims of Sung-pan-ting in Sinkinga contribute to the emperor of China, together with an invitation to embrace Islam, and who then proceeded to Hai-an-in. Other reports say that the earliest message was brought by Suld Ibn Abi Waqqas, whose tomb may be seen in Canton. The tradition attaches special importance to an expedition of 4000 Muslim troops which the Khalifah Mansur is said to have sent to assist the emperor in a struggle with rebels (A.D. 755). The emperor permitted them to settle in this rich province, and, when they took Chinese wives and became the progenitors of the numerous and important Muslim communities in China.

These traditions find no corroboration in the writings of Arab historians. China and Islam, as a matter of fact, were brought into contact with each other as a result of the conditions prevailing in either sphere. About 620 a new power in Near Asia emerged, and another in China, each characterized by a ruthless expansion for its own gain. The former was the Caliphate, the latter the empire of the Sung dynasty. Among the chief cities of the Chinese empire, they took Chinese wives and became the progenitors of the numerous and important Muslim communities in China.

In China proper there existed no considerable groups of Muslims before the Mongolian period, and the reports of an earlier immigration are altogether legendary. Chinese tradition says that Islam found its way into the country by land and sea. It tells of a maternal uncle of the Prophet, Wahh Abi Kabihah, who landed at Canton in A.D. 628 or 629, bearing the name of Abul-Abi Murtada. He was received by the empress dowager, who invited him to the emperor of China, together with an invitation to embrace Islam, and who then proceeded to Hai-an-in. Other reports say that the earliest message was brought by Said Ibn Abi Waqqas, whose tomb may be seen in Canton. The tradition attaches special importance to an expedition of 4000 Muslim troops which the Khalifah Mansur is said to have sent to assist the emperor in a struggle with rebels (A.D. 755). The emperor permitted them to settle in this rich province, and, when they took Chinese wives and became the progenitors of the numerous and important Muslim communities in China.

These traditions find no corroboration in the writings of Arab historians. China and Islam, as a matter of fact, were brought into contact with each other as a result of the conditions prevailing in either sphere. About 620 a new power in Near Asia emerged, and another in China, each characterized by a ruthless expansion for its own gain. The former was the Caliphate, the latter the empire of the Sung dynasty. Among the chief cities of the Chinese empire, they took Chinese wives and became the progenitors of the numerous and important Muslim communities in China.

Even at a later time, however, as the records conclusively show, the adherence of princes and people alike to the new faith was half-hearted, and the ideas and usages of Lamism (q.v.) were quite the common around them. The blind superstition of the people facilitated the usurping tactics of the philosophically gifted descendants of Makhdim Azam, who at first ruled as the spiritual advisers of the dispossessed house of T'ang, and, after the fall of the house of T'ang, as the leaders of the Sung dynasty, the work of Christian missionaries, of whose bold advance into China the Nestorian style of Khian-in (dating from 781) affords telling evidence. Against these influences, however, must be placed the influence of intercourse arising from the tendency of both empires to rest content with their gains, and so to limit their frontiers. The emperor T'ai T'ang showed caution in rejecting the appeal of Yanzagir in; for assistance (as may be inferred from T'abari, I. 360 f.), though the report of the ambassador is a fabrication; cf. i. 2976). The Muslims became more aggressive after their able general Qutabib Ibn Muslim had subjugated Parthia, but his expedition against Kashgar in 715 was unsuccessful. A campaign of the second empire of T'ang (T'abari, i. 1275-1279) shows that Kashgar remained unconquered. The sending of ambassadors to the emperor of China (Hisian Tsung, 712-756), however, was probably historical. These missions, which were made at the request of the T'ang, were probably historical. These missions, which were made at the request of the T'ang, were probably historical. They were, in the traditional form, it is garnished with all the conventional features,2 under the Umayyads the Muslims had, indirectly, a good deal to do with China, since the Khagan of the T'urkhi, and also the jilgha,3 were vassals of the emperor. A time-honoured tale is that of the scene between Naizak and the jilgha on the one side, and the shadd (the shadd of the Orophian records) and the nubul (probably to be identified with the zibell of the Théophanes of Byzantium) on the other side. A description of the K'ang-huang (T'abari, ii. 1224, year 91 [A.D. 710]). The jilgha1 Notwithstanding the supposed connexion of the Orophians with the Byzantine empire under Justinian, the silk merchandise of China was largely imported into Near Asia. It was conveyed overland by the ancient "Silk Road" and overland through the Persian Gulf, on the north shore of which Al-Shabab (T'abari, ed. Leyden, 1577-1891, I. 398 f.), and afterwards Sarit (references in G. Le Strange, The Lands of the Eastern Caliphs, Calcutta, 1891, p. 258 f.), was the port for such products. 2 Nothing is said, however, of an embasement from the west side. At an earlier date, in the reign of Ch'ou-dze Anubharin there were Chinese at the Sasanian court (T'abari, i. 899; cf. T. Schloeder, Gesch. der Perser und Araber bis zur Zeit der Sassaniden, Leyden, 1879, p. 167).
was sent to Damaascus, and was probably the first Chinese, or Chinese Turk, that the Syrians had ever seen. It may be regarded as certain that it was Chinese statecraft that checked the opposition of the Turk in the hqagin and that of the smaller nationalities in Transoxania dependent upon him or upon China itself, so that the Muslims had to incorporate them. The object, and the probable location of the Timurid, were already fixed, and Som-Pek, in short, was the result of the Chinese expansion having somewhat relaxed, and the central authority was busy with the maintenance and organization of what had been won, and when contemporaneously the central power of China under the Tang emperors showed symptoms of decline, the interjacent territory was soon occupied by strong buffer States—first of all by the Uighurs, and then by the Hephkids (see above). Islam was then placed in a very unfavourable position for making an advance into China. Weak as were the dynasties that followed the Tang emperors, the people held firmly to the maxims, "Nothing foreign religion in China." Buddhism, it is true, had made a successful entry in the face of vigorous opposition, but this is explained by the facts that (1) Buddhism was to some extent in harmony with the cult of reason (li), which, if hardly to be called a religion, was more widely diffused than any other; and (2) it assimilated certain elements of the ruling race. In a word, it adapted itself to the prevailing sentiment (see art. China [Buddhism in]). Islam, which with its rigid doctrine of uniformity does not on principle express itself in creeds, and tends to rebel by the dehant and independence of the subject, was confronted with a political religion, with nothing to fear from the formation of any powerful alliance against him. He found his auxiliaries—part from his own countrymen—in the various Muslim tribes of the West, a race renowned for their courage. Among these the Turk took precedence, alike in numbers, in importance, in capacity for bearing arms, and in discipline. We shall hardly err in adding Afghan mercenaries—for the Afghans—the Pathans of India—were always willing to serve for pay; and bands of warriors may also have flocked to him from the mountains of Persia—the fastnesses of the Kurds—though not the Persians in the narrow sense, the inhabitants of the plain, who had small reputation for bravery. Yet we can hardly look for definite information regarding the composition of his army, or those of his successors, for the great Mongol rulers were not the people to depend themselves to the statistician, thereby being more interested in being secret, not in keeping of trim muster-rolls. We may venture to assume, however, that the largest hordes of their followers were supplied by the countries lying nearest the scene of their conquests, viz., besides the land of the Turkic between the Great Wall and the mountain barrier of the Tien Shan (Chine-est Turkestan). Trotsky explains also the curious phenomenon that from that day till the present, Persia has been regarded by the Muslims of China as the language of polite education, and that the vernacular Chinese written in these languages is mixed with scraps of Persian. In elucidation of this it has been supposed that at some time or other Persian immigrants had settled in the country, losing their mother tongue, but retaining vestiges of it in these numerous fragments. This, however, is not true, for the interspersions of Persian in the Muslim idiom of Chinese is due rather to the superstitions regard for the Persian language entertained by the baronial and semi-barbarian hordes of Nevaro who swarmed to the camp of the Mongolian Khans. Moreover, as soon as Kublai Khan had established his sway in China, he brought Persians in great numbers to fill the offices connected with the government and the court. Both Marco Polo and the Arabian traveller Ibn Battutah supply full information regarding these foreigners in the Chinese services. To a great extent they would be full-blooded Persians, and they no doubt helped to enhance the respect accorded to their language, and keep it alive in the very heart of the country.

As to the numbers of Muslims brought into China by the Mongol emperors, we can hardly even hazard a conjecture, although an incident now to hand may throw light upon the question. In A.D. 1268, a young Muslim warrior, a native of Bukhara, who claimed to be a descendant of the Prophet—a Sayyid—placed himself at the disposal of Jenghiz Khan. The latter perceived, in the once the outstanding ability of the youth, and, attaching him to his bodyguard, soon began to employ him on commissions of a special kind. His successor, Kublai Khan, entrusted this Sayyid (who appears as Sayyid: Aljaf, in the work of Rashid-al-Din, and as Sai-tien-tele in the Chinese sources) with the task of subjugating the province of Yuen-nan, and for six years the affairs of that province were administered by this talented Muslim. He died in office, and his two tombs—the first in Yuen-nan, the other near Hi-i—were discovered by the French explorers. The official employment of this Muslim from Bukhara, who, of course, did not come single-handed, but was attended by a company of armed men, is of special interest, because his instructions were sent on service to the Yuen-nan and Turkestan, for himself he was installed as viceroy of that province. We may accordingly infer that the influx of Islam into Yuen-nan began at that time, for that it reached

1 An excellent specimen of this idiom is found in the short Chinese Miss (35 Sin. Hartmann of the Royal Library, Berlin ed. A. Forke, which contains a Chinese text in Arabic script (Toungpao, viii. 1907) nos. 8). From the nature of the language Forke inferred wrongly, as the present writer thinks—The Persian origin of the Romans.

2 It is no argument against the theory, however, to say that it would involve a wider diffusion of Shisian than we actually find, for the introduction of Shisian as the national religion of Persia and the dissemination of the Shite principle among the people did not take place till a later period. There is a tendency to regard all Persian writings as Shisian than an utterly mistaken idea, as the widely-read work, Maw'rj-al-Afnoun, "Life of the Prophet," by Miru al-Din al-Misiri (A.D. 1268), is Somani in character.

3 One of these officials made himself very obnoxious—Abdishah (Abdulali the Babi); whose story is to be found in the Chinese sources (cf. J. A. M. de M. de Maailo., Hist. generale de la Chine, Paris, 1777-85, iv. 412. cf. of Tory in Ron-Kon-Bau Mond), which might naturally be expected to contain the information, but also in a straightforward account by Marco Polo (cf. H. Yule, The Book of Ser Marco Polo, 1896 ed., p. 210), who brought the facts into a graphic and ingenious sketch (RMM iv. 1907) 220 ff.)

4 For reports of these discoveries, see P. Berthelot, "Note sur les inscriptions arabes, persanes et chinoises du Ch'ou-I, du Hu-nan, et du Chao-teng," Camb. iv. 1904, 189, which gives a map of the province of Yuen-nan, which was the principal object of this work. It is said to be situated in the north of the province of Yuen-nan, and is the southernmost province of the Kansu.
that province by sea is in the highest degree unlikely.

Now, when we take into consideration the number of Muslims in China at the present day as derived from the names which are recorded in Chinese records, and as estimated from the registers of the religious festivals, the whole of China is represented as possessing 70,000,000 Muslims. This is probably a very low estimate. It is a matter of opinion whether the number of the Chinese population, as estimated, is correct, or whether the number of Muslims is correct, or whether both are correct. The question is of great importance. It is a question which has been the subject of great controversy, and has been the subject of great speculation. The question is one of great importance, and it is one which has been the subject of great controversy. The question is one of great importance, and it is one which has been the subject of great speculation.

MUHAMMADANISM (in China)

(Mongols) and the aborigines of the south (Lotos, Miao-ze)—into Chinese and Muslims holds good throughout. The name Dungan is applied to a large section of the Chinese Muslims, who, however, as was said above, term themselves simply Hui-hui or Hui-tzo, and repudiate the appellation Dungan; but they would never think of calling themselves Han ('Chinese'), nor are they ever designated so. They form, in fact, a distinct racial aggregate, co-ordinate with the Chinese and the Manchus. The name Dungan is sometimes erroneously extended also to the Turki of Turkestan, but in reality there exists a marked contrast between them and the Dungan who speak Turkish—they are by no means few—acquire a peculiar dialect of that language; and, as regards the Chinese spoken by the Dungan, it should further be noted that the document of Dungan origin in the Berlin Royal Library (see above, p. 890) is composed in a very corrupt Chinese.

In Forke's opinion, however, its solecisms are not such as might be perpetrated by an uneducated Chinese, but are in many cases not Chinese at all, suggesting that the Dungan are of alien origin. As a recent illustration of the intercourse between the Chinese Muslims and the 'Turki, cf. the story of Hidjayat-Allah (Apq Khojam) of Kishghar, who came to Hsi-nings-fu, in MS Hartmann 1 (Forke, 1880)

The process which dominates everything found within the Great Wall is one of adaptation to Chinese standards, of assimilation to the character of the yellow race—or 'black-heads,' as they like to call themselves. This process overcame the Muslims and many other non-Chinese in the country, and it was impossible that the Muslims should altogether elude its operation. The Chinese have a capacity for dissolving racial characteristics. This holds good even of physical qualities, for Chinese sentiment does not disown the alliances of native women with foreigners, while Muslim women cannot legally be given in marriage to non-Muslims. The resultant diffusion of Chinese blood among the Muslims is of vast importance, and we cannot but admire the tenacity with which the latter have kept themselves from complete absorption by the Chinese. In spite of a considerable degree of assimilation in external matters, the two peoples look at things from a fundamentally different point of view. Chinese (Hsi-ning-fu) (di) is supreme; for the Muslims tradition is all. Notable, too, is the contrast in certain traits of character. The Chinese is patient to a degree, and will put up with a great deal; the Dungan has an intense self-esteem, and is a dangerous man to offend. The difference reveals itself also in the outward bearing. The Chinese not seldom gives one the impression of being a dejected and downtrodden man; the Muslim carries himself proudly, and faces the world with a (Turkish) self-complacency. The relative physical debility of the Chinese may be due in part to the opium habit. Among the Muslims this is but rarely found; tobacco smoking is prohibited, and the drinking of wine and other intoxicants, which the stringent interdict of the law does not prevent in Western Islam, is quite inconsiderable among the Muslims of China. All this testifies to a very real cleavage between the Chinese and the Muslims, and is a constant reminder that the latter are not Han-yen, but something else.

What, then, are the Muslims of China, ethnologically considered? To this question there is no answer, whether or not we postulate a connexion between the name Hui-tzo and the Tu-tso (or Tso) of surfing the pass, with all its various transcriptions in the Chinese language (Chavannes, pp. 87-94). From the time of the earliest considerable invasions of Muslims, this region of many races has been overwhelmed with so many devastations that it is now impossible to speak of any single racial type. In addition to this we must also take into consideration the Muslim policy of incorporating people of other faiths, notably purchased children (cf. the present writer's note in Der Islamische Orient, i. [Leipzig, 1905]; more recently d'Ollone, in MM ix.). Such absorption of foreign elements must be regarded as a very important factor. In this connection we should note the suggestive remark of d'Ollone to the effect that the purchased Chinese children do not exhibit a uniform Chinese type, and that the homogeneity of the Chinese race is simply the resultant of those factors which can only be vehemently opposed, since in point of fact many who are not Muslims at all are no more Chinese than the Muslims themselves.

A distinct ethnological group is formed by the Salars, who live in Hsin-hau-t'ing (Playfair, p. 3110) on the right bank of the Hoang-ho, and in the surrounding villages, and who are also found on a section of the road between Hsi-ning-fu and Houchou. They show a racial character markedly divergent from the ordinary Chinese Muslims. In figure they are tall and spare, with nose large but not broad, eyes black and set horizontally, cheekbones not very prominent, face longish, eyebrows bushy, beard black and abundant, skin flattened behind, skin brown but not in any sense yellow. The Salars thus bear a striking resemblance to the Turki of Turkestan. Their chief peculiarity is their language, which may be described as a degenerate Turkish. Their style of dress is Chinese, but they are marked as a separate race, as they shave the head completely and wear a polygonal cap (tibie) of white colour. In religion they are strict Hanlrites, and show the utmost respect to their spiritual guides (okhona), many of whom speak and write the Persian language, but they are given to the use of strong drink. Even the lower classes are acquainted with the Arabic script. They do not burn incense in worship, nor do they tolerate the emperor's portrait in their mosques. This form of the Muslim faith is said to have emanated from a reformer named Ma-ming-hsin (Muhammad E'min), who preached to the Salars c. 1750, laying great stress on the practice of praying aloud (see below, p. 894), which led to serious disturbances. The Salars are daring brigands, and trample under the rudder of the upper Hoang-ho, with whom they also share a fierce hatred of the Chinese.1

(b) Marriage, family, kinship. — The sexual aspects of the religious law among the Muslims of China are regulated by the shari'ah—in the scholastic form developed in the Hanlithe school—which applies to all Islam, though here the separate ordinances are not very well known to the people at large, nor, even where they are known, are they very strictly observed. As to the degree in which the Chinese environment has brought about modifications in practice, we do not possess the necessary details of information; nor would such details yield a complete and uniform picture, since the influence varies greatly in different localities.2

1 Our authority for these particulars is Grenard, Mission, ii. 457. A somewhat different account is given by d'Ollone (R.M.M iv, 558 ff.), who says that the Salars are confined to twelve villages in the district of Hsin-hau, but are found both in the Hoang-ho, but that the bulk of their traffic is with the left bank, especially the town of Hsi-ning, in which, however, there reside only five Salar families: they wear a broad turban, but do not keep it perfectly, but retain the pigtail; they wear, not the polygonal cap, but the turban-like head-dress which they have taken part in various risings; and they assert that their original home was Samarghand.

2 With reference to the well-known canon allowing the Muslim to marry as many as four wives, and to have slaves as concubines, D'Ohny (Stud. ii, n. 4) writes: 'In China the Muslims are forced to submit to the law of the land and to pay the tax. This is undoubtedly a mistake in so far as it applies that
The like is true of the position of women in general. According to d'Ollone, the so-called law of veiling is not observed by Muslim women in China, who, with few exceptions, are free from it. Grenard indicated the fact, but noted an exception in the case of the wealthier classes. In Hope, however, d'Ollone found a different practice, the women there wearing a veil of black silk below the eyes, a custom which seems to the present writer to be connected with the sect of Ma-huang; further, they go on the street on horseback instead of in carriages. As regards foot-binding, d'Ollone notices no difference between Muslim women and Chinese women; he says they are not principally addicted, especially as the practice is very common. That a Muslim should take in marriage one of alien faith is not objected to; it is rather deemed a meritorious act thus to bring an unbeliever to the true religion. The Muslim woman, on the other hand, must not be given in marriage to a non-Muslim; such a union is regarded as the most heinous of sins.

In this matter, however, compromises are sometimes made, e.g., a marriage of a Turki prince of the City of Peking to a Chinese woman was referred to; and, when the present writer passed through Minjol (a day's journey west of Kashgar) in 1902, a Chinese with a Turki wife (in concubine) was presented to him. Illicit intercourse is not permitted in the home, and such entrance into the Muslim countries, with the strict legal penalty (forty whippings, or stoning), but it must not be supposed that any unusual laxity of morals prevails, and the unnatural vices common among the Chinese (see an instructive chapter in J. D. Maunoury, Superstition, crime et misère en Chine, Lyons, 1902, p. 185) are less prevalent among the Muslims. No special attention is devoted to the education of children (for the schools see below (d)). Two very prevalent features of family life are filial piety and ancestor-worship. The former is extolled in the narrative given in the Chinese-Arabic MS. edited by Forsk; the latter finds expression in the liturgical prayers for parents and ancestors, while the use is also made of pictures of ancestors after the Chinese manner. Social distinctions are in evitably fixed by descent, except in the case of the Prophet's descendants. The mischief wrought in other Muslim countries by surreptitious enrolment in the religious, political, and commercial movements among the Muslims of China. Nor does the generation of Swaydis appear to have assumed any unusual forms on Chinese soil, apart at least from the turbulence of entrance into the Muslim countries, which claimed to be a Swaydt, but who failed to win such prestige as the notorious sons and grandsons of Makhum Aqan (see above, p. 890). The relative indifference to Swaydis (Shariats) in China is explained by the popular belief that they are the most part converts to Islam or the descendants of converts (Dungans).

(c) Industries.—The industries in which the Chinese Muslims are engaged are (1) agriculture, (2) commerce (including handicraft and trade in goods), and (3) transit-trade. The Muslims do not take naturally to agriculture, but here the environment has asserted itself, inasmuch as the Chinese are pre-eminent an agricultural people, while the Muslims are largely engaged in the alien population with their own habits. Accordingly, the Chinese Muslim is everywhere one of the most industrious tillers of the soil, so that it was recently reported that those employed in the like is true of the position of women in general. According to d'Ollone, the so-called law of veiling is not observed by Muslim women in China, who, with few exceptions, are free from it. Grenard indicated the fact, but noted an exception in the case of the wealthier classes. In Hope, however, d'Ollone found a different practice, the women there wearing a veil of black silk below the eyes, a custom which seems to the present writer to be connected with the sect of Ma-huang; further, they go on the street on horseback instead of in carriages. The relative indifference to Swaydis (Shariats) in China is explained by the popular belief that they are the most part converts to Islam or the descendants of converts (Dungans).
and were quite unaware of his real relation to Islam. Having been ostensibly punished by 'dami-hunt' to K'ansu, he lived there like a 'hidden man' (i.e., without his proper name). On his death in February 1908, all his titles, of which he had been deprived at the instance of the European Powers, were restored, and his remains were buried with the highest honours at K'ou-yuen, his birth-place (R.M.I. vi. 560 ff.). Apart from adventurers of this stamp, whose exploits are recorded in contemporary histories of Muslims with regard as apostates, there is a far-reaching antagonism between the indigenous and the immigrant peoples. The Chinese realize the danger involved in the Muslim aspiration of an imperium in imperio, while the Muslims, enjoined as they are by the Qur'an to fight against the unbeliever, feel the ascendency of the latter as a heavy infraction, and from time to time the strain has found expression in open revolt. The most notable and most serious of these outbreaks were those in the north (K'ansu and Shensi) in 1851-74, and of the south (Yiin-nan) in 1856-72. It would be a mistake, however, to attribute these ruinous insurrections to religious motives alone, for racial animosity, and the hard conditions of life may have been the real causes. The antagonism between different social classes was certainly no less potent for the Mosques resemble pagodas, the mahab and minbar alone proclaiming their Muslim origin. We sometimes find two fortified castles near K'ang-hsi, and had a bodyguard of 500 veterans, who were the tenants of the surrounding estates which he had taken from Muslims. The local councils of K'ang-hsi and Lin-chou could not lift a finger without his approval. After his death in 1908, all his titles, of which he had been deprived at the instance of the European Powers, were restored, and his remains were buried with the highest honours at K'ou-yuen, his birth-place (R.M.I. vi. 560 ff.). It would be a mistake, however, to attribute these ruinous insurrections to religious motives alone, for racial animosity, and the hard conditions of life may have been the real causes. The antagonism between different social classes was certainly no less potent factors.
MUHAMMADANISM (in India) 895

Thus, e.g., within a mile to the north of Sung-p'ant-ting is to be seen the tomb of an akhun from Medina, who came to Sung-p'ant-ting in 668, lived for a time in Shen-si, and by his prayers saved the land from drought. He died there in 686, and his tomb is guarded by an akhun. Another tomb, somewhat smaller, is found within the mausoleum. The orthodox muliss inveigh strongly against this practice (RMM v. 439). D'Ollone thinks that the veneration accorded to the monument of the Hsin chiao sect (RMM ix. 553 ff.) is but this cannot be admitted, and, indeed, it conflicts with other statements of the same writer. As a matter of fact, the tendency to idealize is characteristic of the sect. As regards the religious position of the ethnocentrically distinct Salars see above, p. 892.

The idea of a khotfisht as a single individual invested with authority over Islam as a whole is much more ancient. Among the Sabuktagin, who occupied this part of the Gobi desert at the time of 'Abd-al-'Aziz it also prevailed. The tomb of 'Abd-al-'Aziz was a life-size statue (RMM ix. 561 ff.). Yet the efforts directed from Sambool in the latter half of last century were not altogether without result. Ya'qub Beg recognized 'Abd-al-Aziz as commander of the faithful, while Sulaiman, the Muslim king of Yunnan, appealed to him, as khotfisht—in vain, it is true—for assistance.

As the intellectual life of the Muslims bears the closest possible relation to their religion, the aim of elementary education is to inculcate the rudiments of religious doctrine, the children being taught by readings from the Qur'an and by short catechisms. In these exercises two languages are employed, both the national language and that of the Qur'an (or a mixed Perso-Arabic dialect). There is a considerable circulation of anthologies from the Qur'an, either with or without a Chinese translation, and booklets containing the leading elements of the creed, which are also found.

The life of the Chinese Muslims has no place for art. To anything in the nature of artistic activity only a single field is open—the Arabic script, which is often elaborated in pedantic forms suggestive of the Chinese method of writing and is being formed as in the native calligraphy (especially in epitaphs). The Muslims also erect orately written Arabic tablets, which, however, often show such a divergence from the common script that they are very difficult to read. Even the experienced E. Boclet mistook an r for a y (RMM v. 291).

(e) Political relations.—In China proper the Muslims have never secured an independent political organization, while in Persia in their period of highest prosperity (c. 1750) they succeeded in establishing only the short-lived Muslim government of Ya'qub Beg (see above, p. 889). The object of the Muslim rising in Kan-su and Shen-si (1663-74), which was annexed to the vast empire of China, Ya'qub Beg's success, was likewise conditional; but the movement proved abortive, and, in fact, no other issue was to be expected. The necessary condition of a permanent political organization is that it shall have a basis of nationality, and no such thing exists among the Chinese Muslims. The latter, as intermixed among the Han (Chinese), form, not a national, but merely a religious, aggregate, and all

1 The present writer possesses a copy of such a bilingual catechism.

- M. HAITMANN.

MUHAMMADANISM (in India).—Islam was introduced into India by the Arab invaders who entered Sind under Muhammad ibn Qasim in A.D. 712 and founded a Muhammadan State which was eventually absorbed in the Mughal empire; but this early Arab occupation was not the last. When the Mughal emperor Akbar died in 1605, the Sultans of Delhi and the Mughal conquerors of the rest of India did not begin until nearly three centuries later, with the raids of Sabuktigin and Mahmud of Gazana; but, however, in 1660, the provinces of Lahore and Sind were the only part of Indian territory that he beleaguered to his successor. The permanent extension of Muslim rule in India dates from the latter part of the 12th cent., when the Muslim conquerors of the north of India were able to found an establishment of a Muhammadan dynasty in Delhi, which continued to be a Muhammadan capital up to the extinction of the Mughal empire in 1858. The scope of this article being limited to religion and ethics, no account is taken of the political and social developments that may be given, though the intimate connexion between Islam as a religious system and the Muhammadan governments in India makes it difficult to consider them apart. A brief reference must be made, however, to the relations between the Muslim rulers and their non-Muslim subjects. The Muhammadan invaders at times during the early stages of the conquest exhibited a brutal intolerance towards the Hindus who opposed their armies, and ruthless persecution. The invaders razed temples to the ground; but, after the savagery of conquest was over, a certain amount of toleration was allowed to their Hindu subjects. The Arabs in Sind were, however, left in undisturbed possession of their religion and in the enjoyment of their old rights and privileges, and the late conquerors who founded kingdoms in N. India and the Deccan were generally too much occupied with the military consolidation of their empires and felt too little interest in spiritual matters, to turn their attention to the propagation of their own faith. Even under the settled rule of the Mughal, dynastic and financial considerations dictated their policy rather than consideration of the interests of Islam. On the other hand, the reign of several

- M. HAITMANN.
MUHAMMADANISM (in India)

monarchs were signalized by outbursts of fanaticism and the cruel oppression of unbelievers, their temples being destroyed and many of them converted by force. In Gujarāt Sultan Muhāmmed II of Khūtba begān his reign (1269-1287) with the fervent issue of his enactments against them. In Kashmir Sultan Sīkandar (1393-1417) acquired the designation Butshikan ('idol-smasher') by his ruthless destruction of Hindu idols and temples, and in Bengal Dālāl-ud-Dīn Muhammad Shāh (1414-31) made himself notorious by his persecution of unbelievers. Aurangzīb (1659-1707) attempted to carry out a policy of unification led to several acts of repression, and tradition attributes to him the destruction of temples. Shāh Shams al-Dīn Muhammad Bābur's conquests of Hindus in various districts throughout the whole extent of the Muḥāghal empire. The latest example of such fanaticism on the part of a Muḥāghal ruler was that of Tiṉal Sultan (1782-90), whose barbarities outside anything recorded of previous monarchs after the first conquerors. Apart from such outbursts of fanaticism, the rule of the Muḥāghals has generally been characterized by an attitude of toleration towards their Hindu subjects, and the adherers of the religion have often been closely drawn together by a spirit of unity and mutual respect.

The fact that the Muḥāghal dynasties in India were almost entirely founded by foreign invaders led to the current inquiry into the history of Islam; they brought with them a large number of foreign troops, and attracted to their courts military adventurers, poets, scholars, and others, who ultimately settled in the country. The foreign invaders, their descendants, Persians, Turks, Mughals, and Pathans—formed an important element in the total Muḥāghal population, and exercised a preponderating influence in the administration, the social organization, and the religious life. They received grants of land from the Muḥāghal governments, or in times of political unrest arrogated to themselves rights of ownership, and thus formed the nucleus of an aristocracy that looked down with contempt on the native converts. The missionaried efforts the conversion of whole tribes is attributed, and the saints, whose tombs are still venerated throughout all parts of Muslim India, were for the most part of foreign extraction. The sufi saints, the centres of religious influence and attract thousands of pilgrims every year; among the most famous are those of Kīwārā Kān, Muḥāmmed al-Dīn Chishti, Farīd al-Dīn Shāh Shāh Shams al-Dīn Muhammad Shāh, and Nūr al-Dīn Awhīyā (1235) near Dīlī, and Shāh ʿĀlām (1475) near Ahmadābād. The great family of Bakhārī Sayyids, who settled in ʿUsh in the 13th cent, may be taken as a typical example of the wide-spread influence exercised by some of these foreign immigrants. The effect of the stream of foreign immigration has been to keep India in close contact with the main currents of theological thought and speculation in Islam, and the religious beliefs and practices of the educated section at least of the Muslim population, whether Sunni or Shīʿah, have tended to conform to those in other parts of the Muslim world. A large part of the religious literature has been written in Arabic, and still more in Persian—both languages foreign to India. Many of the study of the languages and the religious theologies acquainted with the writings of Muslim thinkers outside India. These foreign influences have thus prevented Islam in India from taking on a provincial character, so far at least as the literate are concerned. But among the uneducated and the lower classes of Hindu origin, especially in the country districts remote from the centres of Muslim culture, many survivals of older cults are to be found, and there his Muḥāghal differs little but in name from his Hindu neighbour. He continues to worship the gods of his ancestors—particularly the village gods— whose rites for the cultivation of the soil, and the deities of disease, especially Sitā, the dreaded goddess of smallpox—and to take part in the Hindu festivals connected with the changes of the season, such as Ḥolk, the festival of the spring equinox, and Dānśā, the festival of the autumn equinox. Against such Hindu beliefs and practices the orthodox have at all times protested, but the first active campaign against them appears to have been started by Sayyid Muhammad Bābur, the father of the second decade of the 19th cent, began to disseminate in India the doctrines of the Wadhōhī reforming movement. The writings of a later religious reformer, Maulārī Raiṭhānī, ʿAlī (1874), were especially influential in combating the observance of Hindu rites and ceremonies by Muḥāghals. In more recent years, the greater facilities of communication between one part of the country and another, the spread of education and the consequent growth in the number of theological text-books have increased the tendency towards an orthodox uniformity, but the low level of education among the masses of the Indian Muḥāghals still keeps a large proportion of them ignorant of the tenets of their religion.

The abiding influence of Hindu institutions on the converts to Islam is still further shown by their rejection of the ʿshārīʿah in favour of their tribal ordinances in regard to marriage and inheritance. As is well known, Islam is not merely a system of religious dogma but also a system of legislation, but the Muḥāghalized Rājputs and Jats in the Panjāb and the Māphīlas on the west coast of S. India have always continued to follow the customs of their Hindu ancestors in preference to the Muslim law of succession.

The influence of Islam in India has not been confined to the Muslims themselves, but may be observed in sections of the population that stand outside the Muslim community. There can be little doubt that the Hindu reform movements of the 15th and 16th centuries, especially those connected with the names of Kaṅbhīr and Naṅā, owed much to Muslim influences. Many low-caste Hindus, especially the Dāns, the ancestors of modern Hindus, especially the Dāns, the ancestors of modern Indians, were represented by thousands of Hindus to be the only divinities that they worship. An influence of a different character was that of the Mughal court upon the higher ranks of Hindu society, resulting in the adoption of many Muḥāghal habits and observances such as are generally significant of adherence to the faith of Islam.

As an ethical system Islam in India presents in many ways a strong contrast to Hinduism. Both, it is true, cherish an ascetic ideal, pursued by the few, and Hindu and Muslim ascetics have often found that they have much in common, and both have often received the veneration of pious adherents of the rival creed. But the stern Puritanism of Islam has left the most indelible marks on the characteristics of Hindu conduct which are set forth in the Āvīśaṇaṇa and illustrated on such Hindu temples as have escaped the iconoclastic wrath of outraged Muslim sentiment. This austerity of Muslim morals runs through the whole of their social life, and lends to their outward bearing an aspect of dignity and self-respect such as is depicted by a constant recognition of moral
MUHAMMADANISM (in Persia) — 587

obligation; at the same time it regulates women to the seclusion of the zenana, depriving social intercourse of the charm of their society, and depresses annuities that other countries find harmless, that the authority of the majority of moral favour is capable of producing such types as that of the judge who ent himself off from all human associations lest his judgment might be influenced by consideration for a friend, the hard-worked administrative officer who gave away the whole of his official salary in charity, and the scholar who repented in bitter tears because he had made a profit out of the sale of a work on religion. The moral sanction is sought in religion, and moral principles are that the Qur'an, the traditions, and the works of authoritative theologians; maxims of conduct are also frequently quoted from the poets and Sufi writers. Treatises on ethics, such as Akhlaq-i-Nasir, Akhlaq-i-Mishri, etc., are read by the learned, and similar works — e.g., Akhlaq-i-Jahangiri — were compiled in India, and acquaintance with them has been too restricted for them to have exercised much influence on the general moral conduct of the Persians. This legal and didactic view of ethics may at times degenerate into formalism, and a low level of moral achievement may subsist side by side with fervid professions of piety; but the tendency of modern Muslim society is towards a more distinctive ethical basis for conduct and less dependence upon religious authority.

Within the narrow limits of this article it has not been possible to do more than briefly indicate something of the characteristics of Islam in India. See, further, MUSLIMS (Muhammadan), Sects (Muhammadan), LITERATURE. — No comprehensive work has yet been written on the religion and ethics of the Indian Muhammadans. The reader will find a number of articles in the following periodicals as JASE (Calcutta, 1852 ff.); Calcutta Review (Calcutta, 1841 ff.); Journal of the Bombay Asiatic Society (Calcutta, 1805 ff.); Revue du monde musulman (Paris, 1900 ff.); EI (Leyden, 1868 ff.). For the bibliography of historical works see The History of India as told by its own Historians; The Muhammadan Period, ed. from the papers of H. M. Elliot by John Dowson, London, 1867-77. A vast amount of material is to be found scattered throughout the official publications of the Government of India; for bibliography see F. Campbell, Indore Catalogue of Indian Official Publications in the Library of the British Museum, 2nd ed. (1900). Among separate works may be mentioned: J. H. García de Tassy, Memoire sur les particules grammaticaux de la langue arabe (Paris, 1806); Mrs. Meer Hassan Ali, Observations on the Muhammadans of India, London, 1825; W. W. Hunter, The Indian Muhammadans, 1st ed. (1841), 2nd ed. (1874); J. J. D. de la Cour, Histoire des Musulmans de l'Inde, 2nd ed. (Paris, 1838); M. M. M., Essais sur les Musulmans de l'Inde, 1st ed. (1819). A more detailed bibliography will be found in the present writer's article, 'India' in EI.

T. W. ARNOLD.

MUHAMMADANISM (in Persia). — Islam began in Persia very early. Within a year of Muhammad's death the Muslim armies came into collision with the Persian power, and the conflict lasted for thirty years, extending from the Tigris to the Oxus. The last Zoroastrian dynasty was overthrown in A.D. 750 in the region south of the Caspian. The conquest of Islam to Persia was a slow process, and the disappearance of Zoroastrianism was gradual. The intellectual life of Islam was very soon enriched by Persian scholars. It is significant that after the Arab conquest Nestorian influences were successively proscribed among Iranians described as pagans.1 Still, Islam was identified with a foreign invasion — a fact that influenced subsequent history.

The cause of the retained adherents in Persia from the first, perhaps because资讯 married a Sassanian princess. In the Umayyad period revolts were frequent, many of them Khiarjite in origin. The

MUHAMMADANISM (in Syria, Egypt, and Mesopotamia).

Even among the Sunnites (especially the Kurds) religion centres much in the cult of the Shiakhis, who are connected with ulama and mullahs. Many of these are connected with the dervish orders, especially the Naqshbandis.

The great religious principle of the Shiites is the veneration of the family of 'Ali and the doctrine of the imamia. While every community numbers its hujjas, the great shrine for pilgrimage of the living and burial of the dead is Karbala, which, moreover, is the place of religious authority, the seat of the chief mujtahids, and the centre of theological education and learning. In every city there is a moharras (college), but an ambitious student completes his training at Karbala, or at one of the neighbouring shrines that share in its importance. The unifying power of such a centre is very important. The other shrine of importance is Mashhad. For the mass of the people the great religious observance is the commemoration of the battle of Karbala on the 10th of Muharram and preceding days. On the spectacular side it is the carnival of the populace, and the timid disapproval of the educated is unavailing to check continual increase of the excesses of grief in cutting the head and beating the breast. Regular passion-plays are uncommon (cf. art. DRAMA (Persian)). Frencbing has a prominent place in the mosque life, and the great topic for sermons is the life of the Imams. Ghadir Bairam (when Muhammad is supposed to have designated 'Ali as his successor) is at least equal to Qurbán Bairam in popular estimation. The Sayyids rival the mullás in authority and claim the fifth of field and herd. So far the description applies to all Shi'ite sects.

The Mutasharís, who are by far the most numerous sect, regard the mujtahids as the only representative of the Qá'im, or hidden Imám, and only inasmuch as they interpret the sharí'ah (canon law). They are conservatories and traditionalists. The Shiakhis, Zahábs, and minor sects hold that there is a representative of the Imám, who possesses in some degree his divine authority. They differ as to who that representative is, and in other matters. The Shiakhis are the intellectual mystics, interpreting, e.g., the mi'raj (Muhammad's ascent to heaven, deduced from Qur'an, xxvii. 19) in a spiritual way. Zahábs resemble the dervishes in ascetic practices and in the use of the dhikr, both fází and qálí (spoken and silent).

'Ali Hâshim and Bahá'í, widely different in other respects, may be classed together as being Muslim in only a modified sense. The former recognizes none of the Imams except 'Ali, care nothing for the sharí'ah, pay no attention to Ramadan or the prayers, and have their own yearly feast, in connection with which a country meal is eaten. Among Shi'ites they conform more or less, but in private they claim that they are not Shi'ite. They believe in an incarnation, but it is not very clear whether the connexion with 'Ali is not a blind. They call themselves Abal-i Haqiqah ('people of the Truth'). In practical life the reverence paid to the Sayyids, or mulla, is great. Their religious centre, where the head of the sect lives, is near Kermandshah. They are numerous both north and south, among the Kurds, Turks, and Persians, and especially in the villages and among the nomads, and are found in smaller numbers in the cities. The Baha'ís are too well known to require description. For them Muhammad and the sharí'ah are superseded. They are found in the cities and among the more educated classes, less often in the villages, and not at all among the nomads. They are chiefly found in Persia. Nevertheless, in the numerous societies of the country, their influence is not to be measured by their numbers. The Azalis are practically extinct, and the Baha'is, with insignificant exceptions, follow 'Abbas Efendi. Both these sects practise taqiyah, or religious deception.

The Safis (or 'Arifs, 'pirudiv') are the philosophical and intellectual devotees of religion, belonging, it may be, to some sect, but not often to the Mutasharís. Among them are many dervishes. They usually recognize some one as their guide (muraqbih). The most popular poets among them are Jalá'il-Din, Shams-i-Tabriz, Farid al-Din 'Attar, and Hâfiz. Dervishes in Persia are loosely organized, and monasteries are almost unknown. Many dervishes will claim to be khwáshah ('abject, 'humble'), others to be followers of Sháh 'Abbas Alláh or of 'Arif 'Ali Shah, a saint of recent date.

The organization of religion is democratic, and in the last analysis it is popularity that determines rank and authority. The government exercises a control by granting titles and recognition, and the mullás and mujtahids, both as authorized exponents of the sharí'ah and as popular leaders, are apt to influence government and sway the people, and are susceptible to the influences that affect the people. Low birth is no bar to ecclesiastical advancement. The dervishes are to some extent controlled by the appointment from them of a qádî, or civil judge, the eminence of which, in the main city, he has charge also of jugglers, mountebanks, snake-charmers, etc.

The influence of religion in moral and social matters is not easily estimated. Of course it is pervasive. The uniformity among the bulk of the people is that in the mosque schools. The pilgrimages promote intelligence and national unity. On the other hand, the shrines are centres of vice, the mullás are notorious for venality, the sharí'ah is an obstacle to progress, and religious teaching often makes wrongdoing easy rather than difficult. It may be doubted whether those who desire moral or social reform look to religion for inspiration and aid. The least religious classes are the educated men of the Imamí sect.

An influence at work that must affect the future of Islám is the rationalization of religion. It takes the form of reducing religion to the minimum of doctrine, equalizing all forms of revelation by admitting truth in each, but granting fidelity to none. Another tendency is what the Persians call tab'í ('naturalistic'), denying all revelation and taking an agnostic position on the question of God's existence. Another growing influence is the renascence of Turkish literature in the Ahdarbaijání dialect in Tiflis and Baku. The reaction due to foreign dominance is also to be reckoned with. The influence of Western civilization is in many ways disintegrating. The influence of Christianity mediated by church and state, politics and literature, and missionary effort must not be forgotten. This has its part in Bábism and still more in Bahá'ism.

See, further, artt. BÁB, BÁBIS, SHÁHIS, SÚFISM.

W. A. SHEDD.

MUHAMMADANISM (in Syria, Egypt, and Mesopotamia).—A. SYRIA.—Syria and Palestine have always formed one of the outlets for the superfluous population of Arabia. The invasion of the country by the Arabs in the first half of the 7th. cent. A.D. was only one of a series of incursions-
MUHAMMADANISM (in Syria, Egypt, and Mesopotamia) 890

which had been going on from time immemorial. The conquest, which took place in the Caliphate of 'Omar, only a year or two after the death of Muhammad, soon ended. On this occasion the Caliph 'Abd Allah (originally a Crusaders' church), with very rare exceptions, and then only by a special permit.

Under the Umayyads (A.D. 661-750) Syria attained to the hegemony of all the Arab States, and Damascus became the centre of an empire stretching from India to Spain. Mu'awiyah, the first of the line, had been governor of the country under the Caliph 'Othman; it was to the Arabs of Syria that his dynasty owed its birth and stability, the representatives of the Eastern Roman empire. Moreover, it was only a score of years since the Persians had wrested the country from the Greeks and held it for ten years. The Persian Wars had defeated the exchequer of Constantinople, and Heraclius had been compelled to withdraw the wondrous subsidies from the frontier tribes—a fact which made them all the more unwilling to throw in their lot with the Arabs. When Byzantium's treasury had been emptied, they did not come altogether as invaders, and to the indigenous population the issue was not subjection so much as a change of masters; and it was not impossible that the new masters might be better ones.

To the Arabs the conquest of Chaldea was motivated by the lust of plunder, the conquest of Egypt was to a large extent a necessity—had it been acquired a year or two earlier Medina would have been surrounded and reclaimed. But the conquest of Syria was largely a matter of sentiment. Within its borders were contained nearly all the holy places of Islam. Had and Salih had ministered to tribes within the boundaries of Arabia, but nearly all the holy places of Syria were, through the conduct of their rulers, above all Jesus—had lived and died in Palestine. Muhammad, too, had visited Syria, once as a mere boy, with his uncle Abu Talib, and again as the agent of Khadijah. Jerusalem had been the goal of his mysterious night-journey, from which he had ascended to the Divine Presence, and it was from Damascus that he had turned away, saying that one could not enter Paradise twice. The reverence of the Arabs for Jerusalem is shown by the fact that it was the chief city of Syria, and the most visited of the holy places, under the guidance of its patriarch Sophronius. He is said to have identified the site of Solomon's temple, and he erected a small mosque, probably of wood and clay, for the worship of the Muslims of Jerusalem did not become the political capital of the province of Palestine. For that Ramleh was founded somewhat later. But the sacred character attributed to the ancient city by the Arabs appears in the name of the city itself, its name being derived from the Arabic word *sajdah*, meaning prostration or adoration.

The sanctity in the eyes of the Muslims even of Jerusalem is, however, surpassed by that of Hebron. The stone over the tomb of Abraham, Isaac, and Jacob, with their wives, as well as of Joseph. Hence it used to be named Masjid Ibrahim ('Abraham's mosque'), but now it is always called Al-Khalil ('the friend'), abbreviated from 'the city of the friend of God.' Hebron fell into the hands of the Crusaders in A.D. 1099 and remained so until it was retaken by Saladin in 1187. The Crusaders do not seem to have had much scruple about entering the sepulchral chambers, but the curiosity of the Muslim does not exceed his sense of reverence, and one of them mentions with a feeling of the deepest awe that he had conversed with one who had with his own eyes seen Abraham. At the present day Europeans are not permitted to enter the mosque (originally a Crusaders' church), with very rare exceptions, and then only by a special permit.

The Caliphs of Damascus, as well as his father, held high office under these Arab rulers of his native city, and the panegyrist of the Umayyads was the Christian poet al-Akhlaq. Moreover, it was not that these Caliphs merely made use of their Christian subjects,
MUHAMMADANISM (in Syria, Egypt, and Mesopotamia)

whilst ignoring their religious creed. Questions of dominion, and the religious freedom they had to the Parthian and Caliph, and when the country was recovered for the Eastern empire by the conquests of Heraclius, the change of masters was a change for the worse. The natural craving of the Egyptian for a strong arm on which to lean had shown itself in the height of theology in their dedication of Jesus Christ, which was the basis of their whole-hearted attachment to the Monophysite doctrine; when, therefore, Heraclius sought, through his instrument Cyrus, to force upon them the orthodox of formula, and at the same time to increase the revenues obtained from the taxation of the country, the attempt was met by the Copts with dogged resistance, culminating in the flight of their patriarch Benjamin. It was owing to this prevailing discontent that the conquest of the country by the Arabs was a comparatively easy matter, accomplished within a couple of years, and with not more than a handful of troops. 'Amr, who had planned and carried out the expedition, became the first governor of the country. He at once granted religious toleration to the people, whose disputes he did not understand; he restored the Coptic patriarch to his office; and he, at any rate, did not take advantage of the Norman government was removed from Alexandria to the fortress of Babylon, close to the modern Cairo, around which a town, called Fustat, soon sprang up. The southern boundary of the province was at the time the Christian kingdom of Nubia, with which the Arabs concluded a treaty.

The Copts did not at once go over to the faith of the conquerors. Probably they believed that the occupation would be temporary, as that of the Persians had been more durable, and which the Umayyads ruled the Muslim world from Damascus was the most glorious in Arabian annals, and it is not without significance that it was after the last Caliph of the line had removed the capital to his native town of Harran that the dynasty fell and was replaced by that of the 'Abbasids.

With the fall of the Umayyads the Arabs ceased to be the ruling race and Syria became one of the provinces of the empire, not specially distinguished in any important aspect. The breakup of the Caliphate, with its resulting chaos, Syria became, with its many holy places, the battle-ground of Christianity and Islam. When it was prosperous and well-governed, it was generally the home of converts from other religions, and in public order, to see that justice was executed, and to collect the revenues. This was pre-eminently the case in Egypt, to such an extent that the newcomers, professing various religions, did not scruple to take over even the seals of their predecessors in office, on which was frequently engraved the figure of a wolf or other animal—a rather hard nut for modern writers of Hebrew history to crack. The wise tolerance of the Arabs is shown by the fact that not only were their official documents written in Greek and Coptic as well as in Arabic, but many important positions in the government were filled by Christian natives of the country. No doubt, complaints of oppression were not wanting, but what oppression there was seems to have been due to the system which the Byzantines had bequeathed to the Arabs rather than to the manner in which the system was carried out by the latter, and sometimes the fault lay with the native intermediaries.

Once more it fell to 'Amr to become the conqueror of Egypt, this time on behalf of the Umayyads, in whose hands it remained for nearly a century (A.D. 640-750). The tragic fall of the Umayyad dynasty and the massacre of their house
made a deep impression upon the Christian population of Egypt, and it is not without significance that it was in Egypt that the last of the Umayyad Caliphs sought shelter from his enemies. For a century the 'Abbasīds continued to send Arab governors to Egypt, and it was not until the year 316/929 that apparently the Christian elements began to be set up in the country.

Under the two centuries of Arab sway Egypt appears to have enjoyed a period of comparative prosperity and good government. The governors were no doubt often absent, but their numerous papyri show to have been a just, if strict, ruler. Moreover, not only was there no religious persecution of Christians by the Arabs, but these had rescued the native Jacobite church from the hands of their co-religionists, the Greek Melkites, the free-lance nature of the Belawī always leading him to seek the advantage of the situation and to subserve his own interests also. The Arabs even discriminated in the taxation in favour of the Jacobites as against the Melkites to such an extent that not a few of the latter went over to the native church. The first destruction of the Copts by the Arab conquerors is said to have been inflicted by the Umayyads at the beginning of the 9th century. The Moslem government had extended the tolerance. His reign is the culmination of the period of the dynasty, although it was considerably later that the prayers were said in the name of the Fatimid Caliphs in the 'Abbasid capital itself, but only for one year (A.D. 902) in the 'Aṣṣid state of feudalism. The people were settled on the land, and many of the papyri are taken up with the capture of some fugitive who has escaped from his oppressors. The latter were the so-called Copts, as the Copts are also known to have been forced to deliver them from their feudal lords, by converting these into mere tax-gatherers for the government.

The purely Arab government under the direct supervision of the Caliph of Cairo was followed by a succession of dynasties of Turkish origin, the Ṭūlūnids (A.D. 868-905), whose capital Qaṭā‘i, between Fustāṭ and modern Cairo, was famous for its splendour, and who for a quarter of a century ruled Egypt as well as the Levant, and, after a brief interval, the Ikhshīdīds (A.D. 933-969), who also ruled both Syria and the holy cities of the Hijāz, Mecca and Medina. The Axubans did not leave behind them much in the way of architecture, but a type of mosque was evolved which was the occupation of the country. The so-called 'mosque of 'Amr' may at least indicate the site on which that of the first conqueror of the country was built, but the latter was a building of very much more modern character. Built in Christian tradition upon the foundations of the Church of the Redeemer in Copenhagen, is still one of the sights of Cairo. Ibn Ṭūlūn's brilliant but unfortunate son also resembled the late Khedive Ismail in his devotion to building and public works.

It was, however, under the Fātimids that Egypt rose to the height of its greatness. Claiming descent from Fatimah bint al-Mu‘izz, his first wife, with a dome superimposed and a minaret round which winds an external staircase resembling that of the Church of the Redeemer in Copenhagen, is still one of the sights of Cairo. Ibn Ṭūlūn's brilliant but unfortunate son also resembled the late Khedive Isma‘il in his devotion to building and public works.

Of the dynasty, proclaimed himself Caliph, in opposition to the 'Abbasid Caliph at Baghadad, and founded a new city close to the old capital, which he called Al-Qāhirah ('the victorious'), the modern Cairo. The name bears a curious resemblance in sound to that of the ancient Egyptian town of Ptolemais (Rhakotis in the same neighbourhood). The heterodox peoples, the Fātimids were enlightened rulers. In spite of famine at home and the inroads of the Coptic Christians (q.v.) from Syria, they quickly consolidated their empire over all the countries bordering upon the shores of the Mediterranean, from Algeria to Syria, the holy cities of Arabia also acknowledging their sway. Security of life and property led to a great increase of population. Commerce was flourishing, and the country was a centre of learning. The Fātimids were propagators of the Persian Darzlih and the Caliph proclaimed himself the incarnation of all the divine honours. He disappeared, but his principles were propagated in the sects (see Sects [Christian]). A persecution was also instigated against both Jews and Christians, in whose spirit not those who allowed the early Christians suffered for refusing to acknowledge the ambition of the Frankish and other Roman emperors.

The most enduring benefit which the Fātimids conferred upon Egypt and upon the whole Moslem world was the founding of the so-called State Bank, was the so-called State Bank, which was transformed into a college and hospital for the poor by 'Aṣṣid. The instruction imparted there is not now known. Of this period little is known, and by a curious irony the college did not attain to full usefulness until it came under the rule of Sunni, or orthodox, masters.

The annexation of Egypt by Saladin in the year 1169 and the consequent suppression of the Fātimid by the Ayyūbid dynasty, naturally led to the immediate abolition of the Shi'ite faith of the descendants of 'Ali and the establishment of the orthodox Sunni prefect, Cairo, in the Academy of Al-Azhar by Sultan Saladin, in 1180, which was the first of its kind in Egypt. It is of the four schools of doctrine which are recognized as orthodox by the Sunnite Muslims, the one

which first prevailed in Egypt was that of Mālik ibn Anas († A.D. 781). It is the accepted ritual of the rest of N. Africa, but in Egypt itself it has been replaced by that of his friend and disciple Shafi‘i, who died in Fustat in the year A.D. 819, and whose tomb is visited still by the pious near the Mokattam Hills. With a view to rooting out the Shi‘i doctrines and planting in their stead the orthodox faith, Saladin despoiled the Azhar of many of its privileges and endowments, and founded in its place a mosque and college known by Fumān and the Imām Shafi‘ (A.D. 1091), at the same time instituting missions to the outlying districts for the propagation of the true faith. The Azhar, however, quickly rose again into favour with the great and benevolent, and it is from the Ayyubids rather than from the Fatimid period that its career of brilliance and usefulness takes its beginning. With the coming of the Mamluks (1250-1517), who succeeded the Ayyubids, the Ḥanafī school (called after Abu Ḥanīfah, + in Baghdad, A.D. 767) came into prominence, and still more under the Ottoman Turks (from 1517 on). Being the least strict of the four schools and also the most inclined to monarchy, it was naturally favoured by the government, whilst the Shafi‘ite remained throughout the学校 of the last of the four orthodox schools (founded by the fanatical Ibn Ḥanbal, + 855), it has never taken hold in Egypt, and its students in the Azhar have never been more than a handful at the most.

Mean time the Azhar University, which may be considered the intellectual barometer of Egypt, grew in importance and splendour by leaps and bounds. In the West the conquests of the Christians ending in the expulsion of the Moors from Spain and Sicily and by far the larger part of Mesopotamia (1492) and the incursions of Jenghiz Khan at the beginning of the 13th cent. and of Timūr Lenk (Tamerlane) at the end of the 14th in the East, left Egypt untouched. Thus, when its rivals in Cordova and in Baghdad had been swept away, Cairo remained the undisputed mistress of Muslim learning and culture. Both its professors and students were drawn from all parts of the Muslim world, a preference even being given in some cases to those who wholly or partly abandoned the native religion is cosmopolitan in his habits; he visits all countries where he may hope to pick up some crumbs of knowledge or obtain a diploma from some world-famous doctor; and the fame of the Azhar is such that students who include many of these travelling students to settle in Cairo, and sometimes to lecture in its college. The best known of these is probably the philosopher-historian Ibn Khaldun, who was a native of Tunis and was given posts in the government not only of that country, but also of Fes and Granada. He then came to Cairo, where he was given the office of qādi of the Malikīs. From there he paid a visit to Timūr Lenk at his camp in Syria, and finally died in Cairo in A.D. 1406.

But, while the Azhar may be considered as holding aloft the torch of learning to the whole world, both Muslim and Christian, up to the period of the Renaissance in Europe, it must be confessed that after that epoch it became a stronghold of obscurantism. This is evident from the books which continued to be studied there. The ancient poetry, which is the whole literature of pre-Islamic Arabia, was unheard of, and even the Assemblies of the whole Ḥarānī University were translated. A study was theological (including jurisprudence) or grammatical. Even the original texts of the Qurān and the Traditions of Bukhārī were not studied so much as commentaries and super-commentaries upon them. Mathematics, natural philosophy, history, and geography were ignored. In other words, the Azhar, like the University of Fes, continued to be a medieval school after the Middle Ages had passed away.

Egypt was one of the first homes of Christian monasticism, and this religious tendency of its people showed with striking effects. With a view to rooting out the Shi‘i doctrines and planting in their stead the orthodox faith, Saladin despoiled the Azhar of many of its privileges and endowments, and founded in its place a mosque and college known by Fumān and the Imām Shafi‘ (A.D. 1091), at the same time instituting missions to the outlying districts for the propagation of the true faith. A study was theological (including jurisprudence) or grammatical. Even the original texts of the Qurān and the Traditions of Bukhārī were not studied so much as commentaries and super-commentaries upon them. Mathematics, natural
vices rather than the virtues of Europe. Isma'il laid down railway and telegraph lines all over the
country. Under Tanfiq slavery largely disappeared, and polygamy is fast becoming a thing of the past. From Tanfiq also dates the liberty of the Jewish and Moslem vices, and the legal prohibition of mourning (which generally means Turkish), conservative, or
progressive. The best Christian newspapers are
eplied by Syrian immigrants. There are three or
four journals published by and for women.

In countries, is looked by the Khedives naturally reacted on that stronghold of
conservatism, the Azhar University. Incredible as it may appear, the instruction given there con-
tinued on the same lines as in the 13th century. To
meet present-day needs the Gordon College was
founded at Khartum, and also a modern university
in Cairo, but the latter has practically no students.
Meanwhile the students of the Azhar, who have
always been loyal and have not rebelled against the
law, used to work for years, in 1909 went on strike,
with the result that some concessions were made
to modern ideas. The last century in Egypt, how-
ever, can hardly be fairly considered as an example
of Mohammedanism. By, as, all French Hous^ of
egypt, European, although the instruments putting them in
force were Muslim.

On the whole, it may be affirmed that Muham-
madanism in Egypt has, considering the times and
conditions, shown remarkable progress and enlighten-
ment. Even at the period of conquest they did
not put in force the iconoclastic theory of their faith,
and under the Mamluks, and even under the Fatimids, stone and metal work are, as may be seen
by the specimens in the latter in the museum at
South Kensington, of a very high order. Neither
was there any scruple about making representations
of living creatures. Ibn Tulun caused two
plaster lions to be set over one of his gateways.
Saladin introduced the eagle as an ornament in
design. On one ever, of the year A.D. 1232, in
the British Museum there are over one hundred
animal figures. It was from the Mamluk artists
of Egypt and Syria that the art passed into
Europe. In architecture, too, the Mamluks
excelled. Nearly all the mosques of Cairo origin-
ated in their period, and certainly all the finest, not
the least remarkable buildings being those of one
of the Mamluks, and rule, Ma'mun, who died in 1260,
and yet it is on two of the oldest mosques, those of
Ibn Tulun and of Hakim, that are found the supposed
beginnings of Gothic architecture. With the com-
ing of the Turks a period of decadence supervened,
which was only intensified under the Khedives.

With regard to their moral qualities it can be said
that the Muslim rulers of Egypt, with the excep-
tion of the Caliph Hakim, were not worse than
Muslim rulers elsewhere; Saladin and a few other masters of the country were notable
for their probity. The ancient monuments of Egypt still witness to the fact that the Arab conquerors of the country were not ruthless fanatics. The Coptic Church was
not exterminated, as Zoroastrianism practically
wants, and there was no wave of Islamisation at
the outset. The native churches in Cairo are more magnificent than the mosques. One can only hope that the accounts of the persecution, especially under Hakim, have been exaggerated; but, even if they
are literally true, they would not prove that the Muslims treated Jews and Christians much worse
than they treated another. It is certainly
remarkable and significant that, at the time of the
British occupation, the Copts took the side of their
former masters, thus bringing about an inward
of educated Syrian Christians. British writers do
not give the Copts a very high character, and much
prefer the Muhammadans in many ways; but this
may be the result of ages of subordination. For the
present, it is more than doubtful whether a
Coptic government would not be more corrupt
than the Muhammadan has been. The amuse-
ments of the people consist in smoking hashish
(Cannabis Indica), which, being intoxicating, is
forbidden, watched by police inspectors, and
printed to songs and stories. All these are degrading
to both spectators and performers, and it would be
well if they could be put down by the government.

The great want of Egypt, as of all Muslim
countries, is books. It is easy to see that the
Copts are not given to litigation, and that the

Literature.—The most reliable information in regard
to present-day Egypt is to be obtained from Lord Cromer's
Modern Egypt, London, 1898, and from his and his successors' annual Reports to the British Government (1888-98), as well as
those of the Education and other Departments of the Govern-
ment; see also A. M. Milner, English and Egyptian,
London, 1892; much information is also obtainable in E. W.
Lane's notes to tr. of The Thousand and One Nights, London, 1829, and the Novels and other
Egyptian, Egyptians, do, 1829; also Ibrahim Hilmi, Literature of Egypt
and the Sudan, do, 1880-85; H. J. Massy, Bibliotheca
Aegyptia, Leipzig, 1880-90; J. R. Pusey, Classical and
Egyptian, Cairo, 1821; K. Voller, in Minerva for 1884

C. MESOPOTAMIA.—In the first quarter of the
7th cent. A.D. the Persians had conquered Egypt
and Syria, and the Eastern Roman empires for the
moment, almost limited by the walls of
Constantinople. By a mighty effort, however,
Heraclius drove the enemy from his provinces and
the Persian empire was in its turn completely
broken. This was the opportunity of the Arabs.
Chaldæa became an easy prey, and in half a dozen
years the empire, which under one dynasty
and another had witnessed the might of Greece
and Rome for a millennium, had ceased to
exist.

The sudden collapse of Persia is explained by
Arab writers by the decadent condition of the
country, the effeminacy of the people, the tyranny
of the great landowners, and the chaotic state of
the government which led to the outbreak of the
hardy nature and simple habits of the Arabs.
But equally important is the fact that the popula-
tion of Chaldæa was itself Arab. The Lakhmid
kings, whose capital was at Ur, near the ancient
Kufa and the present Najaf, were, like the
Ghassanids on the other side of the Syrian desert,
immigrants from Southern Arabia. Mesopotamia
itself was peopled by the tribes of Taghilb, Iyad,
and, further to the west, Nimir; and at Dnna, in the
Jurt, on the route to the rubeh, the
Ephrates, was settled a branch of Kelb, the tribe
which so influenced the Umayyads in Syria. All
these tribes made a profession of Christianity;
but how lightly their religion sat on their
keads, is shown by the nonchalance with which the tribe
of Taghilb fell in with 'Omar's stipulation that they
should not bring up their children in the Christian
faith. Accordingly, when the Muslims set out to
invade Mesopotamia, they met with little opposi-
tion and with some assistance from these tribes.
The ties of blood proved stronger than those of
religion.

Thus Mesopotamia quickly became a Muham-
madan country, and, being peopled largely by
Arabs of the tribe of Qurash, it rapidly assumed a leading place in the Muslim world, and remained for three centuries, even when the political capital was transferred, the intellectual and religious centre of Islam. It was generally divided into two provinces—Iraq, the southern half, its most northerly town being Takrit, and the northern portion, Jazira (the Peninsula). Much the more important of the two provinces, from the point of view of the history of the faith, is Iraq. It has always been the storm centre of S.W. Asia, from which the majority of the great schisms and disputes arose, and it remains to-day the spiritual heart of Islam. In the days of Ali himself the produce of the Khawarij (or Seceders), whose main principle was to oppose the established order of belief and of society, and to champion for a theocracy, by which they really meant anarchy and nihilism. Often apparently exterminated, they continued to be a thorn in the side of the recognized Caliphs for many a day. Baghdad itself was originally built and fortified to protect the person of the Caliph against the fanatic Revolts, or seer of Khurasan (A.D. 722). In the first half of the 9th cent., three of the Abbassid Caliphs threw in their lot with the Mutazilah, or party of freedom of thought, and instituted a vigorous persecution of the orthodox but in the latter part of the same century a servile war broke out in the country to the north of the Persian Gulf and continued for fifteen years before it was quelled. With the 10th cent. the incursions of the terrible Carthamus began, who, though originating in Bahrain, quickly overspread and devastated Mesopotamia, Syria, and Egypt (see CARMATIANS). Meanwhile the Turkish slave-soldiers of the Caliphs had become so out of hand that the court was compelled to quit Baghdad and establish itself at Samarra, some seventy-five miles further up the Tigris, and remain there for fifty-five years. By the time they returned the glory had departed from the Caliphate, and the supreme pontiff of Islam had become a puppet in the hands of the military power which happened to be supreme at the moment, until the last semblance of authority was swept away by the Mongol invasion.

But, whilst Iraq was the principal seat of heresy and sedition, it afforded the very cradle of a strong hold of orthodoxy and firm government. Its turbulent population was the best brains and the strongest arm to keep them in check, and their very oppositionness led to the necessary education, the investigation, that remotest of the sects became accepted by the civil power. Just as some of the Caliphs liked to send their worst governors to the holy city of Medina, so some of the best, from the point of view of the Caliph, were sent to Iraq. Such governors were, under the Umayyads, Ziyad, half-brother of the Caliph Mu'awiyah; the famous, if bloodthirsty, Hassaj ibn Yusuf, and Khulid al-Qasri. Iraq, too, produced Hassan al-Askari († 728), a commentator on the Qur'an and collector of traditions about Muhammad, to whom the mystics trace their origin; and Abu'larab, a Christian, who at first a Mutazillite, ended by reducing the faith to a system which was quickly acknowledged as orthodox and remains so at the present day.

The twin cities of Basra and Kufa were founded immediately after the conquest of Mesopotamia by the Arabs about A.D. 638. They were at first cantonments for the Arab garrison stationed in the two cities, but under one strong hand, however, quickly lost their military character, and became what may be called the university towns of Islam. They have been well compared to Oxford and Cambridge, not only in their mutual rivalry, but also in the wide-spread authority which attached to their dietas. Their scholars laid down the principles of Arabic grammar, and decided, or at least pronounced on the pronunciation of the text of the Qur'an, those of one city often taking the view opposed to that advocated by the other. Basra especially was the home of free-thinking. It was there that the Arab encyclopedists published their treatises, and nowhere could the Assembly of Hurrar († 1122), with their airy use of expressions from the sacred volume, have been so fitly written. The Zanj and the Carmatians, who, though still lived in Iraq, brought ruin to Basseir (Bassorah), and under the enlightened open door policy of native rulers, rose again, and is likely to continue an important commercial city, Kufa never recovered.

One of the most curious facts in connection with the history of Islam in Mesopotamia is the confluence of intolerable rites in the midst of the true Faith at the city of Sarrar. Originally the seat of the worship of the moon-god, and best known from its mention in the biblical story of Abraham, this city, from the time of Alexander, became a centre of Greek civilization. Long after Mesopotamia had become a Muslim province, Babylonian magic and Greek wisdom, Syrio-paganism and Christian rites, all combined into one system of religion, and were continued into the Baytun. They were not kept in ignorance of these practices or bribed to remain silent regarding them. It was only in the year 830 that the Caliph Mar'wan, when on an expedition against the Byzantines he passed by Harran, was so taken with the dress and garb and long hair, that for the first time their existence became known to the central government. They were offered the alternatives of Islam—one of the tolerated sects or the sword. After some delay they declared, and the Caliphs set up the Christians set of the Sabians to whom toleration is granted in the Qur'an. No doubt the Caliph was only too glad to let them be, as they were one of the chief means of introducing Greek learning into Islam. They produced many writers and translators, of whom perhaps the best known is Tahir ibn Qurrah († 904).

The Abbassid was essentially a Persian dynasty. The cause had its beginnings in Khurasan. One Caliph even wished to make it his. But the claims of the West were still too great for that, and so Iraq, the meeting-point of Semite and Persian, became and remained the seat of government. Baghdad was founded by Mansur in the year 762, and quickly eclipsed all the other cities of the empire. Originally built on the west bank of the Tigris, the government offices and residence of the Caliph were later removed to the east. The insubordination of the Turkish guards at one time necessitated the withdrawal of the court to the small town of Samarra further up the river. There it remained for over half a century (836-892). During this and the subsequent period nearly all the Abbassid Caliphs came to a violent end at the hands of their own pretorians. Order was somewhat restored when the temporal power of the Caliphs was taken over by the Buwayhids (A.D. 945). These princes were, however, Shiites, whereas the population of Baghdad were Sunnites. Thus religious strife was added to civil, and was arrested only on the coming of the Seljucks (A.D. 1055). Mesopotamia had been split up under innumerable petty chieftains, but now all Asia from Egypt to Afghanistan was under one strong hand. The invaded the Fatimid Caliph in Baghdad in A.D. 1058 was merely a passing incident, and did not stay the march of events. The Buwayhids had already restored the old royal palace of the Khulid and...
MUHAMMADANISM (in Turkey).

1. Statistics.

Statistics relating to Turkish conditions have hitherto been of very limited value, and in the circumstances of to-day it is virtually impossible to obtain them. The most recent computations were those made by Mr. A. H. Haddad, i.e.

Two facts stand out clearly, however: (1) the Muslim element in the Balkan Peninsula proceeds swiftly, and the rapidity with which the numerical decrease of a Muslim population may take place under Christian rule can be estimated from the data relating to Thessaly given by Franchet d'Espérey in *E.J.M.* xiii. [1911] 87; thus, while in 1881 the 320,000 inhabitants of that district included 50,000 Muslims, in the present population of 381,000 there are not more than 20,000. This has been traced, though not in the same degree, also in Cyprus, Crete, Bulgaria, and Bosnia. It would seem to be doubtful, indeed, if the number of Muslims in the entire peninsula, even including such as are no longer Turkish subjects, would now amount to 3,000,000. As an offset, it is likely enough that there has been an increase in Anatolia. In the Muslim population of Asia Minor those of Turkish blood number about 11,000,000.

2. Development.—It is a manifest fact that the Turks as a people have not played so important a part in the formation of doctrine as in the popular religion. The share which they have had in the later development of Islam cannot as yet be determined, since the necessary secular investigation has not so far been made. Nor has the protracted struggle which Sunnite orthodoxy has had to wage in Turkey with the Shi'ite faction and various sectarian movements been as yet examined in detail.

On the other hand, the Turkic element, during the last century as a result of European influence have been in a measure exhaustively studied. While it is true that many of the proposed improvements were but imperfectly carried out, or were not carried out at all, the Turkish nation has, as the most significant effort made in recent times to modernize Islam. At the outset they were ostensibly to be put in practice in the spirit of Islam, but in many cases, as a matter of fact, they ran counter to it. We are here and there with the reforms which come into conflict with the provisions of the *shari'ah*, or Muhammadan law, and thus bear upon Islam as a religion. Besides a number of laws and regulations of the most diverse types there were in all and under the dual system inaugurated by the Sultan which, promulgated in a peculiarly impressive form, may be regarded as the pivots of modern Turkish life. These were respectively the *Hatti-sherif* of Gula'bâhâ, issued on 5th Nov., 1908, and the *Hatti-sharûut*, 18th Feb., 1909. 1—both belonging, therefore, to the administration of Abd al-Majid. While the former made promise, in a merely general way, of sundry reforms which should be in harmony with the spirit of the *shari'ah*, the latter prescribed the necessary changes in certain ordinances laid down by that legal system. These changes related to the legal oath and the military service of Christians, and to the abolition of the capital penalty for apostasy. In connexion with these points a new penal code was issued, and the suppression of slavery resolved upon, in 1838. 2

None of these reforms sprang from the will of the Turkish people themselves; on the contrary, they were effected at the instigation of the European Powers, especially of Great Britain, and were introduced only after long temporizing on the part of the higher governing classes in Turkey. When the Western Powers had succeeded in saving Turkey in the Crimean War, they demanded, as an act of gratitude, the abrogation of the ordinances which could not but be humiliating to the national mind. They likewise expected that the changes would serve to increase the political consciousness of the non-Muhammadan elements in Turkey, and thus provide a barrier to the growth.

2 Hereafter cited as *E.J.M.*
ing influence of Russia. The Turkish administra-
tion was not blind to the difficulty of the under-
taking, and to some extent evaded it in a very
adroit fashion.

The various points were settled as follows:

In order to permit Christians to take oaths as witnesses—a privilege long claimed by the Russia, there
was an entirely new statute, upon which experts had been at work for a number of
years. In addition to the jurisdiction of the shari'ah, which henceforward retained its competence only
in certain cases arising out of the personal status of Muslim
subjects, all affairs relating to marriages, alimony,
divorce, inheritance, etc.—the malakim-i-imamiyang was
introduced, organized on European models. At those courts any evidence permitted by the shari'ah, docu-
mental evidence alone was received as valid, so that it was
now possible for a Christian to give his testimony even against a Musulman.

The abolition of capital punishment for detection from the
Muslim bank the following cases: (a) As every
religion and sect in my empire may practice its form of worship
with complete freedom, no one shall be obstructed or molested in
practising the worship of the religion to which he belongs, and
no one shall be compelled to change his religion or sect (Fr.
text, 29).

The abolition of hariz (poll-tax) and the introduction of
military service for non-Musulmans were effected in name, but
consummation (bindal-I-Iiastri) was still to be achieved (cf.
the present writer's art. 'Bedel-l-I'estr', in RI). In reality, the official basis of the new service remained as it was, the
only modification being that the term hariz was replaced by the
expression bindal-I-Iastri. It was not till the Revolution of
1908 that this measure was actually imposed upon
Turkish subjects quite independently of their religious profes-
sion—a measure certainly not conducive to the national welfare,
and purely symbolic. By this code, as long as the
i'ltifat-I-Iiastri was promulgated that such a
code would be drawn up, and this had in some measure been
attained. The new penal law was at length modernized by the
Supreme decree of 4th April 1911. The later code, however,
did not supersede any of the punishments of the ancient
shari'ah on the contrary, the two sets of laws remain in opera-
tion side by side, and offences can be tried by either (cf. E.
X. J. Das, 'Punishment in the Ottoman Empire', 1912, and
Hildesheim, Droit public et administratif de l'Empire ottoman,
I., Vienna, 1909, p. 354). Of the other reforms, reference need
here be made only to the enactments relating to the slave-trade.
An trade of 1st Oct. 1854 forbade the buying and selling of
Georgian slaves. Various ministerial ordinances, dating from
the years 1865, 1870, 1871, 1879, and 1889, prohibited all com-
merce in slaves whatsoever; since 1892 the trade has been
regarded as smuggling. From 1880 Turkey has taken part in
the International Conferences for the suppression of the slave-
trade in Africa at Brussels.

While it is true that many of these reforms were not perfectly carried out, or not carried
out at all, yet their importance should not be under-
rated. In not a few cases they made a breach in the fabric of the shari'ah alike in theory and in
practice. The consistent application of the new
law would serve to bring Islam into line with
modern ideas; but to what extent this may be
affected without great religious wars, and how far
Muslim theology is able and willing to deal with the
future problems involved, the future alone can
show.

Hitherto Muslim theology has tacitly sub-
tended to the reforms, and has not expressed itself
openly regarding them. It is only within recent
years that the aspirations of the young Turks have
won support among the theologians, but no attempt
has yet been made as yet to produce works of import-
ance in the field of scientific theology. The views
of this liberal tendency—if we may so call it—in
theology find expression in the Suriyat-i-Musayrin,
a periodical founded immediately after the Revolu-
tion, and from no. 183 (8th March 1912) continued
under the name of Shulal al-Rasidah (cf. I. Boutav,
in KMM xx. [1912] 202-204; M. Hartmann, Un-
politische Briefe aus der Türkei, Leipzig, 1919, P.
3).

3. Religious organization. Apart from the
theological group just referred to, the religious
ranks of Islam in Turkey have no liking for inno-
vation. The name by which the entire class, as
well as the individual member of it, is known is 'ulama (the plural of 'ulum, 'learned'). This
long-established organization of the Ism, as still existing
with but little change in its main features, was
founded in the reign of Sultan Muhammad IV, the
Conqueror (1451-81) (cf. J. von Hammer-Purgstall,
Des osmanischen Reiches Staatsverwaltung
its head stands the Shiak al-Islam, whose office,
as now constituted, was created for him by Sultan
Sulaiman I. the Magnificent (1520-66), though
the title had been employed by Muhammad I., the
Conqueror, upon the mufid of Constantinople.

In consequence of the reforms, and especially the
introduction of the malakim-i-imamiyang (see above),
his authority has suffered a considerable decline;
he now controls only the religious schools and the
shari'ah. The board over which he presides is
called Bab-l-naashoqghi-I-tulmiyah, Bab-i-fatw
panakhi, or, popularly, Shek-Islamogou, and
consists of the following departments:

(a) Administrative boards: (1) Majlesi-i-mas'abah-khuyi
shan), the commission for the selection of spiritual judges; (2) Majlesi-I-Iidami, the
commission for the regulation of public order; (3) Majlesi-I-Iadami, the
commission for the regulation of civil matters; (4) Majlesi-I-Iadami, the
commission for the regulation of government affairs of subjects; (5) Majlesi-I-Iadami, the
commission for the regulation of government affairs of the dervish orders; (6) Majlesi-I-Iadami, the
commission for the regulation of government affairs of students; (7) Majlesi-I-Iadami, the
commission for their exemption from military service; (8) Majlesi-I-Iadami, the
commission for the regulation of government affairs of wards; (9) Judicial boards: (1) Cemal	gu
i, the kadi
ace of the Court of Justice; (2) Anadolu i, the kadi
ace of the Constantinopolitan Court of Justice; (3) Istanbul i, the kadi
ace of the Courts of Justice; (4) Tuna, the office for verification; (5) Majlesi-I-Iadami, the
commission for the enforcement of the decisions of the shari'ah; (6) Parkas, the office for the legal decisions of the shari'ah.

While the standing of the Shiak al-Islam, as of the
'eunuchs generally, is now greatly inferior to
what it once was, its influence among large
masses of the people is still very considerable,
and to this day they form a power which cannot safely
be ignored by the politicians.

4. The dervish orders. Perhaps an even
greater influence among the people is enjoyed by the
dervish orders. From the foundation of the
Ottoman empire they have played a great role in
Asia Minor, as they did to some extent even before.
As a matter of fact, the great modernization of the Christian elements in Turkey has
been their work; in their indifference towards the
existing forms of religion, views of the most
diverse character could find a refuge in their
minds. Their ideas have come, in a sense, now sunk to a lower level; others, again, have been of late gradually growing
in prestige—e.g., the Malai, (cf. Hartmann, Indext.

The Baudh, an order which at one time,
owing to its close connexion with the Janizaries,
held a position of special prominence, sank into
the background after the suppression of that force
by Sultan Mahmud in 1826, but have quite recently
begun to display a more active spirit in Asia Minor, and
even more decidedly in Albania, this order is constantly adding to its strength.

It has been methodically dealt with in several recent works of
noteworthy redability, such as G. Jacob, Beitrag zur Kenntniss des
MUHYI AL-DIN IBN AL-ARABI

Of literature relating to the orders there is much of a sort in The Dervish, London, 1869, but contains only valuable items of information, but must be read with extreme caution; and so said of A. de CHUST's Dervishes et Confréreances du Hadj a, Paris, 1857.

We need not deal here with such sects as the Yezidis (q.v.), the Nusairis, the Tahteji, the Kizil Bash (q.v.), etc., which, though professing certain Muslim doctrines, cannot be included under Islam. In contrast to the Bautiashi, who, as has been said, still claim to rank as Muslims, these sects in general renounce the name. As these propriety have no real standing in Turkey, they, too, lie outside the scope of this article.

5. Superstition and popular religion.—Superstition is extremely prevalent among the masses, and popular thought exhibits residue of the most diverse forms of religion. We find survivals of the ancient shamanism of the Turkic peoples, as well as of Christian and Jewish superstition. This interesting side of Turkish Islam has not yet been exhaustively dealt with, but there are several compilations from which we may glean an adequate picture.

Besides a number of shorter papers, as, e.g., F. SCHRADER, 'Zur vorderasiatischen Volksglauben', in the Supplement to Actes du 4ème Congrès international des orientalistes, t. III, 1901, and F. MEGALE, 'Osmanische türkische Volksglaube', in Kelti Studi, voi, 1903; F. MEGALE, 'Osmanische astronomie', in Ephemerides Scientiarum, 1901; an able survey is given of the Horsufi sects, with some of their more curious effects.

There is evidence to show, moreover, that the worship of saints (nekritad) and their places of pilgrimage (ziyaratgah) has a predominant place in Turkish popular belief. A large number of the Turkish Sufis trace their personal devotion to sacred persons, in the studies of Byzantium, the names being in some cases greatly corrupted. For example, the 'Tugla Dedeh' from St. Thukla, and the places of pilgrimage are still found on the Byzantine sites.

The religious needs of the common people, and more especially of the women, are served by a large mass of devotional literature. The principal works of this class are among the oldest literary monuments of the Osmanli Turks, and their idiom is frequently unintelligible to the readers of to-day—a fact which, of course, in no way detracts from their popularity. Pre-eminent among these are the Muhammediyyah and the Ahmadiyyah, as also the History of Iznik Urus (cf. GIBB, i. 164, 1860) which, however, is little used by the student of Turkish literature, these works being all of importance, but their theological value is of the slightest, and their contents need further concern us here. Similarly, the 'ilm-i-hed literature requires but the briefest mention; it consists of booklets which, like our modern catechisms, set forth the leading religious dogmas in the form of question and answer.

LITERATURE.—There is as yet no systematic account of Islam in Turkey. Studies dealing with special aspects of the subject have been cited throughout the article in connexion with the particular topic. No attempt has been made here to enumerate all the works worthy of mention, as the great number of works on Islam in Turkey, whether in prose or in verse, is extremely great.

MUHYI AL-DIN IBN AL-ARABI.—Muhyi al-din ibn al-Arabi, the celebrated Muhammedan mystic, who was born in S. Spain in A.D. 1165. Much of his youth was spent in Seville, where he devoted himself to literature, theological, and mystical studies. After visiting Granada and other Muslim towns, as well as Tunis, Fez, and Morocco, he set out in 1204 for the East by way of Egypt, whence he made the pilgrimage to Mecca. He did not return to Spain. Many of the remaining years of his life were passed in the neighbourhood of Mecca, but he made extensive journeys in the Arabic peninsula, in Syria, and Asia Minor, gaining disciples and spreading his doctrines in conversation with high and low, while he beheld a good deal of Muslim in the East and the conquest of the Crusades, he called for repressive measures against the Christian population and encouraged his fellow-Muslims to persevere in their faith. He died at Damascus in A.D. 1240.

Whether we regard the influence of his writings or influence of the subsequent development of Islamic mysticism, Ibn al-Arabi can justly claim the supreme position among Sufi authors whose posterity has accorded to him, and which is attested by the title, 'al-Shaikh al-Akher,' conferred on him by the most unanimous voice of those who are best qualified to judge. The list of his works drawn up by himself contains 289 titles (Brocklemann, Gesch. der arab. Litteratur, i. 449), and some of them are of enormous length. The most famous and important is the Futihat al-Makkiya (4 vols., 1876), comprising about 3000 pages. This, in as, in many of his works, Ibn al-Arabi professes to communicate mysteries revealed to him by the prophets, angels, and even God Himself (a brief resume of the contents of the Futihat will be found in H. O. FISCHER and P. DELITZSCH, Catalogus librorum notorum, bibliotheca sacer. Lipsiensis, Grenzau, 1895, pp. 532-545), and is to be considered by some the smallest compass but equally celebrated, is the Fusus al-Hikam, in which the author discourses upon the nature and significance of the divine revelations imparted to twenty-seven prophets, beginning with Adam and ending with Muhammad. Besides the Futihat and the Fusus, both of which contain a considerable quantity of verse, his prose writings include a mystical commentary on the Qur'an, a collection of definitions of Sufistic technical terms, which has been edited by F. FUGGE, (Leipzig, 1845), and a short treatise on mystical psychology (Arab. text with Span. tr. by Asim Palacios, in Actes du 4ème Congres International des orientalistes, ii. 151). He also edited several volumes of mystical poems, one of which, the Tarjum a al-a'zwar, ed. with Eng. tr. by the present writer, London, 1911, has a curious history.

The erotic style in which it is written gives rise to scandal, and in order to suppress its circulation Ibn al-Arabi published a second edition accompanied by a commentary in which the mystical sense of each verse is explained. Although his interpretations are often far-fetched, the poems themselves supply evidence that there was no ground for the charge brought against him, plausible as it might appear to the uninitiated. The question of his orthodoxy was keenly disputed, and, if many Muslims saw in him a dangerous heretic, others had no doubt that he was a great saint; but even his admirers recognized that the outward sense of his writings was frequently ambiguous, and that the study of them should be permitted only to mystics of ripe experience. At first sight, it seems hard to reconcile Ibn al-Arabi's extreme conservatism in the sphere of religious law with his remarkably bold and fantastic speculations in the domain of theosophy.

He belonged to the Zahirite school, which rejects the idea of the intercession, who simultaneously not only the spirit of the Koran and the tradition, but, while his attitude in regard to legal and ritual practice was that of the literalist (zaahir), who looks only at the outward form, in all matters of doctrine and belief he was pre-eminently the mystic (batini), who fixes his gaze on the inward spirit and seeks to
Muhyi al-Din Ibn al-'Arabi, like other Sufis before and after him, endeavored to combine the Asiatic theology with philosophic ideas, and this practice appealed to many Sufis, who found in it an expression of their own dislike for the hair-splitting pedantry of the rival schools of law, for the acceptance of external authority as the standard of truth, and for the method of logical demonstration as opposed to intuitive knowledge.

Ibn al-'Arabi, the like of other Sufis before and after him, endeavours to combine the Asiatic theology with philosophic ideas, and this practice appealed to many Sufis, who found in it an expression of their own dislike for the hair-splitting pedantry of the rival schools of law, for the acceptance of external authority as the standard of truth, and for the method of logical demonstration as opposed to intuitive knowledge.

Although the contrary might be maintained from some passages of his writings, he makes a distinction between the divine and human natures, and his pantheism does not lead to the doctrine of incarnation (tahlil) or identification (ittihad). Man can never say with Hallâl: 'I am God' (Ana 's-Haqq), because, owing to the constitution of his mind, he is unable to think all objects of knowledge simultaneously, as God thinks them; therefore he is only 'a truth' (Haqq), not 'the Truth' (al-Haqq), who is the counterpart of the whole universe of created things (cf. Masséignon, p. 182 f.).

In view of the scanty attention that Ibn al-'Arabi has hitherto received from European scholars, it would be impossible to give a detailed account of his doctrines, and premature to make a more definite statement concerning the character of his theology as a whole. Much of it, of course, belongs to the common stock of Sufistic speculation, but there is also a great deal that appears to be original and based upon the immense store of his own mystical experiences, which he has so copiously recorded and analyzed (for his theory of ecstasy and the seven degrees of 'passing-away' [fana] which he enumerates, see Asin Palacios, 'La Psicologia segun Mohideen Ahenzar, des orientalistes, iii. 125 ff.).

The following are noteworthy:

(a) That man stands to God in the same relation as the pupil of the eye, which is the instrument of vision, to the eye; i.e., man is the means whereby God beholds His creation and knows Himself; and that we (mankind) are the representatives with which we endow God—excepting only the attribute of necessary and essential being—so that, when we contemplate Him, we contemplate ourselves, and when He contemplates us, He contemplates Himself (Falsâf. ch. iv). Elsewhere Ibn al-'Arabi says: 'We are the food that sustains the being of God, and He is our food'—a further instance of the way in which he turns the principle of logical correlation to pantheistic use.

(b) That God is the 'self' [ilâh] of the things that He brought into existence, for He is the 'self' of things in manifestation, though He is not the 'self' of things in their essences. Therefore Ibn al-'Arabi holds that the true mystic, combining the doctrines of tanwîr and tâhîl, worships God both corrupt, and suffers punishment for sins committed in the flesh.

The system of Ibn al-'Arabi may be described as a pantheistic monism. God and the world are two correlative and complementary aspects of one Absolute Reality; the world could not exist apart from God, and, if the world did not exist, God could not be manifested and known. The terms 'Creator' (al-Haqq) and 'creature' (kalâm) are logically involved in another as moments of the Absolute Being, not indeed of equal worth—since al-Haqq is eternal, while kalâm is contingent (i.e. eternal in the knowledge of God, and originated in the context of its absolute, but interchangeable, subjects of predication (cf. L. Masséignon, Kitâb al-Farâ'isân, Paris, 1912, p. 130 ff.). Ibn al-'Arabi delights in the daring paradoxes which this line of thought suggests to him—e.g.,

*He praises me and I praise Him,
And He worships me and I worship Him.
In one state I acknowledge Him,
And in the objects of some I deny Him.
He knows me and I know Him not,
And I know Him and behold Him.
How can He be independent,
When I help and aid Him.
For that cause God brought me into existence.*

(Força, Cairo, 1231 A.H., ch. v. p. 76.)

Discover the reality of the words and letters are a symbol. "A-" Goldziher has shown (Die Zichteinen, Leipzig, 1884, p. 129 ff.), the two points of view are philosophically impossible. The Zâhiriyah practice appealed to many Sufis, who found in it an expression of their own dislike for the hair-splitting pedantry of the rival schools of law, for the acceptance of external authority as the standard of truth, and for the method of logical demonstration as opposed to intuitive knowledge.
as absolutely transcendent and as externalized in nature (Fusūs, ch. iii.).

(c) That all forms of religious belief are relatively true. This follows from the proposition that God is the creator of the world, in whom we are to believe or sensible or intelligible. Every reality forms some notion of God, and in praising the god which he has made he praises himself, while at the same time he blames the gods of other sects and individuals, to whom he is more wise and just if it be perceived God in every form and in every belief, according to the verse (Coran, ii. 109), "Whereover ye turn, there is the face, i.e. the reality, of Allah" (Fusūs, chs. x. and xxvii.; cf. Taqayyur al-asrār, Preface)."

(d) That, even if the infidels shall remain in hell for ever, their torments will ultimately be transmuted into such pleasure as is enjoyed by the blessed in paradise.

Abd al-Karim al-Jilī develops this theory in Khattāt al-kāmil (see the present writer's article, "A Moslem Philosophy of Religion," in Museum, 3rd ser. i. 1. [1915] 83 ff.). Evidently there is no room in Ibn al-'Arabi's system for the Muhammadan scheme of rewards and punishments. The fulfillment of the divine scheme of creation requires that the spiritual capacities of human souls shall be infinitely various, and salvation and perdition are the effects that correspond with the capacity eternally implicit in God's knowledge of the soul before it entered into individuation in the material world. Ibn al-'Arabi proceeds to argue that, inasmuch as knowledge is a relation dependent on the object known, viz. the soul and its potential capacity, each individual is responsible for the accuracy of what he has been taught by that capacity (Fusūs, ch. v.); but in another passage of the same work (ch. viii.) he declares that it is a more profoundly mystic thought to regard the soul as a mode of God, and its recompense as a divine illumination (fusūs) in the form of pleasure or pain which are felt by God Himself.

(e) That the saints are superior to the prophets. Ibn al-'Arabi does not state the doctrine in this absolute form. The prophets, he says, may be viewed in three aspects: as apostles, they bring a religious code to their people; as prophets, they inform them about God in proportion to their own knowledge; and, as saints, they pass away in God and abide in God. There is no logical connection between capacity (Fusūs, ch. v.); but in another passage of the same work (ch. viii.) he declares that it is a more profoundly mystic thought to regard the soul as a mode of God, and its recompense as a divine illumination (fusul) in the form of pleasure or pain which are felt by God Himself.

REYNOLD A. NICHOLSON.

MUKTI.—See MOKSA.

MULLA.—Mulla is a title of varied usage, given to officials of different ranks, but invariably to men who have received some degree of education. It is of Persian origin, and denoting a religious schoolmaster and hold certificates testifying thereto; it is also a generic term applied to such officials as a class.

"Mulla" is a proper pronunciation of the Turkish "mukha, the Arab. mula (lit. "lord," "master," "patron"); also "slave."
tion, and performs no necessary part in the rites connected with birth, circumcision, marriage, or death. But, in being the teacher of these rights and duties and the accepted adviser in questions of faith as well as of daily life, the mullah considers himself in a position above that of the other Oriental clergy—whose equal at least he generally is in learning and whose superior he is in the persuasive powers of his dialectics.

In their conservative and reactionary tendencies the mullahs have generally given their support to the absolutism of temporal authorities—in Turkey especially to the Sultan as head of both the Church and the State—and they have opposed the introduction of Western culture as encouraging religious indifferencism and ceremonial laxity, and as substituting rationalism for their own fatalism. In Persia, however, where the Shi'itic form of Muhammadanism prevails, and where, consequently, the temporal ruler is not regarded as the head of the Church, the mullahs often exercise their popular power against the State authority, matching the despoticism of the latter with their own extreme fanaticism. There the house of the mullah, like mosques and shrines in all Muhammadan lands, is an inviolable place of refuge; and Persian mullahs have often been charged with harbouring outlaws, whose services they have then used in furthering their own designs. The power of the mullahs is sometimes checked to a certain extent by that of the dervish orders, and in Turkey, India, and Egypt by the secular courts instituted in more recent times to administer the so-called 'urf ('customary law').

The mullahs in general, being sincere in their devotion to their calling, are seldom guilty of infractions of the moral law; indeed, they have generally been held to contrast favourably with the lower priesthood of other faiths. Moral probity is less marked among the Persian mullahs, however, who, at heart more devoted to Persian poetry than to Muhammadan theology, hold their own functions in light esteem. In one respect, too, the mullahs everywhere, especially those who fill the office of minor judge, are not above reproach; inasmuch as the stipend furnished by the mosque endowments, and official salaries in general, are very small, the practice of usury and acceptance of bribes is frequent—an abuse which early Muhammadanism attempted to avoid by the principle that religious teachers should always have some other means of gaining a livelihood.

Despite the reactionary tendencies and the corruptibility generally ascribed to the mullah, the history of Muhammadanism contains the names of many mullahs conspicuous for nobility of character and devotion to absolute justice, who have risked their lives to rebuke the corruption and tyranny of rulers. To-day, too, the number of clear-headed, honest leaders among the Turkish, Arabic, and Indian 'ulama' is steadily increasing; not a few scholars have been sent from Turkey to receive part of their education in Europe; in India the mullahs have sometimes warmly advocated the innovations of the English; and everywhere in the larger cities subjected to European influence the traditional type of mullah is being combated by advanced Muhammadans who, even when they are rationalists, at the same time deny that they are guilty of any defection from the fundamental principles of Muhammadanism; and fatalism is often taught, practically if not logically, as a doctrine which induces fortitude in bearing the accidents and misfortunes of life, without permitting the cessation of righteous endeavour in any cause as long as Allah has not shown, by making its failure a fait accompli, that His will and decree are opposed thereto.

'Prayer'
By James Hastings, D.D.

The first of a short series of volumes on the

GREAT CHRISTIAN DOCTRINES

Edited by Dr. Hastings. The Doctrines to be dealt with, in addition to Prayer, are The Atonement, Faith, The Holy Spirit, Miracle, and The Person of Christ.

'Nothing could have been more appropriate than this volume on 'Prayer' during a world-crisis like the present. All the elements of prayer—adoration, confession, petition, intercession, thanksgiving—are treated in turn, while the nature of prayer, together with scientific and philosophic objections, is amply considered. Further, there are chapters on encouragements, perplexities, answers, times, and manner of prayer. . . . As a text-book for Christian preachers, teachers, and workers, the book will prove of the utmost service.'—London Quarterly Review.

In Demy 8vo, price 6s. net.

'The Scholar as Preacher' Series

In Post 8vo. Price 4s. 6d. net per Volume.

These volumes are carefully chosen. They are chosen because their authors are scholars as well as preachers, for the suggestiveness of their thought, and because they are saturated with the most promising ideas of the present day.

'SUB CORONA.' Sermons by Principals G. A. Smith, Denney, Iverach, Stewart; Professors W. P. Paterson, Stalker, Cooper, Curtis, Cairns, MacEwen, McFadyen, Mackintosh, Milligan, Selbie, Reid, Nicol, Kay, Gilroy, and the Bishop of Aberdeen.

THE EYE FOR SPIRITUAL THINGS. Prof. H. M. Gwatkin, D.D.
THE GOSPEL OF GLADNESS. John Clifford, D.D.
THE SEER'S HOUSE. James Rutherford, D.D.
FAITH AND KNOWLEDGE. Dean W. R. Inge, D.D.
CHRISTUS IN ECCLESIA. Hastings Rashdall, D.C.L.
JESUS CHRIST THE SON OF GOD. W. M. MacGregor, D.D.
SOME OF GOD'S MINISTRIES. W. M. MacGregor, D.D.
CHRIST AND CHRIST'S RELIGION. F. Homes Dudden, D.D.
THE PROGRESS OF REVELATION. Canon G. A. Cooke, D.D.
AT THE TEMPLE CHURCH. H. G. Woods, D.D.
A DISCIPLE'S RELIGION. Archdeacon W. H. Hutton, B.D.
BREAD AND SALT FROM THE WORD OF GOD. Prof. Th. Zahn.
